Socrates:: And in the case of a woman, do you think, my friend, that there is one art for the sowing and another for the harvesting?

Theaetetus:: It is not likely.

Socrates:: No; but because there is a wrongful and unscientific way of bringing men and women together, which is called pandering, the midwives, since they are women of dignity and worth, avoid match-making, through fear of falling under the charge of pandering. And yet the true midwife is the only proper matchmaker.

Theaetetus:: It seems so.

Socrates:: So great, then, is the importance of midwives; but their function is less important than mine. For women do not, like my patients, bring forth at one time real children and at another mere images which it is difficult to distinguish from the real. For if they did, the greatest and noblest part of the work of the mid wives would be in distinguishing between the real and the false. Do you not think so?

Theaetetus:: Yes, I do.

Socrates:: All that is true of their art of midwifery is true also of mine, but mine differs from theirs in being practiced upon men, not women, and in tending their souls in labor, not their bodies. But the greatest thing about my art is this, that it can test in every way whether the mind of the young man is bringing forth a mere image, an imposture, or a real and genuine offspring. For I have this in common with the midwives; I am sterile in point of wisdom, and the reproach which has often been brought against me, that I question others but make no reply myself about anything, because I have no wisdom in me, is a true reproach; and the reason of it is this; the god compels me to act as midwife, but has never allowed me to bring forth. I am, then, not at all a wise person myself, nor have I any wise invention, the offspring born of my own soul; but those who associate with me, although at first some of them seem very ignorant, yet, as our acquaintance advances, all of them to whom the god is gracious make wonderful progress, not only in their own opinion, but in that of others as well. And it is clear that they do this, not because they have ever learned anything from me, but because they have found in themselves many fair things and have brought them forth. But the delivery is due to the god and me. And the proof of it is this; many before now, being ignorant of this fact and thinking that they were themselves the cause of their success, but despising me, have gone away from me sooner than they ought, whether of their own accord or because others persuaded them to do so. Then, after they have gone away, they have miscarried thenceforth on account of evil companionship, and the offspring which they had brought forth through my assistance they have reared so badly that they have lost it; they have considered impostures and images of more importance than the truth, and at last it was evident to themselves, as well as to others, that they were ignorant. One of these was Aristeides, the son of Lysimachus, and there are very many more. When such men come back and beg me, as they do, with wonderful eagerness to let them join me again, the spiritual monitor that comes to me forbids me to associate with some of them, but allows me to converse with others, and these again make progress. Now those who associate with me are in this matter also like women in childbirth; they are in pain and are full of trouble night and day, much more than are the women; and my art can arouse this pain and cause it to cease. Well, that is what happens to them. But in some cases, Theaetetus, when they do not seem to me to be exactly pregnant, since I see that they have no need of me, I act with perfect goodwill as match-maker and, under God, I guess very successfully with whom they can associate profitably, and I have handed over many of them to Prodicus, and many to other wise and inspired men.

Now I have said all this to you at such length, my dear boy, because I suspect that you, as you yourself believe, are in pain because you are pregnant with something within you. Apply, then, to me, remembering that I am the son of a midwife and have myself a midwifes gifts, and do your best to answer the questions I ask as I ask them. And if, when I have examined any of the things you say, it should prove that I think it is a mere image and not real, and therefore quietly take it from you and throw it away, do not be angry as women are when they are deprived of their first offspring. For many, my dear friend, before this have got into such a state of mind towards me that they are actually ready to bite me, if I take some foolish notion away from them, and they do not believe that I do this in kindness, since they are far from knowing that no god is unkind to mortals, and that I do nothing of this sort from unkindness, either, and that it is quite out of the question for me to allow an imposture or to destroy the true. And so, Theaetetus, begin again and try to tell us what knowledge is. And never say that you are unable to do so; for if God wills it and gives you courage, you will be able.

Theaetetus:: Well then, Socrates, since you are so urgent it would be disgraceful for anyone not to exert himself in every way to say what he can. I think, then, that he who knows anything perceives that which he knows, and, as it appears at present, knowledge is nothing else than perception.

Socrates:: Good! Excellent, my boy! That is the way one ought to speak out. But come now, let us examine your utterance together, and see whether it is a real offspring or a mere wind-egg. Perception, you say, is knowledge?

Theaetetus:: Yes.

Socrates:: And, indeed, if I may venture to say so, it is not a bad description of knowledge that you have given, but one which Protagoras also used to give. Only, he has said the same thing in a different way For he says somewhere that man is the “measure of all things, of the existence of the things that are and the non-existence of the things that are not.” You have read that, I suppose?

Theaetetus:: Yes, I have read it often.

Socrates:: Well, is not this about what he means, that individual things are for me such as they appear to me, and for you in turn such as they appear to you—you and I being man?

Theaetetus:: Yes, that is what he says.

Socrates:: It is likely that a wise man is not talking nonsense; so let us follow after him. Is it not true, that sometimes, when the same wind blows, one of us feels cold, and the other does not? or one feels slightly and the other exceedingly cold?

Theaetetus:: Certainly.

Socrates:: Then in that case, shall we say that the wind is in itself cold or not cold; or shall we accept Protagoras’s saying that it is cold for him who feels cold and not for him who does not?

Theaetetus:: Apparently we shall accept that.

Socrates:: Then it also seems cold, or not, to each of the two?

Theaetetus:: Yes.

Socrates:: But “seems” denotes perceiving?

Theaetetus:: It does.

Socrates:: Then seeming and perception are the same thing in matters of warmth and everything of that sort. For as each person perceives things, such they are to each person.

Theaetetus:: Apparently.

Socrates:: Perception, then, is always of that which exists and, since it is knowledge, cannot be false.

Theaetetus:: So it seems.

Socrates:: By the Graces! I wonder if Protagoras, who was a very wise man, did not utter this dark saying to the common herd like ourselves, and tell the truth in secret to his pupils.

Theaetetus:: Why, Socrates, what do you mean by that?

Socrates:: I will tell you and it is not a bad description, either, that nothing is one and invariable, and you could not rightly ascribe any quality whatsoever to anything, but if you call it large it will also appear to be small, and light if you call it heavy, and everything else in the same way, since nothing whatever is one, either a particular thing or of a particular quality; but it is out of movement and motion and mixture with one another that all those things become which we wrongly say “are”—wrongly, because nothing ever is, but is always becoming. And on this subject all the philosophers, except Parmenides, may be marshaled in one line—

Protagoras and Heracleitus and Empedocles—and the chief poets in the two kinds of poetry, Epicharmus, in comedy, and in tragedy, Homer, who, in the line Oceanus the origin of the gods, and Tethys their mother has said that all things are the offspring of flow and motion; or don’t you think he means that?

Theaetetus:: I think he does.

Socrates:: Then who could still contend with such a great host, led by Homer as general, and not make himself ridiculous?

Theaetetus:: It is not easy, Socrates.

Socrates:: No, Theaetetus, it is not. For the doctrine is amply proved by this, namely, that motion is the cause of that which passes for existence, that is, of becoming, whereas rest is the cause of non-existence and destruction; for warmth or fire, which, you know, is the parent and preserver of all other things, is itself the offspring of movement and friction, and these two are forms of motion. Or are not these the source of fire?

Theaetetus:: Yes, they are.

Socrates:: And furthermore, the animal kingdom is sprung from these same sources.

Theaetetus:: Of course.

Socrates:: Well, then, is not the bodily habit destroyed by rest and idleness, and preserved, generally speaking, by gymnastic exercises and motions?

Theaetetus:: Yes.

Socrates:: And what of the habit of the soul? Does not the soul acquire information and is it not preserved and made better through learning and practice, which are motions, whereas through rest, which is want of practice and of study, it learns nothing and forgets what it has learned?

Theaetetus:: Certainly.

Socrates:: Then the good, both for the soul and for the body, is motion, and rest is the opposite?

Theaetetus:: Apparently.

Socrates:: Now shall I go on and mention to you also windless air, calm sea, and all that sort of thing, and say that stillness causes decay and destruction and that the opposite brings preservation? And shall I add to this the all-compelling and crowning argument that Homer by the "golden chain" refers to nothing else than the sun, and means that so long as the heavens and the sun go round everything exists and is preserved, among both gods and men, but if the motion should stop, as if bound fast, everything would be destroyed and would, as the saying is, be turned upside down?

Theaetetus:: Yes, Socrates, I think he means what you say he does.

Socrates:: Then, my friend, you must apply the doctrine in this way; first as concerns vision, the color that you call white is not to be taken as something separate outside of your eyes, nor yet as something inside of them; and you must not assign any place to it, for then it would at once be in a definite position and stationary and would have no part in the process of becoming.

Theaetetus:: But what do you mean?

Socrates:: Let us stick close to the statement we made a moment ago, and assume that nothing exists by itself as invariably one; then it will be apparent that black or white or any other color whatsoever is the result of the impact of the eye upon the appropriate motion, and therefore that which we call color will be in each instance neither that which impinges nor that which is impinged upon, but something between, which has occurred, peculiar to each individual. Or would you maintain that each color appears to a dog, or any other animal you please, just as it does to you?

Theaetetus:: No, by Zeus, I wouldn't.

Socrates:: Well, does anything whatsoever appear the same to any other man as to you? Are you sure of this? Or are you not much more convinced that nothing appears the same even to you, because you yourself are never exactly the same?

Theaetetus:: Yes, I am much more convinced of the last.

Socrates:: Then, if that with which I compare myself in size, or which I touch, were really large or white or hot, it would never have become different by coming in contact with something different, without itself changing; and if, on the other hand, that which did the comparing or the touching were really large or white or hot, it would not have become different when something different approached it or was affected in some way by it, without being affected in some way itself. For nowadays, my friend, we find ourselves rather easily forced to make extraordinary and absurd statements, as Protagoras and everyone who undertakes to agree with him would say.

Theaetetus:: What do you mean? What statements?

Socrates:: Take a little example and you will know all I have in mind. Given six dice, for instance, if you compare four with them, we say that they are more than the four, half as many again, but if you compare twelve with them, we say they are less, half as many; and any other statement would be inadmissible; or would you admit any other?

Theaetetus:: Not I.

Socrates:: Well then, if Protagoras, or anyone else, ask you, “Theaetetus, can anything become greater or more in any other way than by being increased?” what reply will you make?

Theaetetus:: If I am to say what I think, Socrates, with reference to the present question, I should say “no,” but if I consider the earlier question, I should say “yes,” for fear of contradicting myself.

Socrates:: Good, by Hera! Excellent, my friend! But apparently, if you answer “yes” it will be in the Euripidean spirit; for our tongue will be unconvinced, but not our mind.

Theaetetus:: True.

Socrates:: Well, if you and I were clever and wise and had found out everything about the mind, we should henceforth spend the rest of our time testing each other out of the fullness of our wisdom, rushing together like sophists in a sophistical combat, battering each others arguments with counter arguments. But, as it is, since we are ordinary people, we shall wish in the first place to look into the real essence of our thoughts and see whether they harmonize with one another or not at all.

Theaetetus:: Certainly that is what I should like.

Socrates:: And so should I. But since this is the case, and we have plenty of time, shall we not quietly, without any impatience, but truly examining ourselves, consider again the nature of these appearances within us? And as we consider them, I shall say, I think, first, that nothing can ever become more or less in size or number, so long as it remains equal to itself. Is it not so?

Theaetetus:: Yes.

Socrates:: And secondly, that anything to which nothing is added and from which nothing is subtracted, is neither increased nor diminished, but is always equal.

Theaetetus:: Certainly.

Socrates:: And should we not say thirdly, that what was not previously could not afterwards be without becoming and having become?

Theaetetus:: Yes, I agree.

Socrates:: These three assumptions contend with one another in our minds when we talk about the dice, or when we say that I, who do not, at my age, either increase in size or diminish, am in the course of a year first larger than you, who are young, and afterwards smaller, when nothing has been taken from my size, but you have grown. For I am, it seems, afterwards what I was not before, and I have not become so; for it is impossible to have become without becoming, and without losing anything of my size I could not become smaller. And there are countless myriads of such contradictions, if we are to accept these that I have mentioned. You follow me, I take it, Theaetetus, for I think you are not new at such things.

Theaetetus:: By the gods, Socrates, I am lost in wonder when I think of all these things, and sometimes when I regard them it really makes my head swim.

Socrates:: Theodorus seems to be a pretty good guesser about your nature. For this feeling of wonder shows that you are a philosopher, since wonder is the only beginning of philosophy, and he who said that Iris was the child of Thaumas made a good genealogy. But do you begin to understand why these things are so, according to the doctrine we attribute to Protagoras, or do you not as yet?

Theaetetus:: Not yet, I think.

Socrates:: And will you be grateful to me if I help you to search out the hidden truth of the thought of a famous man or, I should say, of famous men?

Theaetetus:: Of course I shall be grateful, very grateful.

Socrates:: Look round and see that none of the uninitiated is listening. The uninitiated are those who think nothing is except what they can grasp firmly with their hands, and who deny the existence of actions and generation and all that is invisible.

Theaetetus:: Truly, Socrates, those you speak of are very stubborn and perverse mortals.

Socrates:: So they are, my boy, quite without culture. But others are more clever, whose secret doctrines I am going to disclose to you. For them the beginning, upon which all the things we were just now speaking of depend, is the assumption that everything is really motion and that there is nothing besides this, but that there are two kinds of motion, each infinite in the number of its manifestations, and of these kinds one has an active, the other a passive force. From the union and friction of these two are born offspring, infinite in number, but always twins, the object of sense and the sense which is always born rind brought forth together with the object of sense. Now we give the senses names like these; sight and hearing and smell, and the sense of cold and of heat, and pleasures and pains and desires and fears and so forth. Those that have names are very numerous, and those that are unnamed are innumerable. Now the class of objects of sense is akin to each of these; all sorts of colors are akin to all sorts of acts of vision, and in the same way sounds to acts of hearing, and the other objects of sense spring forth akin to the other senses. What does this tale mean for us, Theaetetus, with reference to what was said before? Do you see?

Theaetetus:: Not quite, Socrates.

Socrates:: Just listen; perhaps we can finish the tale. It means, of course, that all these things are, as we were saying, in motion, and their motion has in it either swiftness or slowness. Now the slow element keeps its motion in the same place and directed towards such things as draw near it, and indeed it is in this way that it begets. But the things begotten in this way are quicker; for they move from one place to another, and their motion is naturally from one place to another. Now when the eye and some appropriate object which approaches beget whiteness and the corresponding perception—which could never have been produced by either of them going to anything else—then, while sight from the eye and whiteness from that which helps to produce the color are moving from one to the other, the eye becomes full of sight and so begins at that moment to see, and becomes, certainly not sight, but a seeing eye, and the object which joined in begetting the color is filled with whiteness and becomes in its turn, not whiteness, but white, whether it be a stick or a stone, or whatever it be the hue of which is so colored. And all the rest—hard and hot and so forth—must be regarded in the same way; we must assume, we said before, that nothing exists in itself, but all things of all sorts arise out of motion by intercourse with each other; for it is, as they say, impossible to form a firm conception of the active or the passive element as being anything separately; for there is no active element until there is a union with the passive element, nor is there a passive element until there is a union with the active; and that which unites with one thing is active and appears again as passive when it comes in contact with something else. And so it results from all this, as we said in the beginning, that nothing exists as invariably one, itself by itself, but everything is always becoming in relation to something, and "being" should be altogether abolished, though we have often—and even just now—been compelled by custom and ignorance to use the word. But we ought not, the wise men say, to permit the use of "something" or "somebody's" or "mine" or "this' or "that" or any other word that implies making things stand still, but in accordance with nature we should speak of things as "becoming" and "being made" and "being destroyed" and "changing;" for anyone who by his mode of speech makes things stand still is easily refuted. And we must use such expressions in relation both to particular objects and collective designations, among which are "mankind" and "stone" and the names of every animal and class. Do these doctrines seem pleasant to you, Theaetetus, and do you find their taste agreeable?

Theaetetus:: I don't know, Socrates; besides, I cant tell about you, either, whether you are preaching them because you believe them or to test me.

Socrates:: You forget, my friend, that I myself know nothing about such things, and claim none of them as mine, but am incapable of bearing them and am merely acting as a midwife to you, and for that reason am uttering incantations and giving you a taste of each of the philosophical theories, until I may help to bring your own opinion to light. And when it is brought to light, I will examine it and see whether it is a mere wind-egg or a real offspring. So be brave and patient, and in good and manly fashion tell what you think in reply to my questions.

Theaetetus:: Very well; ask them.

Socrates:: Then say once more whether the doctrine pleases you that nothing is, but is always becoming—good or beautiful or any of the other qualities we were just enumerating.

Theaetetus:: Why, when I hear you telling about it as you did, it seems to me that it is wonderfully reasonable and ought to be accepted as you have presented it.

Socrates:: Let us, then, not neglect a point in which it is defective. The defect is found in connection with dreams and diseases, including insanity, and everything else that is said to cause illusions of sight and hearing and the other senses. For of course you know that in all these the doctrine we were just presenting seems admittedly to be refuted, because in them we certainly have false perceptions, and it is by no means true that everything is to each man which appears to him; on the contrary, nothing is which appears.

Theaetetus:: What you say is very true, Socrates.

Socrates:: What argument is left, then, my boy, for the man who says that perception is knowledge and that in each case the things which appear are to the one to whom they appear?

Theaetetus:: I hesitate to say, Socrates, that I have no reply to make, because you scolded me just now when I said that. But really I cannot dispute that those who are insane or dreaming have false opinions, when some of them think they are gods and others fancy in their sleep that they have wings and are flying.

Socrates:: Don't you remember, either, the similar dispute about these errors, especially about sleeping and waking?

Theaetetus:: What dispute?

Socrates:: One which I fancy you have often heard. The question is asked, what proof you could give if anyone should ask us now, at the present moment, whether we are asleep and our thoughts are a dream, or whether we are awake and talking with each other in a waking condition.

Theaetetus:: Really, Socrates, I don't see what proof can be given; for there is an exact correspondence in all particulars, as between the strophe and antistrophe of a choral song. Take, for instance, the conversation we have just had; there is nothing to prevent us from imagining in our sleep also that we are carrying on this conversation with each other, and when in a dream we imagine that we are relating dreams, the likeness between the one talk and the other is remarkable.

Socrates:: So you see it is not hard to dispute the point, since it is even open to dispute whether we are awake or in a dream. Now since the time during which we are asleep is equal to that during which we are awake,. in each state our spirit contends that the semblances that appear to it at any time are certainly true, so that for half the time we say that this is true, and for half the time the other, and we maintain each with equal confidence.

Theaetetus:: Certainly.

Socrates:: And may not, then, the same be said about insanity and the other diseases, except that the time is not equal?

Theaetetus:: Yes.

Socrates:: Well, then, shall truth be determined by the length or shortness of time?

Theaetetus:: That would be absurd in many ways.

Socrates:: But can you show clearly in any other way which of the two sets of opinions is true?

Theaetetus:: I do not think I can.

Socrates:: Listen, then, while I tell you what would be said about them by those who maintain that what appears at any time is true for him to whom it appears. They begin, I imagine, by asking this question; “Theaetetus, can that which is wholly other have in any way the same quality as its alternative? And we must not assume that the thing in question is partially the same and partially other, but wholly other.”

Theaetetus:: It is impossible for it to be the same in anything, either in quality or in any other respect whatsoever, when it is wholly other.

Socrates:: Must we not, then, necessarily agree that such a thing is also unlike?

Theaetetus:: It seems so to me.

Socrates:: Then if anything happens to become like or unlike anything—either itself or anything else—we shall say that when it becomes like it becomes the same, and when it becomes unlike it becomes other?

Theaetetus:: We must.

Socrates:: Well, we said before, did we not, that the active elements were many—infinite in fact—and likewise the passive elements?

Theaetetus:: Yes.

Socrates:: And furthermore, that any given element, by uniting at different times with different partners, will beget, not the same, but other results?

Theaetetus:: Certainly.

Socrates:: Well, then, let us take me, or you, or anything else at hand, and apply the same principle—say Socrates in health and Socrates in illness. Shall we say the one is like the other, or unlike?

Theaetetus:: When you say "Socrates in illness" do you mean to compare that Socrates as a whole with Socrates in health as a whole?

Socrates:: You understand perfectly; that is just what I mean.

Theaetetus:: Unlike, I imagine.

Socrates:: And therefore other, inasmuch as unlike?

Theaetetus:: Necessarily.

Socrates:: And you would say the same of Socrates asleep or in any of the other states we enumerated just now?

Theaetetus:: Yes.

Socrates:: Then each of those elements which by the law of their nature act upon something else, will, when it gets hold of Socrates in health, find me one object to act upon, and when it gets hold of me in illness, another?

Theaetetus:: How can it help it?

Socrates:: And so, in the two cases, that active element and I, who am the passive element, shall each produce a different object?

Theaetetus:: Of course.

Socrates:: So, then, when I am in health and drink wine, it seems pleasant and sweet to me?

Theaetetus:: Yes.

Socrates:: The reason is, in fact, that according to the principles we accepted a while ago, the active and passive elements produce sweetness and perception, both of which are simultaneously moving from one place to another, and the perception, which comes from the passive element, makes the tongue perceptive, and the sweetness, which comes from the wine and pervades it, passes over and makes the wine both to be and to seem sweet to the tongue that is in health.

Theaetetus:: Certainly, such are the principles we accepted a while ago.

Socrates:: But when it gets hold of me in illness, in the first place, it really doesn't get hold of the same man, does it? For he to whom it comes is certainly unlike.

Theaetetus:: True.

Socrates:: Therefore the union of the Socrates who is ill and the draught of wine produces other results; in the tongue the sensation or perception of bitterness, and in the wine—a bitterness which is engendered there and passes over into the other; the wine is made, not bitterness, but bitter, and I am made, not perception, but perceptive.

Theaetetus:: Certainly.

Socrates:: Then I shall never have this perception of any other thing; for a perception of another thing is another perception, and makes the percipient different and other; nor can that which acts on me ever by union with another produce the same result or become the same in kind; for by producing another result from another passive element it will become different in kind.

Theaetetus:: That is true.

Socrates:: And neither shall I, furthermore, ever again become the same as I am, nor will that ever become the same as it is.

Theaetetus:: No.

Socrates:: And yet, when I become percipient, I must necessarily become percipient of something, for it is impossible to become percipient and perceive nothing; and that which is perceived must become so to someone, when it becomes sweet or bitter or the like; for to become sweet, but sweet to no one, is impossible.

Theaetetus:: Perfectly true.

Socrates:: The result, then, I think, is that we (the active and the passive elements) are or become, whichever is the case, in relation to one another, since we are bound to one another by the inevitable law of our being, but to nothing else, not even to ourselves. The result, then, is that we are bound to one another; and so if a man says anything “is,” he must say it is to or of or in relation to something, and similarly if he says it “becomes;” but he must not say it is or becomes absolutely, nor can he accept such a statement from anyone else. That is the meaning of the doctrine we have been describing.

Theaetetus:: Yes, quite so, Socrates.

Socrates:: Then, since that which acts on me is to me and to me only, it is also the case that I perceive it, and I only?

Theaetetus:: Of course.

Socrates:: Then to me my perception is true; for in each case it is always part of my being; and I am, as Protagoras says, the judge of the existence of the things that are to me and of the non-existence of those that are not to me.

Theaetetus:: So it seems.

Socrates:: How, then, if I am an infallible judge and my mind never stumbles in regard to the things that are or that become, can I fail to know that which I perceive?

Theaetetus:: You cannot possibly fail.

Socrates:: Therefore you were quite right in saying that knowledge is nothing else than perception, and there is complete identity between the doctrine of Homer and Heracleitus and all their followers—that all things are in motion, like streams—the doctrine of the great philosopher Protagoras that man is the measure of all things—and the doctrine of Theaetetus that, since these things are true, perception is knowledge. Eh, Theaetetus? Shall we say that this is, so to speak, your new-born child and the result of my midwifery? Or what shall we say?

Theaetetus:: We must say that, Socrates.

Socrates:: Well, we have at last managed to bring this forth, whatever it turns out to be; and now that it is born, we must in very truth perform the rite of running round with it in a circle—the circle of our argument—and see whether it may not turn out to be after all not worth rearing, but only a wind-egg, an imposture. But, perhaps, you think that any offspring of yours ought to be cared for and not put away; or will you bear to see it examined and not get angry if it is taken away from you, though it is your first-born?

Theodorus:: Theaetetus will bear it, Socrates, for he is not at all ill-tempered. But for heavens sake, Socrates, tell me, is all this wrong after all?

Socrates:: You are truly fond of argument, Theodorus, and a very good fellow to think that I am a sort of bag full of arguments and can easily pull one out and say that after all the other one was wrong; but you do not understand what is going on; none of the arguments comes from me, but always from him who is talking with me. I myself know nothing, except just a little, enough to extract an argument from another man who is wise and to receive it fairly. And now I will try to extract this thought from Theaetetus, but not to say anything myself.

Theodorus:: That is the better way, Socrates; do as you say.

Socrates:: Do you know, then, Theodorus, what amazes me in your friend Protagoras?

Theodorus:: What is it?

Socrates:: In general I like his doctrine that what appears to each one is to him, but I am amazed by the beginning of his book. I don’t see why he does not say in the beginning of his *Truth* that a pig or a dog-faced baboon or some still stranger creature of those that have sensations is the measure of all things. Then he might have begun to speak to us very imposingly and condescendingly, showing that while we were honoring him like a god for his wisdom, he was after all no better in intellect than any other man, or, for that matter, than a tadpole. What alternative is there, Theodorus? For if that opinion is true to each person which he acquires through sensation, and no one man can discern another's condition better than he himself, and one man has no better right to investigate whether another's opinion is true or false than he himself, but, as we have said several times, each man is to form his own opinions by himself, and these opinions are always right and true, why in the world, my friend, was Protagoras wise, so that he could rightly be thought worthy to be the teacher of other men and to be well paid, and why were we ignorant creatures and obliged to go to school to him, if each person is the measure of his own wisdom? Must we not believe that Protagoras was "playing to the gallery" in saying this? I say nothing of the ridicule that I and my science of midwifery deserve in that case,—and, I should say, the whole practice of dialectics, too. For would not the investigation of one another's fancies and opinions, and the attempt to refute them, when each mans must be right, be tedious and blatant folly, if the *Truth* of Protagoras is true and he was not jesting when he uttered his oracles from the shrine of his book?

Theodorus:: Socrates, the man was my friend, as you just remarked. So I should hate to bring about the refutation of Protagoras by agreeing with you, and I should hate also to oppose you contrary to my real convictions. So take Theaetetus again; especially as he seemed just now to follow your suggestions very carefully.

Socrates:: If you went to Sparta, Theodorus, and visited the wrestling-schools, would you think it fair to look on at other people naked, some of whom were of poor physique, without stripping and showing your own form, too?

Theodorus:: Why not, if I could persuade them to allow me to do so? So now I think I shall persuade you to let me be a spectator, and not to drag me into the ring, since I am old and stiff, but to take the younger and nimbler man as your antagonist.

Socrates:: Well, Theodorus, if that pleases you, it does not displease me, as the saying is. So I must attack the wise Theaetetus again. Tell me, Theaetetus, referring to the doctrine we have just expounded, do you not share my amazement at being suddenly exalted to an equality with the wisest man, or even god? Or do you think Protagoras's "measure" applies any less to gods than to men?

Theaetetus:: By no means; and I am amazed that you ask such a question at all; for when we were discussing the meaning of the doctrine that whatever appears to each one really is to him, I thought it was good; but now it has suddenly changed to the opposite.

Socrates:: You are young, my dear boy; so you are quickly moved and swayed by popular oratory. For in reply to what I have said, Protagoras, or someone speaking for him, will say, Excellent boys and old men, there you sit together declaiming to the people, and you bring in the gods, the question of whose existence or non-existence I exclude from oral and written discussion, and you say the sort of thing that the crowd would readily accept—that it is a terrible thing if every man is to be no better than any beast in point of wisdom; but you do not advance any cogent proof whatsoever; you base your statements on probability. If Theodorus, or any other geometrician, should base his geometry on probability, he would be of no account at all. So you and Theodorus had better consider whether you will accept arguments founded on plausibility and probabilities in such important matters.

Theaetetus:: That would not be right, Socrates; neither you nor we would think so.

Socrates:: Apparently, then, you and Theodorus mean we must look at the matter in a different way.

Theaetetus:: Yes, certainly in a different way.

Socrates:: Well, then, let us look at it in this way, raising the question whether knowledge is after all the same as perception, or different. For that is the object of all our discussion, and it was to answer that question that we stirred up all these strange doctrines, was it not?

Theaetetus:: Most assuredly.

Socrates:: Shall we then agree that all that we perceive by sight or hearing we know? For instance, shall we say that before having learned the language of foreigners we do not hear them when they speak, or that we both hear and know what they say? And again, if we do not know the letters, shall we maintain that we do not see them when we look at them or that if we really see them we know them?

Theaetetus:: We shall say, Socrates, that we know just so much of them as we hear or see; in the case of the letters, we both see and know the form and color, and in the spoken language we both hear and at the same time know the higher and lower notes of the voice; but we do not perceive through sight or hearing, and we do not know, what the grammarians and interpreters teach about them.

Socrates:: First-rate, Theaetetus! and it is a pity to dispute that, for I want you to grow. But look out for another trouble that is yonder coming towards us, and see how we can repel it.

Theaetetus:: What is it?

Socrates:: It is like this; If anyone should ask, “Is it possible, if a man has ever known a thing and still has and preserves a memory of that thing, that he does not, at the time when he remembers, know that very thing which he remembers?” I seem to be pretty long winded; but I merely want to ask if a man who has learned a thing does not know it when he remembers it.

Theaetetus:: Of course he does, Socrates; for what you suggest would be monstrous.

Socrates:: Am I crazy, then? Look here. Do you not say that seeing is perceiving and that sight is perception?

Theaetetus:: I do.

Socrates:: Then, according to what we have just said, the man who has seen a thing has acquired knowledge of that which he has seen?

Theaetetus:: Yes.

Socrates:: Well, then, do you not admit that there is such a thing as memory?

Theaetetus:: Yes.

Socrates:: Memory of nothing or of something?

Theaetetus:: Of something, surely.

Socrates:: Of things he has learned and perceived—that sort of things?

Theaetetus:: Of course.

Socrates:: A man sometimes remembers what he has seen, does he not?

Theaetetus:: He does.

Socrates:: Even when he shuts his eyes, or does he forget if he does that?

Theaetetus:: It would be absurd to say that, Socrates.

Socrates:: We must, though, if we are to maintain our previous argument; otherwise, it is all up with it.

Theaetetus:: I too, by Zeus, have my suspicions, but I don't fully understand you. Tell me how it is.

Socrates:: This is how it is; he who sees has acquired knowledge, we say, of that which he has seen; for it is agreed that sight and perception and knowledge are all the same.

Theaetetus:: Certainly.

Socrates:: But he who has seen and has acquired knowledge of what he saw, if he shuts his eyes, remembers it, but does not see it. Is that right?

Theaetetus:: Yes.

Socrates:: But "does not see" is the same as "does not know," if it is true that seeing is knowing.

Theaetetus:: True.

Socrates:: Then this is our result. When a man has acquired knowledge of a thing and still remembers it, he does not know it, since he does not see it; but we said that would be a monstrous conclusion.

Theaetetus:: Very true.

Socrates:: So, evidently, we reach an impossible result if we say that knowledge and perception are the same.

Theaetetus:: So it seems.

Socrates:: Then we must say they are different.

Theaetetus:: I suppose so.

Socrates:: Then what can knowledge be? We must, apparently, begin our discussion all over again. And yet, Theaetetus, what are we on the point of doing?

Theaetetus:: About what?

Socrates:: It seems to me that we are behaving like a worthless game-cock; before winning the victory we have leapt away from our argument and begun to crow.

Theaetetus:: How so?

Socrates:: We seem to be acting like professional debaters; we have based our agreements on the mere similarity of words and are satisfied to have got the better of the argument in such a way, and we do not see that we, who claim to be, not contestants for a prize, but lovers of wisdom, are doing just what those ingenious persons do.

Theaetetus:: I do not yet understand what you mean.

Socrates:: Well, I will try to make my thought clear. We asked, you recollect, whether a man who has learned something and remembers it does not know it. We showed first that the one who has seen and then shuts his eyes remembers, although he does not see, and then we showed that he does not know, although at the same time he remembers; but this, we said, was impossible. And so the Protagorean tale was brought to naught, and yours also about the identity of knowledge and perception.

Theaetetus:: Evidently.

Socrates:: It would not be so, I fancy, my friend, if the father of the first of the two tales were alive; he would have had a good deal to say in its defense. But he is dead, and we are abusing the orphan. Why, even the guardians whom Protagoras left—one of whom is Theodorus here—are unwilling to come to the child's assistance. So it seems that we shall have to do it ourselves, assisting him in the name of justice.

Theodorus:: Do so, for it is not I, Socrates, but rather Callias the son of Hipponicus, who is the guardian of his children. As for me, I turned rather too soon from abstract speculations to geometry. However, I shall be grateful to you if you come to his assistance.

Socrates:: Good, Theodorus! Now see how I shall help him; for a man might find himself involved in still worse inconsistencies than those in which we found ourselves just now, if he did not pay attention to the terms which we generally use in assent and denial. Shall I explain this to you, or only to Theaetetus?

Theodorus:: To both of us, but let the younger answer; for he will be less disgraced if he is discomfited.

Socrates:: Very well; now I am going to ask the most frightfully difficult question of all. It runs, I believe, something like this; Is it possible for a person, if he knows a thing, at the same time not to know that which he knows?

Theodorus:: Now, then, what shall we answer, Theaetetus?

Theaetetus:: It is impossible, I should think.

Socrates:: Not if you make seeing and knowing identical.

For what will you do with a question from which there is no escape, by which you are, as the saying is, caught in a pit, when your adversary, unabashed, puts his hand over one of your eyes and asks if you see his cloak with the eye that is covered?

Theaetetus:: I shall say, I think, “Not with that eye, but with the other.”

Socrates:: Then you see and do not see the same thing at the same time?

Theaetetus:: After a fashion.

Socrates:: ”That,” he will reply, “is not at all what I want, and I did not ask about the fashion, but whether you both know and do not know the same thing. Now manifestly you see that which you do not see. But you have agreed that seeing is knowing and not seeing is not knowing. Very well; from all this, reckon out what the result is.”

Theaetetus:: Well, I reckon out that the result is the contrary of my hypothesis.

Socrates:: And perhaps, my fine fellow, more troubles of the same sort might have come upon you, if anyone asked you further questions—whether it is possible to know the same thing both sharply and dully, to know close at hand but not at a distance, to know both violently and gently, and countless other questions, such as a nimble fighter, fighting for pay in the war of words, might have lain in wait and asked you, when you said that knowledge and perception were the same thing; he would have charged down upon hearing and smelling and such senses, and would have argued persistently and unceasingly until you were filled with admiration of his greatly desired wisdom and were taken in his toils, and then, after subduing and binding you he would at once proceed to bargain with you for such ransom as might be agreed upon between you. What argument, then, you might ask, will Protagoras produce to strengthen his forces? Shall we try to carry on the discussion?

Theaetetus:: By all means.

Socrates:: He will, I fancy, say all that we have said in his defense and then will close with us, saying contemptuously, "Our estimable Socrates here frightened a little boy by asking if it was possible for one and the same person to remember and at the same time not to know one and the same thing, and when the child in his fright said 'no,' because he could not foresee what would result, Socrates made poor me a laughing-stock in his talk. But, you slovenly Socrates, the facts stand thus; when you examine any doctrine of mine by the method of questioning, if the person who is questioned makes such replies as I should make and comes to grief, then I am refuted, but if his replies are quite different, then the person questioned is refuted, not I. Take this example. Do you suppose you could get anybody to admit that the memory a man has of a past feeling he no longer feels is anything like the feeling at the time when he was feeling it? Far from it. Or that he would refuse to admit that it is possible for one and the same person to know and not to know one and the same thing? Or if he were afraid to admit this, would he ever admit that a person who has become unlike is the same as before he became unlike? In fact, if we are to be on our guard against such verbal entanglements, would he admit that a person is one at all, and not many, who become infinite in number, if the process of becoming different continues? But, my dear fellow," he will say, "attack my real doctrines in a more generous manner, and prove, if you can, that perceptions, when they come, or become, to each of us, are not individual, or that, if they are individual, what appears to each one would not, for all that, become to that one alone—or, if you prefer to say 'be, would not be—to whom it appears. But when you talk of pigs and dog-faced baboons, you not only act like a pig yourself, but you persuade your hearers to act so toward my writings, and that is not right. For I maintain that the truth is as I have written; each one of us is the measure of the things that are and those that are not; but each person differs immeasurably from every other in just this, that to one person some things appear and are, and to another person other things. And I do not by any means say that wisdom and the wise man do not exist; on the contrary, I say that if bad things appear and are to any one of us, precisely that man is wise who causes a change and makes good things appear and be to him. And, moreover, do not lay too much stress upon the words of my argument, but get a clearer understanding of my meaning from what I am going to say. Recall to your mind what was said before, that his food appears and is bitter to the sick man, but appears and is the opposite of bitter to the man in health. Now neither of these two is to be made wiser than he is—

that is not possible—nor should the claim be made that the sick man is ignorant because his opinions are ignorant, or the healthy man wise because his are different; but a change must be made from the one condition to the other, for the other is better. So, too, in education a change has to be made from a worse to a better condition; but the physician causes the change by means of drugs, and the teacher of wisdom by means of words. And yet, in fact, no one ever made anyone think truly who previously thought falsely, since it is impossible to think that which is not or to think any other things than those which one feels; and these are always true. But I believe that a man who, on account of a bad condition of soul, thinks thoughts akin to that condition, is made by a good condition of soul to think correspondingly good thoughts; and some men, through inexperience, call these appearances true, whereas I call them better than the others, but in no wise truer. And the wise, my dear Socrates, I do not by any means call tadpoles; when they have to do with the human body, I call them physicians, and when they have to do with plants, husbandmen; for I assert that these latter, when plants are sickly, instill into them good and healthy sensations, and true ones instead of bad sensations, and that the wise and good orators make the good, instead of the evil, seem to be right to their states. For I claim that whatever seems right and honorable to a state is really right and honorable to it, so long as it believes it to be so; but the wise man causes the good, instead of that which is evil to them in each instance, to be and seem right and honorable. And on the same principle the teacher who is able to train his pupils in this manner is not only wise but is also entitled to receive high pay from them when their education is finished. And in this sense it is true that some men are wiser than others, and that no one thinks falsely, and that you, whether you will or no, must endure to be a measure. Upon these positions my doctrine stands firm; and if you can dispute it in principle, dispute it by bringing an opposing doctrine against it; or if you prefer the method of questions, ask questions; for an intelligent person ought not to reject this method, on the contrary, he should choose it before all others. However, let me make a suggestion; do not be unfair in your questioning; it is very inconsistent for a man who asserts that he cares for virtue to be constantly unfair in discussion; and it is unfair in discussion when a man makes no distinction between merely trying to make points and carrying on a real argument. In the former he may jest and try to trip up his opponent as much as he can, but in real argument he must be in earnest and must set his interlocutor on his feet, pointing out to him those slips only which are due to himself and his previous associations. For if you act in this way, those who debate with you will cast the blame for their confusion and perplexity upon themselves, not upon you; they will run after you and love you, and they will hate themselves and run away from themselves, taking refuge in philosophy, that they may escape from their former selves by becoming different. But if you act in the opposite way, as most teachers do, you will produce the opposite result, and instead of making your young associates philosophers, you will make them hate philosophy when they grow older. If, therefore, you will accept the suggestion which I made before, you will avoid a hostile and combative attitude and in a gracious spirit will enter the lists with me and inquire what we really mean when we declare that all things are in motion and that whatever seems is to each individual, whether man or state. And on the basis of that you will consider the question whether knowledge and perception are the same or different, instead of doing as you did a while ago, using as your basis the ordinary meaning of names and words, which most people pervert in haphazard ways and thereby cause all sorts of perplexity in one another.” Such, Theodorus, is the help I have furnished your friend to the best of my ability—not much, for my resources are small; but if he were living himself he would have helped his offspring in a fashion more magnificent.

Theodorus:: You are joking, Socrates, for you have come to the mans assistance with all the velour of youth.

Socrates:: Thank you, my friend. Tell me, did you observe just now that Protagoras reproached us for addressing our words to a boy, and said that we made the boys timidity aid us in our argument against his doctrine, and that he called our procedure a mere display of wit, solemnly insisting upon the importance of “the measure of all things” and urging us to treat his doctrine seriously?

Theodorus:: Of course I observed it, Socrates.

Socrates:: Well then, shall we do as he says?

Theodorus:: By all means.

Socrates:: Now you see that all those present, except you and myself, are boys. So if we are to do as the man asks, you and I must question each other and make reply in order to show our serious attitude towards his doctrine; then he cannot, at any rate, find fault with us on the ground that we examined his doctrine in a spirit of levity with mere boys.

Theodorus:: Why is this? Would not Theaetetus follow an investigation better than many a man with a long beard?

Socrates:: Yes, but not better than you, Theodorus. So you must not imagine that I have to defend your deceased friend by any and every means, while you do nothing at all; but come, my good man, follow the discussion a little way, just until we can see whether, after all, you must be a measure in respect to diagrams, or whether all men are as sufficient unto themselves as you are in astronomy and the other sciences in which you are alleged to be superior.

Theodorus:: It is not easy, Socrates, for anyone to sit beside you and not be forced to give an account of himself and it was foolish of me just now to say you would excuse me and would not oblige me, as the Lacedaemonians do, to strip; you seem to me to take rather after Sciron. For the Lacedaemonians tell people to go away or else strip, but you seem to me to play rather the role of Antaeus; for you do not let anyone go who approaches you until you have forced him to strip and wrestle with you in argument.

Socrates:: Your comparison with Sciron and Antaeus pictures my complaint admirably; only I am a more stubborn combatant than they; for many a Heracles and many a Theseus, strong men of words, have fallen in with me and belabored me mightily, but still I do not desist, such a terrible love of this kind of exercise has taken hold on me. So, now that it is your turn, do not refuse to try a bout with me; it will be good for both of us.

Theodorus:: I say no more. Lead on as you like. Most assuredly I must endure whatsoever fate you spin for me, and submit to interrogation. However, I shall not be able to leave myself in your hands beyond the point you propose.

Socrates:: Even that is enough. And please be especially careful that we do not inadvertently give a playful turn to our argument and somebody reproach us again for it.

Theodorus:: Rest assured that I will try so far as in me lies.

Socrates:: Let us, therefore, first take up the same question as before, and let us see whether we were right or wrong in being displeased and finding fault with the doctrine because it made each individual self-sufficient in wisdom. Protagoras granted that some persons excelled others in respect to the better and the worse, and these he said were wise, did he not?

Theodorus:: Yes.

Socrates:: Now if he himself were present and could agree to this, instead of our making the concession for him in our effort to help him, there would be no need of taking up the question again or of reinforcing his argument. But, as it is, perhaps it might be said that we have no authority to make the agreement for him; therefore it is better to make the agreement still clearer on this particular point; for it makes a good deal of difference whether it is so or not.

Theodorus:: That is true.

Socrates:: Let us then get the agreement in as concise a form as possible, not through others, but from his own statement.

Theodorus:: How?

Socrates:: In this way; He says, does he not? “that which appears to each person really is to him to whom it appears.”

Theodorus:: Yes, that is what he says.

Socrates:: Well then, Protagoras, we also utter the opinions of a man, or rather, of all men, and we say that there is no one who does not think himself wiser than others in some respects and others wiser than himself in other respects; for instance, in times of greatest danger, when people are distressed in war or by diseases or at sea, they regard their commanders as gods and expect them to be their saviors, though they excel them in nothing except knowledge. And all the world of men is, I dare say, full of people seeking teachers and rulers for themselves and the animals and for human activities, and, on the other hand, of people who consider themselves qualified to teach and qualified to rule. And in all these instances we must say that men themselves believe that wisdom and ignorance exist in the world of men, must we not?

Theodorus:: Yes, we must.

Socrates:: And therefore they think that wisdom is true thinking and ignorance false opinion, do they not?

Theodorus:: Of course.

Socrates:: Well then, Protagoras, what shall we do about the doctrine? Shall we say that the opinions which men have are always true, or sometimes true and sometimes false? For the result of either statement is that their opinions are not always true, but may be either true or false. Just think, Theodorus; would any follower of Protagoras, or you yourself, care to contend that no person thinks that another is ignorant and has false opinions?

Theodorus:: No, that is incredible, Socrates.

Socrates:: And yet this is the predicament to which the doctrine that man is the measure of all things inevitably leads.

Theodorus:: How so?

Socrates:: When you have come to a decision in your own mind about something, and declare your opinion to me, this opinion is, according to his doctrine, true to you; let us grant that; but may not the rest of us sit in judgment on your decision, or do we always judge that your opinion is true? Do not myriads of men on each occasion oppose their opinions to yours, believing that your judgment and belief are false?

Theodorus:: Yes, by Zeus, Socrates, countless myriads in truth, as Homer says, and they give me all the trouble in the world.

Socrates:: Well then, shall we say that in such a case your opinion is true to you but false to the myriads?

Theodorus:: That seems to be the inevitable deduction.

Socrates:: And what of Protagoras himself? If neither he himself thought, nor people in general think, as indeed they do not, that man is the measure of all things, is it not inevitable that the “truth” which he wrote is true to no one? But if he himself thought it was true, and people in general do not agree with him, in the first place you know that it is just so much more false than true as the number of those who do not believe it is greater than the number of those who do.

Theodorus:: Necessarily, if it is to be true or false according to each individual opinion.

Socrates:: Secondly, it involves this, which is a very pretty result; he concedes about his own opinion the truth of the opinion of those who disagree with him and think that his opinion is false, since he grants that the opinions of all men are true.

Theodorus:: Certainly.

Socrates:: Then would he not be conceding that his own opinion is false, if he grants that the opinion of those who think he is in error is true?

Theodorus:: Necessarily.

Socrates:: But the others do not concede that they are in error, do they?

Theodorus:: No, they do not.

Socrates:: And he, in turn, according to his writings, grants that this opinion also is true.

Theodorus:: Evidently.

Socrates:: Then all men, beginning with Protagoras, will dispute—or rather, he will grant, after he once concedes that the opinion of the man who holds the opposite view is true—even Protagoras himself, I say, will concede that neither a dog nor any casual man is a measure of anything whatsoever that he has not learned. Is not that the case?

Theodorus:: Yes.

Socrates:: Then since the “truth” of Protagoras is disputed by all, it would be true to nobody, neither to anyone else nor to him.

Theodorus:: I think, Socrates, we are running my friend too hard.

Socrates:: But, my dear man, I do not see that we are running beyond what is right. Most likely, though, he, being older, is wiser than we, and if, for example, he should emerge from the ground, here at our feet, if only as far as the neck, he would prove abundantly that I was making a fool of myself by my talk, in all probability, and you by agreeing with me; then he would sink down and be off at a run. But we, I suppose, must depend on ourselves, such as we are, and must say just what we think. And so now must we not say that everybody would agree that some men are wiser and some more ignorant than others?

Theodorus:: Yes I think at least we must.

Socrates:: And do you think his doctrine might stand most firmly in the form in which we sketched it when defending Protagoras, that most things—hot, dry, sweet, and everything of that sort—are to each person as they appear to him, and if Protagoras is to concede that there are cases in which one person excels another, he might be willing to say that in matters of health and disease not every woman or child—or beast, for that matter—knows what is wholesome for it and is able to cure itself, but in this point, if in any, one person excels another?

Theodorus:: Yes, I think that is correct.

Socrates:: And likewise in affairs of state, the honorable and disgraceful, the just and unjust, the pious and its opposite, are in truth to each state such as it thinks they are and as it enacts into law for itself, and in these matters no citizen and no state is wiser than another; but in making laws that are advantageous to the state, or the reverse, Protagoras again will agree that one counselor is better than another, and the opinion of one state better than that of another as regards the truth, and he would by no means dare to affirm that whatsoever laws a state makes in the belief that they will be advantageous to itself are perfectly sure to prove advantageous. But in the other class of things—I mean just and unjust, pious and impious—they are willing to say with confidence that no one of them possesses by nature an existence of its own; on the contrary, that the common opinion becomes true at the time when it is adopted and remains true as long as it is held; this is substantially the theory of those who do not altogether affirm the doctrine of Protagoras. But, Theodorus, argument after argument, a greater one after a lesser, is overtaking us.

Theodorus:: Well, Socrates, we have plenty of leisure, have we not?

Socrates:: Apparently we have. And that makes me think, my friend, as I have often done before, how natural it is that those who have spent a long time in the study of philosophy appear ridiculous when they enter the courts of law as speakers.

Theodorus:: What do you mean?

Socrates:: Those who have knocked about in courts and the like from their youth up seem to me, when compared with those who have been brought up in philosophy and similar pursuits, to be as slaves in breeding compared with freemen.

Theodorus:: In what way is this the case?

Socrates:: In this way; the latter always have that which you just spoke of, leisure, and they talk at their leisure in peace; just as we are now taking up argument after argument, already beginning a third, so can they, if, as in our case, the new one pleases them better than that in which they are engaged; and they do not care at all whether their talk is long or short, if only they attain the truth. But the men of the other sort are always in a hurry—for the water flowing through the water-clock urges them on—and the other party in the suit does not permit them to talk about anything they please, but stands over them exercising the laws compulsion by reading the brief, from which no deviation is allowed (this is called the affidavit); and their discourse is always about a fellow slave and is addressed to a master who sits there holding some case or other in his hands; and the contests never run an indefinite course, but are always directed to the point at issue, and often the race is for the defendants life. As a result of all this, the speakers become tense and shrewd; they know how to wheedle their master with words and gain his favor by acts; but in their souls they become small and warped. For they have been deprived of growth and straightforwardness and independence by the slavery they have endured from their youth up, for this forces them to do crooked acts by putting a great burden of fears and dangers upon their souls while these are still tender; and since they cannot bear this burden with uprightness and truth, they turn forthwith to deceit and to requiting wrong with wrong, so that they become greatly bent and stunted. Consequently they pass from youth to manhood with no soundness of mind in them, but they think they have become clever and wise. So much for them, Theodorus. Shall we describe those who belong to our band, or shall we let that go and return to the argument, in order to avoid abuse of that freedom and variety of discourse, of which we were speaking just now?

Theodorus:: By all means, Socrates, describe them; for I like your saying that we who belong to this band are not the servants of our arguments, but the arguments are, as it were, our servants, and each of them must await our pleasure to be finished; for we have neither judge, nor, as the poets have, any spectator set over us to censure and rule us.

Socrates:: Very well, that is quite appropriate, since it is your wish; and let us speak of the leaders; for why should anyone talk about the inferior philosophers? The leaders, in the first place, from their youth up, remain ignorant of the way to the agora, do not even know where the court-room is, or the senate-house, or any other public place of assembly; as for laws and decrees, they neither hear the debates upon them nor see them when they are published; and the strivings of political clubs after public offices, and meetings, and banquets, and retellings with chorus girls—it never occurs to them even in their dreams to indulge in such things. And whether anyone in the city is of high or low birth, or what evil has been inherited by anyone from his ancestors, male or female, are matters to which they pay no more attention than to the number of pints in the sea, as the saying is. And all these things the philosopher does not even know that he does not know; for he does not keep aloof from them for the sake of gaining reputation, but really it is only his body that has its place and home in the city; his mind, considering all these things petty and of no account, disdains them and is borne in all directions, as Pindar says, “both below the earth,” and measuring the surface of the earth, and “above the sky,” studying the stars, and investigating the universal nature of every thing that is, each in its entirety, never lowering itself to anything close at hand.

Theodorus:: What do you mean by this, Socrates?

Socrates:: Why, take the case of Thales, Theodorus. While he was studying the stars and looking upwards, he fell into a pit, and a neat, witty Thracian servant girl jeered at him, they say, because he was so eager to know the things in the sky that he could not see what was there before him at his very feet. The same jest applies to all who pass their lives in philosophy. For really such a man pays no attention to his next door neighbor; he is not only ignorant of what he is doing, but he hardly knows whether he is a human being or some other kind of a creature; but what a human being is and what is proper for such a nature to do or bear different from any other, this he inquires and exerts himself to find out. Do you understand, Theodorus, or not?

Theodorus:: Yes, I do; you are right.

Socrates:: Hence it is, my friend, such a man, both in private, when he meets with individuals, and in public, as I said in the beginning, when he is obliged to speak in court or elsewhere about the things at his feet and before his eyes, is a laughing-stock not only to Thracian girls but to the multitude in general, for he falls into pits and all sorts of perplexities through inexperience, and his awkwardness is terrible, making him seem a fool; for when it comes to abusing people he has no personal abuse to offer against anyone, because he knows no evil of any man, never having cared for such things; so his perplexity makes him appear ridiculous; and as to laudatory speeches and the boastings of others, it becomes manifest that he is laughing at them—not pretending to laugh, but really laughing—and so he is thought to be a fool. When he hears a panegyric of a despot or a king he fancies he is listening to the praises of some herdsman—a swineherd, a shepherd, or a neatherd, for instance—who gets much milk from his beasts; but he thinks that the ruler tends and milks a more perverse and treacherous creature than the herdsmen, and that he must grow coarse and uncivilized, no less than they, for he has no leisure and lives surrounded by a wall, as the herdsmen live in their mountain pens. And when he hears that someone is amazingly rich, because he owns ten thousand acres of land or more, to him, accustomed as he is to think of the whole earth, this seems very little. And when people sing the praises of lineage and say someone is of noble birth, because he can show seven wealthy ancestors, he thinks that such praises betray an altogether dull and narrow vision on the part of those who utter them; because of lack of education they cannot keep their eyes fixed upon the whole and are unable to calculate that every man has had countless thousands of ancestors and progenitors, among whom have been in any instance rich and poor, kings and slaves, barbarians and Greeks. And when people pride themselves on a list of twenty-five ancestors and trace their pedigree back to Heracles, the son of Amphitryon, the pettiness of their ideas seems absurd to him; he laughs at them because they cannot free their silly minds of vanity by calculating that Amphitryons twenty-fifth ancestor was such as fortune happened to make him, and the fiftieth for that matter. In all these cases the philosopher is derided by the common herd, partly because he seems to be contemptuous, partly because he is ignorant of common things and is always in perplexity.

Theodorus:: That all happens just as you say, Socrates.

Socrates:: But when, my friend, he draws a man upwards and the other is willing to rise with him above the level of “What wrong have I done you or you me?” to the investigation of abstract right and wrong, to inquire what each of them is and wherein they differ from each other and from all other things, or above the level of “Is a king happy?” or, on the other hand, “Has he great wealth? to the investigation of royalty and of human happiness and wretchedness in general, to see what the nature of each is and in what way man is naturally fitted to gain the one and escape the other when that man of small and sharp and pettifogging mind is compelled in his turn to give an account of all these things, then the tables are turned; dizzied by the new experience of hanging at such a height, he gazes downward from the air in dismay and perplexity; he stammers and becomes ridiculous, not in the eyes of Thracian girls or other uneducated persons, for they have no perception of it, but in those of all men who have been brought up as free men, not as slaves. Such is the character of each of the two classes, Theodorus, of the man who has truly been brought up in freedom and leisure, whom you call a philosopher—who may without censure appear foolish and good for nothing when he is involved in menial services, if, for instance, he does not know how to pack up his bedding, much less to put the proper sweetening into a sauce or a fawning speech—and of the other, who can perform all such services smartly and quickly, but does not know how to wear his cloak as a freeman should, properly draped, still less to acquire the true harmony of speech and hymn aright the praises of the true life of gods and blessed men.

Theodorus:: If, Socrates, you could persuade all men of the truth of what you say as you do me, there would be more peace and fewer evils among mankind.

Socrates:: But it is impossible that evils should be done away with, Theodorus, for there must always be something opposed to the good; and they cannot have their place among the gods, but must inevitably hover about mortal nature and this earth. Therefore we ought to try to escape from earth to the dwelling of the gods as quickly as we can; and to escape is to become like God, so far as this is possible; and to become like God is to become righteous and holy and wise. But, indeed, my good friend, it is not at all easy to persuade people that the reason generally advanced for the pursuit of virtue and the avoidance of vice—namely, in order that a man may not seem bad and may seem good—is not the reason why the one should be practiced and the other not; that, I think, is merely old wives chatter, as the saying is. Let us give the true reason. God is in no wise and in no manner unrighteous, but utterly and perfectly righteous, and there is nothing so like him as that one of us who in turn becomes most nearly perfect in righteousness. It is herein that the true cleverness of a man is found and also his worthlessness and cowardice; for the knowledge of this is wisdom or true virtue, and ignorance of it is folly or manifest wickedness; and all the other kinds of seeming cleverness and wisdom are paltry when they appear in public affairs and vulgar in the arts. Therefore by far the best thing for the unrighteous man and the man whose words or deeds are impious is not to grant that he is clever through knavery; for such men glory in that reproach, and think it means that they are not triflers, "useless burdens upon the earth," but such as men should be who are to live safely in a state. So we must tell them the truth that just because they do not think they are such as they are, they are so all the more truly; for they do not know the penalty of unrighteousness, which is the thing they most ought to know. For it is not what they think it is—scourgings and death, which they sometimes escape entirely when they have done wrong—but a penalty which it is impossible to escape.

Theodorus:: What penalty do you mean?

Socrates:: Two patterns, my friend, are set up in the world, the divine, which is most blessed, and the godless, which is most wretched. But these men do not see that this is the case, and their silliness and extreme foolishness blind them to the fact that through their unrighteous acts they are made like the one and unlike the other. They therefore pay the penalty for this by living a life that conforms to the pattern they resemble; and if we tell them that, unless they depart from their "cleverness," the blessed place that is pure of all things evil will not receive them after death, and here on earth they will always live the life like themselves—evil men associating with evil—when they hear this, they will be so confident in their unscrupulous cleverness that they will think our words the talk of fools.

Theodorus:: Very true, Socrates.

Socrates:: Yes, my friend, I know. However, there is one thing that has happened to them; whenever they have to carry on a personal argument about the doctrines to which they object, if they are willing to stand their ground for a while like men and do not run away like cowards, then, my friend, they at last become strangely dissatisfied with themselves and their arguments; their brilliant rhetoric withers away, so that they seem no better than children. But this is a digression. Let us turn away from these matters—if we do not, they will come on like an ever-rising flood and bury in silt our original argument—and let us, if you please, proceed.

Theodorus:: To me, Socrates, such digressions are quite as agreeable as the argument; for they are easier for a man of my age to follow. However, if you prefer, let us return to our argument.

Socrates:: Very well. We were at about the point in our argument where we said that those who declare that only motion is reality, and that whatever seems to each man really is to him to whom it seems, are willing to maintain their position in regard to other matters and to maintain especially in regard to justice that whatever laws a state makes, because they seem to it just, are just to the state that made them, as long as they remain in force; but as regards the good, that nobody has the courage to go on and contend that whatever laws a state passes thinking them advantageous to it are really advantageous as long as they remain in force, unless what he means is merely the name “advantageous;” and that would be making a joke of our argument. Am I right?

Theodorus:: Certainly.

Socrates:: Yes; for he must not mean merely the name, but the thing named must be the object of his attention.

Theodorus:: True.

Socrates:: But the state, in making laws, aims, of course, at advantage, whatever the name it gives it, and makes all its laws as advantageous as possible to itself, to the extent of its belief and ability; or has it in making laws anything else in view?

Theodorus:: Certainly not.

Socrates:: And does it always hit the mark, or does every state often miss it?

Theodorus:: I should say they do often miss it!

Socrates:: Continuing, then, and proceeding from this point, every one would more readily agree to this assertion, if the question were asked concerning the whole class to which the advantageous belongs; and that whole class, it would seem, pertains to the future. For when we make laws, we make them with the idea that they will be advantageous in after time; and this is rightly called the future.

Theodorus:: Certainly.

Socrates:: Come then, on this assumption, let us question Protagoras or someone of those who agree with him. Man is the measure of all things, as your school says, Protagoras, of the white, the heavy, the light, everything of that sort without exception; for he possesses within himself the standard by which to judge them, and when his thoughts about them coincide with his sensations, he thinks what to him is true and really is. Is not that what they say?

Theodorus:: Yes.

Socrates:: Does he, then, also, Protagoras, we shall say, possess within himself the standard by which to judge of the things which are yet to be, and do those things which he thinks will be actually come to pass for him who thought them? Take, for instance, heat; if some ordinary man thinks he is going to take a fever, that is to say, that this particular heat will be, and some other man, who is a physician, thinks the contrary, whose opinion shall we expect the future to prove right? Or perhaps the opinion of both, and the man will become, not hot or feverish to the physician, but to himself both?

Theodorus:: No, that would be ridiculous.

Socrates:: But, I imagine, in regard to the sweetness or dryness which will be in a wine, the opinion of the husbandman, not that of the lyre-player, will be valid.

Theodorus:: Of course.

Socrates:: And again, in a matter of discord or tunefulness in music that has never been played, a gymnastic teacher could not judge better than a musician what will, when performed, seem tuneful even to a gymnastic teacher himself.

Theodorus:: Certainly not.

Socrates:: Then, too, when a banquet is in preparation the opinion of him who is to be a guest, unless he has training in cookery, is of less value concerning the pleasure that will be derived from the viands than that of the cook. For we need not yet argue about that which already is or has been pleasant to each one; but concerning that which will in the future seem and be pleasant to each one, is he himself the best judge for himself, or would you, Protagoras—at least as regards the arguments which will be persuasive in court to each of us—be able to give an opinion beforehand better than anyone whatsoever who has no especial training?

Theodorus:: Certainly, Socrates, in this, at any rate, he used to declare emphatically that he himself excelled everyone.

Socrates:: Yes, my friend, he certainly did; otherwise nobody would have paid him a high fee for his conversations, if he had not made his pupils believe that neither a prophet nor anyone else could judge better than himself what was in the future to be and seem.

Theodorus:: Very true.

Socrates:: Both lawmaking, then, and the advantageous are concerned with the future, and everyone would agree that a state in making laws must often fail to attain the greatest advantage?

Theodorus:: Assuredly.

Socrates:: Then it will be a fair answer if we say to your master that he is obliged to agree that one man is wiser than another, and that such a wise man is a measure, but that I, who am without knowledge, am not in the least obliged to become a measure, as the argument in his behalf just now tried to oblige me to be, whether I would or no.

Theodorus:: In that respect, Socrates, I think that the argument is most clearly proved to be wrong, and it is proved wrong in this also, in that it declares the opinions of others to be valid, whereas it was shown that they do not consider his arguments true at all.

Socrates:: In many other respects, Theodorus, it could be proved that not every opinion of every person is true, at any rate in matters of that kind; but it is more difficult to prove that opinions are not true in regard to the momentary states of feeling of each person, from which our perceptions and the opinions concerning them arise. But perhaps I am quite wrong; for it may be impossible to prove that they are not true, and those who say that they are manifest and are forms of knowledge may perhaps be right, and Theaetetus here was not far from the mark in saying that perception and knowledge are identical. So we must, as the argument in behalf of Protagoras enjoined upon us, come up closer and examine this doctrine of motion as the fundamental essence, rapping on it to see whether it rings sound or unsound. As you know, a strife has arisen about it, no mean one, either, and waged by not a few combatants.

Theodorus:: Yes, far from mean, and it is spreading far and wide all over Ionia; for the disciples of Heracleitus are supporting this doctrine very vigorously.

Socrates:: Therefore, my dear Theodorus, we must all the more examine it from the beginning as they themselves present it.

Theodorus:: Certainly we must. For it is no more possible, Socrates, to discuss these doctrines of Heracleitus (or, as you say, of Homer or even earlier sages) with the Ephesians themselves—those, at least, who profess to be familiar with them—than with madmen. For they are, quite in accordance with their text-books, in perpetual motion; but as for keeping to an argument or a question and quietly answering and asking in turn, their power of doing that is less than nothing; or rather the words “nothing at all” fail to express the absence from these fellows of even the slightest particle of rest. But if you ask one of them a question, he pulls out puzzling little phrases, like arrows from a quiver, and shoots them off; and if you try to get hold of an explanation of what he has said, you will be struck with another phrase of novel and distorted wording, and you never make any progress whatsoever with any of them, nor do they themselves with one another, for that matter, but they take very good care to allow nothing to be settled either in an argument or in their own minds, thinking, I suppose, that this is being stationary; but they wage bitter war against the stationary, and, so far as they can, they banish it altogether.

Socrates:: Perhaps, Theodorus, you have seen the men when they are fighting, but have not been with them when they are at peace; for they are no friends of yours; but I fancy they utter such peaceful doctrines at leisure to those pupils whom they wish to make like themselves.

Theodorus:: What pupils, my good man? Such people do not become pupils of one another, but they grow up of themselves, each one getting his inspiration from any chance source, and each thinks the other knows nothing. From these people, then, as I was going to say, you would never get an argument either with their will or against it; but we must ourselves take over the question and investigate it as if it were a problem of mathematics.

Socrates:: Yes, what you say is reasonable. Now as for the problem, have we not heard from the ancients, who concealed their meaning from the multitude by their poetry, that the origin of all things is Oceanus and Tethys. flowing streams, and that nothing is at rest; and likewise from the moderns, who, since they are wiser, declare their meaning openly, in order that even cobblers may hear and know their wisdom and may cease from the silly belief that some things are at rest and others in motion, and, after learning that everything is in motion, may honor their teachers? But, Theodorus, I almost forgot that others teach the opposite of this;

> So that it is motionless, the name of which is the
> All.

and all the other doctrines maintained by Melissus and Parmenides and the rest, in opposition to all these; they maintain that everything is one and is stationary within itself, having no place in which to move. What shall we do with all these people, my friend? For, advancing little by little, we have unwittingly fallen between the two parties, and, unless we protect ourselves and escape somehow, we shall pay the penalty, like those in the palaestra, who in playing on the line are caught by both sides and dragged in opposite directions. I think, then, we had better examine first the one party, those whom we originally set out to join, the flowing ones, and if we find their arguments sound, we will help them to pull us over, trying thus to escape the others; but if we find that the partisans of “the whole” seem to have truer doctrines, we will take refuge with them from those who would move what is motionless. But if we find that neither party has anything reasonable to say, we shall be ridiculous if we think that we, who are of no account, can say anything worth while after having rejected the doctrines of very ancient and very wise men. Therefore, Theodorus, see whether it is desirable to go forward into so great a danger.

Theodorus:: Oh, it would be unendurable, Socrates, not to examine thoroughly the doctrines of both parties.

Socrates:: Then they must be examined, since you are so urgent. Now I think the starting-point of our examination of the doctrine of motion is this; Exactly what do they mean, after all, when they say that all things are in motion? What I wish to ask is this; Do they mean to say that there is only one kind of motion or, as I believe, two? But it must not be my belief alone; you must share it also, that if anything happens to us we may suffer it in common. Tell me, do you call it motion when a thing changes its place or turns round in the same place?

Theodorus:: Yes.

Socrates:: Let this, then, be one kind of motion. Now when a thing remains in the same place, but grows old, or becomes black instead of white, or hard instead of soft, or undergoes any other kind of alteration, is it not proper to say that this is another kind of motion?

Theodorus:: I think so.

Socrates:: Nay, it must be true. So I say that there are these two kinds of motion; “alteration,” and “motion in space.”

Theodorus:: And you are right.

Socrates:: Now that we have made this distinction, let us at once converse with those who say that all things are in motion, and let us ask them, “Do you mean that everything moves in both ways, moving in space and undergoing alteration, or one thing in both ways and another in one of the two ways only?”

Theodorus:: By Zeus, I cannot tell! But I think they would say that everything moves in both ways.

Socrates:: Yes; otherwise, my friend, they will find that things in motion are also things at rest, and it will be no more correct to say that all things are in motion than that all things are at rest.

Theodorus:: What you say is very true.

Socrates:: Then since they must be in motion, and since absence of motion must be impossible for anything, all things are always in all kinds of motion.

Theodorus:: Necessarily.

Socrates:: Then just examine this point of their doctrine. Did we not find that they say that heat or whiteness or anything you please arises in some such way as this, namely that each of these moves simultaneously with perception between the active and the passive element, and the passive becomes percipient, but not perception, and the active becomes, not a quality, but endowed with a quality? Now perhaps quality seems an extraordinary word, and you do not understand it when used with general application, so let me give particular examples. For the active element becomes neither heat nor whiteness, but hot or white, and other things in the same way; you probably remember that this was what we said earlier in our discourse, that nothing is in itself unvaryingly one, neither the active nor the passive, but from the union of the two with one another the perceptions and the perceived give birth and the latter become things endowed with some quality while the former become percipient.

Theodorus:: I remember, of course.

Socrates:: Let us then pay no attention to other matters, whether they teach one thing or another; but let us attend strictly to this only, which is the object of our discussion. Let us ask them, “Are all things, according to your doctrine, in motion and flux?” Is that so?

Theodorus:: Yes.

Socrates:: Have they then both kinds of motion which we distinguished? Are they moving in space and also undergoing alteration?

Theodorus:: Of course; that is, if they are to be in perfect motion.

Socrates:: Then if they moved only in space, but did not undergo alteration, we could perhaps say what qualities belong to those moving things which are in flux, could we not?

Theodorus:: That is right.

Socrates:: But since not even this remains fixed—that the thing in flux flows white, but changes, so that there is a flux of the very whiteness, and a change of color, that it may not in that way be convicted of remaining fixed, is it possible to give any name to a color, and yet to speak accurately?

Theodorus:: How can it be possible, Socrates, or to give a name to anything else of this sort, if while we are speaking it always evades us, being, as it is, in flux?

Socrates:: But what shall we say of any of the perceptions, such as seeing or hearing? Does it perhaps remain fixed in the condition of seeing or hearing?

Theodorus:: It must be impossible, if all things are in motion.

Socrates:: Then we must not speak of seeing more than not-seeing, or of any other perception more than of non-perception, if all things are in all kinds of motion.

Theodorus:: No, we must not.

Socrates:: And yet perception is knowledge, as Theaetetus and I said.

Theodorus:: Yes, you did say that.

Socrates:: Then when we were asked "what is knowledge?" we answered no more what knowledge is than what not-knowledge is.

Theodorus:: So it seems.

Socrates:: This would be a fine result of the correction of our answer, when we were so eager to show that all things are in motion, just for the purpose of making that answer prove to be correct. But this, I think, did prove to be true, that if all things are in motion, every answer to any question whatsoever is equally correct, and we may say it is thus or not thus—or, if you prefer, "becomes thus," to avoid giving them fixity by using the word "is."

Theodorus:: You are right.

Socrates:: Except, Theodorus, that I said "thus," and "not thus;" but we ought not even to say "thus;" for "thus" would no longer be in motion; nor, again, "not thus." For there is no motion in "this" either; but some other expression must be supplied for those who maintain this doctrine, since now they have, according to their own hypothesis, no words, unless it be perhaps the word "no how." That might be most fitting for them, since it is indefinite.

Theodorus:: At any rate that is the most appropriate form of speech for them.

Socrates:: So, Theodorus, we have got rid of your friend, arid we do not yet concede to him that every man is a measure of all things, unless he be a sensible man; and we are not going to concede that knowledge is perception, at least not by the theory of universal motion, unless Theaetetus here has something different to say.

Theodorus:: An excellent idea, Socrates; for now that this matter is settled, I too should be rid of the duty of answering your questions according to our agreement, since the argument about Protagoras is ended.

Theaetetus:: No, Theodorus, not until you and Socrates have discussed those who say all things are at rest, as you proposed just now.

Theodorus:: A young man like you, Theaetetus, teaching your elders to do wrong by breaking their agreements! No; prepare to answer Socrates yourself for the rest of the argument.

Theaetetus:: I will if he wishes it. But I should have liked best to hear about the doctrine I mentioned.

Theodorus:: Calling Socrates to an argument is calling cavalry into an open plain. Just ask him a question and you shall hear.

Socrates:: Still I think, Theodorus, I shall not comply with the request of Theaetetus.

Theodorus:: Why will you not comply with it?

Socrates:: Because I have a reverential fear of examining in a flippant manner Melissus and the others who teach that the universe is one and motionless, and because I reverence still more one man, Parmenides. Parmenides seems to me to be, in Homers words, “one to be venerated” and also “awful.”

For I met him when I was very young and he was very old, and he appeared to me to possess an absolutely noble depth of mind. So I am afraid we may not understand his words and may be still farther from understanding what he meant by them; but my chief fear is that the question with which we started, about the nature of knowledge, may fail to be investigated, because of the disorderly crowd of arguments which will burst in upon us if we let them in; especially as the argument we are now proposing is of vast extent, and would not receive its deserts if we treated it as a side issue, and if we treat it as it deserves, it will take so long as to do away with the discussion about knowledge. Neither of these things ought to happen, but we ought to try by the science of midwifery to deliver Theaetetus of the thoughts about knowledge with which he is pregnant.

Theodorus:: Yes, if that is your opinion, we ought to do so.

Socrates:: Consider, then, Theaetetus, this further point about what has been said. Now you answered that perception is knowledge, did you not?

Theaetetus:: Yes.

Socrates:: If, then, anyone should ask you, “By what does a man see white and black colors and by what does he hear high and low tones?” you would, I fancy, say, “By his eyes and ears.”

Theaetetus:: Yes, I should.

Socrates:: The easy use of words and phrases and the avoidance of strict precision is in general a sign of good breeding; indeed, the opposite is hardly worthy of a gentleman, but sometimes it is necessary, as now it is necessary to object to your answer, in so far as it is incorrect. Just consider; which answer is more correct, that our eyes are that by which we see or that through which we see, and our ears that by which or that through which we hear?

Theaetetus:: I think, Socrates, we perceive through, rather than by them, in each case.

Socrates:: Yes, for it would be strange indeed, my boy, if there are many senses ensconced within us, as if we were so many wooden horses of Troy, and they do not all unite in one power, whether we should call it soul or something else, by which we perceive through these as instruments the objects of perception.

Theaetetus:: I think what you suggest is more likely than the other way.

Socrates:: Now the reason why I am so precise about the matter is this; I want to know whether there is some one and the same power within ourselves by which we perceive black and white through the eyes, and again other qualities through the other organs, and whether you will be able, if asked, to refer all such activities to the body. But perhaps it is better that you make the statement in answer to a question than that I should take all the trouble for you. So tell me; do you not think that all the organs through which you perceive hot and hard and light and sweet are parts of the body? Or are they parts of something else?

Theaetetus:: Of nothing else.

Socrates:: And will you also be ready to agree that it is impossible to perceive through one sense what you perceive through another; for instance, to perceive through sight what you perceive through hearing, or through hearing what you perceive through sight?

Theaetetus:: Of course I shall.

Socrates:: Then if you have any thought about both of these together, you would not have perception about both together either through one organ or through the other.

Theaetetus:: No.

Socrates:: Now in regard to sound and color, you have, in the first place, this thought about both of them, that they both exist?

Theaetetus:: Certainly.

Socrates:: And that each is different from the other and the same as itself?

Theaetetus:: Of course.

Socrates:: And that both together are two and each separately is one?

Theaetetus:: Yes, that also.

Socrates:: And are you able also to observe whether they are like or unlike each other?

Theaetetus:: May be.

Socrates:: Now through what organ do you think all this about them? For it is impossible to grasp that which is common to them both either through hearing or through sight. Here is further evidence for the point I am trying to make; if it were possible to investigate the question whether the two, sound and color, are bitter or not, you know that you will be able to tell by what faculty you will investigate it, and that is clearly neither hearing nor sight, but something else.

Theaetetus:: Of course it is,—the faculty exerted through the tongue.

Socrates:: Very good. But through what organ is the faculty exerted which makes known to you that which is common to all things, as well as to these of which we are speaking—that which you call being and not-being, and the other attributes of things, about which we were asking just now? What organs will you assign for all these, through which that part of us which perceives gains perception of each and all of them?

Theaetetus:: You mean being and not-being, and likeness and unlikeness, and identity and difference, and also unity and plurality as applied to them. And you are evidently asking also through what bodily organs we perceive by our soul the odd and the even and everything else that is in the same category.

Socrates:: Bravo, Theaetetus! you follow me exactly; that is just what I mean by my question.

Theaetetus:: By Zeus, Socrates, I cannot answer, except that I think there is no special organ at all for these notions, as there are for those others; but it appears to me that the soul views by itself directly what all things have in common.

Socrates:: Why, you are beautiful, Theaetetus, and not, as Theodorus said, ugly; for he who speaks beautifully is beautiful and good. But besides being beautiful, you have done me a favor by relieving me from a long discussion, if you think that the soul views some things by itself directly and others through the bodily faculties; for that was my own opinion, and I wanted you to agree.

Theaetetus:: Well, I do think so.

Socrates:: To which class, then, do you assign being; for this, more than anything else, belongs to all things?

Theaetetus:: I assign them to the class of notions which the soul grasps by itself directly.

Socrates:: And also likeness and unlikeness and identity and difference?

Theaetetus:: Yes.

Socrates:: And how about beautiful and ugly, and good and bad?

Theaetetus:: I think that these also are among the things the essence of which the soul most certainly views in their relations to one another, reflecting within itself upon the past and present in relation to the future.

Socrates:: Stop there. Does it not perceive the hardness of the hard through touch, and likewise the softness of the soft?

Theaetetus:: Yes.

Socrates:: But their essential nature and the fact that they exist, and their opposition to one another, and, in turn, the essential nature of this opposition, the soul itself tries to determine for us by reverting to them and comparing them with one another.

Theaetetus:: Certainly.

Socrates:: Is it not true, then, that all sensations which reach the soul through the body, can be perceived by human beings, and also by animals, from the moment of birth; whereas reflections about these, with reference to their being and usefulness, are acquired, if at all, with difficulty and slowly, through many troubles, in other words, through education?

Theaetetus:: Assuredly.

Socrates:: Is it, then, possible for one to attain "truth" who cannot even get as far as "being?"

Theaetetus:: No.

Socrates:: And will a man ever have knowledge of anything the truth of which he fails to attain?

Theaetetus:: How can he, Socrates?

Socrates:: Then knowledge is not in the sensations, but in the process of reasoning about them; for it is possible, apparently, to apprehend being and truth by reasoning, but not by sensation.

Theaetetus:: So it seems.

Socrates:: Then will you call the two by the same name, when there are so great differences between them?

Theaetetus:: No, that would certainly not be right.

Socrates:: What name will you give, then, to the one which includes seeing, hearing, smelling, being cold, and being hot?

Theaetetus:: Perceiving. What other name can I give it?

Socrates:: Collectively you call it, then, perception?

Theaetetus:: Of course.

Socrates:: By which, we say, we are quite unable to apprehend truth, since we cannot apprehend being, either.

Theaetetus:: No; certainly not.

Socrates:: Nor knowledge either, then.

Theaetetus:: No.

Socrates:: Then, Theaetetus, perception and knowledge could never be the same.

Theaetetus:: Evidently not, Socrates; and indeed now at last it has been made perfectly clear that knowledge is something different from perception.

Socrates:: But surely we did not begin our conversation in order to find out what knowledge is not, but what it is. However, we have progressed so far, at least, as not to seek for knowledge in perception at all, but in some function of the soul, whatever name is given to it when it alone and by itself is engaged directly with realities.

Theaetetus:: That, Socrates, is, I suppose, called having opinion.

Socrates:: You suppose rightly, my friend. Now begin again at the beginning. Wipe out all we said before, and see if you have any clearer vision, now that you have advanced to this point. Say once more what knowledge is.

Theaetetus:: To say that all opinion is knowledge is impossible, Socrates, for there is also false opinion; but true opinion probably is knowledge. Let that be my answer. For if it is proved to be wrong as we proceed, I will try to give another, just as I have given this.

Socrates:: That is the right way, Theaetetus. It is better to speak up boldly than to hesitate about answering, as you did at first. For if we act in this way, one of two things will happen; either we shall find what we are after, or we shall be less inclined to think we know what we do not know at all; and surely even that would be a recompense not to be despised. Well, then, what do you say now? Assuming that there are two kinds of opinion, one true and the other false, do you define knowledge as the true opinion?

Theaetetus:: Yes. That now seems to me to be correct.

Socrates:: Is it, then, still worth while, in regard to opinion, to take up—again?

Theaetetus:: What point do you refer to?

Socrates:: Somehow I am troubled now and have often been troubled before, so that I have been much perplexed in my own reflections and in talking with others, because I cannot tell what this experience is which we human beings have, and how it comes about.

Theaetetus:: What experience?

Socrates:: That anyone has false opinions. And so I am considering and am still in doubt whether we had better let it go or examine it by another method than the one we followed a while ago.

Theaetetus:: Why not, Socrates, if there seems to be the least need of it? For just now, in talking about leisure, you and Theodorus said very truly that there is no hurry in discussions of this sort.

Socrates:: You are right in reminding me. For perhaps this is a good time to retrace our steps. For it is better to finish a little task well than a great deal imperfectly.

Theaetetus:: Of course.

Socrates:: How, then, shall we set about it? What is it that we do say? Do we say that in every case of opinion there is a false opinion, and one of us has a false, and another a true opinion, because, as we believe, it is in the nature of things that this should be so?

Theaetetus:: Yes, we do.

Socrates:: Then this, at any rate, is possible for us, is it not, regarding all things collectively and each thing separately, either to know or not to know them? For learning and forgetting, as intermediate stages, I leave out of account for the present, for just now they have no bearing upon our argument.

Theaetetus:: Certainly, Socrates, nothing is left in any particular case except knowing or not knowing it.

Socrates:: Then he who forms opinion must form opinion either about what he knows or about what he does not know?

Theaetetus:: Necessarily.

Socrates:: And it is surely impossible that one who knows a thing does not know it, or that one who does not know it knows it.

Theaetetus:: Certainly.

Socrates:: Then does he who forms false opinions think that the things which he knows are not these things, but some others of the things he knows, and so, knowing both, is he ignorant of both?

Theaetetus:: That is impossible, Socrates.

Socrates:: Well then, does he think that the things he does not know are other things which he does not know—which is as if a man who knows neither Theaetetus nor Socrates should conceive the idea that Socrates is Theaetetus or Theaetetus Socrates?

Theaetetus:: That is impossible.

Socrates:: But surely a man does not think that the things he knows are the things he does not know, or again that the things he does not know are the things he knows.

Theaetetus:: That would be a monstrous absurdity.

Socrates:: Then how could he still form false opinions? For inasmuch as all things are either known or unknown to us, it is impossible, I imagine, to form opinions outside of these alternatives, and within them it is clear that there is no place for false opinion.

Theaetetus:: Very true.

Socrates:: Had we, then, better look for what we are seeking, not by this method of knowing and not knowing, but by that of being and not being?

Theaetetus:: What do you mean?

Socrates:: We may simply assert that he who on any subject holds opinions which are not, will certainly think falsely, no matter what the condition of his mind may be in other respects.

Theaetetus:: That, again, is likely, Socrates.

Socrates:: Well then, what shall we say, Theaetetus, if anyone asks us, “Is that which is assumed in common speech possible at all, and can any human being hold an opinion which is not, whether it be concerned with any of the things which are, or be entirely independent of them?” We, I fancy, shall reply, “Yes, when, in thinking, he thinks what is not true,” shall we not?

Theaetetus:: Yes.

Socrates:: And is the same sort of thing possible in any other field?

Theaetetus:: What sort of thing?

Socrates:: For instance, that a man sees something, but sees nothing.

Theaetetus:: How can he?

Socrates:: Yet surely if a man sees any one thing, he sees something that is. Or do you, perhaps, think “one” is among the things that are not?

Theaetetus:: No, I do not.

Socrates:: Then he who sees any one thing, sees something that is.

Theaetetus:: That is clear.

Socrates:: And therefore he who hears anything, hears some one thing and therefore hears what is.

Theaetetus:: Yes.

Socrates:: And he who touches anything, touches some one thing, which is, since it is one?

Theaetetus:: That also is true.

Socrates:: So, then, does not he who holds an opinion hold an opinion of some one thing?

Theaetetus:: He must do so.

Socrates:: And does not he who holds an opinion of some one thing hold an opinion of something that is?

Theaetetus:: I agree.

Socrates:: Then he who holds an opinion of what is not holds an opinion of nothing.

Theaetetus:: Evidently.

Socrates:: Well then, he who holds an opinion of nothing, holds no opinion at all.

Theaetetus:: That is plain, apparently.

Socrates:: Then it is impossible to hold an opinion of that which is not, either in relation to things that are, or independently of them.

Theaetetus:: Evidently.

Socrates:: Then holding false opinion is something different from holding an opinion of that which is not.

Theaetetus:: So it seems.

Socrates:: Then false opinion is not found to exist in us either by this method or by that which we followed a little while ago.

Theaetetus:: No, it certainly is not.

Socrates:: But does not that which we call by that name arise after the following manner?

Theaetetus:: After what manner?

Socrates:: We say that false opinion is a kind of interchanged opinion, when a person makes an exchange in his mind and says that one thing which exists is another thing which exists. For in this way he always holds an opinion of what exists, but of one thing instead of another; so he misses the object he was aiming at in his thought and might fairly be said to hold a false opinion.

Theaetetus:: Now you seem to me to have said what is perfectly right. For when a man, in forming an opinion, puts ugly instead of beautiful, or beautiful instead of ugly, he does truly hold a false opinion.

Socrates:: Evidently, Theaetetus, you feel contempt of me, and not fear.

Theaetetus:: Why in the world do you say that?

Socrates:: You think, I fancy, that I would not attack your “truly false” by asking whether it is possible for a thing to become slowly quick or heavily light, or any other opposite, by a process opposite to itself, in accordance, not with its own nature, but with that of its opposite. But I let this pass, that your courage may not fail. You are satisfied, you say, that false opinion is interchanged opinion?

Theaetetus:: I am.

Socrates:: It is, then, in your opinion, possible for the mind to regard one thing as another and not as what it is.

Theaetetus:: Yes, it is.

Socrates:: Now when ones mind does this, does it not necessarily have a thought either of both things together or of one or the other of them?

Theaetetus:: Yes, it must; either of both at the same time or in succession.

Socrates:: Excellent. And do you define thought as I do?

Theaetetus:: How do you define it?

Socrates:: As the talk which the soul has with itself about any subjects which it considers. You must not suppose that I know this that I am declaring to you. But the soul, as the image presents itself to me, when it thinks, is merely conversing with itself, asking itself questions and answering, affirming and denying. When it has arrived at a decision, whether slowly or with a sudden bound, and is at last agreed, and is not in doubt, we call that its opinion; and so I define forming opinion as talking and opinion as talk which has been held, not with someone else, nor yet aloud, but in silence with oneself. How do you define it?

Theaetetus:: In the same way.

Socrates:: Then whenever a man has an opinion that one thing is another, he says to himself, we believe, that the one thing is the other.

Theaetetus:: Certainly.

Socrates:: Now call to mind whether you have ever said to yourself that the beautiful is most assuredly ugly, or the wrong right, or—and this is the sum of the whole matter—consider whether you have ever tried to persuade yourself that one thing is most assuredly another, or whether quite the contrary is the case, and you have never ventured, even in sleep, to say to yourself that the odd is, after all, certainly even, or anything of that sort.

Theaetetus:: You are right.

Socrates:: Do you imagine that anyone else, sane or insane, ever ventured to say to himself seriously and try to persuade himself that the ox must necessarily be a horse, or two one?

Theaetetus:: No, by Zeus, I do not.

Socrates:: Then if forming opinion is talking to oneself, no one who talks and forms opinion of two objects and apprehends them both with his soul, could say and have the opinion that one is the other. But you will also have to give up the expression “one and other.” This is what I mean, that nobody holds the opinion that the ugly is beautiful, or anything of that sort.

Theaetetus:: Well, Socrates, I do give it up; and I agree with you in what you say.

Socrates:: You agree, therefore, that he who holds an opinion of both things cannot hold the opinion that one is the other.

Theaetetus:: So it seems.

Socrates:: But surely he who holds an opinion of one only, and not of the other at all, will never hold the opinion that one is the other.

Theaetetus:: You are right; for he would be forced to apprehend also that of which he holds no opinion.

Socrates:: Then neither he who holds opinion of both nor he who holds it of one can hold the opinion that a thing is something else. And so anyone who sets out to define false opinion as interchanged opinion would be talking nonsense. Then neither by this method nor by our previous methods is false opinion found to exist in us.

Theaetetus:: Apparently not.

Socrates:: But yet, Theaetetus, if this is found not to exist, we shall be forced to admit many absurdities.

Theaetetus:: What absurdities?

Socrates:: I will not tell you until I have tried to consider the matter in every way. For I should be ashamed of us, if, in our perplexity, we were forced to make such admissions as those to which I refer. But if we find the object of our quest, and are set free from perplexity, then, and not before, we will speak of others as involved in those absurdities, and we ourselves shall stand free from ridicule. But if we find no escape from our perplexity, we shall, I fancy, become low-spirited, like seasick people, and shall allow the argument to trample on us and do to us anything it pleases. Hear, then, by what means I still see a prospect of success for our quest.

Theaetetus:: Do speak.

Socrates:: I shall deny that we were right when we agreed that it is impossible for a man to have opinion that the things he does not know are the things which he knows, and thus to be deceived. But there is a way in which it is possible.

Theaetetus:: Do you mean what I myself suspected when we made the statement to which you refer, that sometimes I, though I know Socrates, saw at a distance someone whom I did not know, and thought it was Socrates whom I do know? In such a case false opinion does arise.

Socrates:: But did not we reject that, because it resulted in our knowing and not knowing the things which we know?

Theaetetus:: Certainly we did.

Socrates:: Let us, then, not make that assumption, but another; perhaps it will turn out well for us, perhaps the opposite. But we are in such straits that we must turn every argument round and test it from all sides. Now see if this is sensible; Can a man who did not know a thing at one time learn it later?

Theaetetus:: To be sure he can.

Socrates:: Again, then, can he learn one thing after another?

Theaetetus:: Why not?

Socrates:: Please assume, then, for the sake of argument, that there is in our souls a block of wax, in one case larger, in another smaller, in one case the wax is purer, in another more impure and harder, in some cases softer, and in some of proper quality.

Theaetetus:: I assume all that.

Socrates:: Let us, then, say that this is the gift of Memory, the mother of the Muses, and that whenever we wish to remember anything we see or hear or think of in our own minds, we hold this wax under the perceptions and thoughts and imprint them upon it, just as we make impressions from seal rings; and whatever is imprinted we remember and know as long as its image lasts, but whatever is rubbed out or cannot be imprinted we forget and do not know.

Theaetetus:: Let us assume that.

Socrates:: Now take a man who knows the things which he sees and hears, and is considering some one of them; observe whether he may not gain a false opinion in the following manner.

Theaetetus:: In what manner?

Socrates:: By thinking that the things which he knows are sometimes things which he knows and sometimes things which he does not know. For we were wrong before in agreeing that this is impossible.

Theaetetus:: What do you say about it now?

Socrates:: We must begin our discussion of the matter by making the following distinctions; It is impossible for anyone to think that one thing which he knows and of which he has received a memorial imprint in his soul, but which he does not perceive, is another thing which he knows and of which also he has an imprint, and which he does not perceive. And, again, he cannot think that what he knows is that which he does not know and of which he has no seal; nor that what he does not know is another thing which he does not know; nor that what he does not know is what he knows; nor can he think that what he perceives is something else which he perceives; nor that what he perceives is something which he does not perceive; nor that what he does not perceive is something else which he does not perceive; nor that what he does not perceive is something which he perceives. And, again, it is still more impossible, if that can be, to think that a thing which he knows and perceives and of which he has an imprint which accords with the perception is another thing which he knows and perceives and of which he has an imprint which accords with the perception. And he cannot think that what he knows and perceives and of which he has a correct memorial imprint is another thing which he knows; nor that a thing which he knows and perceives and of which he has such an imprint is another thing which he perceives; nor again that a thing which he neither knows nor perceives is another thing which he neither knows nor perceives; nor that a thing which he neither knows nor perceives is another thing which he does not know; nor that a thing which he neither knows nor perceives is another thing which he does not perceive. In all these cases it is impossible beyond everything for false opinion to arise in the mind of anyone. The possibility that it may arise remains, if anywhere, in the following cases.

Theaetetus:: What cases are they? I hope they may help me to understand better; for now I cannot follow you.

Socrates:: The cases in which he may think that things which he knows are some other things which he knows and perceives; or which he does not know, but perceives; or that things which he knows and perceives are other things which he knows and perceives.

Theaetetus:: Now I am even more out of the running than before.

Socrates:: Then let me repeat it in a different way. I know Theodorus and remember within myself what sort of a person he is, and just so I know Theaetetus, but sometimes I see them, and sometimes I do not, sometimes I touch them, sometimes not, sometimes I hear them or perceive them through some other sense, and sometimes I have no perception of you at all, but I remember you none the less and know you in my own mind. Is it not so?

Theaetetus:: Certainly.

Socrates:: This, then, is the first of the points which I wish to make clear. Note that one may perceive or not perceive that which one knows.

Theaetetus:: That is true.

Socrates:: So, too, with that which he does not know he may often not even perceive it, and often he may merely perceive it?

Theaetetus:: That too is possible.

Socrates:: See if you follow me better now. If Socrates knows Theodorus and Theaetetus, but sees neither of them and has no other perception of them, he never could have the opinion within himself that Theaetetus is Theodorus. Am I right or wrong?

Theaetetus:: You are right.

Socrates:: Now that was the first of the cases of which I spoke.

Theaetetus:: Yes, it was.

Socrates:: The second is this; knowing one of you and not knowing the other, and not perceiving either of you, I never could think that the one whom I know is the one whom I do not know.

Theaetetus:: Right.

Socrates:: And this is the third case; not knowing and not perceiving either of you, I could not think that he whom I do not know is someone else whom I do not know. And imagine that you have heard all the other cases again in succession, in which I could never form false opinions about you and Theodorus, either when I know or do not know both of you, or when I know one and not the other; and the same is true if we say "perceive" instead of "know." Do you follow me?

Theaetetus:: I follow you.

Socrates:: Then the possibility of forming false opinion remains in the following case; when, for example, knowing you and Theodorus, and having on that block of wax the imprint of both of you, as if you were signet-rings, but seeing you both at a distance and indistinctly, I hasten to assign the proper imprint of each of you to the proper vision, and to make it fit, as it were, its own footprint, with the purpose of causing recognition; but I may fail in this by interchanging them, and put the vision of one upon the imprint of the other, as people put a shoe on the wrong foot; or, again, I may be affected as the sight is affected when we use a mirror and the sight as it flows makes a change from right to left, and thus make a mistake; it is in such cases, then, that interchanged opinion occurs and the forming of false opinion arises.

Theaetetus:: I think it does, Socrates. You describe what happens to opinion marvelously well.

Socrates:: There is still the further case, when, knowing both of you, I perceive one in addition to knowing him, but do not perceive the other, and the knowledge which I have of that other is not in accord with my perception. This is the case I described in this way before, and at that time you did not understand me.

Theaetetus:: No, I did not.

Socrates:: This is what I meant, that if anyone knows and perceives one of you, and has knowledge of him which accords with the perception, he will never think that he is someone else whom he knows and perceives and his knowledge of whom accords with the perception. That was the case, was it not?

Theaetetus:: Yes.

Socrates:: But we omitted, I believe, the case of which I am speaking now—the case in which we say the false opinion arises; when a man knows both and sees both (or has some other perception of them), but fails to hold the two imprints each under its proper perception; like a bad archer he shoots beside the mark and misses it; and it is just this which is called error or deception.

Theaetetus:: And properly so.

Socrates:: Now when perception is present to one of the imprints but not to the other, and the mind applies the imprint of the absent perception to the perception which is present, the mind is deceived in every such instance. In a word, if our present view is sound, false opinion or deception seems to be impossible in relation to things which one does not know and has never perceived; but it is precisely in relation to things which we know and perceive that opinion turns and twists, becoming false and true—true when it puts the proper imprints and seals fairly and squarely upon one another, and false when it applies them sideways and aslant.

Theaetetus:: Well, then, Socrates, is that view not a good one?

Socrates:: After you have heard the rest, you will be still more inclined to say so. For to hold a true opinion is a good thing, but to be deceived is a disgrace.

Theaetetus:: Certainly.

Socrates:: They say the cause of these variations is as follows; When the wax in the soul of a man is deep and abundant and smooth and properly kneaded, the images that come through the perceptions are imprinted upon this heart of the soul—as Homer calls it in allusion to its similarity to wax;—when this is the case, and in such men, the imprints, being clear and of sufficient depth, are also lasting. And men of this kind are in the first place quick to learn, and secondly they have retentive memories, and moreover they do not interchange the imprints of their perceptions, but they have true opinions. For the imprints are clear and have plenty of room, so that such men quickly assign them to their several moulds, which are called realities; and these men, then, are called wise. Or do you not agree?

Theaetetus:: Most emphatically.

Socrates:: Now when the heart of anyone is shaggy (a condition which the all-wise poet commends), or when it is unclean or of impure wax, or very soft or hard, those whose wax is soft are quick to learn, but forgetful, and those in whom it is hard are the reverse. But those in whom it is shaggy and rough and stony, infected with earth or dung which is mixed in it, receive indistinct imprints from the moulds. So also do those whose wax is hard; for the imprints lack depth. And imprints in soft wax are also indistinct, because they melt together and quickly become blurred; but if besides all this they are crowded upon one another through lack of room, in some mean little soul, they are still more indistinct. So all these men are likely to have false opinions. For when they see or hear or think of anything, they cannot quickly assign things to the right imprints, but are slow about it, and because they assign them wrongly they usually see and hear and think amiss. These men, in turn, are accordingly said to be deceived about realities and ignorant.

Theaetetus:: You are right as right could be, Socrates.

Socrates:: Shall we, then, say that false opinions exist in us?

Theaetetus:: Assuredly.

Socrates:: And true opinions, no doubt?

Theaetetus:: And true ones also.

Socrates:: Then now at last we think we have reached a valid agreement, that these two kinds of opinion incontestably exist?

Theaetetus:: Most emphatically.

Socrates:: Truly, Theaetetus, a garrulous man is a strange and unpleasant creature!

Theaetetus:: Eh? What makes you say that?

Socrates:: Vexation at my own stupidity and genuine garrulity. For what else could you call it when a man drags his arguments up and down because he is so stupid that he cannot be convinced, and is hardly to be induced to give up any one of them?

Theaetetus:: But you, why are you vexed?

Socrates:: I am not merely vexed, I am actually afraid; for I do not know what answer to make if anyone asks me; "Socrates, have you found out, I wonder, that false opinion exists neither in the relations of the perceptions to one another nor in the thoughts, but in the combination of perception with thought?" I shall say "yes," I suppose, and put on airs, as if we had made a fine discovery.

Theaetetus:: It seems to me, Socrates, that the result we have now brought out is not half bad.

Socrates:: “Do you go on and assert,” then, he will say, “that we never could imagine that the man whom we merely think of, but do not see, is a horse which also we do not see or touch or perceive by any other sense, but merely think of?” I suppose I shall say that I do make that assertion.

Theaetetus:: Yes, and you will be right.

Socrates:: “Then,” he will say, “according to that, could we ever imagine that the number eleven which is merely thought of, is the number twelve which also is merely thought of?” Come now, it is for you to answer.

Theaetetus:: Well, my answer will be that a man might imagine the eleven that he sees or touches to be twelve, but that he could never have that opinion concerning the eleven that he has in his mind.

Socrates:: Well, then, do you think that anyone ever considered in his own mind five and seven,—I do not mean by setting before his eyes seven men and five men and considering them, or anything of that sort, but seven and five in the abstract, which we say are imprints in the block of wax, and in regard to which we deny the possibility of forming false opinions—taking these by themselves, do you imagine that anybody in the world has ever considered them, talking to himself and asking himself what their sum is, and that one person has said and thought eleven, and another twelve, or do all say and think that it is twelve?

Theaetetus:: No, by Zeus; many say eleven, and if you take a larger number for consideration, there is greater likelihood of error. For I suppose you are speaking of any number rather than of these only.

Socrates:: You are right in supposing so; and consider whether in that instance the abstract twelve in the block of wax is not itself imagined to be eleven.

Theaetetus:: It seems so.

Socrates:: Have we not, then, come back again to the beginning of our talk? For the man who is affected in this way imagines that one thing which he knows is another thing which he knows. This we said was impossible, and by this very argument we were forcing false opinion out of existence, that the same man might not be forced to know and not know the same things at the same time.

Theaetetus:: Very true.

Socrates:: Then we must show that forming false opinion is something or other different from the interchange of thought and perception. For if it were that, we should never be deceived in abstract thoughts. But as the case now stands, either there is no false opinion or it is possible for a man not to know that which he knows. Which alternative will you choose?

Theaetetus:: There is no possible choice, Socrates.

Socrates:: And yet the argument is not likely to admit both. But still, since we must not shrink from any risk, what if we should try to do a shameless deed?

Theaetetus:: What is it?

Socrates:: To undertake to tell what it really is to know.

Theaetetus:: And why is that shameless?

Socrates:: You seem not to remember that our whole talk from the beginning has been a search for knowledge, because we did not know what it is.

Theaetetus:: Oh yes, I remember.

Socrates:: Then is it not shameless to proclaim what it is to know, when we are ignorant of knowledge? But really, Theaetetus, our talk has been badly tainted with unclearness all along; for we have said over and over again "we know" and "we do not know" and "we have knowledge" and "we have no knowledge," as if we could understand each other, while we were still ignorant of knowledge; and at this very moment, if you please, we have again used the terms "be ignorant" and "understand," as though we had any right to use them if we are deprived of knowledge.

Theaetetus:: But how will you converse, Socrates, if you refrain from these words?

Socrates:: Not at all, being the man I am; but I might if I were a real reasoner; if such a man were present at this moment he would tell us to refrain from these terms, and would criticize my talk scathingly. But since we are poor creatures, shall I venture to say what the nature of knowing is? For it seems to me that would be of some advantage.

Theaetetus:: Venture it then, by Zeus. You shall have full pardon for not refraining from those terms.

Socrates:: Have you heard what they say nowadays that knowing is?

Theaetetus:: Perhaps; however, I don't remember just at this moment.

Socrates:: They say it is having knowledge.

Theaetetus:: True.

Socrates:: Let us make a slight change and say possessing knowledge.

Theaetetus:: Why, how will you claim that the one differs from the other?

Socrates:: Perhaps it doesn’t; but first hear how it seems to me to differ, and then help me to test my view.

Theaetetus:: I will if I can.

Socrates:: Well, then, having does not seem to me the same as possessing. For instance, if a man bought a cloak and had it under his control, but did not wear it, we should certainly say, not that he had it, but that he possessed it.

Theaetetus:: And rightly.

Socrates:: Now see whether it is possible in the same way for one who possesses knowledge not to have it, as, for instance, if a man should catch wild birds—pigeons or the like—and should arrange an aviary at home and keep them in it, we might in a way assert that he always has them because he possesses them, might we not?

Theaetetus:: Yes.

Socrates:: And yet in another way that he has none of them, but that he has acquired power over them, since he has brought them under his control in his own enclosure, to take them and hold them whenever he likes, by catching whichever bird he pleases, and to let them go again; and he can do this as often as he sees fit.

Theaetetus:: That is true.

Socrates:: Once more, then, just as a while ago we contrived some sort of a waxen figment in the soul, so now let us make in each soul an aviary stocked with all sorts of birds, some in flocks apart from the rest, others in small groups, and some solitary, flying hither and thither among them all.

Theaetetus:: Consider it done. What next?

Socrates:: We must assume that while we are children this receptacle is empty, and we must understand that the birds represent the varieties of knowledge. And whatsoever kind of knowledge a person acquires and shuts up in the enclosure, we must say that he has learned or discovered the thing of which this is the knowledge, and that just this is knowing.

Theaetetus:: So be it.

Socrates:: Consider then what expressions are needed for the process of recapturing and taking and holding and letting go again whichever he please of the kinds of knowledge, whether they are the same expressions as those needed for the original acquisition, or others. But you will understand better by an illustration. You admit that there is an art of arithmetic?

Theaetetus:: Yes.

Socrates:: Now suppose this to be a hunt after the kinds of knowledge, or sciences, of all odd and even numbers.

Theaetetus:: I do SO.

Socrates:: Now it is by this art, I imagine, that a man has the sciences of numbers under his own control and also that any man who transmits them to another does this.

Theaetetus:: Yes.

Socrates:: And we say that when anyone transmits them he teaches, and when anyone receives them he learns, and when anyone, by having acquired them, has them in that aviary of ours, he knows them.

Theaetetus:: Certainly.

Socrates:: Now pay attention to what follows from this. Does not the perfect arithmetician understand all numbers; for he has the sciences of all numbers in his mind?

Theaetetus:: To be sure.

Socrates:: Then would such a man ever count anything—either any abstract numbers in his head, or any such external objects as possess number?

Theaetetus:: Of course.

Socrates:: But we shall affirm that counting is the same thing as considering how great any number in question is.

Theaetetus:: We shall.

Socrates:: Then he who by our previous admission knows all number is found to be considering that which he knows as if he did not know it. You have doubtless heard of such ambiguities.

Theaetetus:: Yes, I have.

Socrates:: Continuing, then, our comparison with the acquisition and hunting of the pigeons, we shall say that the hunting is of two kinds, one before the acquisition for the sake of possessing, the other carried on by the possessor for the sake of taking and holding in his hands what he had acquired long before. And just so when a man long since by learning came to possess knowledge of certain things, and knew them, he may have these very things afresh by taking up again the knowledge of each of them separately and holding it—the knowledge which he had acquired long before, but had not at hand in his mind?

Theaetetus:: That is true.

Socrates:: This, then, was my question just now; How should we express ourselves in speaking about them when an arithmetician undertakes to count or a man of letters to read something? In such a case shall we say that although he knows he sets himself to learn again from himself that which he knows?

Theaetetus:: But that is extraordinary, Socrates.

Socrates:: But shall we say that he is going to read or count that which he does not know, when we have granted that he knows all letters and all numbers?

Theaetetus:: But that too is absurd.

Socrates:: Shall we then say that words are nothing to us, if it amuses anyone to drag the expressions “know” and “learn” one way and another, but since we set up the distinction that it is one thing to possess knowledge and another thing to have it, we affirm that it is impossible not to possess what one possesses, so that it never happens that a man does not know that which he knows, but that it is possible to conceive a false opinion about it? For it is possible to have not the knowledge of this thing, but some other knowledge instead, when in hunting for some one kind of knowledge, as the various kinds fly about, he makes a mistake and catches one instead of another; so in one example he thought eleven was twelve, because he caught the knowledge of twelve, which was within him, instead of that of eleven, caught a ringdove, as it were, instead of a pigeon.

Theaetetus:: Yes, that is reasonable.

Socrates:: But when he catches the knowledge he intends to catch, he is not deceived and has true opinion, and so true and false opinion exist and none of the things which formerly annoyed us interferes? Perhaps you will agree to this; or what will you do?

Theaetetus:: I will agree.

Socrates:: Yes, for we have got rid of our difficulty about men not knowing that which they know; for we no longer find ourselves not possessing that which we possess, whether we are deceived about anything or not. However, another more dreadful disaster seems to be coming in sight.

Theaetetus:: What disaster?

Socrates:: If the interchange of kinds of knowledge should ever turn out to be false opinion.

Theaetetus:: How so?

Socrates:: Is it not the height of absurdity, in the first place for one who has knowledge of something to be ignorant of this very thing, not through ignorance but through his knowledge; secondly, for him to be of opinion that this thing is something else and something else is this thing—for the soul, when knowledge has come to it, to know nothing and be ignorant of all things? For by this argument there is nothing to prevent ignorance from coming to us and making us know something and blindness from making us see, if knowledge is ever to make us ignorant.

Theaetetus:: Perhaps, Socrates, we were not right in making the birds represent kinds of knowledge only, but we ought to have imagined kinds of ignorance also flying about in the soul with the others; then the hunter would catch sometimes knowledge and sometimes ignorance of the same thing, and through the ignorance he would have false, but through the knowledge true opinion.

Socrates:: It is not easy, Theaetetus, to refrain from praising you. However, examine your suggestion once more. Let it be as you say; the man who catches the ignorance will, you say, have false opinion. Is that it?

Theaetetus:: Yes.

Socrates:: But surely he will not also think that he has false opinion.

Theaetetus:: Certainly not.

Socrates:: No, but true opinion, and will have the attitude of knowing that about which he is deceived.

Theaetetus:: Of course.

Socrates:: Hence he will fancy that he has caught, and has, knowledge, not ignorance.

Theaetetus:: Evidently.

Socrates:: Then, after our long wanderings, we have come round again to our first difficulty. For the real reasoner will laugh and say, “Most excellent Sirs, does a man who knows both knowledge and ignorance think that one of them, which he knows, is another thing which he knows; or, knowing neither of them, is he of opinion that one, which he does not know, is another thing which he does not know; or, knowing one and not the other, does he think that the one he does not know is the one he knows; or that the one he knows is the one he does not know? Or will you go on and tell me that there are kinds of knowledge of the kinds of knowledge and of ignorance, and that he who possesses these kinds of knowledge and has enclosed them in some sort of other ridiculous aviaries or waxen figments, knows them, so long as he possesses them, even if he has them not at hand in his soul? And in this fashion are you going to be compelled to trot about endlessly in the same circle without making any progress?" What shall we reply to this, Theaetetus?

Theaetetus:: By Zeus, Socrates, I don't know what to say.

Socrates:: Then, my boy, is the argument right in rebuking us and in pointing out that we were wrong to abandon knowledge and seek first for false opinion? It is impossible to know the latter until we have adequately comprehended the nature of knowledge.

Theaetetus:: As the case now stands, Socrates, we cannot help thinking as you say.

Socrates:: To begin, then, at the beginning once more, what shall we say knowledge is? For surely we are not going to give it up yet, are we?

Theaetetus:: Not by any means, unless, that is, you give it up.

Socrates:: Tell us, then, what definition will make us contradict ourselves least.

Theaetetus:: The one we tried before, Socrates; at any rate, I have nothing else to offer.

Socrates:: What one?

Theaetetus:: That knowledge is true opinion; for true opinion is surely free from error and all its results are fine and good.

Socrates:: The man who was leading the way through the river, Theaetetus, said; "The result itself will show;" and so in this matter, if we go on with our search, perhaps the thing will turn up in our path and of itself reveal the object of our search; but if we stay still, we shall discover nothing.

Theaetetus:: You are right; let us go on with our investigation.

Socrates:: Well, then, this at least calls for slight investigation; for you have a whole profession which declares that true opinion is not knowledge.

Theaetetus:: How so? What profession is it?

Socrates:: The profession of those who are greatest in wisdom, who are called orators and lawyers; for they persuade men by the art which they possess, not teaching them, but making them have whatever opinion they like. Or do you think there are any teachers so clever as to be able, in the short time allowed by the water-clock, satisfactorily to teach the judges the truth about what happened to people who have been robbed of their money or have suffered other acts of violence, when there were no eyewitnesses?

Theaetetus:: I certainly do not think so; but I think they can persuade them.

Socrates:: And persuading them is making them have an opinion, is it not?

Theaetetus:: Of course.

Socrates:: Then when judges are justly persuaded about matters which one can know only by having seen them and in no other way, in such a case, judging of them from hearsay, having acquired a true opinion of them, they have judged without knowledge, though they are rightly persuaded, if the judgment they have passed is correct, have they not?

Theaetetus:: Certainly.

Socrates:: But, my friend, if true opinion and knowledge were the same thing in law courts, the best of judges could never have true opinion without knowledge; in fact, however, it appears that the two are different.

Theaetetus:: Oh yes, I remember now, Socrates, having heard someone make the distinction, but I had forgotten it. He said that knowledge was true opinion accompanied by reason, but that unreasoning true opinion was outside of the sphere of knowledge; and matters of which there is not a rational explanation are unknowable—yes, that is what he called them—and those of which there is are knowable.

Socrates:: I am glad you mentioned that. But tell us how he distinguished between the knowable and the unknowable, that we may see whether the accounts that you and I have heard agree.

Theaetetus:: But I do not know whether I can think it out; but if someone else were to make the statement of it, I think I could follow.

Socrates:: Listen then, while I relate it to you—“a dream for a dream.” I in turn used to imagine that I heard certain persons say that the primary elements of which we and all else are composed admit of no rational explanation; for each alone by itself can only be named, and no qualification can be added, neither that it is nor that it is not, for that would at once be adding to it existence or non-existence, whereas we must add nothing to it, if we are to speak of that itself alone. Indeed, not even “itself” or “that” or “each” or “alone” or “this” or anything else of the sort, of which there are many, must be added; for these are prevalent terms which are added to all things indiscriminately and are different from the things to which they are added; but if it were possible to explain an element, and it admitted of a rational explanation of its own, it would have to be explained apart from everything else. But in fact none of the primal elements can be expressed by reason; they can only be named, for they have only a name; but the things composed of these are themselves complex, and so their names are complex and form a rational explanation; for the combination of names is the essence of reasoning. Thus the elements are not objects of reason or of knowledge, but only of perception, whereas the combinations of them are objects of knowledge and expression and true opinion. When therefore a man acquires without reasoning the true opinion about anything, his mind has the truth about it, but has no knowledge; for he who cannot give and receive a rational explanation of a thing is without knowledge of it; but when he has acquired also a rational explanation he may possibly have become all that I have said and may now be perfect in knowledge. Is that the version of the dream you have heard, or is it different?

Theaetetus:: That was it exactly.

Socrates:: Are you satisfied, then, and do you state it in this way, that true opinion accompanied by reason is knowledge?

Theaetetus:: Precisely.

Socrates:: Can it be, Theaetetus, that we now, in this casual manner, have found out on this day what many wise men have long been seeking and have grown grey in the search?

Theaetetus:: I, at any rate, Socrates, think our present statement is good.

Socrates:: Probably this particular statement is so; for what knowledge could there still be apart from reason and right opinion? One point, however, in what has been said is unsatisfactory to me.

Theaetetus:: What point?

Socrates:: Just that which seems to be the cleverest; the assertion that the elements are unknowable and the class of combinations is knowable.

Theaetetus:: Is that not right?

Socrates:: We are sure to find out, for we have as hostages the examples which he who said all this used in his argument.

Theaetetus:: What examples?

Socrates:: The elements in writing, the letters of the alphabet, and their combinations, the syllables; or do you think the author of the statements we are discussing had something else in view?

Theaetetus:: No; those are what he had in view.

Socrates:: Let us, then, take them up and examine them, or rather, let us examine ourselves and see whether it was in accordance with this theory, or not, that we learned letters. First then, the syllables have a rational explanation, but the letters have not?

Theaetetus:: I suppose so.

Socrates:: I think so, too, decidedly. Now if anyone should ask about the first syllable of Socrates; Theaetetus, tell me, what is SO? What would you reply?

Theaetetus:: I should say S and O.

Socrates:: This, then, is your explanation of the syllable?

Theaetetus:: Yes.

Socrates:: Come now, in the same manner give me the explanation of the S.

Theaetetus:: How can one give any elements of an element? For really, Socrates, the S is a voiceless letter, a mere noise, as of the tongue hissing; B again has neither voice nor noise, nor have most of the other letters; and so it is quite right to say that they have no explanation, seeing that the most distinct of them, the seven vowels, have only voice, but no explanation whatsoever.

Socrates:: In this point, then, my friend, it would seem that we have reached a right conclusion about knowledge.

Theaetetus:: I think we have.

Socrates:: But have we been right in laying down the principle that whereas the letter is unknowable, yet the syllable is knowable?

Theaetetus:: Probably.

Socrates:: Well then, shall we say that the syllable is the two letters, or, if there be more than two, all of them, or is it a single concept that has arisen from their combination?

Theaetetus:: I think we mean all the letters it contains.

Socrates:: Now take the case of two, S and O. The two together are the first syllable of my name. He who knows it knows the two letters, does he not?

Theaetetus:: Of course.

Socrates:: He knows, that is, the S and the O.

Theaetetus:: Yes.

Socrates:: How is that? He is ignorant of each, and knowing neither of them he knows them both?

Theaetetus:: That is monstrous and absurd, Socrates.

Socrates:: And yet if a knowledge of each letter is necessary before one can know both, he who is ever to know a syllable must certainly know the letters first, and so our fine theory will have run away and vanished!

Theaetetus:: And very suddenly, too.

Socrates:: Yes, for we are not watching it carefully. Perhaps we ought to have said that the syllable is not the letters, but a single concept that has arisen from them, having a single form of its own, different from the letters.

Theaetetus:: Certainly; and perhaps that will be better than the other way.

Socrates:: Let us look into that; we must not give up in such unmanly fashion a great and impressive theory.

Theaetetus:: No, we must not.

Socrates:: Let it be, then, as we say now, that the syllable or combination is a single form arising out of the several conjoined elements, and that it is the same in words and in all other things.

Theaetetus:: Certainly.

Socrates:: Therefore there must be no parts of it.

Theaetetus:: How so?

Socrates:: Because if there are parts of anything, the whole must inevitably be all the parts; or do you assert also that the whole that has arisen out of the parts is a single concept different from all the parts?

Theaetetus:: Yes, I do.

Socrates:: Do you then say that all and the whole are the same, or that each of the two is different from the other?

Theaetetus:: I am not sure; but you tell me to answer boldly, so I take the risk and say that they are different.

Socrates:: Your boldness, Theaetetus, is right; but whether your answer is so remains to be seen.

Theaetetus:: Yes, certainly, we must see about that.

Socrates:: The whole, then, according to our present view, would differ from all?

Theaetetus:: Yes.

Socrates:: How about this? Is there any difference between all in the plural and all in the singular? For instance, if we say one, two, three, four, five, six, or twice three, or three times two, or four and two, or three and two and one, are we in all these forms speaking of the same or of different numbers?

Theaetetus:: Of the same.

Socrates:: That is, of six?

Theaetetus:: Yes.

Socrates:: Then in each form of speech we have spoken of all the six?

Theaetetus:: Yes.

Socrates:: And again do we not speak of one thing when we speak of them all?

Theaetetus:: Assuredly.

Socrates:: That is, of six?

Theaetetus:: Yes.

Socrates:: Then in all things that are made up of number, we apply the same term to all in the plural and all in the singular?

Theaetetus:: Apparently.

Socrates:: Here is another way of approaching the matter. The number of the fathom and the fathom are the same, are they not?

Theaetetus:: Yes.

Socrates:: And of the furlong likewise.

Theaetetus:: Yes.

Socrates:: And the number of the army is the same as the army, and all such cases are alike? In each of them all the number is all the thing.

Theaetetus:: Yes.

Socrates:: And is the number of each anything but the parts of each?

Theaetetus:: No.

Socrates:: Everything that has parts, accordingly, consists of parts, does it not?

Theaetetus:: Evidently.

Socrates:: But we are agreed that the all must be all the parts if all the number is to be the all.

Theaetetus:: Yes.

Socrates:: Then the whole does not consist of parts, for if it consisted of all the parts it would be the all.

Theaetetus:: That seems to be true.

Socrates:: But is a part a part of anything in the world but the whole?

Theaetetus:: Yes, of the all.

Socrates:: You are putting up a brave fight, Theaetetus. But is not the all precisely that of which nothing is wanting?

Theaetetus:: Necessarily.

Socrates:: And is not just this same thing, from which nothing whatsoever is lacking, a whole? For that from which anything is lacking is neither a whole nor all, which have become identical simultaneously and for the same reason.

Theaetetus:: I think now that there is no difference between all and whole.

Socrates:: We were saying, were we not, that if there are parts of anything, the whole and all of it will be all the parts?

Theaetetus:: Certainly.

Socrates:: Once more, then, as I was trying to say just now, if the syllable is not the letters, does it not follow necessarily that it contains the letters, not as parts of it, or else that being the same as the letters, it is equally knowable with them?

Theaetetus:: It does.

Socrates:: And it was in order to avoid this that we assumed that it was different from them?

Theaetetus:: Yes.

Socrates:: Well then, if the letters are not parts of the syllable, can you mention any other things which are parts of it, but are not the letters of it?

Theaetetus:: Certainly not. For if I grant that there are parts of the syllable, it would be ridiculous to give up the letters and look for other things as parts.

Socrates:: Without question, then, Theaetetus, the syllable would be, according to our present view, some indivisible concept.

Theaetetus:: I agree.

Socrates:: Do you remember, then, my friend, that we admitted a little while ago, on what we considered good grounds, that there can be no rational explanation of the primary elements of which other things are composed, because each of them, when taken by itself, is not composite, and we could not properly apply to such an element even the expression “be” or “this,” because these terms are different and alien, and for this reason it is irrational and unknowable?

Theaetetus:: I remember.

Socrates:: And is not this the sole reason why it is single in form and indivisible? I can see no other.

Theaetetus:: There is no other to be seen.

Socrates:: Then the syllable falls into the same class with the letter, if it has no parts and is a single form?

Theaetetus:: Yes, unquestionably.

Socrates:: If, then, the syllable is a plurality of letters and is a whole of which the letters are parts, the syllables and the letters are equally knowable and expressible, if all the parts were found to be the same as the whole.

Theaetetus:: Certainly.

Socrates:: But if one and indivisible, then syllable and likewise letter are equally irrational and unknowable; for the same cause will make them so.

Theaetetus:: I cannot dispute it.

Socrates:: Then we must not accept the statement of any one who says that the syllable is knowable and expressible, but the letter is not.

Theaetetus:: No, not if we are convinced by our argument.

Socrates:: But would you not rather accept the opposite belief, judging by your own experience when you were learning to read?

Theaetetus:: What experience?

Socrates:: In learning, you were merely constantly trying to distinguish between the letters both by sight and by hearing, keeping each of them distinct from the rest, that you might not be disturbed by their sequence when they were spoken or written.

Theaetetus:: That is very true.

Socrates:: And in the music school was not perfect attainment the ability to follow each note and tell which string produced it; and everyone would agree that the notes are the elements of music?

Theaetetus:: Yes, that is all true.

Socrates:: Then if we are to argue from the elements and combinations in which we ourselves have experience to other things in general, we shall say that the elements as a class admit of a much clearer knowledge than the compounds and of a knowledge that is much more important for the complete attainment of each branch of learning, and if anyone says that the compound is by its nature knowable and the element unknowable, we shall consider that he is, intentionally or unintentionally, joking.

Theaetetus:: Certainly.

Socrates:: Still other proofs of this might be brought out, I think; but let us not on that account lose sight of the question before us, which is; What is meant by the doctrine that the most perfect knowledge arises from the addition of rational explanation to true opinion?

Theaetetus:: No, we must not.

Socrates:: Now what are we intended to understand by "rational explanation?" I think it means one of three things.

Theaetetus:: What are they?

Socrates:: The first would be making ones own thought clear through speech by means of verbs and nouns, imaging the opinion in the stream that flows through the lips, as in a mirror or water. Do you not think the rational explanation is something of that sort?

Theaetetus:: Yes, I do. At any rate, we say that he who does that speaks or explains.

Socrates:: Well, that is a thing that anyone can do sooner or later; he can show what he thinks about anything, unless he is deaf or dumb from the first; and so all who have any right opinion will be found to have it with the addition of rational explanation, and there will henceforth be no possibility of right opinion apart from knowledge.

Theaetetus:: True.

Socrates:: Let us not, therefore, carelessly accuse him of talking nonsense who gave the definition of knowledge which we are now considering; for perhaps that is not what he meant. He may have meant that each person if asked about anything must be able in reply to give his questioner an account of it in terms of its elements.

Theaetetus:: As for example, Socrates?

Socrates:: As, for example, Hesiod, speaking of a wagon, says, “a hundred pieces of wood in a wagon.” Now I could not name the pieces, nor, I fancy, could you; but if we were asked what a wagon is, we should be satisfied if we could say “wheels, axle, body, rims, yoke.”

Theaetetus:: Certainly.

Socrates:: But he, perhaps, would think we were ridiculous, just as he would if, on being asked about your name, we should reply by telling the syllables, holding a right opinion and expressing correctly what we have to say, but should think we were grammarians and as such both possessed and were expressing as grammarians would the rational explanation of the name Theaetetus. He would say that it is impossible for anyone to give a rational explanation of anything with knowledge, until he gives a complete enumeration of the elements, combined with true opinion. That, I believe, is what was said before.

Theaetetus:: Yes, it was.

Socrates:: So, too, he would say that we have right opinion about a wagon, but that he who can give an account of its essential nature in terms of those one hundred parts has by this addition added rational explanation to true opinion and has acquired technical knowledge of the essential nature of a wagon, in place of mere opinion, by describing the whole in terms of its elements.

Theaetetus:: Do you agree to that, Socrates?

Socrates:: If you, my friend, agree to it and accept the view that orderly description in terms of its elements is a rational account of anything, but that description in terms of syllables or still larger units is irrational, tell me so, that we may examine the question.

Theaetetus:: Certainly I accept it.

Socrates:: Do you accept it in the belief that anyone has knowledge of anything when he thinks that the same element is a part sometimes of one thing and sometimes of another or when he is of opinion that the same thing has as a part of it sometimes one thing and sometimes another?

Theaetetus:: Not at all, by Zeus.

Socrates:: Then do you forget that when you began to learn to read you and the others did just that?

Theaetetus:: Do you mean when we thought that sometimes one letter and sometimes another belonged to the same syllable, and when we put the same letter sometimes into the proper syllable and sometimes into another?

Socrates:: That is what I mean.

Theaetetus:: By Zeus, I do not forget, nor do think that those have knowledge who are in that condition.

Socrates:: Take an example; When at such a stage in his progress a person in writing “Theaetetus” thinks he ought to write, and actually does write, TH and E, and again in trying to write “Theodorus” thinks he ought to write, and does write, T and E, shall we say that he knows the first syllable of your names?

Theaetetus:: No, we just now agreed that a person in such a condition has not yet gained knowledge.

Socrates:: Then there is nothing to prevent the same person from being in that condition with respect to the second and third and fourth syllables?

Theaetetus:: No, nothing.

Socrates:: Then, in that case, he has in mind the orderly description in terms of letters, and will write "Theaetetus" with right opinion, when he writes the letters in order?

Theaetetus:: Evidently.

Socrates:: But he is still, as we say, without knowledge, though he has right opinion?

Theaetetus:: Yes.

Socrates:: Yes, but with his opinion he has rational explanation; for he wrote with the method in terms of letters in his mind, and we agreed that that was rational explanation.

Theaetetus:: True.

Socrates:: There is, then, my friend, a combination of right opinion with rational explanation, which cannot as yet properly be called knowledge?

Theaetetus:: There is not much doubt about it.

Socrates:: So it seems that the perfectly true definition of knowledge, which we thought we had, was but a golden dream. Or shall we wait a bit before we condemn it? Perhaps the definition to be adopted is not this, but the remaining one of the three possibilities one of which we said must be affirmed by anyone who asserts that knowledge is right opinion combined with rational explanation.

Theaetetus:: I am glad you called that to mind. For there is still one left. The first was a kind of vocal image of the thought, the second the orderly approach to the whole through the elements, which we have just been discussing, and what is the third?

Socrates:: It is just the definition which most people would give, that knowledge is the ability to tell some characteristic by which the object in question differs from all others.

Theaetetus:: As an example of the method, what explanation can you give me, and of what thing?

Socrates:: As an example, if you like, take the sun; I think it is enough for you to be told that it is the brightest of the heavenly bodies that revolve about the earth.

Theaetetus:: Certainly.

Socrates:: Understand why I say this. It is because, as we were just saying, if you get hold of the distinguishing characteristic by which a given thing differs from the rest, you will, as some say, get hold of the definition or explanation of it; but so long as you cling to some common quality, your explanation will pertain to all those objects to which the common quality belongs.

Theaetetus:: I understand; and it seems to me that it is quite right to call that kind a rational explanation or definition.

Socrates:: Then he who possesses right opinion about anything and adds thereto a comprehension of the difference which distinguishes it from other things will have acquired knowledge of that thing of which he previously had only opinion.

Theaetetus:: That is what we affirm.

Socrates:: Theaetetus, now that I have come closer to our statement, I do not understand it at all. It is like coming close to a scene-painting. While I stood off at a distance, I thought there was something in it.

Theaetetus:: What do you mean?

Socrates:: I will tell you if I can. Assume that I have right opinion about you; if I add the explanation or definition of you, then I have knowledge of you, otherwise I have merely opinion.

Theaetetus:: Yes.

Socrates:: But explanation was, we agreed, the interpretation of your difference.

Theaetetus:: It Was.

Socrates:: Then so long as I had merely opinion, I did not grasp in my thought any of the points in which you differ from others?

Theaetetus:: Apparently not.

Socrates:: Therefore I was thinking of some one of the common traits which you possess no more than other men.

Theaetetus:: You must have been.

Socrates:: For heavens sake! How in the world could I in that case have any opinion about you more than about anyone else? Suppose that I thought “That is Theaetetus which is a man and has nose and eyes and mouth” and so forth, mentioning all the parts. Can this thought make me think of Theaetetus any more than of Theodorus or of the meanest of the Mysians, as the saying is?

Theaetetus:: Of course not.

Socrates:: But if I think not only of a man with nose and eyes, but of one with snub nose and protruding eyes, shall I then have an opinion of you any more than of myself and all others like me?

Theaetetus:: Not at all.

Socrates:: No; I fancy Theaetetus will not be the object of opinion in me until this snub-nosedness of yours has stamped and deposited in my mind a memorial different from those of the other examples of snub-nosedness that I have seen, and the other traits that make up your personality have done the like. Then that memorial, if I meet you again tomorrow, will awaken my memory and make me have right opinion about you.

Theaetetus:: Very true.

Socrates:: Then right opinion also would have to do with differences in any given instance?

Theaetetus:: At any rate, it seems so.

Socrates:: Then what becomes of the addition of reason or explanation to right opinion? For if it is defined as the addition of an opinion of the way in which a given thing differs from the rest, it is an utterly absurd injunction.

Theaetetus:: How so?

Socrates:: When we have a right opinion of the way in which certain things differ from other things, we are told to acquire a right opinion of the way in which those same things differ from other things! On this plan the twirling of a scytale or a pestle or anything of the sort would be as nothing compared with this injunction. It might more justly be called a blind mans giving directions; for to command us to acquire that which we already have, in order to learn that of which we already have opinion, is very like a man whose sight is mightily darkened.

Theaetetus:: Tell me now, what did you intend to say when you asked the question a while ago?

Socrates:: If, my boy, the command to add reason or explanation means learning to know and not merely getting an opinion about the difference, our splendid definition of knowledge would be a fine affair! For learning to know is acquiring knowledge, is it not?

Theaetetus:: Yes.

Socrates:: Then, it seems, if asked, What is knowledge? our leader will reply that it is right opinion with the addition of a knowledge of difference; for that would, according to him, be the addition of reason or explanation.

Theaetetus:: So it seems.

Socrates:: And it is utterly silly, when we are looking for a definition of knowledge, to say that it is right opinion with knowledge, whether of difference or of anything else whatsoever. So neither perception, Theaetetus, nor true opinion, nor reason or explanation combined with true opinion could be knowledge.

Theaetetus:: Apparently not.

Socrates:: Are we then, my friend, still pregnant and in travail with knowledge, or have we brought forth everything?

Theaetetus:: Yes, we have, and, by Zeus, Socrates, with your help I have already said more than there was in me.

Socrates:: Then does our art of midwifery declare to us that all the offspring that have been born are mere wind-eggs and not worth rearing?

Theaetetus:: It does, decidedly.

Socrates:: If after this you ever undertake to conceive other thoughts, Theaetetus, and do conceive, you will be pregnant with better thoughts than these by reason of the present search, and if you remain barren, you will be less harsh and gentler to your associates, for you will have the wisdom not to think you know that which you do not know. So much and no more my art can accomplish; nor do I know aught of the things that are known by others, the great and wonderful men who are to-day and have been in the past. This art, however, both my mother and I received from God, she for women and I for young and noble men and for all who are fair.

And now I must go to the Porch of the King, to answer to the suit which Meletus has brought against me. But in the morning, Theodorus, let us meet here again.

# Theaetetus.

Translated by Jowett 3rd ed.

PERSONS OF THE DIALOGUE.

SOCRATES. THEODORUS. THEAETETUS.

Euclid and Terpsion meet in front of Euclid's house in Megara; they enter the house, and the dialogue is read to them by a servant.

Euclid:: Have you only just arrived from the country, Terpsion?

Terpsion:: No, I came some time ago: and I have been in the Agora looking for you, and wondering that I could not find you.

Euclid:: But I was not in the city.

Terpsion:: Where then?

Euclid:: As I was going down to the harbor, I met Theaetetus—he was being carried up to Athens from the army at Corinth.

Terpsion:: Was he alive or dead?

Euclid:: He was scarcely alive, for he has been badly wounded; but he was suffering even more from the sickness which has broken out in the army.

Terpsion:: The dysentery, you mean?

Euclid:: Yes.

Terpsion:: Alas! what a loss he will be!

Euclid:: Yes, Terpsion, he is a noble fellow; only to-day I heard some people highly praising his behavior in this very battle.

Terpsion:: No wonder; I should rather be surprised at hearing anything else of him. But why did he go on, instead of stopping at Megara?

Euclid:: He wanted to get home: although I entreated and advised him to remain, he would not listen to me; so I set him on his way, and turned back, and then I remembered what Socrates had said of him, and thought how remarkably this, like all his predictions, had been fulfilled. I believe that he had seen him a little before his own death, when Theaetetus was a youth, and he had a memorable conversation with him, which he repeated to me when I came to Athens; he was full of admiration of his genius, and said that he would most certainly be a great man, if he lived.

Terpsion:: The prophecy has certainly been fulfilled; but what was the conversation? can you tell me?

Euclid:: No, indeed, not offhand; but I took notes of it as soon as I got home; these I filled up from memory, writing them out at leisure; and whenever I went to Athens, I asked Socrates about any point which I had forgotten, and on my return I made corrections; thus I have nearly the whole conversation written down.

Terpsion:: I remember—you told me; and I have always been intending to ask you to show me the writing, but have put off doing so; and now, why should we not read it through?—having just come from the country, I should greatly like to rest.

Euclid:: I too shall be very glad of a rest, for I went with Theaetetus as far as Erineum. Let us go in, then, and, while we are reposing, the servant shall read to us.

Terpsion:: Very good.

Euclid:: Here is the roll, Terpsion; I may observe that I have introduced Socrates, not as narrating to me, but as actually conversing with the persons whom he mentioned—these were, Theodorus the geometrician (of Cyrene), and Theaetetus. I have omitted, for the sake of convenience, the interlocutory words 'I said,' 'I remarked,' which he used when he spoke of himself, and again, 'he agreed,' or 'disagreed,' in the answer, lest the repetition of them should be troublesome.

Terpsion:: Quite right, Euclid.

Euclid:: And now, boy, you may take the roll and read.

Euclid's servant reads.

Socrates:: If I cared enough about the Cyrenians, Theodorus, I would ask you whether there are any rising geometricians or philosophers in that part of the world. But I am more interested in our own Athenian youth, and I would rather know who among them are likely to do well. I observe them as far as I can myself, and I enquire of any one whom they follow, and I see that a great many of them follow you, in which they are quite right, considering your eminence in geometry and in other ways. Tell me then, if you have met with any one who is good for anything.

Theodorus:: Yes, Socrates, I have become acquainted with one very remarkable Athenian youth, whom I commend to you as well worthy of your attention. If he had been a beauty I should have been afraid to praise him, lest you should suppose that I was in love with him; but he is no beauty, and you must not be offended if I say that he is very like you; for he has a snub nose and projecting eyes, although these features are less marked in him than in you. Seeing, then, that he has no personal attractions, I may freely say, that in all my acquaintance, which is very large, I never knew any one who was his equal in natural gifts: for he has a quickness of apprehension which is almost unrivalled, and he is exceedingly gentle, and also the most courageous of men; there is a union of qualities in him such as I have never seen in any other, and should scarcely have thought possible; for those who, like him, have quick and ready and retentive wits, have generally also quick tempers; they are ships without ballast, and go darting about, and are mad rather than courageous; and the steadier sort, when they have to face study, prove stupid and cannot remember. Whereas he moves surely and smoothly and successfully in the path of knowledge and enquiry; and he is full of gentleness, flowing on silently like a river of oil; at his age, it is wonderful.

Socrates:: That is good news; whose son is he?

Theodorus:: The name of his father I have forgotten, but the youth himself is the middle one of those who are approaching us; he and his companions have been anointing themselves in the outer court, and now they seem to have finished, and are coming towards us. Look and see whether you know him.

Socrates:: I know the youth, but I do not know his name; he is the son of Euphronius the Sunian, who was himself an eminent man, and such another as his son is, according to your account of him; I believe that he left a considerable fortune.

Theodorus:: Theaetetus, Socrates, is his name; but I rather think that the property disappeared in the hands of trustees; notwithstanding which he is wonderfully liberal.

Socrates:: He must be a fine fellow; tell him to come and sit by me.

Theodorus:: I will. Come hither, Theaetetus, and sit by Socrates.

Socrates:: By all means, Theaetetus, in order that I may see the reflection of myself in your face, for Theodorus says that we are alike; and yet if each of us held in his hands a lyre, and he said that they were tuned alike, should we at once take his word, or should we ask whether he who said so was or was not a musician?

Theaetetus:: We should ask.

Socrates:: And if we found that he was, we should take his word; and if not, not?

Theaetetus:: True.

Socrates:: And if this supposed likeness of our faces is a matter of any interest to us, we should enquire whether he who says that we are alike is a painter or not?

Theaetetus:: Certainly we should.

Socrates:: And is Theodorus a painter?

Theaetetus:: I never heard that he was.

Socrates:: Is he a geometrician?

Theaetetus:: Of course he is, Socrates.

Socrates:: And is he an astronomer and calculator and musician, and in general an educated man?

Theaetetus:: I think so.

Socrates:: If, then, he remarks on a similarity in our persons, either by way of praise or blame, there is no particular reason why we should attend to him.

Theaetetus:: I should say not.

Socrates:: But if he praises the virtue or wisdom which are the mental endowments of either of us, then he who hears the praises will naturally desire to examine him who is praised: and he again should be willing to exhibit himself.

Theaetetus:: Very true, Socrates.

Socrates:: Then now is the time, my dear Theaetetus, for me to examine, and for you to exhibit; since although Theodorus has praised many a citizen and stranger in my hearing, never did I hear him praise any one as he has been praising you.

Theaetetus:: I am glad to hear it, Socrates; but what if he was only in jest?

Socrates:: Nay, Theodorus is not given to jesting; and I cannot allow you to retract your consent on any such pretence as that. If you do, he will have to swear to his words; and we are perfectly sure that no one will be found to impugn him. Do not be shy then, but stand to your word.

Theaetetus:: I suppose I must, if you wish it.

Socrates:: In the first place, I should like to ask what you learn of Theodorus: something of geometry, perhaps?

Theaetetus:: Yes.

Socrates:: And astronomy and harmony and calculation?

Theaetetus:: I do my best.

Socrates:: Yes, my boy, and so do I; and my desire is to learn of him, or of anybody who seems to understand these things. And I get on pretty well in general; but there is a little difficulty which I want you and the company to aid me in investigating. Will you answer me a question: 'Is not learning growing wiser about that which you learn?'

Theaetetus:: Of course.

Socrates:: And by wisdom the wise are wise?

Theaetetus:: Yes.

Socrates:: And is that different in any way from knowledge?

Theaetetus:: What?

Socrates:: Wisdom; are not men wise in that which they know?

Theaetetus:: Certainly they are.

Socrates:: Then wisdom and knowledge are the same?

Theaetetus:: Yes.

Socrates:: Herein lies the difficulty which I can never solve to my satisfaction—What is knowledge? Can we answer that question? What say you? which of us will speak first? whoever misses shall sit down, as at a game of ball, and shall be donkey, as the boys say; he who lasts out his competitors in the game without missing, shall be our king, and shall have the right of putting to us any questions which he pleases.... Why is there no reply? I hope, Theodorus, that I am not betrayed into rudeness by my love of conversation? I only want to make us talk and be friendly and sociable.

Theodorus:: The reverse of rudeness, Socrates: but I would rather that you would ask one of the young fellows; for the truth is, that I am unused to your game of question and answer, and I am too old to learn; the young will be more suitable, and they will improve more than I shall, for youth is always able to improve. And so having made a beginning with Theaetetus, I would advise you to go on with him and not let him off.

Socrates:: Do you hear, Theaetetus, what Theodorus says? The philosopher, whom you would not like to disobey, and whose word ought to be a command to a young man, bids me interrogate you. Take courage, then, and nobly say what you think that knowledge is.

Theaetetus:: Well, Socrates, I will answer as you and he bid me; and if I make a mistake, you will doubtless correct me.

Socrates:: We will, if we can.

Theaetetus:: Then, I think that the sciences which I learn from Theodorus—geometry, and those which you just now mentioned—are knowledge; and I would include the art of the cobbler and other craftsmen; these, each and all of them, are knowledge.

Socrates:: Too much, Theaetetus, too much; the nobility and liberality of your nature make you give many and diverse things, when I am asking for one simple thing.

Theaetetus:: What do you mean, Socrates?

Socrates:: Perhaps nothing. I will endeavor, however, to explain what I believe to be my meaning: When you speak of cobbling, you mean the art or science of making shoes?

Theaetetus:: Just so.

Socrates:: And when you speak of carpentering, you mean the art of making wooden implements?

Theaetetus:: I do.

Socrates:: In both cases you define the subject-matter of each of the two arts?

Theaetetus:: True.

Socrates:: But that, Theaetetus, was not the point of my question: we wanted to know not the subjects, nor yet the number of the arts or sciences, for we were not going to count them, but we wanted to know the nature of knowledge in the abstract. Am I not right?

Theaetetus:: Perfectly right.

Socrates:: Let me offer an illustration: Suppose that a person were to ask about some very trivial and obvious thing—for example, What is clay? and we were to reply, that there is a clay of potters, there is a clay of oven-makers, there is a clay of brick-makers; would not the answer be ridiculous?

Theaetetus:: Truly.

Socrates:: In the first place, there would be an absurdity in assuming that he who asked the question would understand from our answer the nature of 'clay,' merely because we added ‘of the image-makers’ or of any other workers. How can a man understand the name of anything, when be does not know the nature of it?

Theaetetus:: He cannot.

Socrates:: Then he who does not know what science or knowledge is, has no knowledge of the art or science of making shoes?

Theaetetus:: None.

Socrates:: Nor of any other science?

Theaetetus:: No.

Socrates:: And when a man is asked what science or knowledge is, to give in answer the name of some art or science is ridiculous; for the question is, ‘What is knowledge?’ and he replies, ‘A knowledge of this or that.’

Theaetetus:: True.

Socrates:: Moreover, he might answer shortly and simply, but he makes an enormous circuit. For example, when asked about the clay, he might have said simply, that clay is moistened earth—what sort of clay is not to the point.

Theaetetus:: Yes, Socrates, there is no difficulty as you put the question. You mean, if I am not mistaken, something like what occurred to me and to my friend here, your namesake Socrates, in a recent discussion.

Socrates:: What was that, Theaetetus?

Theaetetus:: Theodorus was writing out for us something about roots, such as the roots of three or five, showing that they are incommensurable by the unit: he selected other examples up to seventeen—there he stopped. Now as there are innumerable roots, the notion occurred to us of attempting to include them all under one name or class.

Socrates:: And did you find such a class?

Theaetetus:: I think that we did; but I should like to have your opinion.

Socrates:: Let me hear.

Theaetetus:: We divided all numbers into two classes: those which are made up of equal factors multiplying into one another, which we compared to square figures and called square or equilateral numbers;—that was one class.

Socrates:: Very good.

Theaetetus:: The intermediate numbers, such as three and five, and every other number which is made up of unequal factors, either of a greater multiplied by a less, or of a less multiplied by a greater, and when regarded as a figure, is contained in unequal sides;—all these we compared to oblong figures, and called them oblong numbers.

Socrates:: Capital; and what followed?

Theaetetus:: The lines, or sides, which have for their squares the equilateral plane numbers, were called by us lengths or magnitudes; and the lines which are the roots of (or whose squares are equal to) the oblong numbers, were called powers or roots; the reason of this latter name being, that they are commensurable with the former [i.e. with the so-called lengths or magnitudes] not in linear measurement, but in the value of the superficial content of their squares; and the same about solids.

Socrates:: Excellent, my boys; I think that you fully justify the praises of Theodorus, and that he will not be found guilty of false witness.

Theaetetus:: But I am unable, Socrates, to give you a similar answer about knowledge, which is what you appear to want; and therefore Theodorus is a deceiver after all.

Socrates:: Well, but if some one were to praise you for running, and to say that he never met your equal among boys, and afterwards you were beaten in a race by a grown-up man, who was a great runner—would the praise be any the less true?

Theaetetus:: Certainly not.

Socrates:: And is the discovery of the nature of knowledge so small a matter, as I just now said? Is it not one which would task the powers of men perfect in every way?

Theaetetus:: By heaven, they should be the top of all perfection!

Socrates:: Well, then, be of good cheer; do not say that Theodorus was mistaken about you, but do your best to ascertain the true nature of knowledge, as well as of other things.

Theaetetus:: I am eager enough, Socrates, if that would bring to light the truth.

Socrates:: Come, you made a good beginning just now; let your own answer about roots be your model, and as you comprehended them all in one class, try and bring the many sorts of knowledge under one definition.

Theaetetus:: I can assure you, Socrates, that I have tried very often, when the report of questions asked by you was brought to me; but I can neither persuade myself that I have a satisfactory answer to give, nor hear of any one who answers as you would have him; and I cannot shake off a feeling of anxiety.

Socrates:: These are the pangs of labor, my dear Theaetetus; you have something within you which you are bringing to the birth.

Theaetetus:: I do not know, Socrates; I only say what I feel.

Socrates:: And have you never heard, simpleton, that I am the son of a midwife, brave and burly, whose name was Phaenarete?

Theaetetus:: Yes, I have.

Socrates:: And that I myself practice midwifery?

Theaetetus:: No, never.

Socrates:: Let me tell you that I do though, my friend: but you must not reveal the secret, as the world in general have not found me out; and therefore they only say of me, that I am the strangest of mortals and drive men to their wits' end. Did you ever hear that too?

Theaetetus:: Yes.

Socrates:: Shall I tell you the reason?

Theaetetus:: By all means.

Socrates:: Bear in mind the whole business of the midwives, and then you will see my meaning better:—No woman, as you are probably aware, who is still able to conceive and bear, attends other women, but only those who are past bearing.

Theaetetus:: Yes, I know.

Socrates:: The reason of this is said to be that Artemis—the goddess of childbirth—is not a mother, and she honors those who are like herself; but she could not allow the barren to be midwives, because human nature cannot know the mystery of an art without experience; and therefore she assigned this office to those who are too old to bear.

Theaetetus:: I dare say.

Socrates:: And I dare say too, or rather I am absolutely certain, that the midwives know better than others who is pregnant and who is not?

Theaetetus:: Very true.

Socrates:: And by the use of potions and incantations they are able to arouse the pangs and to soothe them at will; they can make those bear who have a difficulty in bearing, and if they think fit they can smother the embryo in the womb.

Theaetetus:: They can.

Socrates:: Did you ever remark that they are also most cunning matchmakers, and have a thorough knowledge of what unions are likely to produce a brave brood?

Theaetetus:: No, never.

Socrates:: Then let me tell you that this is their greatest pride, more than cutting the umbilical cord. And if you reflect, you will see that the same art which cultivates and gathers in the fruits of the earth, will be most likely to know in what soils the several plants or seeds should be deposited.

Theaetetus:: Yes, the same art.

Socrates:: And do you suppose that with women the case is otherwise?

Theaetetus:: I should think not.

Socrates:: Certainly not; but midwives are respectable women who have a character to lose, and they avoid this department of their profession, because they are afraid of being called procuresses, which is a name given to those who join together man and woman in an unlawful and unscientific way; and yet the true midwife is also the true and only matchmaker.

Theaetetus:: Clearly.

Socrates:: Such are the midwives, whose task is a very important one, but not so important as mine; for women do not bring into the world at one time real children, and at another time counterfeits which are with difficulty distinguished from them; if they did, then the discernment of the true and false birth would be the crowning achievement of the art of midwifery—you would think so?

Theaetetus:: Indeed I should.

Socrates:: Well, my art of midwifery is in most respects like theirs; but differs, in that I attend men and not women, and I look after their souls when they are in labor, and not after their bodies: and the triumph of my art is in thoroughly examining whether the thought which the mind of the young man brings forth is a false idol or a noble and true birth. And like the midwives, I am barren, and the reproach which is often made against me, that I ask questions of others and have not the wit to answer them myself, is very just—the reason is, that the god compels me to be a midwife, but does not allow me to bring forth. And therefore I am not myself at all wise, nor have I anything to show which is the invention or birth of my own soul, but those who converse with me profit. Some of them appear dull enough at first, but afterwards, as our acquaintance ripens, if the god is gracious to them, they all make astonishing progress; and this in the opinion of others as well as in their own. It is quite clear that they never learned anything from me; the many fine discoveries to which they cling are of their own making. But to me and the god they owe their delivery. And the proof of my words is, that many of them in their ignorance, either in their self-conceit despising me, or falling under the influence of others, have gone away too soon; and have not only lost the children of whom I had previously delivered them by an ill bringing up, but have stifled whatever else they had in them by evil communications, being fonder of lies and shams than of the truth; and they have at last ended by seeing themselves, as others see them, to be great fools. Aristeides, the son of Lysimachus, is one of them, and there are many others. The truants often return to me, and beg that I would consort with them again—they are ready to go to me on their knees—and then, if my familiar allows, which is not always the case, I receive them, and they begin to grow again. Dire are the pangs which my art is able to arouse and to allay in those who consort with me, just like the pangs of women in childbirth; night and day they are full of perplexity and travail which is even worse than that of the women. So much for them. And there are others, Theaetetus, who come to me apparently having nothing in them; and as I know that they have no need of my art, I coax them into marrying some one, and by the grace of God I can generally tell who is likely to do them good. Many of them I have given away to Prodicus, and many to other inspired sages.

I tell you this long story, friend Theaetetus, because I suspect, as indeed you seem to think yourself, that you are in labor—great with some conception. Come then to me, who am a midwife's son and myself a midwife, and do your best to answer the questions which I will ask you. And if I abstract and expose your first-born, because I discover upon inspection that the conception which you have formed is a vain shadow, do not quarrel with me on that account, as the manner of women is when their first children are taken from them. For I have actually known some who were ready to bite me when I deprived them of a darling folly; they did not perceive that I acted from goodwill, not knowing that no god is the enemy of man—that was not within the range of their ideas; neither am I their enemy in all this, but it would be wrong for me to admit falsehood, or to stifle the truth. Once more, then, Theaetetus, I repeat my old question, 'What is knowledge?'—and do not say that you cannot tell; but quit yourself like a man, and by the help of God you will be able to tell.

Theaetetus:: At any rate, Socrates, after such an exhortation I should be ashamed of not trying to do my best. Now he who knows perceives what he knows, and, as far as I can see at present, knowledge is perception.

Socrates:: Bravely said, boy; that is the way in which you should express your opinion. And now, let us examine together this conception of yours, and see whether it is a true birth or a mere wind-egg:—You say that knowledge is perception?

Theaetetus:: Yes.

Socrates:: Well, you have delivered yourself of a very important doctrine about knowledge; it is indeed the opinion of Protagoras, who has another way of expressing it. Man, he says, is the measure of all things, of the existence of things that are, and of the non-existence of things that are not:—You have read him?

Theaetetus:: O yes, again and again.

Socrates:: Does he not say that things are to you such as they appear to you, and to me such as they appear to me, and that you and I are men?

Theaetetus:: Yes, he says so.

Socrates:: A wise man is not likely to talk nonsense. Let us try to understand him: the same wind is blowing, and yet one of us may be cold and the other not, or one may be slightly and the other very cold?

Theaetetus:: Quite true.

Socrates:: Now is the wind, regarded not in relation to us but absolutely, cold or not; or are we to say, with Protagoras, that the wind is cold to him who is cold, and not to him who is not?

Theaetetus:: I suppose the last.

Socrates:: Then it must appear so to each of them?

Theaetetus:: Yes.

Socrates:: And ‘appears to him’ means the same as ‘he perceives.’

Theaetetus:: True.

Socrates:: Then appearing and perceiving coincide in the case of hot and cold, and in similar instances; for things appear, or may be supposed to be, to each one such as he perceives them?

Theaetetus:: Yes.

Socrates:: Then perception is always of existence, and being the same as knowledge is unerring?

Theaetetus:: Clearly.

Socrates:: In the name of the Graces, what an almighty wise man Protagoras must have been! He spoke these things in a parable to the common herd, like you and me, but told the truth, ‘his Truth’, in secret to his own disciples.

Theaetetus:: What do you mean, Socrates?

Socrates:: I am about to speak of a high argument, in which all things are said to be relative; you cannot rightly call anything by any name, such as great or small, heavy or light, for the great will be small and the heavy light—there is no single thing or quality, but out of motion and change and admixture all things are becoming relatively to one another, which ‘becoming’ is by us incorrectly called being, but is really becoming, for nothing ever is, but all things are becoming. Summon all philosophers—Protagoras, Heracleitus, Empedocles, and the rest of them, one after another, and with the exception of Parmenides they will agree with you in this. Summon the great masters of either kind of poetry—Epicharmus, the prince of Comedy, and Homer of Tragedy; when the latter sings of

> ‘Ocean whence sprang the gods, and mother Tethys,’

does he not mean that all things are the offspring of flux and motion?

Theaetetus:: I think so.

Socrates:: And who could take up arms against such a great army having Homer for its general, and not appear ridiculous?

Theaetetus:: Who indeed, Socrates?

Socrates:: Yes, Theaetetus; and there are plenty of other proofs which will show that motion is the source of what is called being and becoming, and inactivity of not-being and destruction; for fire and warmth, which are supposed to be the parent and guardian of all other things, are born of movement and of friction, which is a kind of motion; —is not this the origin of fire?

Theaetetus:: It is.

Socrates:: And the race of animals is generated in the same way?

Theaetetus:: Certainly.

Socrates:: And is not the bodily habit spoiled by rest and idleness, but preserved for a long time by motion and exercise?

Theaetetus:: True.

Socrates:: And what of the mental habit? Is not the soul informed, and improved, and preserved by study and attention, which are motions; but when at rest, which in the soul only means want of attention and study, is uninformed, and speedily forgets whatever she has learned?

Theaetetus:: True.

Socrates:: Then motion is a good, and rest an evil, to the soul as well as to the body?

Theaetetus:: Clearly.

Socrates:: I may add, that breathless calm, stillness and the like waste and impair, while wind and storm preserve; and the palmary argument of all, which I strongly urge, is the golden chain in Homer, by which he means the sun, thereby indicating that so long as the sun and the heavens go round in their orbits, all things human and divine are and are preserved, but if they were chained up and their motions ceased, then all things would be destroyed, and, as the saying is, turned upside down.

Theaetetus:: I believe, Socrates, that you have truly explained his meaning.

Socrates:: Then now apply his doctrine to perception, my good friend, and first of all to vision; that which you call white color is not in your eyes, and is not a distinct thing which exists out of them. And you must not assign any place to it: for if it had position it would be, and be at rest, and there would be no process of becoming.

Theaetetus:: Then what is color?

Socrates:: Let us carry out the principle which has just been affirmed, that nothing is self-existent, and then we shall see that white, black, and every other color, arises out of the eye meeting the appropriate motion, and that what we call a color is in each case neither the active nor the passive element, but something which passes between them, and is peculiar to each percipient; are you quite certain that the several colors appear to a dog or to any animal whatever as they appear to you?

Theaetetus:: Far from it.

Socrates:: Or that anything appears the same to you as to another man? Are you so profoundly convinced of this?

Rather would it not be true that it never appears exactly the same to you, because you are never exactly the same?

Theaetetus:: The latter.

Socrates:: And if that with which I compare myself in size, or which I apprehend by touch, were great or white or hot, it could not become different by mere contact with another unless it actually changed; nor again, if the comparing or apprehending subject were great or white or hot, could this, when unchanged from within, become changed by any approximation or affection of any other thing. The fact is that in our ordinary way of speaking we allow ourselves to be driven into most ridiculous and wonderful contradictions, as Protagoras and all who take his line of argument would remark.

Theaetetus:: How? and of what sort do you mean?

Socrates:: A little instance will sufficiently explain my meaning: Here are six dice, which are more by a half when compared with four, and fewer by a half than twelve—they are more and also fewer. How can you or any one maintain the contrary?

Theaetetus:: Very true.

Socrates:: Well, then, suppose that Protagoras or some one asks whether anything can become greater or more if not by increasing, how would you answer him, Theaetetus?

Theaetetus:: I should say 'No,' Socrates, if I were to speak my mind in reference to this last question, and if I were not afraid of contradicting my former answer.

Socrates:: Capital! excellent! spoken like an oracle, my boy! And if you reply 'Yes,' there will be a case for Euripides; for our tongue will be unconvinced, but not our mind.

Theaetetus:: Very true.

Socrates:: The thoroughbred Sophists, who know all that can be known about the mind, and argue only out of the superfluity of their wits, would have had a regular sparring-match over this, and would have knocked their arguments together finely. But you and I, who have no professional aims, only desire to see what is the mutual relation of these principles,—whether they are consistent with each other or not.

Theaetetus:: Yes, that would be my desire.

Socrates:: And mine too. But since this is our feeling, and there is plenty of time, why should we not calmly and patiently review our own thoughts, and thoroughly examine and see what these appearances in us really are? If I am not mistaken, they will be described by us as follows:—first, equal to that nothing can become greater or less, either in number or magnitude, while remaining equal to itself—you would agree?

Theaetetus:: Yes.

Socrates:: Secondly, that without addition or subtraction there is no increase or diminution of anything, but only equality.

Theaetetus:: Quite true.

Socrates:: Thirdly, that what was not before cannot be afterwards, without becoming and having become.

Theaetetus:: Yes, truly.

Socrates:: These three axioms, if I am not mistaken, are fighting with one another in our minds in the case of the dice, or, again, in such a case as this—if I were to say that I, who am of a certain height and taller than you, may within a year, without gaining or losing in height, be not so tall—not that I should have lost, but that you would have increased. In such a case, I am afterwards what I once was not, and yet I have not become; for I could not have become without becoming, neither could I have become less without losing somewhat of my height; and I could give you ten thousand examples of similar contradictions, if we admit them at all. I believe that you follow me, Theaetetus; for I suspect that you have thought of these questions before now.

Theaetetus:: Yes, Socrates, and I am amazed when I think of them; by the Gods I am! and I want to know what on earth they mean; and there are times when my head quite swims with the contemplation of them.

Socrates:: I see, my dear Theaetetus, that Theodorus had a true insight into your nature when he said that you were a philosopher, for wonder is the feeling of a philosopher, and philosophy begins in wonder. He was not a bad genealogist who said that Iris (the messenger of heaven) is the child of Thaumas (wonder). But do you begin to see what is the explanation of this perplexity on the hypothesis which we attribute to Protagoras?

Theaetetus:: Not as yet.

Socrates:: Then you will be obliged to me if I help you to unearth the hidden ‘truth’ of a famous man or school.

Theaetetus:: To be sure, I shall be very much obliged.

Socrates:: Take a look round, then, and see that none of the uninitiated are listening. Now by the uninitiated I mean the people who believe in nothing but what they can grasp in their hands, and who will not allow that action or generation or anything invisible can have real existence.

Theaetetus:: Yes, indeed, Socrates, they are very hard and impenetrable mortals.

Socrates:: Yes, my boy, outer barbarians. Far more ingenious are the brethren whose mysteries I am about to reveal to you. Their first principle is, that all is motion, and upon this all the affections of which we were just now speaking are supposed to depend: there is nothing but motion, which has two forms, one active and the other passive, both in endless number; and out of the union and friction of them there is generated a progeny endless in number, having two forms, sense and the object of sense, which are ever breaking forth and coming to the birth at the same moment. The senses are variously named hearing, seeing, smelling; there is the sense of heat, cold, pleasure, pain, desire, fear, and many more which have names, as well as innumerable others which are without them; each has its kindred object,—each variety of color has a corresponding variety of sight, and so with sound and hearing, and with the rest of the senses and the objects akin to them. Do you see, Theaetetus, the bearings of this tale on the preceding argument?

Theaetetus:: Indeed I do not.

Socrates:: Then attend, and I will try to finish the story. The purport is that all these things are in motion, as I was saying, and that this motion is of two kinds, a slower and a quicker; and the slower elements have their motions in the same place and with reference to things near them, and so they beget; but what is begotten is swifter, for it is carried to and fro, and moves from place to place. Apply this to sense:—When the eye and the appropriate object meet together and give birth to whiteness and the sensation connatural with it, which could not have been given by either of them going elsewhere, then, while the sight is flowing from the eye, whiteness proceeds from the object which combines in producing the color; and so the eye is fulfilled with sight, and really sees, and becomes, not sight, but a seeing eye; and the object which combined to form the color is fulfilled with whiteness, and becomes not whiteness but a white thing, whether wood or stone or whatever the object may be which happens to be colored white. And this is true of all sensible objects, hard, warm, and the like, which are similarly to be regarded, as I was saying before, not as having any absolute existence, but as being all of them of whatever kind generated by motion in their intercourse with one another; for of the agent and patient, as existing in separation, no trustworthy conception, as they say, can be formed, for the agent has no existence until united with the patient, and the patient has no existence until united with the agent; and that which by uniting with something becomes an agent, by meeting with some other thing is converted into a patient. And from all these considerations, as I said at first, there arises a general reflection, that there is no one self-existent thing, but everything is becoming and in relation; and being must be altogether abolished, although from habit and ignorance we are compelled even in this discussion to retain the use of the term. But great philosophers tell us that we are not to allow either the word 'something,' or 'belonging to something,' or 'to me,' or 'this' or 'that,' or any other detaining name to be used; in the language of nature all things are being created and destroyed, coming into being and passing into new forms; nor can any name fix or detain them; he who attempts to fix them is easily refuted. And this should be the way of speaking, not only of particulars but of aggregates; such aggregates as are expressed in the word 'man,' or 'stone,' or any name of an animal or of a class. O Theaetetus, are not these speculations sweet as honey? And do you not like the taste of them in the mouth?

Theaetetus:: I do not know what to say, Socrates; for, indeed, I cannot make out whether you are giving your own opinion or only wanting to draw me out.

Socrates:: You forget, my friend, that I neither know, nor profess to know, anything of these matters; you are the person who is in labor, I am the barren midwife; and this is why I soothe you, and offer you one good thing after another, that you may taste them. And I hope that I may at last help to bring your own opinion into the light of day: when this has been accomplished, then we will determine whether what you have brought forth is only a wind-egg or a real and genuine birth. Therefore, keep up your spirits, and answer like a man what you think.

Theaetetus:: Ask me.

Socrates:: Then once more: Is it your opinion that nothing is but what becomes?—the good and the noble, as well as all the other things which we were just now mentioning?

Theaetetus:: When I hear you discoursing in this style, I think that there is a great deal in what you say, and I am very ready to assent.

Socrates:: Let us not leave the argument unfinished, then; for there still remains to be considered an objection which may be raised about dreams and diseases, in particular about madness, and the various illusions of hearing and sight, or of other senses. For you know that in all these cases the *esse-percipi* theory appears to be unmistakably refuted, since in dreams and illusions we certainly have false perceptions; and far from saying that everything is which appears, we should rather say that nothing is which appears.

Theaetetus:: Very true, Socrates.

Socrates:: But then, my boy, how can any one contend that knowledge is perception, or that to every man what appears is?

Theaetetus:: I am afraid to say, Socrates, that I have nothing to answer, because you rebuked me just now for making this excuse; but I certainly cannot undertake to argue that madmen or dreamers think truly, when they imagine, some of them that they are gods, and others that they can fly, and are flying in their sleep.

Socrates:: Do you see another question which can be raised about these phenomena, notably about dreaming and waking?

Theaetetus:: What question?

Socrates:: A question which I think that you must often have heard persons ask:—How can you determine whether at this moment we are sleeping, and all our thoughts are a dream; or whether we are awake, and talking to one another in the waking state?

Theaetetus:: Indeed, Socrates, I do not know how to prove the one any more than the other, for in both cases the facts precisely correspond; and there is no difficulty in supposing that during all this discussion we have been talking to one another in a dream; and when in a dream we seem to be narrating dreams, the resemblance of the two states is quite astonishing.

Socrates:: You see, then, that a doubt about the reality of sense is easily raised, since there may even be a doubt whether we are awake or in a dream. And as our time is equally divided between sleeping and waking, in either sphere of existence the soul contends that the thoughts which are present to our minds at the time are true; and during one half of our lives we affirm the truth of the one, and, during the other half, of the other; and are equally confident of both.

Theaetetus:: Most true.

Socrates:: And may not the same be said of madness and other disorders? the difference is only that the times are not equal.

Theaetetus:: Certainly.

Socrates:: And is truth or falsehood to be determined by duration of time?

Theaetetus:: That would be in many ways ridiculous.

Socrates:: But can you certainly determine by any other means which of these opinions is true?

Theaetetus:: I do not think that I can.

Socrates:: Listen, then, to a statement of the other side of the argument, which is made by the champions of appearance. They would say, as I imagine—Can that which is wholly other than something, have the same quality as that from which it differs? and observe, Theaetetus, that the word 'other' means not 'partially,' but 'wholly other.'

Theaetetus:: Certainly, putting the question as you do, that which is wholly other cannot either potentially or in any other way be the same.

Socrates:: And must therefore be admitted to be unlike?

Theaetetus:: True.

Socrates:: If, then, anything happens to become like or unlike itself or another, when it becomes like we call it the same—when unlike, other?

Theaetetus:: Certainly.

Socrates:: Were we not saying that there are agents many and infinite, and patients many and infinite?

Theaetetus:: Yes.

Socrates:: And also that different combinations will produce results which are not the same, but different?

Theaetetus:: Certainly.

Socrates:: Let us take you and me, or anything as an example:—There is Socrates in health, and Socrates sick—Are they like or unlike?

Theaetetus:: You mean to compare Socrates in health as a whole, and Socrates in sickness as a whole?

Socrates:: Exactly; that is my meaning.

Theaetetus:: I answer, they are unlike.

Socrates:: And if unlike, they are other?

Theaetetus:: Certainly.

Socrates:: And would you not say the same of Socrates sleeping and waking, or in any of the states which we were mentioning?

Theaetetus:: I should.

Socrates:: All agents have a different patient in Socrates, accordingly as he is well or ill.

Theaetetus:: Of course.

Socrates:: And I who am the patient, and that which is the agent, will produce something different in each of the two cases?

Theaetetus:: Certainly.

Socrates:: The wine which I drink when I am in health, appears sweet and pleasant to me?

Theaetetus:: True.

Socrates:: For, as has been already acknowledged, the patient and agent meet together and produce sweetness and a perception of sweetness, which are in simultaneous motion, and the perception which comes from the patient makes the tongue percipient, and the quality of sweetness which arises out of and is moving about the wine, makes the wine both to be and to appear sweet to the healthy tongue.

Theaetetus:: Certainly; that has been already acknowledged.

Socrates:: But when I am sick, the wine really acts upon another and a different person?

Theaetetus:: Yes.

Socrates:: The combination of the draught of wine, and the Socrates who is sick, produces quite another result; which is the sensation of bitterness in the tongue, and the motion and creation of bitterness in and about the wine, which becomes not bitterness but something bitter; as I myself become not perception but percipient?

Theaetetus:: True.

Socrates:: There is no other object of which I shall ever have the same perception, for another object would give another perception, and would make the percipient other and different; nor can that object which affects me, meeting another subject, produce the same, or become similar, for that too will produce another result from another subject, and become different.

Theaetetus:: True.

Socrates:: Neither can I by myself, have this sensation, nor the object by itself, this quality.

Theaetetus:: Certainly not.

Socrates:: When I perceive I must become percipient of something—there can be no such thing as perceiving and perceiving nothing; the object, whether it become sweet, bitter, or of any other quality, must have relation to a percipient; nothing can become sweet which is sweet to no one.

Theaetetus:: Certainly not.

Socrates:: Then the inference is, that we [the agent and patient] are or become in relation to one another; there is a law which binds us one to the other, but not to any other existence, nor each of us to himself; and therefore we can only be bound to one another; so that whether a person says that a thing is or becomes, he must say that it is or becomes to or of or in relation to something else; but he must not say or allow any one else to say that anything is or becomes absolutely:—such is our conclusion.

Theaetetus:: Very true, Socrates.

Socrates:: Then, if that which acts upon me has relation to me and to no other, I and no other am the percipient of it?

Theaetetus:: Of course.

Socrates:: Then my perception is true to me, being inseparable from my own being; and, as Protagoras says, to myself I am judge of what is and what is not to me.

Theaetetus:: I suppose so.

Socrates:: How then, if I never err, and if my mind never trips in the conception of being or becoming, can I fail of knowing that which I perceive?

Theaetetus:: You cannot.

Socrates:: Then you were quite right in affirming that knowledge is only perception; and the meaning turns out to be the same, whether with Homer and Heracleitus, and all that company, you say that all is motion and flux, or with the great sage Protagoras, that man is the measure of all things; or with Theaetetus, that, given these premises, perception is knowledge. Am I not right, Theaetetus, and is not this your new-born child, of which I have delivered you? What say you?

Theaetetus:: I cannot but agree, Socrates.

Socrates:: Then this is the child, however he may turn out, which you and I have with difficulty brought into the world. And now that he is born, we must run round the hearth with him, and see whether he is worth rearing, or is only a wind-egg and a sham. Is he to be reared in any case, and not exposed? or will you bear to see him rejected, and not get into a passion if I take away your first-born?

Theodorus:: Theaetetus will not be angry, for he is very good-natured. But tell me, Socrates, in heaven's name, is this, after all, not the truth?

Socrates:: You, Theodorus, are a lover of theories, and now you innocently fancy that I am a bag full of them, and can easily pull one out which will overthrow its predecessor. But you do not see that in reality none of these theories come from me; they all come from him who talks with me. I only know just enough to extract them from the wisdom of another, and to receive them in a spirit of fairness. And now I shall say nothing myself, but shall endeavor to elicit something from our young friend.

Theodorus:: Do as you say, Socrates; you are quite right.

Socrates:: Shall I tell you, Theodorus, what amazes me in your acquaintance Protagoras.

Theodorus:: What is it?

Socrates:: I am charmed with his doctrine, that what appears is to each one, but I wonder that he did not begin his book on Truth with a declaration that a pig or a dog-faced baboon, or some other yet stranger monster which has sensation, is the measure of all things; then he might have shown a magnificent contempt for our opinion of him by informing us at the outset that while we were reverencing him like a God for his wisdom he was no better than a tadpole, not to speak of his fellow-men—would not this have produced an overpowering effect? For if truth is only sensation, and no man can discern another's feelings better than he, or has any superior right to determine whether his opinion is true or false, but each, as we have several times repeated, is to himself the sole judge, and everything that he judges is true and right, why, my friend, should Protagoras be preferred to the place of wisdom and instruction, and deserve to be well paid, and we poor ignoramuses have to go to him, if each one is the measure of his own wisdom? Must he not be talking ‘ad captandum’ in all this? I say nothing of the ridiculous predicament in which my own midwifery and the whole art of dialectic is placed; for the attempt to supervise or refute the notions or opinions of others would be a tedious and enormous piece of folly, if to each man his own are right; and this must be the case if Protagoras’ Truth is the real truth, and the philosopher is not merely amusing himself by giving oracles out of the shrine of his book.

Theodorus:: He was a friend of mine, Socrates, as you were saying, and therefore I cannot have him refuted by my lips, nor can I oppose you when I agree with you; please, then, to take Theaetetus again; he seemed to answer very nicely.

Socrates:: If you were to go into a Lacedaemonian palestra, Theodorus, would you have a right to look on at the naked wrestlers, some of them making a poor figure, if you did not strip and give them an opportunity of judging of your own person?

Theodorus:: Why not, Socrates, if they would allow me, as I think you will, in consideration of my age and stiffness; let some more supple youth try a fall with you, and do not drag me into the gymnasium.

Socrates:: Your will is my will, Theodorus, as the proverbial philosophers say, and therefore I will return to the sage Theaetetus: Tell me, Theaetetus, in reference to what I was saying, are you not lost in wonder, like myself, when you find that all of a sudden you are raised to the level of the wisest of men, or indeed of the gods?—for you would assume the measure of Protagoras to apply to the gods as well as men?

Theaetetus:: Certainly I should, and I confess to you that I am lost in wonder. At first hearing, I was quite satisfied with the doctrine, that whatever appears is to each one, but now the face of things has changed.

Socrates:: Why, my dear boy, you are young, and therefore your ear is quickly caught and your mind influenced by popular arguments. Protagoras, or some one speaking on his behalf, will doubtless say in reply,—Good people, young and old, you meet and harangue, and bring in the gods, whose existence or non-existence I banish from writing and speech, or you talk about the reason of man being degraded to the level of the brutes, which is a telling argument with the multitude, but not one word of proof or demonstration do you offer. All is probability with you, and yet surely you and Theodorus had better reflect whether you are disposed to admit of probability and figures of speech in matters of such importance. He or any other mathematician who argued from probabilities and likelihoods in geometry, would not be worth an ace.

Theaetetus:: But neither you nor we, Socrates, would be satisfied with such arguments.

Socrates:: Then you and Theodorus mean to say that we must look at the matter in some other way?

Theaetetus:: Yes, in quite another way.

Socrates:: And the way will be to ask whether perception is or is not the same as knowledge; for this was the real point of our argument, and with a view to this we raised (did we not?) those many strange questions.

Theaetetus:: Certainly.

Socrates:: Shall we say that we know every thing which we see and hear? for example, shall we say that not having learned, we do not hear the language of foreigners when they speak to us? or shall we say that we not only hear, but know what they are saying? Or again, if we see letters which we do not understand, shall we say that we do not see them? or shall we aver that, seeing them, we must know them?

Theaetetus:: We shall say, Socrates, that we know what we actually see and hear of them—that is to say, we see and know the figure and color of the letters, and we hear and know the elevation or depression of the sound of them; but we do not perceive by sight and hearing, or know, that which grammarians and interpreters teach about them.

Socrates:: Capital, Theaetetus; and about this there shall be no dispute, because I want you to grow; but there is another difficulty coming, which you will also have to repulse.

Theaetetus:: What is it?

Socrates:: Some one will say, Can a man who has ever known anything, and still has and preserves a memory of that which he knows, not know that which he remembers at the time when he remembers? I have, I fear, a tedious way of putting a simple question, which is only, whether a man who has learned, and remembers, can fail to know?

Theaetetus:: Impossible, Socrates; the supposition is monstrous.

Socrates:: Am I talking nonsense, then? Think: is not seeing perceiving, and is not sight perception?

Theaetetus:: True.

Socrates:: And if our recent definition holds, every man knows that which he has seen?

Theaetetus:: Yes.

Socrates:: And you would admit that there is such a thing as memory?

Theaetetus:: Yes.

Socrates:: And is memory of something or of nothing?

Theaetetus:: Of something, surely.

Socrates:: Of things learned and perceived, that is?

Theaetetus:: Certainly.

Socrates:: Often a man remembers that which he has seen?

Theaetetus:: True.

Socrates:: And if he closed his eyes, would he forget?

Theaetetus:: Who, Socrates, would dare to say so?

Socrates:: But we must say so, if the previous argument is to be maintained.

Theaetetus:: What do you mean? I am not quite sure that I understand you, though I have a strong suspicion that you are right.

Socrates:: As thus: he who sees knows, as we say, that which he sees; for perception and sight and knowledge are admitted to be the same.

Theaetetus:: Certainly.

Socrates:: But he who saw, and has knowledge of that which he saw, remembers, when he closes his eyes, that which he no longer sees.

Theaetetus:: True.

Socrates:: And seeing is knowing, and therefore not-seeing is not-knowing?

Theaetetus:: Very true.

Socrates:: Then the inference is, that a man may have attained the knowledge of something, which he may remember and yet not know, because he does not see; and this has been affirmed by us to be a monstrous supposition.

Theaetetus:: Most true.

Socrates:: Thus, then, the assertion that knowledge and perception are one, involves a manifest impossibility?

Theaetetus:: Yes.

Socrates:: Then they must be distinguished?

Theaetetus:: I suppose that they must.

Socrates:: Once more we shall have to begin, and ask 'What is knowledge?' and yet, Theaetetus, what are we going to do?

Theaetetus:: About what?

Socrates:: Like a good-for-nothing cock, without having won the victory, we walk away from the argument and crow.

Theaetetus:: How do you mean?

Socrates:: After the manner of disputers, we were satisfied with mere verbal consistency, and were well pleased if in this way we could gain an advantage. Although professing not to be mere Eristics, but philosophers, I suspect that we have unconsciously fallen into the error of that ingenious class of persons.

Theaetetus:: I do not as yet understand you.

Socrates:: Then I will try to explain myself: just now we asked the question, whether a man who had learned and remembered could fail to know, and we showed that a person who had seen might remember when he had his eyes shut and could not see, and then he would at the same time remember and not know. But this was an impossibility. And so the Protagorean fable came to naught, and yours also, who maintained that knowledge is the same as perception.

Theaetetus:: True.

Socrates:: And yet, my friend, I rather suspect that the result would have been different if Protagoras, who was the father of the first of the two brats, had been alive; he would have had a great deal to say on their behalf. But he is dead, and we insult over his orphan child; and even the guardians whom he left, and of whom our friend Theodorus is one, are unwilling to give any help, and therefore I suppose that I must take up his cause myself, and see justice done?

Theodorus:: Not I, Socrates, but rather Callias, the son of Hipponicus, is guardian of his orphans. I was too soon diverted from the abstractions of dialectic to geometry. Nevertheless, I shall be grateful to you if you assist him.

Socrates:: Very good, Theodorus; you shall see how I will come to the rescue. If a person does not attend to the meaning of terms as they are commonly used in argument, he may be involved even in greater paradoxes than these. Shall I explain this matter to you or to Theaetetus?

Theodorus:: To both of us, and let the younger answer; he will incur less disgrace if he is discomfited.

Socrates:: Then now let me ask the awful question, which is this:—Can a man know and also not know that which he knows?

Theodorus:: How shall we answer, Theaetetus?

Theaetetus:: He cannot, I should say.

Socrates:: He can, if you maintain that seeing is knowing. When you are imprisoned in a well, as the saying is, and the self-assured adversary closes one of your eyes with his hand, and asks whether you can see his cloak with the eye which he has closed, how will you answer the inevitable man?

Theaetetus:: I should answer, ‘Not with that eye but with the other.’

Socrates:: Then you see and do not see the same thing at the same time.

Theaetetus:: Yes, in a certain sense.

Socrates:: None of that, he will reply; I do not ask or bid you answer in what sense you know, but only whether you know that which you do not know. You have been proved to see that which you do not see; and you have already admitted that seeing is knowing, and that not-seeing is not-knowing: I leave you to draw the inference.

Theaetetus:: Yes; the inference is the contradictory of my assertion.

Socrates:: Yes, my marvel, and there might have been yet worse things in store for you, if an opponent had gone on to ask whether you can have a sharp and also a dull knowledge, and whether you can know near, but not at a distance, or know the same thing with more or less intensity, and so on without end. Such questions might have been put to you by a light-armed mercenary, who argued for pay. He would have lain in wait for you, and when you took up the position, that sense is knowledge, he would have made an assault upon hearing, smelling, and the other senses;—he would have shown you no mercy; and while you were lost in envy and admiration of his wisdom, he would have got you into his net, out of which you would not have escaped until you had come to an understanding about the sum to be paid for your release. Well, you ask, and how will Protagoras reinforce his position? Shall I answer for him?

Theaetetus:: By all means.

Socrates:: He will repeat all those things which we have been urging on his behalf, and then he will close with us in disdain, and say:—The worthy Socrates asked a little boy, whether the same man could remember and not know the same thing, and the boy said No, because he was frightened, and could not see what was coming, and then

Socrates made fun of poor me. The truth is, O slatternly Socrates, that when you ask questions about any assertion of mine, and the person asked is found tripping, if he has answered as I should have answered, then I am refuted, but if he answers something else, then he is refuted and not I. For do you really suppose that any one would admit the memory which a man has of an impression which has passed away to be the same with that which he experienced at the time? Assuredly not. Or would he hesitate to acknowledge that the same man may know and not know the same thing? Or, if he is afraid of making this admission, would he ever grant that one who has become unlike is the same as before he became unlike? Or would he admit that a man is one at all, and not rather many and infinite as the changes which take place in him? I speak by the card in order to avoid entanglements of words. But, O my good sir, he will say, come to the argument in a more generous spirit; and either show, if you can, that our sensations are not relative and individual, or, if you admit them to be so, prove that this does not involve the consequence that the appearance becomes, or, if you will have the word, is, to the individual only. As to your talk about pigs and baboons, you are yourself behaving like a pig, and you teach your hearers to make sport of my writings in the same ignorant manner; but this is not to your credit. For I declare that the truth is as I have written, and that each of us is a measure of existence and of non-existence. Yet one man may be a thousand times better than another in proportion as different things are and appear to him. And I am far from saying that wisdom and the wise man have no existence; but I say that the wise man is he who makes the evils which appear and are to a man, into goods which are and appear to him. And I would beg you not to press my words in the letter, but to take the meaning of them as I will explain them. Remember what has been already said,—that to the sick man his food appears to be and is bitter, and to the man in health the opposite of bitter. Now I cannot conceive that one of these men can be or ought to be made wiser than the other: nor can you assert that the sick man because he has one impression is foolish, and the healthy man because he has another is wise; but the one state requires to be changed into the other, the worse into the better. As in education, a change of state has to be effected, and the sophist accomplishes by words the change which the physician works by the aid of drugs. Not that any one ever made another think truly, who previously thought falsely. For no one can think what is not, or, think anything different from that which he feels; and this is always true. But as the inferior habit of mind has thoughts of a kindred nature, so I conceive that a good mind causes men to have good thoughts; and these which the inexperienced call true, I maintain to be only better, and not truer than others. And, O my dear Socrates, I do not call wise men tadpoles: far from it; I say that they are the physicians of the human body, and the husbandmen of plants—for the husbandmen also take away the evil and disordered sensations of plants, and infuse into them good and healthy sensations—aye and true ones; and the wise and good rhetoricians make the good instead of the evil to seem just to states; for whatever appears to a state to be just and fair, so long as it is regarded as such, is just and fair to it; but the teacher of wisdom causes the good to take the place of the evil, both in appearance and in reality. And in like manner the Sophist who is able to train his pupils in this spirit is a wise man, and deserves to be well paid by them. And so one man is wiser than another; and no one thinks falsely, and you, whether you will or not, must endure to be a measure. On these foundations the argument stands firm, which you, Socrates, may, if you please, overthrow by an opposite argument, or if you like you may put questions to me—a method to which no intelligent person will object, quite the reverse. But I must beg you to put fair questions: for there is great inconsistency in saying that you have a zeal for virtue, and then always behaving unfairly in argument. The unfairness of which I complain is that you do not distinguish between mere disputation and dialectic: the disputer may trip up his opponent as often as he likes, and make fun; but the dialectician will be in earnest, and only correct his adversary when necessary, telling him the errors into which he has fallen through his own fault, or that of the company which he has previously kept. If you do so, your adversary will lay the blame of his own confusion and perplexity on himself, and not on you. He will follow and love you, and will hate himself, and escape from himself into philosophy, in order that he may become different from what he was. But the other mode of arguing, which is practiced by the many, will have just the opposite effect upon him; and as he grows older, instead of turning philosopher, he will come to hate philosophy. I would recommend you, therefore, as I said before, not to encourage yourself in this polemical and controversial temper, but to find out, in a friendly and congenial spirit, what we really mean when we say that all things are in motion, and that to every individual and state what appears, is. In this manner you will consider whether knowledge and sensation are the same or different, but you will not argue, as you were just now doing, from the customary use of names and words, which the vulgar pervert in all sorts of ways, causing infinite perplexity to one another. Such, Theodorus, is the very slight help which

I am able to offer to your old friend; had he been living, he would have helped himself in a far more glorious style.

Theodorus:: You are jesting, Socrates; indeed, your defense of him has been most valorous.

Socrates:: Thank you, friend; and I hope that you observed Protagoras bidding us be serious, as the text, ‘Man is the measure of all things’ was a solemn one; and he reproached us with making a boy the medium of discourse, and said that the boy’s timidity was made to tell against his argument; he also declared that we made a joke of him.

Theodorus:: How could I fail to observe all that, Socrates?

Socrates:: Well, and shall we do as he says?

Theodorus:: By all means.

Socrates:: But if his wishes are to be regarded, you and I must take up the argument, and in all seriousness, and ask and answer one another, for you see that the rest of us are nothing but boys. In no other way can we escape the imputation, that in our fresh analysis of his thesis we are making fun with boys.

Theodorus:: Well, but is not Theaetetus better able to follow a philosophical enquiry than a great many men who have long beards?

Socrates:: Yes, Theodorus, but not better than you; and therefore please not to imagine that I am to defend by every means in my power your departed friend; and that you are to defend nothing and nobody. At any rate, my good man, do not sheer off until we know whether you are a true measure of diagrams, or whether all men are equally measures and sufficient for themselves in astronomy and geometry, and the other branches of knowledge in which you are supposed to excel them.

Theodorus:: He who is sitting by you, Socrates, will not easily avoid being drawn into an argument; and when I said just now that you would excuse me, and not, like the Lacedaemonians, compel me to strip and fight, I was talking nonsense—I should rather compare you to Scirrhon, who threw travelers from the rocks; for the Lacedaemonian rule is 'strip or depart,' but you seem to go about your work more after the fashion of Antaeus: you will not allow any one who approaches you to depart until you have stripped him, and he has been compelled to try a fall with you in argument.

Socrates:: There, Theodorus, you have hit off precisely the nature of my complaint; but I am even more pugnacious than the giants of old, for I have met with no end of heroes; many a Heracles, many a Theseus, mighty in words, has broken my head; nevertheless I am always at this rough exercise, which inspires me like a passion. Please, then, to try a fall with me, whereby you will do yourself good as well as me.

Theodorus:: I consent; lead me whither you will, for I know that you are like destiny; no man can escape from any argument which you may weave for him. But I am not disposed to go further than you suggest.

Socrates:: Once will be enough; and now take particular care that we do not again unwittingly expose ourselves to the reproach of talking childishly.

Theodorus:: I will do my best to avoid that error.

Socrates:: In the first place, let us return to our old objection, and see whether we were right in blaming and taking offence at Protagoras on the ground that he assumed all to be equal and sufficient in wisdom; although he admitted that there was a better and worse, and that in respect of this, some who as he said were the wise excelled others.

Theodorus:: Very true.

Socrates:: Had Protagoras been living and answered for himself, instead of our answering for him, there would have been no need of our reviewing or reinforcing the argument. But as he is not here, and some one may accuse us of speaking without authority on his behalf, had we not better come to a clearer agreement about his meaning, for a great deal may be at stake?

Theodorus:: True.

Socrates:: Then let us obtain, not through any third person, but from his own statement and in the fewest words possible, the basis of agreement.

Theodorus:: In what way?

Socrates:: In this way:—His words are, 'What seems to a man, is to him.'

Theodorus:: Yes, so he says.

Socrates:: And are not we, Protagoras, uttering the opinion of man, or rather of all mankind, when we say that every one thinks himself wiser than other men in some things, and their inferior in others? In the hour of danger, when they are in perils of war, or of the sea, or of sickness, do they not look up to their commanders as if they were gods, and expect salvation from them, only because they excel them in knowledge? Is not the world full of men in their several employments, who are looking for teachers and rulers of themselves and of the animals? and there are plenty who think that they are able to teach and able to rule. Now, in all this is implied that ignorance and wisdom exist among them, at least in their own opinion.

Theodorus:: Certainly.

Socrates:: And wisdom is assumed by them to be true thought, and ignorance to be false opinion.

Theodorus:: Exactly.

Socrates:: How then, Protagoras, would you have us treat the argument? Shall we say that the opinions of men are always true, or sometimes true and sometimes false? In either case, the result is the same, and their opinions are not always true, but sometimes true and sometimes false. For tell me, Theodorus, do you suppose that you yourself, or any other follower of Protagoras, would contend that no one deems another ignorant or mistaken in his opinion?

Theodorus:: The thing is incredible, Socrates.

Socrates:: And yet that absurdity is necessarily involved in the thesis which declares man to be the measure of all things.

Theodorus:: How so?

Socrates:: Why, suppose that you determine in your own mind something to be true, and declare your opinion to me; let us assume, as he argues, that this is true to you. Now, if so, you must either say that the rest of us are not the judges of this opinion or judgment of yours, or that we judge you always to have a true opinion? But are there not thousands upon thousands who, whenever you form a judgment, take up arms against you and are of an opposite judgment and opinion, deeming that you judge falsely?

Theodorus:: Yes, indeed, Socrates, thousands and tens of thousands, as Homer says, who give me a world of trouble.

Socrates:: Well, but are we to assert that what you think is true to you and false to the ten thousand others?

Theodorus:: No other inference seems to be possible.

Socrates:: And how about Protagoras himself? If neither he nor the multitude thought, as indeed they do not think, that man is the measure of all things, must it not follow that the truth of which Protagoras wrote would be true to no one? But if you suppose that he himself thought this, and that the multitude does not agree with him, you must begin by allowing that in whatever proportion the many are more than one, in that proportion his truth is more untrue than true.

Theodorus:: That would follow if the truth is supposed to vary with individual opinion.

Socrates:: And the best of the joke is, that he acknowledges the truth of their opinion who believe his own opinion to be false; for he admits that the opinions of all men are true.

Theodorus:: Certainly.

Socrates:: And does he not allow that his own opinion is false, if he admits that the opinion of those who think him false is true?

Theodorus:: Of course.

Socrates:: Whereas the other side do not admit that they speak falsely?

Theodorus:: They do not.

Socrates:: And he, as may be inferred from his writings, agrees that this opinion is also true.

Theodorus:: Clearly.

Socrates:: Then all mankind, beginning with Protagoras, will contend, or rather, I should say that he will allow, when he concedes that his adversary has a true opinion—Protagoras, I say, will himself allow that neither a dog nor any ordinary man is the measure of anything which he has not learned—am I not right?

Theodorus:: Yes.

Socrates:: And the truth of Protagoras being doubted by all, will be true neither to himself nor to any one else?

Theodorus:: I think, Socrates, that we are running my old friend too hard.

Socrates:: But I do not know that we are going beyond the truth. Doubtless, as he is older, he may be expected to be wiser than we are. And if he could only just get his head out of the world below, he would have overthrown both of us again and again, me for talking nonsense and you for assenting to me, and have been off and underground in a trice. But as he is not within call, we must make the best use of our own faculties, such as they are, and speak out what appears to us to be true. And one thing which no one will deny is, that there are great differences in the understandings of men.

Theodorus:: In that opinion I quite agree.

Socrates:: And is there not most likely to be firm ground in the distinction which we were indicating on behalf of Protagoras, viz. that most things, and all immediate sensations, such as hot, dry, sweet, are only such as they appear; if however difference of opinion is to be allowed at all, surely we must allow it in respect of health or disease? for every woman, child, or living creature has not such a knowledge of what conduces to health as to enable them to cure themselves.

Theodorus:: I quite agree.

Socrates:: Or again, in politics, while affirming that just and unjust, honorable and disgraceful, holy and unholy, are in reality to each state such as the state thinks and makes lawful, and that in determining these matters no individual or state is wiser than another, still the followers of Protagoras will not deny that in determining what is or is not expedient for the community one state is wiser and one counselor better than another—they will scarcely venture to maintain, that what a city enacts in the belief that it is expedient will always be really expedient. But in the other case, I mean when they speak of justice and injustice, piety and impiety, they are confident that in nature these have no existence or essence of their own—the truth is that which is agreed on at the time of the agreement, and as long as the agreement lasts; and this is the philosophy of many who do not altogether go along with Protagoras. Here arises a new question, Theodorus, which threatens to be more serious than the last.

Theodorus:: Well, Socrates, we have plenty of leisure.

Socrates:: That is true, and your remark recalls to my mind an observation which I have often made, that those who have passed their days in the pursuit of philosophy are ridiculously at fault when they have to appear and speak in court. How natural is this!

Theodorus:: What do you mean?

Socrates:: I mean to say, that those who have been trained in philosophy and liberal pursuits are as unlike those who from their youth upwards have been knocking about in the courts and such places, as a freeman is in breeding unlike a slave.

Theodorus:: In what is the difference seen?

Socrates:: In the leisure spoken of by you, which a freeman can always command: he has his talk out in peace, and, like ourselves, he wanders at will from one subject to another, and from a second to a third,—if the fancy takes him, he begins again, as we are doing now, caring not whether his words are many or few; his only aim is to attain the truth. But the lawyer is always in a hurry; there is the water of the clepsydra driving him on, and not allowing him to expatiate at will: and there is his adversary standing over him, enforcing his rights; the indictment, which in their phraseology is termed the affidavit, is recited at the time: and from this he must not deviate. He is a servant, and is continually disputing about a fellow-servant before his master, who is seated, and has the cause in his hands; the trial is never about some indifferent matter, but always concerns himself; and often the race is for his life. The consequence has been, that he has become keen and shrewd; he has learned how to flatter his master in word and indulge him in deed; but his soul is small and unrighteous. His condition, which has been that of a slave from his youth upwards, has deprived him of growth and uprightness and independence; dangers and fears, which were too much for his truth and honesty, came upon him in early years, when the tenderness of youth was unequal to them, and he has been driven into crooked ways; from the first he has practiced deception and retaliation, and has become stunted and warped. And so he has passed out of youth into manhood, having no soundness in him; and is now, as he thinks, a master in wisdom. Such is the lawyer, Theodorus. Will you have the companion picture of the philosopher, who is of our brotherhood; or shall we return to the argument? Do not let us abuse the freedom of digression which we claim.

Theodorus:: Nay, Socrates, not until we have finished what we are about; for you truly said that we belong to a brotherhood which is free, and are not the servants of the argument; but the argument is our servant, and must wait our leisure. Who is our judge? Or where is the spectator having any right to censure or control us, as he might the poets?

Socrates:: Then, as this is your wish, I will describe the leaders; for there is no use in talking about the inferior sort. In the first place, the lords of philosophy have never, from their youth upwards, known their way to the Agora, or the dicastery, or the council, or any other political assembly; they neither see nor hear the laws or decrees, as they are called, of the state written or recited; the eagerness of political societies in the attainment of offices—clubs, and banquets, and revels, and singing-maidens,—do not enter even into their dreams. Whether any event has turned out well or ill in the city, what disgrace may have descended to any one from his ancestors, male or female, are matters of which the philosopher no more knows than he can tell, as they say, how many pints are contained in the ocean. Neither is he conscious of his ignorance. For he does not hold aloof in order that he may gain a reputation; but the truth is, that the outer form of him only is in the city: his mind, disdaining the littlenesses and nothingnesses of human things, is 'flying all abroad' as Pindar says, measuring earth and heaven and the things which are under and on the earth and above the heaven, interrogating the whole nature of each and all in their entirety, but not condescending to anything which is within reach.

Theodorus:: What do you mean, Socrates?

Socrates:: I will illustrate my meaning, Theodorus, by the jest which the clever witty Thracian handmaid is said to have made about Thales, when he fell into a well as he was looking up at the stars. She said, that he was so eager to know what was going on in heaven, that he could not see what was before his feet. This is a jest which is equally applicable to all philosophers. For the philosopher is wholly unacquainted with his next-door neighbor; he is ignorant, not only of what he is doing, but he hardly knows whether he is a man or an animal; he is searching into the essence of man, and busy in enquiring what belongs to such a nature to do or suffer different from any other;—I think that you understand me, Theodorus?

Theodorus:: I do, and what you say is true.

Socrates:: And thus, my friend, on every occasion, private as well as public, as I said at first, when he appears in a law-court, or in any place in which he has to speak of things which are at his feet and before his eyes, he is the jest, not only of Thracian handmaids but of the general herd, tumbling into wells and every sort of disaster through his inexperience. His awkwardness is fearful, and gives the impression of imbecility. When he is reviled, he has nothing personal to say in answer to the civilities of his adversaries, for he knows no scandals of any one, and they do not interest him; and therefore he is laughed at for his sheepishness; and when others are being praised and glorified, in the simplicity of his heart he cannot help going into fits of laughter, so that he seems to be a downright idiot. When he hears a tyrant or king eulogized, he fancies that he is listening to the praises of some keeper of cattle—a swineherd, or shepherd, or perhaps a cowherd, who is congratulated on the quantity of milk which he squeezes from them; and he remarks that the creature whom they tend, and out of whom they squeeze the wealth, is of a less tractable and more insidious nature. Then, again, he observes that the great man is of necessity as ill-mannered and uneducated as any shepherd—for he has no leisure, and he is surrounded by a wall, which is his mountain-pen. Hearing of enormous landed proprietors of ten thousand acres and more, our philosopher deems this to be a trifle, because he has been accustomed to think of the whole earth; and when they sing the praises of family, and say that some one is a gentleman because he can show seven generations of wealthy ancestors, he thinks that their sentiments only betray a dull and narrow vision in those who utter them, and who are not educated enough to look at the whole, nor to consider that every man has had thousands and ten thousands of progenitors, and among them have been rich and poor, kings and slaves, Hellenes and barbarians, innumerable. And when people pride themselves on having a pedigree of twenty-five ancestors, which goes back to Heracles, the son of Amphitryon, he cannot understand their poverty of ideas. Why are they unable to calculate that Amphitryon had a twenty-fifth ancestor, who might have been anybody, and was such as fortune made him, and he had a fiftieth, and so on? He amuses himself with the notion that they cannot count, and thinks that a little arithmetic would have got rid of their senseless vanity. Now, in all these cases our philosopher is derided by the vulgar, partly because he is thought to despise them, and also because he is ignorant of what is before him, and always at a loss.

Theodorus:: That is very true, Socrates.

Socrates:: But, O my friend, when he draws the other into upper air, and gets him out of his pleas and rejoinders into the contemplation of justice and injustice in their own nature and in their difference from one another and from all other things; or from the commonplaces about the happiness of a king or of a rich man to the consideration of government, and of human happiness and misery in general—what they are, and how a man is to attain the one and avoid the other—when that narrow, keen, little legal mind is called to account about all this, he gives the philosopher his revenge; for dizzied by the height at which he is hanging, whence he looks down into space, which is a strange experience to him, he being dismayed, and lost, and stammering broken words, is laughed at, not by Thracian handmaidens or any other uneducated persons, for they have no eye for the situation, but by every man who has not been brought up a slave. Such are the two characters, Theodorus: the one of the freeman, who has been trained in liberty and leisure, whom you call the philosopher,—him we cannot blame because he appears simple and of no account when he has to perform some menial task, such as packing up bed-clothes, or flavoring a sauce or fawning speech; the other character is that of the man who is able to do all this kind of service smartly and neatly, but knows not how to wear his cloak like a gentleman; still less with the music of discourse can he hymn the true life aright which is lived by immortals or men blessed of heaven.

Theodorus:: If you could only persuade everybody, Socrates, as you do me, of the truth of your words, there would be more peace and fewer evils among men.

Socrates:: Evils, Theodorus, can never pass away; for there must always remain something which is antagonistic to good. Having no place among the gods in heaven, of necessity they hover around the mortal nature, and this earthly sphere. Wherefore we ought to fly away from earth to heaven as quickly as we can; and to fly away is to become like God, as far as this is possible; and to become like him, is to become holy, just, and wise. But, O my friend, you cannot easily convince mankind that they should pursue virtue or avoid vice, not merely in order that a man may seem to be good, which is the reason given by the world, and in my judgment is only a repetition of an old wives' fable. Whereas, the truth is that God is never in any way unrighteous—he is perfect righteousness; and he of us who is the most righteous is most like him. Herein is seen the true cleverness of a man, and also his nothingness and want of manhood. For to know this is true wisdom and virtue, and ignorance of this is manifest folly and vice. All other kinds of wisdom or cleverness, which seem only, such as the wisdom of politicians, or the wisdom of the arts, are coarse and vulgar. The unrighteous man, or the sayer and doer of unholy things, had far better not be encouraged in the illusion that his roguery is clever; for men glory in their shame—they fancy that they hear others saying of them, 'These are not mere good-for-nothing persons, mere burdens of the earth, but such as men should be who mean to dwell safely in a state.' Let us tell them that they are all the more truly what they do not think they are because they do not know it; for they do not know the penalty of injustice, which above all things they ought to know—not stripes and death, as they suppose, which evil-doers often escape, but a penalty which cannot be escaped.

Theodorus:: What is that?

Socrates:: There are two patterns eternally set before them; the one blessed and divine, the other godless and wretched: but they do not see them, or perceive that in their utter folly and infatuation they are growing like the one and unlike the other, by reason of their evil deeds; and the penalty is, that they lead a life answering to the pattern which they are growing like. And if we tell them, that unless they depart from their cunning, the place of innocence will not receive them after death; and that here on earth, they will live ever in the likeness of their own evil selves, and with evil friends—when they hear this they in their superior cunning will seem to be listening to the talk of idiots.

Theodorus:: Very true, Socrates.

Socrates:: Too true, my friend, as I well know; there is, however, one peculiarity in their case: when they begin to reason in private about their dislike of philosophy, if they have the courage to hear the argument out, and do not run away, they grow at last strangely discontented with themselves; their rhetoric fades away, and they become helpless as children. These however are digressions from which we must now desist, or they will overflow, and drown the original argument; to which, if you please, we will now return.

Theodorus:: For my part, Socrates, I would rather have the digressions, for at my age I find them easier to follow; but if you wish, let us go back to the argument.

Socrates:: Had we not reached the point at which the partisans of the perpetual flux, who say that things are as they seem to each one, were confidently maintaining that the ordinances which the state commanded and thought just, were just to the state which imposed them, while they were in force; this was especially asserted of justice; but as to the good, no one had any longer the hardihood to contend of any ordinances which the state thought and enacted to be good that these, while they were in force, were really good;—he who said so would be playing with the name 'good,' and would not touch the real question—it would be a mockery, would it not?

Theodorus:: Certainly it would.

Socrates:: He ought not to speak of the name, but of the thing which is contemplated under the name.

Theodorus:: Right.

Socrates:: Whatever be the term used, the good or expedient is the aim of legislation, and as far as she has an opinion, the state imposes all laws with a view to the greatest expediency; can legislation have any other aim?

Theodorus:: Certainly not.

Socrates:: But is the aim attained always? do not mistakes often happen?

Theodorus:: Yes, I think that there are mistakes.

Socrates:: The possibility of error will be more distinctly recognized, if we put the question in reference to the whole class under which the good or expedient falls. That whole class has to do with the future, and laws are passed under the idea that they will be useful in after-time; which, in other words, is the future.

Theodorus:: Very true.

Socrates:: Suppose now, that we ask Protagoras, or one of his disciples, a question:—O, Protagoras, we will say to him, Man is, as you declare, the measure of all things—white, heavy, light: of all such things he is the judge; for he has the criterion of them in himself, and when he thinks that things are such as he experiences them to be, he thinks what is and is true to himself. Is it not so?

Theodorus:: Yes.

Socrates:: And do you extend your doctrine, Protagoras (as we shall further say), to the future as well as to the present; and has he the criterion not only of what in his opinion is but of what will be, and do things always happen to him as he expected? For example, take the case of heat:—When an ordinary man thinks that he is going to have a fever, and that this kind of heat is coming on, and another person, who is a physician, thinks the contrary, whose opinion is likely to prove right? Or are they both right?—he will have a heat and fever in his own judgment, and not have a fever in the physician's judgment?

Theodorus:: How ludicrous!

Socrates:: And the vine-grower, if I am not mistaken, is a better judge of the sweetness or dryness of the vintage which is not yet gathered than the harp-player?

Theodorus:: Certainly.

Socrates:: And in musical composition the musician will know better than the training master what the training master himself will hereafter think harmonious or the reverse?

Theodorus:: Of course.

Socrates:: And the cook will be a better judge than the guest, who is not a cook, of the pleasure to be derived from the dinner which is in preparation; for of present or past pleasure we are not as yet arguing; but can we say that every one will be to himself the best judge of the pleasure which will seem to be and will be to him in the future?—nay, would not you, Protagoras, better guess which arguments in a court would convince any one of us than the ordinary man?

Theodorus:: Certainly, Socrates, he used to profess in the strongest manner that he was the superior of all men in this respect.

Socrates:: To be sure, friend: who would have paid a large sum for the privilege of talking to him, if he had really persuaded his visitors that neither a prophet nor any other man was better able to judge what will be and seem to be in the future than every one could for himself?

Theodorus:: Who indeed?

Socrates:: And legislation and expediency are all concerned with the future; and every one will admit that states, in passing laws, must often fail of their highest interests?

Theodorus:: Quite true.

Socrates:: Then we may fairly argue against your master, that he must admit one man to be wiser than another, and that the wiser is a measure: but I, who know nothing, am not at all obliged to accept the honor which the advocate of Protagoras was just now forcing upon me, whether I would or not, of being a measure of anything.

Theodorus:: That is the best refutation of him, Socrates; although he is also caught when he ascribes truth to the opinions of others, who give the lie direct to his own opinion.

Socrates:: There are many ways, Theodorus, in which the doctrine that every opinion of every man is true may be refuted; but there is more difficulty in proving that states of feeling, which are present to a man, and out of which arise sensations and opinions in accordance with them, are also untrue. And very likely I have been talking nonsense about them; for they may be unassailable, and those who say that there is clear evidence of them, and that they are matters of knowledge, may probably be right; in which case our friend Theaetetus was not so far from the mark when he identified perception and knowledge. And therefore let us draw nearer, as the advocate of Protagoras desires, and give the truth of the universal flux a ring: is the theory sound or not? at any rate, no small war is raging about it, and there are combatants not a few.

Theodorus:: No small war, indeed, for in Ionia the sect makes rapid strides; the disciples of Heracleitus are most energetic upholders of the doctrine.

Socrates:: Then we are the more bound, my dear Theodorus, to examine the question from the foundation as it is set forth by themselves.

Theodorus:: Certainly we are. About these speculations of Heracleitus, which, as you say, are as old as Homer, or even older still, the Ephesians themselves, who profess to know them, are downright mad, and you cannot talk with them on the subject. For, in accordance with their text-books, they are always in motion; but as for dwelling upon an argument or a question, and quietly asking and answering in turn, they can no more do so than they can fly; or rather, the determination of these fellows not to have a particle of rest in them is more than the utmost powers of negation can express. If you ask any of them a question, he will produce, as from a quiver, sayings brief and dark, and shoot them at you; and if you enquire the reason of what he has said, you will be hit by some other new-fangled word, and will make no way with any of them, nor they with one another; their great care is, not to allow of any settled principle either in their arguments or in their minds, conceiving, as I imagine, that any such principle would be stationary; for they are at war with the stationary, and do what they can to drive it out everywhere.

Socrates:: I suppose, Theodorus, that you have only seen them when they were fighting, and have never stayed with them in time of peace, for they are no friends of yours; and their peace doctrines are only communicated by them at leisure, as I imagine, to those disciples of theirs whom they want to make like themselves.

Theodorus:: Disciples! my good sir, they have none; men of their sort are not one another's disciples, but they grow up at their own sweet will, and get their inspiration anywhere, each of them saying of his neighbor that he knows nothing. From these men, then, as I was going to remark, you will never get a reason, whether with their will or without their will; we must take the question out of their hands, and make the analysis ourselves, as if we were doing a geometrical problem.

Socrates:: Quite right too; but as touching the aforesaid problem, have we not heard from the ancients, who concealed their wisdom from the many in poetical figures, that Oceanus and Tethys, the origin of all things, are streams, and that nothing is at rest? And now the moderns, in their superior wisdom, have declared the same openly, that the cobbler too may hear and learn of them, and no longer foolishly imagine that some things are at rest and others in motion—having learned that all is motion, he will duly honor his teachers. I had almost forgotten the opposite doctrine, Theodorus;

> ‘Alone Being remains unmoved, which is the name for the all.’

This is the language of Parmenides, Melissus, and their followers, who stoutly maintain that all being is one and self-contained, and has no place in which to move. What shall we do, friend, with all these people; for, advancing step by step, we have imperceptibly got between the combatants, and, unless we can protect our retreat, we shall pay the penalty of our rashness—like the players in the palaestra who are caught upon the line, and are dragged different ways by the two parties. Therefore I think that we had better begin by considering those whom we first accosted, ‘the river-gods,’ and, if we find any truth in them, we will help them to pull us over, and try to get away from the others. But if the partisans of ‘the whole’ appear to speak more truly, we will fly off from the party which would move the immovable, to them. And if we find that neither of them have anything reasonable to say, we shall be in a ridiculous position, having so great a conceit of our own poor opinion and rejecting that of ancient and famous men. O Theodorus, do you think that there is any use in proceeding when the danger is so great?

Theodorus:: Nay, Socrates, not to examine thoroughly what the two parties have to say would be quite intolerable.

Socrates:: Then examine we must, since you, who were so reluctant to begin, are so eager to proceed. The nature of motion appears to be the question with which we begin. What do they mean when they say that all things are in motion? Is there only one kind of motion, or, as I rather incline to think, two? I should like to have your opinion upon this point in addition to my own, that I may err, if I must err, in your company; tell me, then, when a thing changes from one place to another, or goes round in the same place, is not that what is called motion?

Theodorus:: Yes.

Socrates:: Here then we have one kind of motion. But when a thing, remaining on the same spot, grows old, or becomes black from being white, or hard from being soft, or undergoes any other change, may not this be properly called motion of another kind?

Theodorus:: I think so.

Socrates:: Say rather that it must be so. Of motion then there are these two kinds, ‘change,’ and ‘motion in place.’

Theodorus:: You are right.

Socrates:: And now, having made this distinction, let us address ourselves to those who say that all is motion, and ask them whether all things according to them have the two kinds of motion, and are changed as well as move in place, or is one thing moved in both ways, and another in one only?

Theodorus:: Indeed, I do not know what to answer; but I think they would say that all things are moved in both ways.

Socrates:: Yes, comrade; for, if not, they would have to say that the same things are in motion and at rest, and there would be no more truth in saying that all things are in motion, than that all things are at rest.

Theodorus:: To be sure.

Socrates:: And if they are to be in motion, and nothing is to be devoid of motion, all things must always have every sort of motion?

Theodorus:: Most true.

Socrates:: Consider a further point: did we not understand them to explain the generation of heat, whiteness, or anything else, in some such manner as the following:—were they not saying that each of them is moving between the agent and the patient, together with a perception, and that the patient ceases to be a perceiving power and becomes a percipient, and the agent a quale instead of a quality? I suspect that quality may appear a strange and uncouth term to you, and that you do not understand the abstract expression. Then I will take concrete instances: I mean to say that the producing power or agent becomes neither heat nor whiteness, but hot and white, and the like of other things. For I must repeat what I said before, that neither the agent nor patient have any absolute existence, but when they come together and generate sensations and their objects, the one becomes a thing of a certain quality, and the other a percipient. You remember?

Theodorus:: Of course.

Socrates:: We may leave the details of their theory unexamined, but we must not forget to ask them the only question with which we are concerned: Are all things in motion and flux?

Theodorus:: Yes, they will reply.

Socrates:: And they are moved in both those ways which we distinguished; that is to say, they move in place and are also changed?

Theodorus:: Of course, if the motion is to be perfect.

Socrates:: If they only moved in place and were not changed, we should be able to say what is the nature of the things which are in motion and flux?

Theodorus:: Exactly.

Socrates:: But now, since not even white continues to flow white, and whiteness itself is a flux or change which is passing into another color, and is never to be caught standing still, can the name of any color be rightly used at all?

Theodorus:: How is that possible, Socrates, either in the case of this or of any other quality—if while we are using the word the object is escaping in the flux?

Socrates:: And what would you say of perceptions, such as sight and hearing, or any other kind of perception? Is there any stopping in the act of seeing and hearing?

Theodorus:: Certainly not, if all things are in motion.

Socrates:: Then we must not speak of seeing any more than of not-seeing, nor of any other perception more than of any non-perception, if all things partake of every kind of motion?

Theodorus:: Certainly not.

Socrates:: Yet perception is knowledge: so at least Theaetetus and I were saying.

Theodorus:: Very true.

Socrates:: Then when we were asked what is knowledge, we no more answered what is knowledge than what is not knowledge?

Theodorus:: I suppose not.

Socrates:: Here, then, is a fine result: we corrected our first answer in our eagerness to prove that nothing is at rest. But if nothing is at rest, every answer upon whatever subject is equally right: you may say that a thing is or is not thus; or, if you prefer, 'becomes' thus; and if we say 'becomes,' we shall not then hamper them with words expressive of rest.

Theodorus:: Quite true.

Socrates:: Yes, Theodorus, except in saying ‘thus’ and ‘not thus.’ But you ought not to use the word ‘thus,’ for there is no motion in ‘thus’ or in ‘not thus.’ The maintainers of the doctrine have as yet no words in which to express themselves, and must get a new language. I know of no word that will suit them, except perhaps ‘no how,’ which is perfectly indefinite.

Theodorus:: Yes, that is a manner of speaking in which they will be quite at home.

Socrates:: And so, Theodorus, we have got rid of your friend without assenting to his doctrine, that every man is the measure of all things—a wise man only is a measure; neither can we allow that knowledge is perception, certainly not on the hypothesis of a perpetual flux, unless perchance our friend Theaetetus is able to convince us that it is.

Theodorus:: Very good, Socrates; and now that the argument about the doctrine of Protagoras has been completed, I am absolved from answering; for this was the agreement.

Theaetetus:: Not, Theodorus, until you and Socrates have discussed the doctrine of those who say that all things are at rest, as you were proposing.

Theodorus:: You, Theaetetus, who are a young rogue, must not instigate your elders to a breach of faith, but should prepare to answer Socrates in the remainder of the argument.

Theaetetus:: Yes, if he wishes; but I would rather have heard about the doctrine of rest.

Theodorus:: Invite Socrates to an argument—invite horsemen to the open plain; do but ask him, and he will answer.

Socrates:: Nevertheless, Theodorus, I am afraid that I shall not be able to comply with the request of Theaetetus.

Theodorus:: Not comply! for what reason?

Socrates:: My reason is that I have a kind of reverence; not so much for Melissus and the others, who say that 'All is one and at rest,' as for the great leader himself, Parmenides, venerable and awful, as in Homeric language he may be called;—him I should be ashamed to approach in a spirit unworthy of him. I met him when he was an old man, and I was a mere youth, and he appeared to me to have a glorious depth of mind. And I am afraid that we may not understand his words, and may be still further from understanding his meaning; above all I fear that the nature of knowledge, which is the main subject of our discussion, may be thrust out of sight by the unbidden guests who will come pouring in upon our feast of discourse, if we let them in—besides, the question which is now stirring is of immense extent, and will be treated unfairly if only considered by the way; or if treated adequately and at length, will put into the shade the other question of knowledge. Neither the one nor the other can be allowed; but I must try by my art of midwifery to deliver Theaetetus of his conceptions about knowledge.

Theaetetus:: Very well; do so if you will.

Socrates:: Then now, Theaetetus, take another view of the subject: you answered that knowledge is perception?

Theaetetus:: I did.

Socrates:: And if any one were to ask you: With what does a man see black and white colors? and with what does he hear high and low sounds?—you would say, if I am not mistaken, 'With the eyes and with the ears.'

Theaetetus:: I should.

Socrates:: The free use of words and phrases, rather than minute precision, is generally characteristic of a liberal education, and the opposite is pedantic; but sometimes precision is necessary, and I believe that the answer which you have just given is open to the charge of incorrectness; for which is more correct, to say that we see or hear with the eyes and with the ears, or through the eyes and through the ears.

Theaetetus:: I should say 'through,' Socrates, rather than 'with.'

Socrates:: Yes, my boy, for no one can suppose that in each of us, as in a sort of Trojan horse, there are perched a number of unconnected senses, which do not all meet in some one nature, the mind, or whatever we please to call it, of which they are the instruments, and with which through them we perceive objects of sense.

Theaetetus:: I agree with you in that opinion.

Socrates:: The reason why I am thus precise is, because I want to know whether, when we perceive black and white through the eyes, and again, other qualities through other organs, we do not perceive them with one and the same part of ourselves, and, if you were asked, you might refer all such perceptions to the body. Perhaps, however, I had better allow you to answer for yourself and not interfere. Tell me, then, are not the organs through which you perceive warm and hard and light and sweet, organs of the body?

Theaetetus:: Of the body, certainly.

Socrates:: And you would admit that what you perceive through one faculty you cannot perceive through another; the objects of hearing, for example, cannot be perceived through sight, or the objects of sight through hearing?

Theaetetus:: Of course not.

Socrates:: If you have any thought about both of them, this common perception cannot come to you, either through the one or the other organ?

Theaetetus:: It cannot.

Socrates:: How about sounds and colors: in the first place you would admit that they both exist?

Theaetetus:: Yes.

Socrates:: And that either of them is different from the other, and the same with itself?

Theaetetus:: Certainly.

Socrates:: And that both are two and each of them one?

Theaetetus:: Yes.

Socrates:: You can further observe whether they are like or unlike one another?

Theaetetus:: I dare say.

Socrates:: But through what do you perceive all this about them? for neither through hearing nor yet through seeing can you apprehend that which they have in common. Let me give you an illustration of the point at issue:—If there were any meaning in asking whether sounds and colors are saline or not, you would be able to tell me what faculty would consider the question. It would not be sight or hearing, but some other.

Theaetetus:: Certainly; the faculty of taste.

Socrates:: Very good; and now tell me what is the power which discerns, not only in sensible objects, but in all things, universal notions, such as those which are called being and not-being, and those others about which we were just asking—what organs will you assign for the perception of these notions?

Theaetetus:: You are thinking of being and not-being, likeness and unlikeness, sameness and difference, and also of unity and other numbers which are applied to objects of sense; and you mean to ask, through what bodily organ the soul perceives odd and even numbers and other arithmetical conceptions.

Socrates:: You follow me excellently, Theaetetus; that is precisely what I am asking.

Theaetetus:: Indeed, Socrates, I cannot answer; my only notion is, that these, unlike objects of sense, have no separate organ, but that the mind, by a power of her own, contemplates the universals in all things.

Socrates:: You are a beauty, Theaetetus, and not ugly, as Theodorus was saying; for he who utters the beautiful is himself beautiful and good. And besides being beautiful, you have done me a kindness in releasing me from a very long discussion, if you are clear that the soul views some things by herself and others through the bodily organs. For that was my own opinion, and I wanted you to agree with me.

Theaetetus:: I am quite clear.

Socrates:: And to which class would you refer being or essence; for this, of all our notions, is the most universal?

Theaetetus:: I should say, to that class which the soul aspires to know of herself.

Socrates:: And would you say this also of like and unlike, same and other?

Theaetetus:: Yes.

Socrates:: And would you say the same of the noble and base, and of good and evil?

Theaetetus:: These I conceive to be notions which are essentially relative, and which the soul also perceives by comparing in herself things past and present with the future.

Socrates:: And does she not perceive the hardness of that which is hard by the touch, and the softness of that which is soft equally by the touch?

Theaetetus:: Yes.

Socrates:: But their essence and what they are, and their opposition to one another, and the essential nature of this opposition, the soul herself endeavors to decide for us by the review and comparison of them?

Theaetetus:: Certainly.

Socrates:: The simple sensations which reach the soul through the body are given at birth to men and animals by nature, but their reflections on the being and use of them are slowly and hardly gained, if they are ever gained, by education and long experience.

Theaetetus:: Assuredly.

Socrates:: And can a man attain truth who fails of attaining being?

Theaetetus:: Impossible.

Socrates:: And can he who misses the truth of anything, have a knowledge of that thing?

Theaetetus:: He cannot.

Socrates:: Then knowledge does not consist in impressions of sense, but in reasoning about them; in that only, and not in the mere impression, truth and being can be attained?

Theaetetus:: Clearly.

Socrates:: And would you call the two processes by the same name, when there is so great a difference between them?

Theaetetus:: That would certainly not be right.

Socrates:: And what name would you give to seeing, hearing, smelling, being cold and being hot?

Theaetetus:: I should call all of them perceiving—what other name could be given to them?

Socrates:: Perception would be the collective name of them?

Theaetetus:: Certainly.

Socrates:: Which, as we say, has no part in the attainment of truth any more than of being?

Theaetetus:: Certainly not.

Socrates:: And therefore not in science or knowledge?

Theaetetus:: No.

Socrates:: Then perception, Theaetetus, can never be the same as knowledge or science?

Theaetetus:: Clearly not, Socrates; and knowledge has now been most distinctly proved to be different from perception.

Socrates:: But the original aim of our discussion was to find out rather what knowledge is than what it is not; at the same time we have made some progress, for we no longer seek for knowledge in perception at all, but in that other process, however called, in which the mind is alone and engaged with being.

Theaetetus:: You mean, Socrates, if I am not mistaken, what is, called thinking or opining.

Socrates:: You conceive truly. And now, my friend, please to begin again at this point; and having wiped out of your memory all that has preceded, see if you have arrived at any clearer view, and once more say what is knowledge.

Theaetetus:: I cannot say, Socrates, that all opinion is knowledge, because there may be a false opinion; but I will venture to assert, that knowledge is true opinion: let this then be my reply; and if this is hereafter disproved, I must try to find another.

Socrates:: That is the way in which you ought to answer, Theaetetus, and not in your former hesitating strain, for if we are bold we shall gain one of two advantages; either we shall find what we seek, or we shall be less likely to think that we know what we do not know—in either case we shall be richly rewarded. And now, what are you saying?—Are there two sorts of opinion, one true and the other false; and do you define knowledge to be the true?

Theaetetus:: Yes, according to my present view.

Socrates:: Is it still worth our while to resume the discussion touching opinion?

Theaetetus:: To what are you alluding?

Socrates:: There is a point which often troubles me, and is a great perplexity to me, both in regard to myself and others. I cannot make out the nature or origin of the mental experience to which I refer.

Theaetetus:: Pray what is it?

Socrates:: How there can be false opinion—that difficulty still troubles the eye of my mind; and I am uncertain whether I shall leave the question, or begin over again in a new way.

Theaetetus:: Begin again, Socrates,—at least if you think that there is the slightest necessity for doing so. Were not you and Theodorus just now remarking very truly, that in discussions of this kind we may take our own time?

Socrates:: You are quite right, and perhaps there will be no harm in retracing our steps and beginning again. Better a little which is well done, than a great deal imperfectly.

Theaetetus:: Certainly.

Socrates:: Well, and what is the difficulty? Do we not speak of false opinion, and say that one man holds a false and another a true opinion, as though there were some natural distinction between them?

Theaetetus:: We certainly say so.

Socrates:: All things and everything are either known or not known. I leave out of view the intermediate conceptions of learning and forgetting, because they have nothing to do with our present question.

Theaetetus:: There can be no doubt, Socrates, if you exclude these, that there is no other alternative but knowing or not knowing a thing.

Socrates:: That point being now determined, must we not say that he who has an opinion, must have an opinion about something which he knows or does not know?

Theaetetus:: He must.

Socrates:: He who knows, cannot but know; and he who does not know, cannot know?

Theaetetus:: Of course.

Socrates:: What shall we say then? When a man has a false opinion does he think that which he knows to be some other thing which he knows, and knowing both, is he at the same time ignorant of both?

Theaetetus:: That, Socrates, is impossible.

Socrates:: But perhaps he thinks of something which he does not know as some other thing which he does not know; for example, he knows neither Theaetetus nor Socrates, and yet he fancies that Theaetetus is Socrates, or Socrates Theaetetus?

Theaetetus:: How can he?

Socrates:: But surely he cannot suppose what he knows to be what he does not know, or what he does not know to be what he knows?

Theaetetus:: That would be monstrous.

Socrates:: Where, then, is false opinion? For if all things are either known or unknown, there can be no opinion which is not comprehended under this alternative, and so false opinion is excluded.

Theaetetus:: Most true.

Socrates:: Suppose that we remove the question out of the sphere of knowing or not knowing, into that of being and not-being.

Theaetetus:: What do you mean?

Socrates:: May we not suspect the simple truth to be that he who thinks about anything, that which is not, will necessarily think what is false, whatever in other respects may be the state of his mind?

Theaetetus:: That, again, is not unlikely, Socrates.

Socrates:: Then suppose some one to say to us, Theaetetus:—Is it possible for any man to think that which is not, either as a self-existent substance or as a predicate of something else? And suppose that we answer, 'Yes, he can, when he thinks what is not true.'—That will be our answer?

Theaetetus:: Yes.

Socrates:: But is there any parallel to this?

Theaetetus:: What do you mean?

Socrates:: Can a man see something and yet see nothing?

Theaetetus:: Impossible.

Socrates:: But if he sees any one thing, he sees something that exists. Do you suppose that what is one is ever to be found among non-existing things?

Theaetetus:: I do not.

Socrates:: He then who sees some one thing, sees something which is?

Theaetetus:: Clearly.

Socrates:: And he who hears anything, hears some one thing, and hears that which is?

Theaetetus:: Yes.

Socrates:: And he who touches anything, touches something which is one and therefore is?

Theaetetus:: That again is true.

Socrates:: And does not he who thinks, think some one thing?

Theaetetus:: Certainly.

Socrates:: And does not he who thinks some one thing, think something which is?

Theaetetus:: I agree.

Socrates:: Then he who thinks of that which is not, thinks of nothing?

Theaetetus:: Clearly.

Socrates:: And he who thinks of nothing, does not think at all?

Theaetetus:: Obviously.

Socrates:: Then no one can think that which is not, either as a self-existent substance or as a predicate of something else?

Theaetetus:: Clearly not.

Socrates:: Then to think falsely is different from thinking that which is not?

Theaetetus:: It would seem so.

Socrates:: Then false opinion has no existence in us, either in the sphere of being or of knowledge?

Theaetetus:: Certainly not.

Socrates:: But may not the following be the description of what we express by this name?

Theaetetus:: What?

Socrates:: May we not suppose that false opinion or thought is a sort of heterodoxy; a person may make an exchange in his mind, and say that one real object is another real object. For thus he always thinks that which is, but he puts one thing in place of another, and missing the aim of his thoughts, he may be truly said to have false opinion.

Theaetetus:: Now you appear to me to have spoken the exact truth: when a man puts the base in the place of the noble, or the noble in the place of the base, then he has truly false opinion.

Socrates:: I see, Theaetetus, that your fear has disappeared, and that you are beginning to despise me.

Theaetetus:: What makes you say so?

Socrates:: You think, if I am not mistaken, that your 'truly false' is safe from censure, and that I shall never ask whether there can be a swift which is slow, or a heavy which is light, or any other self-contradictory thing, which works, not according to its own nature, but according to that of its opposite. But I will not insist upon this, for I do not wish needlessly to discourage you. And so you are satisfied that false opinion is heterodoxy, or the thought of something else?

Theaetetus:: I am.

Socrates:: It is possible then upon your view for the mind to conceive of one thing as another?

Theaetetus:: True.

Socrates:: But must not the mind, or thinking power, which misplaces them, have a conception either of both objects or of one of them?

Theaetetus:: Certainly.

Socrates:: Either together or in succession?

Theaetetus:: Very good.

Socrates:: And do you mean by conceiving, the same which I mean?

Theaetetus:: What is that?

Socrates:: I mean the conversation which the soul holds with herself in considering of anything. I speak of what I scarcely understand; but the soul when thinking appears to me to be just talking—asking questions of herself and answering them, affirming and denying. And when she has arrived at a decision, either gradually or by a sudden impulse, and has at last agreed, and does not doubt, this is called her opinion. I say, then, that to form an opinion is to speak, and opinion is a word spoken,—I mean, to oneself and in silence, not aloud or to another: What think you?

Theaetetus:: I agree.

Socrates:: Then when any one thinks of one thing as another, he is saying to himself that one thing is another?

Theaetetus:: Yes.

Socrates:: But do you ever remember saying to yourself that the noble is certainly base, or the unjust just; or, best of all—have you ever attempted to convince yourself that one thing is another? Nay, not even in sleep, did you ever venture to say to yourself that odd is even, or anything of the kind?

Theaetetus:: Never.

Socrates:: And do you suppose that any other man, either in his senses or out of them, ever seriously tried to persuade himself that an ox is a horse, or that two are one?

Theaetetus:: Certainly not.

Socrates:: But if thinking is talking to oneself, no one speaking and thinking of two objects, and apprehending them both in his soul, will say and think that the one is the other of them, and I must add, that even you, lover of dispute as you are, had better let the word 'other' alone [i.e. not insist that 'one' and 'other' are the same]. I mean to say, that no one thinks the noble to be base, or anything of the kind.

Theaetetus:: I will give up the word 'other,' Socrates; and I agree to what you say.

Socrates:: If a man has both of them in his thoughts, he cannot think that the one of them is the other?

Theaetetus:: True.

Socrates:: Neither, if he has one of them only in his mind and not the other, can he think that one is the other?

Theaetetus:: True; for we should have to suppose that he apprehends that which is not in his thoughts at all.

Socrates:: Then no one who has either both or only one of the two objects in his mind can think that the one is the other. And therefore, he who maintains that false opinion is heterodoxy is talking nonsense; for neither in this, any more than in the previous way, can false opinion exist in us.

Theaetetus:: No.

Socrates:: But if, Theaetetus, this is not admitted, we shall be driven into many absurdities.

Theaetetus:: What are they?

Socrates:: I will not tell you until I have endeavored to consider the matter from every point of view. For I should be ashamed of us if we were driven in our perplexity to admit the absurd consequences of which I speak. But if we find the solution, and get away from them, we may regard them only as the difficulties of others, and the ridicule will not attach to us. On the other hand, if we utterly fail, I suppose that we must be humble, and allow the argument to trample us under foot, as the sea-sick passenger is trampled upon by the sailor, and to do anything to us. Listen, then, while I tell you how I hope to find a way out of our difficulty.

Theaetetus:: Let me hear.

Socrates:: I think that we were wrong in denying that a man could think what he knew to be what he did not know; and that there is a way in which such a deception is possible.

Theaetetus:: You mean to say, as I suspected at the time, that I may know Socrates, and at a distance see some one who is unknown to me, and whom I mistake for him—then the deception will occur?

Socrates:: But has not that position been relinquished by us, because involving the absurdity that we should know and not know the things which we know?

Theaetetus:: True.

Socrates:: Let us make the assertion in another form, which may or may not have a favorable issue; but as we are in a great strait, every argument should be turned over and tested. Tell me, then, whether I am right in saying that you may learn a thing which at one time you did not know?

Theaetetus:: Certainly you may.

Socrates:: And another and another?

Theaetetus:: Yes.

Socrates:: I would have you imagine, then, that there exists in the mind of man a block of wax, which is of different sizes in different men; harder, moister, and having more or less of purity in one than another, and in some of an intermediate quality.

Theaetetus:: I see.

Socrates:: Let us say that this tablet is a gift of Memory, the mother of the Muses; and that when we wish to remember anything which we have seen, or heard, or thought in our own minds, we hold the wax to the perceptions and thoughts, and in that material receive the impression of them as from the seal of a ring; and that we remember and know what is imprinted as long as the image lasts; but when the image is effaced, or cannot be taken, then we forget and do not know.

Theaetetus:: Very good.

Socrates:: Now, when a person has this knowledge, and is considering something which he sees or hears, may not false opinion arise in the following manner?

Theaetetus:: In what manner?

Socrates:: When he thinks what he knows, sometimes to be what he knows, and sometimes to be what he does not know. We were wrong before in denying the possibility of this.

Theaetetus:: And how would you amend the former statement?

Socrates:: I should begin by making a list of the impossible cases which must be excluded. (1) No one can think one thing to be another when he does not perceive either of them, but has the memorial or seal of both of them in his mind; nor can any mistaking of one thing for another occur, when he only knows one, and does not know, and has no impression of the other; nor can he think that one thing which he does not know is another thing which he does not know, or that what he does not know is what he knows; nor (2) that one thing which he perceives is another thing which he perceives, or that something which he perceives is something which he does not perceive; or that something which he does not perceive is something else which he does not perceive; or that something which he does not perceive is something which he perceives; nor again (3) can he think that something which he knows and perceives, and of which he has the impression coinciding with sense, is something else which he knows and perceives, and of which he has the impression coinciding with sense;—this last case, if possible, is still more inconceivable than the others; nor (4) can he think that something which he knows and perceives, and of which he has the memorial coinciding with sense, is something else which he knows; nor so long as these agree, can he think that a thing which he knows and perceives is another thing which he perceives; or that a thing which he does not know and does not perceive, is the same as another thing which he does not know and does not perceive;—nor again, can he suppose that a thing which he does not know and does not perceive is the same as another thing which he does not know; or that a thing which he does not know and does not perceive is another thing which he does not perceive:—All these utterly and absolutely exclude the possibility of false opinion. The only cases, if any, which remain, are the following.

Theaetetus:: What are they? If you tell me, I may perhaps understand you better; but at present I am unable to follow you.

Socrates:: A person may think that some things which he knows, or which he perceives and does not know, are some other things which he knows and perceives; or that some things which he knows and perceives, are other things which he knows and perceives.

Theaetetus:: I understand you less than ever now.

Socrates:: Hear me once more, then:—I, knowing Theodorus, and remembering in my own mind what sort of person he is, and also what sort of person Theaetetus is, at one time see them, and at another time do not see them, and sometimes I touch them, and at another time not, or at one time I may hear them or perceive them in some other way, and at another time not perceive them, but still I remember them, and know them in my own mind.

Theaetetus:: Very true.

Socrates:: Then, first of all, I want you to understand that a man may or may not perceive sensibly that which he knows.

Theaetetus:: True.

Socrates:: And that which he does not know will sometimes not be perceived by him and sometimes will be perceived and only perceived?

Theaetetus:: That is also true.

Socrates:: See whether you can follow me better now: Socrates can recognize Theodorus and Theaetetus, but he sees neither of them, nor does he perceive them in any other way; he cannot then by any possibility imagine in his own mind that Theaetetus is Theodorus. Am I not right?

Theaetetus:: You are quite right.

Socrates:: Then that was the first case of which I spoke.

Theaetetus:: Yes.

Socrates:: The second case was, that I, knowing one of you and not knowing the other, and perceiving neither, can never think him whom I know to be him whom I do not know.

Theaetetus:: True.

Socrates:: In the third case, not knowing and not perceiving either of you, I cannot think that one of you whom I do not know is the other whom I do not know. I need not again go over the catalogue of excluded cases, in which I cannot form a false opinion about you and Theodorus, either when I know both or when I am in ignorance of both, or when I know one and not the other. And the same of perceiving: do you understand me?

Theaetetus:: I do.

Socrates:: The only possibility of erroneous opinion is, when knowing you and Theodorus, and having on the waxen block the impression of both of you given as by a seal, but seeing you imperfectly and at a distance, I try to assign the right impression of memory to the right visual impression, and to fit this into its own print: if I succeed, recognition will take place; but if I fail and transpose them, putting the foot into the wrong shoe—that is to say, putting the vision of either of you on to the wrong impression, or if my mind, like the sight in a mirror, which is transferred from right to left, err by reason of some similar affection, then 'heterodoxy' and false opinion ensues.

Theaetetus:: Yes, Socrates, you have described the nature of opinion with wonderful exactness.

Socrates:: Or again, when I know both of you, and perceive as well as know one of you, but not the other, and my knowledge of him does not accord with perception—that was the case put by me just now which you did not understand.

Theaetetus:: No, I did not.

Socrates:: I meant to say, that when a person knows and perceives one of you, and his knowledge coincides with his perception, he will never think him to be some other person, whom he knows and perceives, and the knowledge of whom coincides with his perception—for that also was a case supposed.

Theaetetus:: True.

Socrates:: But there was an omission of the further case, in which, as we now say, false opinion may arise, when knowing both, and seeing, or having some other sensible perception of both, I fail in holding the seal over against the corresponding sensation; like a bad archer, I miss and fall wide of the mark—and this is called falsehood.

Theaetetus:: Yes; it is rightly so called.

Socrates:: When, therefore, perception is present to one of the seals or impressions but not to the other, and the mind fits the seal of the absent perception on the one which is present, in any case of this sort the mind is deceived; in a word, if our view is sound, there can be no error or deception about things which a man does not know and has never perceived, but only in things which are known and perceived; in these alone opinion turns and twists about, and becomes alternately true and false;—true when the seals and impressions of sense meet straight and opposite—false when they go awry and are crooked.

Theaetetus:: And is not that, Socrates, nobly said?

Socrates:: Nobly! yes; but wait a little and hear the explanation, and then you will say so with more reason; for to think truly is noble and to be deceived is base.

Theaetetus:: Undoubtedly.

Socrates:: And the origin of truth and error is as follows:— When the wax in the soul of any one is deep and abundant, and smooth and perfectly tempered, then the impressions which pass through the senses and sink into the heart of the soul, as Homer says in a parable, meaning to indicate the likeness of the soul to wax (κῆρ κηρὸς); these, I say, being pure and clear, and having a sufficient depth of wax, are also lasting, and minds, such as these, easily learn and easily retain, and are not liable to confusion, but have true thoughts, for they have plenty of room, and having clear impressions of things, as we term them, quickly distribute them into their proper places on the block. And such men are called wise. Do you agree?

Theaetetus:: Entirely.

Socrates:: But when the heart of any one is shaggy—a quality which the all-wise poet commends, or muddy and of impure wax, or very soft, or very hard, then there is a corresponding defect in the mind—the soft are good at learning, but apt to forget; and the hard are the reverse; the shaggy and rugged and gritty, or those who have an admixture of earth or dung in their composition, have the impressions indistinct, as also the hard, for there is no depth in them; and the soft too are indistinct, for their impressions are easily confused and effaced. Yet greater is the indistinctness when they are all jostled together in a little soul, which has no room. These are the natures which have false opinion; for when they see or hear or think of anything, they are slow in assigning the right objects to the right impressions—in their stupidity they confuse them, and are apt to see and hear and think amiss—and such men are said to be deceived in their knowledge of objects, and ignorant.

Theaetetus:: No man, Socrates, can say anything truer than that.

Socrates:: Then now we may admit the existence of false opinion in us?

Theaetetus:: Certainly.

Socrates:: And of true opinion also?

Theaetetus:: Yes.

Socrates:: We have at length satisfactorily proven that beyond a doubt there are these two sorts of opinion?

Theaetetus:: Undoubtedly.

Socrates:: Alas, Theaetetus, what a tiresome creature is a man who is fond of talking!

Theaetetus:: What makes you say so?

Socrates:: Because I am disheartened at my own stupidity and tiresome garrulity; for what other term will describe the habit of a man who is always arguing on all sides of a question; whose dullness cannot be convinced, and who will never leave off?

Theaetetus:: But what puts you out of heart?

Socrates:: I am not only out of heart, but in positive despair; for I do not know what to answer if any one were to ask me:—O Socrates, have you indeed discovered that false opinion arises neither in the comparison of perceptions with one another nor yet in thought, but in the union of thought and perception? Yes, I shall say, with the complacence of one who thinks that he has made a noble discovery.

Theaetetus:: I see no reason why we should be ashamed of our demonstration, Socrates.

Socrates:: He will say: You mean to argue that the man whom we only think of and do not see, cannot be confused with the horse which we do not see or touch, but only think of and do not perceive? That I believe to be my meaning, I shall reply.

Theaetetus:: Quite right.

Socrates:: Well, then, he will say, according to that argument, the number eleven, which is only thought, can never be mistaken for twelve, which is only thought: How would you answer him?

Theaetetus:: I should say that a mistake may very likely arise between the eleven or twelve which are seen or handled, but that no similar mistake can arise between the eleven and twelve which are in the mind.

Socrates:: Well, but do you think that no one ever put before his own mind five and seven,—I do not mean five or seven men or horses, but five or seven in the abstract, which, as we say, are recorded on the waxen block, and in which false opinion is held to be impossible;—did no man ever ask himself how many these numbers make when added together, and answer that they are eleven, while another thinks that they are twelve, or would all agree in thinking and saying that they are twelve?

Theaetetus:: Certainly not; many would think that they are eleven, and in the higher numbers the chance of error is greater still; for I assume you to be speaking of numbers in general.

Socrates:: Exactly; and I want you to consider whether this does not imply that the twelve in the waxen block are supposed to be eleven?

Theaetetus:: Yes, that seems to be the case.

Socrates:: Then do we not come back to the old difficulty? For he who makes such a mistake does think one thing which he knows to be another thing which he knows; but this, as we said, was impossible, and afforded an irresistible proof of the non-existence of false opinion, because otherwise the same person would inevitably know and not know the same thing at the same time.

Theaetetus:: Most true.

Socrates:: Then false opinion cannot be explained as a confusion of thought and sense, for in that case we could not have been mistaken about pure conceptions of thought; and thus we are obliged to say, either that false opinion does not exist, or that a man may not know that which he knows;—which alternative do you prefer?

Theaetetus:: It is hard to determine, Socrates.

Socrates:: And yet the argument will scarcely admit of both. But, as we are at our wits' end, suppose that we do a shameless thing?

Theaetetus:: What is it?

Socrates:: Let us attempt to explain the verb 'to know.'

Theaetetus:: And why should that be shameless?

Socrates:: You seem not to be aware that the whole of our discussion from the very beginning has been a search after knowledge, of which we are assumed not to know the nature.

Theaetetus:: Nay, but I am well aware.

Socrates:: And is it not shameless when we do not know what knowledge is, to be explaining the verb 'to know'? The truth is, Theaetetus, that we have long been infected with logical impurity. Thousands of times have we repeated the words 'we know;' and 'do not know,' and 'we have or have not science or knowledge,' as if we could understand what we are saying to one another, so long as we remain ignorant about knowledge; and at this moment we are using the words 'we understand,' 'we are ignorant,' as though we could still employ them when deprived of knowledge or science.

Theaetetus:: But if you avoid these expressions, Socrates, how will you ever argue at all?

Socrates:: I could not, being the man I am. The case would be different if I were a true hero of dialectic: and O that such an one were present! for he would have told us to avoid the use of these terms; at the same time he would not have spared in you and me the faults which I have noted. But, seeing that we are no great wits, shall I venture to say what knowing is? for I think that the attempt may be worth making.

Theaetetus:: Then by all means venture, and no one shall find fault with you for using the forbidden terms.

Socrates:: You have heard the common explanation of the verb ‘to know’?

Theaetetus:: I think so, but I do not remember it at the moment.

Socrates:: They explain the word ‘to know’ as meaning ‘to have knowledge.’

Theaetetus:: True.

Socrates:: I should like to make a slight change, and say ‘to possess’ knowledge.

Theaetetus:: How do the two expressions differ?

Socrates:: Perhaps there may be no difference; but still I should like you to hear my view, that you may help me to test it.

Theaetetus:: I will, if I can.

Socrates:: I should distinguish ‘having’ from ‘possessing’: for example, a man may buy and keep under his control a garment which he does not wear; and then we should say, not that he has, but that he possesses the garment.

Theaetetus:: It would be the correct expression.

Socrates:: Well, may not a man ‘possess’ and yet not ‘have’ knowledge in the sense of which I am speaking? As you may suppose a man to have caught wild birds—doves or any other birds—and to be keeping them in an aviary which he has constructed at home; we might say of him in one sense, that he always has them because he possesses them, might we not?

Theaetetus:: Yes.

Socrates:: And yet, in another sense, he has none of them; but they are in his power, and he has got them under his hand in an enclosure of his own, and can take and have them whenever he likes;—he can catch any which he likes, and let the bird go again, and he may do so as often as he pleases.

Theaetetus:: True.

Socrates:: Once more, then, as in what preceded we made a sort of waxen figment in the mind, so let us now suppose that in the mind of each man there is an aviary of all sorts of birds—some flocking together apart from the rest, others in small groups, others solitary, flying anywhere and everywhere.

Theaetetus:: Let us imagine such an aviary—and what is to follow?

Socrates:: We may suppose that the birds are kinds of knowledge, and that when we were children, this receptacle was empty; whenever a man has gotten and detained in the enclosure a kind of knowledge, he may be said to have learned or discovered the thing which is the subject of knowledge: and this is to know.

Theaetetus:: Granted.

Socrates:: And further, when any one wishes to catch any of these knowledges or sciences, and having taken, to hold it, and again to let them go, how will he express himself?—will he describe the 'catching' of them and the original 'possession' in the same words? I will make my meaning clearer by an example:—You admit that there is an art of arithmetic?

Theaetetus:: To be sure.

Socrates:: Conceive this under the form of a hunt after the science of odd and even in general.

Theaetetus:: I follow.

Socrates:: Having the use of the art, the arithmetician, if I am not mistaken, has the conceptions of number under his hand, and can transmit them to another.

Theaetetus:: Yes.

Socrates:: And when transmitting them he may be said to teach them, and when receiving to learn them, and when having them in possession in the aforesaid aviary he may be said to know them.

Theaetetus:: Exactly.

Socrates:: Attend to what follows: must not the perfect arithmetician know all numbers, for he has the science of all numbers in his mind?

Theaetetus:: True.

Socrates:: And he can reckon abstract numbers in his head, or things about him which are numerable?

Theaetetus:: Of course he can.

Socrates:: And to reckon is simply to consider how much such and such a number amounts to?

Theaetetus:: Very true.

Socrates:: And so he appears to be searching into something which he knows, as if he did not know it, for we have already admitted that he knows all numbers;—you have heard these perplexing questions raised?

Theaetetus:: I have.

Socrates:: May we not pursue the image of the doves, and say that the chase after knowledge is of two kinds? one kind is prior to possession and for the sake of possession, and the other for the sake of taking and holding in the hands that which is possessed already. And thus, when a man has learned and known something long ago, he may resume and get hold of the knowledge which he has long possessed, but has not at hand in his mind.

Theaetetus:: True.

Socrates:: That was my reason for asking how we ought to speak when an arithmetician sets about numbering, or a grammarian about reading? Shall we say, that although he knows, he comes back to himself to learn what he already knows?

Theaetetus:: It would be too absurd, Socrates.

Socrates:: Shall we say then that he is going to read or number what he does not know, although we have admitted that he knows all letters and all numbers?

Theaetetus:: That, again, would be an absurdity.

Socrates:: Then shall we say that about names we care nothing?—any one may twist and turn the words 'knowing' and 'learning' in any way which he likes, but since we have determined that the possession of knowledge is not the having or using it, we do assert that a man cannot not possess that which he possesses; and, therefore, in no case can a man not know that which he knows, but he may get a false opinion about it; for he may have the knowledge, not of this particular thing, but of some other;—when the various numbers and forms of knowledge are flying about in the aviary, and wishing to capture a certain sort of knowledge out of the general store, he takes the wrong one by mistake, that is to say, when he thought eleven to be twelve, he got hold of the ring-dove which he had in his mind, when he wanted the pigeon.

Theaetetus:: A very rational explanation.

Socrates:: But when he catches the one which he wants, then he is not deceived, and has an opinion of what is, and thus false and true opinion may exist, and the difficulties which were previously raised disappear. I dare say that you agree with me, do you not?

Theaetetus:: Yes.

Socrates:: And so we are rid of the difficulty of a man's not knowing what he knows, for we are not driven to the inference that he does not possess what he possesses, whether he be or be not deceived. And yet I fear that a greater difficulty is looking in at the window.

Theaetetus:: What is it?

Socrates:: How can the exchange of one knowledge for another ever become false opinion?

Theaetetus:: What do you mean?

Socrates:: In the first place, how can a man who has the knowledge of anything be ignorant of that which he knows, not by reason of ignorance, but by reason of his own knowledge? And, again, is it not an extreme absurdity that he should suppose another thing to be this, and this to be another thing;—that, having knowledge present with him in his mind, he should still know nothing and be ignorant of all things?—you might as well argue that ignorance may make a man know, and blindness make him see, as that knowledge can make him ignorant.

Theaetetus:: Perhaps, Socrates, we may have been wrong in making only forms of knowledge our birds: whereas there ought to have been forms of ignorance as well, flying about together in the mind, and then he who sought to take one of them might sometimes catch a form of knowledge, and sometimes a form of ignorance; and thus he would have a false opinion from ignorance, but a true one from knowledge, about the same thing.

Socrates:: I cannot help praising you, Theaetetus, and yet I must beg you to reconsider your words. Let us grant what you say—then, according to you, he who takes ignorance will have a false opinion—am I right?

Theaetetus:: Yes.

Socrates:: He will certainly not think that he has a false opinion?

Theaetetus:: Of course not.

Socrates:: He will think that his opinion is true, and he will fancy that he knows the things about which he has been deceived?

Theaetetus:: Certainly.

Socrates:: Then he will think that he has captured knowledge and not ignorance?

Theaetetus:: Clearly.

Socrates:: And thus, after going a long way round, we are once more face to face with our original difficulty. The hero of dialectic will retort upon us:—'O my excellent friends, he will say, laughing, if a man knows the form of ignorance and the form of knowledge, can he think that one of them which he knows is the other which he knows? or, if he knows neither of them, can he think that the one which he knows not is another which he knows not? or, if he knows one and not the other, can he think the one which he knows to be the one which he does not know? or the one which he does not know to be the one which he knows? or will you tell me that there are other forms of knowledge which distinguish the right and wrong birds, and which the owner keeps in some other aviaries or graven on waxen blocks according to your foolish images, and which he may be said to know while he possesses them, even though he have them not at hand in his mind? And thus, in a perpetual circle, you will be compelled to go round and round, and you will make no progress.' What are we to say in reply, Theaetetus?

Theaetetus:: Indeed, Socrates, I do not know what we are to say.

Socrates:: Are not his reproaches just, and does not the argument truly show that we are wrong in seeking for false opinion until we know what knowledge is; that must be first ascertained; then, the nature of false opinion?

Theaetetus:: I cannot but agree with you, Socrates, so far as we have yet gone.

Socrates:: Then, once more, what shall we say that knowledge is?—for we are not going to lose heart as yet.

Theaetetus:: Certainly, I shall not lose heart, if you do not.

Socrates:: What definition will be most consistent with our former views?

Theaetetus:: I cannot think of any but our old one, Socrates.

Socrates:: What was it?

Theaetetus:: Knowledge was said by us to be true opinion; and true opinion is surely unerring, and the results which follow from it are all noble and good.

Socrates:: He who led the way into the river, Theaetetus, said 'The experiment will show;' and perhaps if we go forward in the search, we may stumble upon the thing which we are looking for; but if we stay where we are, nothing will come to light.

Theaetetus:: Very true; let us go forward and try.

Socrates:: The trail soon comes to an end, for a whole profession is against us.

Theaetetus:: How is that, and what profession do you mean?

Socrates:: The profession of the great wise ones who are called orators and lawyers; for these persuade men by their art and make them think whatever they like, but they do not teach them. Do you imagine that there are any teachers in the world so clever as to be able to convince others of the truth about acts of robbery or violence, of which they were not eye-witnesses, while a little water is flowing in the clepsydra?

Theaetetus:: Certainly not, they can only persuade them.

Socrates:: And would you not say that persuading them is making them have an opinion?

Theaetetus:: To be sure.

Socrates:: When, therefore, judges are justly persuaded about matters which you can know only by seeing them, and not in any other way, and when thus judging of them from report they attain a true opinion about them, they judge without knowledge, and yet are rightly persuaded, if they have judged well.

Theaetetus:: Certainly.

Socrates:: And yet, O my friend, if true opinion in law courts and knowledge are the same, the perfect judge could not have judged rightly without knowledge; and therefore I must infer that they are not the same.

Theaetetus:: That is a distinction, Socrates, which I have heard made by some one else, but I had forgotten it. He said that true opinion, combined with reason, was knowledge, but that the opinion which had no reason was out of the sphere of knowledge; and that things of which there is no rational account are not knowable—such was the singular expression which he used—and that things which have a reason or explanation are knowable.

Socrates:: Excellent; but then, how did he distinguish between things which are and are not 'knowable'? I wish that you would repeat to me what he said, and then I shall know whether you and I have heard the same tale.

Theaetetus:: I do not know whether I can recall it; but if another person would tell me, I think that I could follow him.

Socrates:: Let me give you, then, a dream in return for a dream:—Methought that I too had a dream, and I heard in my dream that the primeval letters or elements out of which you and I and all other things are compounded, have no reason or explanation; you can only name them, but no predicate can be either affirmed or denied of them, for in the one case existence, in the other non-existence is already implied, neither of which must be added, if you mean to speak of this or that thing by itself alone. It should not be called itself, or that, or each, or alone, or this, or the like; for these go about everywhere and are applied to all things, but are distinct from them; whereas, if the first elements could be described, and had a definition of their own, they would be spoken of apart from all else. But none of these primeval elements can be defined; they can only be named, for they have nothing but a name, and the things which are compounded of them, as they are complex, are expressed by a combination of names, for the combination of names is the essence of a definition. Thus, then, the elements or letters are only objects of perception, and cannot be defined or known; but the syllables or combinations of them are known and expressed, and are apprehended by true opinion. When, therefore, any one forms the true opinion of anything without rational explanation, you may say that his mind is truly exercised, but has no knowledge; for he who cannot give and receive a reason for a thing, has no knowledge of that thing; but when he adds rational explanation, then, he is perfected in knowledge and may be all that I have been denying of him. Was that the form in which the dream appeared to you?

Theaetetus:: Precisely.

Socrates:: And you allow and maintain that true opinion, combined with definition or rational explanation, is knowledge?

Theaetetus:: Exactly.

Socrates:: Then may we assume, Theaetetus, that to-day, and in this casual manner, we have found a truth which in former times many wise men have grown old and have not found?

Theaetetus:: At any rate, Socrates, I am satisfied with the present statement.

Socrates:: Which is probably correct—for how can there be knowledge apart from definition and true opinion? And yet there is one point in what has been said which does not quite satisfy me.

Theaetetus:: What was it?

Socrates:: What might seem to be the most ingenious notion of all:—That the elements or letters are unknown, but the combination or syllables known.

Theaetetus:: And was that wrong?

Socrates:: We shall soon know; for we have as hostages the instances which the author of the argument himself used.

Theaetetus:: What hostages?

Socrates:: The letters, which are the elements; and the syllables, which are the combinations;—he reasoned, did he not, from the letters of the alphabet?

Theaetetus:: Yes; he did.

Socrates:: Let us take them and put them to the test, or rather, test ourselves:—What was the way in which we learned letters? and, first of all, are we right in saying that syllables have a definition, but that letters have no definition?

Theaetetus:: I think so.

Socrates:: I think so too; for, suppose that some one asks you to spell the first syllable of my name:—Theaetetus, he says, what is SO?

Theaetetus:: I should reply S and O.

Socrates:: That is the definition which you would give of the syllable?

Theaetetus:: I should.

Socrates:: I wish that you would give me a similar definition of the S.

Theaetetus:: But how can any one, Socrates, tell the elements of an element? I can only reply, that S is a consonant, a mere noise, as of the tongue hissing; B, and most other letters, again, are neither vowel-sounds nor noises. Thus letters may be most truly said to be undefined; for even the most distinct of them, which are the seven vowels, have a sound only, but no definition at all.

Socrates:: Then, I suppose, my friend, that we have been so far right in our idea about knowledge?

Theaetetus:: Yes; I think that we have.

Socrates:: Well, but have we been right in maintaining that the syllables can be known, but not the letters?

Theaetetus:: I think so.

Socrates:: And do we mean by a syllable two letters, or if there are more, all of them, or a single idea which arises out of the combination of them?

Theaetetus:: I should say that we mean all the letters.

Socrates:: Take the case of the two letters S and O, which form the first syllable of my own name; must not he who knows the syllable, know both of them?

Theaetetus:: Certainly.

Socrates:: He knows, that is, the S and O?

Theaetetus:: Yes.

Socrates:: But can he be ignorant of either singly and yet know both together?

Theaetetus:: Such a supposition, Socrates, is monstrous and unmeaning.

Socrates:: But if he cannot know both without knowing each, then if he is ever to know the syllable, he must know the letters first; and thus the fine theory has again taken wings and departed.

Theaetetus:: Yes, with wonderful celerity.

Socrates:: Yes, we did not keep watch properly. Perhaps we ought to have maintained that a syllable is not the letters, but rather one single idea framed out of them; having a separate form distinct from them.

Theaetetus:: Very true; and a more likely notion than the other.

Socrates:: Take care; let us not be cowards and betray a great and imposing theory.

Theaetetus:: No, indeed.

Socrates:: Let us assume then, as we now say, that the syllable is a simple form arising out of the several combinations of harmonious elements—of letters or of any other elements.

Theaetetus:: Very good.

Socrates:: And it must have no parts.

Theaetetus:: Why?

Socrates:: Because that which has parts must be a whole of all the parts. Or would you say that a whole, although formed out of the parts, is a single notion different from all the parts?

Theaetetus:: I should.

Socrates:: And would you say that all and the whole are the same, or different?

Theaetetus:: I am not certain; but, as you like me to answer at once, I shall hazard the reply, that they are different.

Socrates:: I approve of your readiness, Theaetetus, but I must take time to think whether I equally approve of your answer.

Theaetetus:: Yes; the answer is the point.

Socrates:: According to this new view, the whole is supposed to differ from all?

Theaetetus:: Yes.

Socrates:: Well, but is there any difference between all [in the plural] and the all [in the singular]? Take the case of number:—When we say one, two, three, four, five, six; or when we say twice three, or three times two, or four and two, or three and two and one, are we speaking of the same or of different numbers?

Theaetetus:: Of the same.

Socrates:: That is of six?

Theaetetus:: Yes.

Socrates:: And in each form of expression we spoke of all the six?

Theaetetus:: True.

Socrates:: Again, in speaking of all [in the plural], is there not one thing which we express?

Theaetetus:: Of course there is.

Socrates:: And that is six?

Theaetetus:: Yes.

Socrates:: Then in predicating the word ‘all’ of things measured by number, we predicate at the same time a singular and a plural?

Theaetetus:: Clearly we do.

Socrates:: Again, the number of the acre and the acre are the same; are they not?

Theaetetus:: Yes.

Socrates:: And the number of the stadium in like manner is the stadium?

Theaetetus:: Yes.

Socrates:: And the army is the number of the army; and in all similar cases, the entire number of anything is the entire thing?

Theaetetus:: True.

Socrates:: And the number of each is the parts of each?

Theaetetus:: Exactly.

Socrates:: Then as many things as have parts are made up of parts?

Theaetetus:: Clearly.

Socrates:: But all the parts are admitted to be the all, if the entire number is the all?

Theaetetus:: True.

Socrates:: Then the whole is not made up of parts, for it would be the all, if consisting of all the parts?

Theaetetus:: That is the inference.

Socrates:: But is a part a part of anything but the whole?

Theaetetus:: Yes, of the all.

Socrates:: You make a valiant defense, Theaetetus. And yet is not the all that of which nothing is wanting?

Theaetetus:: Certainly.

Socrates:: And is not a whole likewise that from which nothing is absent? but that from which anything is absent is neither a whole nor all;—if wanting in anything, both equally lose their entirety of nature.

Theaetetus:: I now think that there is no difference between a whole and all.

Socrates:: But were we not saying that when a thing has parts, all the parts will be a whole and all?

Theaetetus:: Certainly.

Socrates:: Then, as I was saying before, must not the alternative be that either the syllable is not the letters, and then the letters are not parts of the syllable, or that the syllable will be the same with the letters, and will therefore be equally known with them?

Theaetetus:: You are right.

Socrates:: And, in order to avoid this, we suppose it to be different from them?

Theaetetus:: Yes.

Socrates:: But if letters are not parts of syllables, can you tell me of any other parts of syllables, which are not letters?

Theaetetus:: No, indeed, Socrates; for if I admit the existence of parts in a syllable, it would be ridiculous in me to give up letters and seek for other parts.

Socrates:: Quite true, Theaetetus, and therefore, according to our present view, a syllable must surely be some indivisible therefore form?

Theaetetus:: True.

Socrates:: But do you remember, my friend, that only a little while ago we admitted and approved the statement, that of the first elements out of which all other things are compounded there could be no definition, because each of them when taken by itself is uncompounded; nor can one rightly attribute to them the words 'being' or 'this,' because they are alien and inappropriate words, and for this reason the letters or elements were indefinable and unknown?

Theaetetus:: I remember.

Socrates:: And is not this also the reason why they are simple and indivisible? I can see no other.

Theaetetus:: No other reason can be given.

Socrates:: Then is not the syllable in the same case as the elements or letters, if it has no parts and is one form?

Theaetetus:: To be sure.

Socrates:: If, then, a syllable is a whole, and has many parts or letters, the letters as well as the syllable must be intelligible and expressible, since all the parts are acknowledged to be the same as the whole?

Theaetetus:: True.

Socrates:: But if it be one and indivisible, then the syllables and the letters are alike undefined and unknown, and for the same reason?

Theaetetus:: I cannot deny that.

Socrates:: We cannot, therefore, agree in the opinion of him who says that the syllable can be known and expressed, but not the letters.

Theaetetus:: Certainly not; if we may trust the argument.

Socrates:: Well, but will you not be equally inclined to disagree with him, when you remember your own experience in learning to read?

Theaetetus:: What experience?

Socrates:: Why, that in learning you were kept trying to distinguish the separate letters both by the eye and by the ear, in order that, when you heard them spoken or saw them written, you might not be confused by their position.

Theaetetus:: Very true.

Socrates:: And is the education of the harp-player complete unless he can tell what string answers to a particular note; the notes, as every one would allow, are the elements or letters of music?

Theaetetus:: Exactly.

Socrates:: Then, if we argue from the letters and syllables which we know to other simples and compounds, we shall say that the letters or simple elements as a class are much more certainly known than the syllables, and much more indispensable to a perfect knowledge of any subject; and if some one says that the syllable is known and the letter unknown, we shall consider that either intentionally or unintentionally he is talking nonsense?

Theaetetus:: Exactly.

Socrates:: And there might be given other proofs of this belief, if I am not mistaken. But do not let us in looking for them lose sight of the question before us, which is the meaning of the statement, that right opinion with rational definition or explanation is the most perfect form of knowledge.

Theaetetus:: We must not.

Socrates:: Well, and what is the meaning of the term ‘explanation’? I think that we have a choice of three meanings.

Theaetetus:: What are they?

Socrates:: In the first place, the meaning may be, manifesting one’s thought by the voice with verbs and nouns, imaging an opinion in the stream which flows from the lips, as in a mirror or water. Does not explanation appear to be of this nature?

Theaetetus:: Certainly; he who so manifests his thought, is said to explain himself.

Socrates:: And every one who is not born deaf or dumb is able sooner or later to manifest what he thinks of anything; and if so, all those who have a right opinion about anything will also have right explanation; nor will right opinion be anywhere found to exist apart from knowledge.

Theaetetus:: True.

Socrates:: Let us not, therefore, hastily charge him who gave this account of knowledge with uttering an unmeaning word; for perhaps he only intended to say, that when a person was asked what was the nature of anything, he should be able to answer his questioner by giving the elements of the thing.

Theaetetus:: As for example, Socrates…?

Socrates:: As, for example, when Hesiod says that a wagon is made up of a hundred planks. Now, neither you nor I could describe all of them individually; but if any one asked what is a wagon, we should be content to answer, that a wagon consists of wheels, axle, body, rims, yoke.

Theaetetus:: Certainly.

Socrates:: And our opponent will probably laugh at us, just as he would if we professed to be grammarians and to give a grammatical account of the name of Theaetetus, and yet could only tell the syllables and not the letters of your name—that would be true opinion, and not knowledge; for knowledge, as has been already remarked, is not attained until, combined with true opinion, there is an enumeration of the elements out of which anything is composed.

Theaetetus:: Yes.

Socrates:: In the same general way, we might also have true opinion about a wagon; but he who can describe its essence by an enumeration of the hundred planks, adds rational explanation to true opinion, and instead of opinion has art and knowledge of the nature of a wagon, in that he attains to the whole through the elements.

Theaetetus:: And do you not agree in that view, Socrates?

Socrates:: If you do, my friend; but I want to know first, whether you admit the resolution of all things into their elements to be a rational explanation of them, and the consideration of them in syllables or larger combinations of them to be irrational—is this your view?

Theaetetus:: Precisely.

Socrates:: Well, and do you conceive that a man has knowledge of any element who at one time affirms and at another time denies that element of something, or thinks that the same thing is composed of different elements at different times?

Theaetetus:: Assuredly not.

Socrates:: And do you not remember that in your case and in that of others this often occurred in the process of learning to read?

Theaetetus:: You mean that I mistook the letters and misspelt the syllables?

Socrates:: Yes.

Theaetetus:: To be sure; I perfectly remember, and I am very far from supposing that they who are in this condition have knowledge.

Socrates:: When a person at the time of learning writes the name of Theaetetus, and thinks that he ought to write and does write *Th* and *e*; but, again, meaning to write the name of Theodorus, thinks that he ought to write and does write *T* and *e*—can we suppose that he knows the first syllables of your two names?

Theaetetus:: We have already admitted that such a one has not yet attained knowledge.

Socrates:: And in like manner he may enumerate without knowing them the second and third and fourth syllables of your name?

Theaetetus:: He may.

Socrates:: And in that case, when he knows the order of the letters and can write them out correctly, he has right opinion?

Theaetetus:: Clearly.

Socrates:: But although we admit that he has right opinion, he will still be without knowledge?

Theaetetus:: Yes.

Socrates:: And yet he will have explanation, as well as right opinion, for he knew the order of the letters when he wrote; and this we admit to be explanation.

Theaetetus:: True.

Socrates:: Then, my friend, there is such a thing as right opinion united with definition or explanation, which does not as yet attain to the exactness of knowledge.

Theaetetus:: It would seem so.

Socrates:: And what we fancied to be a perfect definition of knowledge is a dream only. But perhaps we had better not say so as yet, for were there not three explanations of knowledge, one of which must, as we said, be adopted by him who maintains knowledge to be true opinion combined with rational explanation? And very likely there may be found some one who will not prefer this but the third.

Theaetetus:: You are quite right; there is still one remaining. The first was the image or expression of the mind in speech; the second, which has just been mentioned, is a way of reaching the whole by an enumeration of the elements. But what is the third definition?

Socrates:: There is, further, the popular notion of telling the mark or sign of difference which distinguishes the thing in question from all others.

Theaetetus:: Can you give me any example of such a definition?

Socrates:: As, for example, in the case of the sun, I think that you would be contented with the statement that the sun is the brightest of the heavenly bodies which revolve about the earth.

Theaetetus:: Certainly.

Socrates:: Understand why:—the reason is, as I was just now saying, that if you get at the difference and distinguishing characteristic of each thing, then, as many persons affirm, you will get at the definition or explanation of it; but while you lay hold only of the common and not of the characteristic notion, you will only have the definition of those things to which this common quality belongs.

Theaetetus:: I understand you, and your account of definition is in my judgment correct.

Socrates:: But he, who having right opinion about anything, can find out the difference which distinguishes it from other things will know that of which before he had only an opinion.

Theaetetus:: Yes; that is what we are maintaining.

Socrates:: Nevertheless, Theaetetus, on a nearer view, I find myself quite disappointed; the picture, which at a distance was not so bad, has now become altogether unintelligible.

Theaetetus:: What do you mean?

Socrates:: I will endeavor to explain: I will suppose myself to have true opinion of you, and if to this I add your definition, then I have knowledge, but if not, opinion only.

Theaetetus:: Yes.

Socrates:: The definition was assumed to be the interpretation of your difference.

Theaetetus:: True.

Socrates:: But when I had only opinion, I had no conception of your distinguishing characteristics.

Theaetetus:: I suppose not.

Socrates:: Then I must have conceived of some general or common nature which no more belonged to you than to another.

Theaetetus:: True.

Socrates:: Tell me, now—How in that case could I have formed a judgment of you any more than of any one else? Suppose that I imagine Theaetetus to be a man who has nose, eyes, and mouth, and every other member complete; how would that enable me to distinguish Theaetetus from Theodorus, or from some outer barbarian?

Theaetetus:: How could it?

Socrates:: Or if I had further conceived of you, not only as having nose and eyes, but as having a snub nose and prominent eyes, should I have any more notion of you than of myself and others who resemble me?

Theaetetus:: Certainly not.

Socrates:: Surely I can have no conception of Theaetetus until your snub-nosedness has left an impression on my mind different from the snub-nosedness of all others whom

I have ever seen, and until your other peculiarities have a like distinctness; and so when I meet you to-morrow the right opinion will be re-called?

Theaetetus:: Most true.

Socrates:: Then right opinion implies the perception of differences?

Theaetetus:: Clearly.

Socrates:: What, then, shall we say of adding reason or explanation to right opinion? If the meaning is, that we should form an opinion of the way in which something differs from another thing, the proposal is ridiculous.

Theaetetus:: How so?

Socrates:: We are supposed to acquire a right opinion of the differences which distinguish one thing from another when we have already a right opinion of them, and so we go round and round;—the revolution of the scytal, or pestle, or any other rotatory machine, in the same circles, is as nothing compared with such a requirement; and we may be truly described as the blind directing the blind; for to add those things which we already have, in order that we may learn what we already think, is like a soul utterly benighted.

Theaetetus:: Tell me; what were you going to say just now, when you asked the question?

Socrates:: If, my boy, the argument, in speaking of adding the definition, had used the word to ‘know,’ and not merely ‘have an opinion’ of the difference, this which is the most promising of all the definitions of knowledge would have come to a pretty end, for to know is surely to acquire knowledge.

Theaetetus:: True.

Socrates:: And so, when the question is asked, What is knowledge? this fair argument will answer ‘Right opinion with knowledge,’—knowledge, that is, of difference, for this, as the said argument maintains, is adding the definition.

Theaetetus:: That seems to be true.

Socrates:: But how utterly foolish, when we are asking what is knowledge, that the reply should only be, right opinion with knowledge of difference or of anything! And so, Theaetetus, knowledge is neither sensation nor true opinion, nor yet definition and explanation accompanying and added to true opinion?

Theaetetus:: I suppose not.

Socrates:: And are you still in labor and travail, my dear friend, or have you brought all that you have to say about knowledge to the birth?

Theaetetus:: I am sure, Socrates, that you have elicited from me a good deal more than ever was in me.

Socrates:: And does not my art show that you have brought forth wind, and that the offspring of your brain are not worth bringing up?

Theaetetus:: Very true.

Socrates:: But if, Theaetetus, you should ever conceive afresh, you will be all the better for the present investigation, and if not, you will be soberer and humbler and gentler to other men, and will be too modest to fancy that you know what you do not know. These are the limits of my art; I can no further go, nor do I know aught of the things which great and famous men know or have known in this or former ages. The office of a midwife I, like my mother, have received from God; she delivered women, and I deliver men; but they must be young and noble and fair.

And now I have to go to the porch of the King Archon, where I am to meet Meletus and his indictment. To-morrow morning, Theodorus, I shall hope to see you again at this place.

# **Theaetetus.**

Translated by Benjamin Hall Kennedy.

PERSONS OF THE DIALOGUE.

Socrates, Theodorus, Theaetetus.

Euclid:: Ha, Terpsion! long in from the country?

Terpsion:: A good while. And you—I was looking for you in the Agora, and wondering that I could not find you.

Euclid:: I was not in the city.

Terpsion:: Where then?

Euclid:: As I was going down to the harbor I met with Theaetetus being carried to Athens from the camp at Corinth.

Terpsion:: Alive or dead?

Euclid:: Alive, but only just. Besides being very ill from wounds, he is more seriously affected by the malady which has broken out in the army.

Terpsion:: You mean the dysentery?

Euclid:: Yes.

Terpsion:: In danger, you say, such a man as that!

Euclid:: Ay, a gallant and good one, Terpsion. It was but just now I heard some people praising him highly for his behavior in the battle.

Terpsion:: Nothing strange in that. It were far more surprising if he had not behaved so. But how came he not to put up here at Megara?

Euclid:: He was in haste to get home. For all my entreaties and advice, he would not stay. So after accompanying him some way, as I went back I bethought me of the marvelous divination shown by Socrates in so many cases, especially in that of Theaetetus. I think it was but a little while before his own death that he met him, a mere lad at the time, and, after conversing and arguing with him, admired his genius greatly. When I went to Athens, he repeated to me the arguments he had held with him—well worth hearing they were—and said this youth must inevitably become distinguished, if he should reach man’s estate.

Terpsion:: He spoke the truth, manifestly. But what were the arguments? Can you repeat them?

Euclid:: No indeed: not from mere recollection. But, having returned home immediately, I jotted down some notes at once, and, afterwards taxing my memory at leisure, I went on writing; and, every time I visited Athens, I used to ask Socrates anything I had not remembered, and to make corrections on my return here. So that I have got nearly the whole conversation in writing.

Terpsion:: True: I heard you say so once before; and I have always been meaning to bid you show it me, but have loitered till this moment. What hinders us from perusing it now? Especially as I am in real want of rest, after coming from the country.

Euclid:: Well, and I too escorted Theaetetus as far as Erineum; so I should not dislike a siesta. Let us go then; and while we repose, the attendant shall read to us.

Terpsion:: A good suggestion.

[ They go to Euclid’s house. ]

Euclid:: Here is the manuscript, Terpsion. I must observe that I wrote out the conversation in my own way:—not in the narrative form as Socrates related it to me, but as a dialogue between him and his fellow-disputants, whom he stated to be Theodoras the geometrician and Theaetetus. And, in order to escape the troublesome notices between the speeches in my manuscript (such as, when Socrates was speaker, 'I spoke,' 'I said,' and, in case of an answerer, 'he agreed' or 'he disagreed') I wrote as if he were actually talking with them, and got rid of such interpolations.

Terpsion:: Well, no harm in that, Euclid.

Euclid:: Now, boy, take the volume, and read.

[The slave reads aloud all that follows]

Socrates:: If I had a peculiar interest in Cyrene and its affairs, Theodoras, I would ask you about things there, and about its people, whether any of the young men in those parts are studying geometry or other scientific subjects. But I really care for them less than I do for our youth here, and would rather know which of our own young men are expected to become scholars. This therefore I observe for myself as well as I can, and inquire about it from every body else, with whom I see the young men desirous to converse. Now the largest number of pupils attend your lectures; and justly: for you deserve it on many grounds, but especially for geometry. So I shall be glad to hear if you have met with any one worth naming.

Theodorus:: Yes, Socrates; among your citizens I have met with a youth, whose character I can cite as well worthy of your attention. If he were handsome, I should be much afraid to mention him, lest any one should fancy I am in love with him. But in fact (don't be vexed with me) he is not handsome: he has a flat nose and protruding eyes like you: but less marked in his case than in yours. I speak then without scruple. And I can assure you that of all the persons I ever met (and I have associated with a great number) I never found any of a nature so wonderfully excellent. Aptitude for learning such as few attain, combined with a temper singularly mild, and furthermore with unrivalled courage, I could never have expected to find, nor have I ever seen any similar instances. Those who, like him, are quick and ready-witted and gifted with a good memory, are liable to keen emotions; they rush impetuously like unballasted vessels, and grow up with more of madness in them than of velour: whilst others of more solid temperament usually approach studies in a somewhat sluggish mood, and laden with forgetfulness. But he comes to all his studies and investigations with perfect gentleness, like a current of oil flowing without sound, so smoothly, firmly and successfully, that we marvel to see one of his age perform these things as he does.

Socrates:: Good news indeed. Pray whose son is he?

Theodorus:: I have heard the name, but do not remember it. However, he is the middle one of those who are now approaching us. He and these friends of his were anointing themselves just now in the outer race-course. They have finished, I suppose, and are coming this way. So see if you know him.

Socrates:: I do. He is the son of Sophronius of Sunium, just such a man, my friend, as you describe this one to be, of good repute generally, and, I can tell you, a man who left a considerable property. But I do not know the name of the youth.

Theodorus:: Theaetetus is his name, Socrates: the property I fancy certain trustees have wasted: yet even in money matters he is wonderfully liberal.

Socrates:: A noble character you give him. Bid him come and sit down by me here.

Theodorus:: I will. Theaetetus, come and sit here by Socrates.

Socrates:: Do by all means, Theaetetus, that I may view myself, and see what kind of face I have. Theodorus says it’s like yours. Now if each of us held a lyre in his hand, and he said they were tuned to the same pitch, should we believe him at once, or should we have taken note whether he spoke as a musician?

Theaetetus:: We should have taken note.

Socrates:: And if we found him such, should we not believe him, if ignorant of music, we should disbelieve?

Theaetetus:: True.

Socrates:: And in the present case, I suppose, if we care at all for resemblance of faces, we must consider whether he speaks with a painter’s skill or not.

Theaetetus:: I think so.

Socrates:: Is then Theodorus skilled in portrait-painting?

Theaetetus:: Not to my knowledge.

Socrates:: And is he not skilled in geometry?

Theaetetus:: Without doubt, Socrates.

Socrates:: And in astronomy and calculations and music and every subject of education?

Theaetetus:: I think so.

Socrates:: If then he says, either by way of praise or dispraise, that we are alike in some bodily feature, it is not very well worth while to attend to him?

Theaetetus:: Perhaps not.

Socrates:: But how, if he were to praise the soul of one or the other for virtue and wisdom? Would it not be worth while for the one who heard the praise to observe him who was praised, and for the other to exhibit himself with alacrity?

Theaetetus:: Quite so, Socrates.

Socrates:: It is time, then, my dear Theaetetus, for you to exhibit and for me to observe. For I must tell you that, although Theodorus has often spoken to me with praise of many persons, both foreigners and citizens, he never gave such praise to anybody as he did to you just now.

Theaetetus:: I am glad to hear it, Socrates; but see to it, that he did not speak in jest.

Socrates:: That is not the way of Theodorus. So do not retract your admissions on the plea that our friend here speaks in jest, lest he be compelled to add an affidavit. I am sure nobody will indict him for perjury. So stand to your confession boldly.

Theaetetus:: Yes, I must, if you think so.

Socrates:: Tell me now: you learn, I suppose, from Theodorus some lessons of geometry?

Theaetetus:: I do.

Socrates:: And of astronomy and harmony and calculations?

Theaetetus:: I use my best endeavor.

Socrates:: So do I, my boy, both from him and from all others whom I suppose to have any acquaintance with the subjects. Nevertheless, though I am in general pretty well versed in them, I have one little difficulty, which I must examine with your help and that of our friends here. Tell me, does not ‘to learn’ mean to become wiser in that which one learns?

Theaetetus:: Certainly.

Socrates:: And by wisdom it is, I suppose, that the wise are wise?

Theaetetus:: Yes.

Socrates:: Does this differ at all from knowledge?

Theaetetus:: Does what differ?

Socrates:: Wisdom. In things whereof we are knowing, are we not also wise?

Theaetetus:: Can it be otherwise?

Socrates:: Are then wisdom and knowledge the same thing?

Theaetetus:: Yes.

Socrates:: Now here is precisely my difficulty, and I cannot adequately comprehend in my own mind what knowledge really is. Are we then able to define it? What say ye? Which of us will speak first? Whoever misses the mark on each trial, shall sit down, as boys playing at ball say, for donkey: and whoever goes through to the end without missing, shall be our king, and shall command us to answer anything he likes to ask. But perhaps, Theodoras, my love of discussion leads me to be rude in trying so hard to make us argue, and become friendly and chatty with one another.

Theodorus:: No, Socrates, such a wish is the reverse of rudeness. But call on one of the youths to answer you. I am unaccustomed to this kind of debate, and too old to acquire the habit. It would suit our young friends, and they would get on much better: for it is a fact that in all things youth has the gift of progress. So, as you had Theaetetus in hand at first, do not let him go, but continue to question him.

Socrates:: You hear then, Theaetetus, what Theodoras says; and you will not, I think, wish to disobey him. In such matters a wise man's injunctions cannot be lawfully disobeyed by his junior. Speak then well and nobly. What do you think that knowledge is?

Theaetetus:: I must, Socrates, since you both require. No doubt, if I make any blunder, you will correct me.

Socrates:: Certainly, if we are able.

Theaetetus:: Well then, I think that all the things one can learn from Theodorus are knowledge; geometry for instance and the others which you enumerated just now: and again leather-dressing, and the trades of the other craftsmen, all and each, I consider nothing else than knowledge.

Socrates:: In a truly noble and bountiful style, my friend, when asked for one thing you give many, and various things instead of a simple one.

Theaetetus:: Why, what is the sense of your words, Socrates?

Socrates:: Perhaps none at all: however, I will explain what I mean. When you name leather-dressing, do you intend anything else than the knowledge of the manufacture of shoes?

Theaetetus:: Nothing else.

Socrates:: Or when you name carpentry, do you intend anything but the knowledge of the manufacture of wooden implements?

Theaetetus:: No, nothing.

Socrates:: In both cases then, you express that thing of which each is the knowledge?

Theaetetus:: Yes.

Socrates:: But the question put, Theaetetus, was not concerning the various subjects of knowledge, or their number. We did not ask with a wish to count them, but to know what the nature of knowledge itself is. Am I talking nonsense?

Theaetetus:: No, quite correctly.

Socrates:: Consider this also. Should some one ask us any trivial and obvious question, such as, what is clay? if we said in reply, the clay of the potters, and the clay of the stove-makers, and the clay of the brick-makers, should we not deserve to be laughed at?

Theaetetus:: Probably.’

Socrates:: In the first place because we thought the questioner would understand us from our answer, when we introduce the word ‘clay,’ whether we add that of the doll-makers, or of any other craftsmen. Does anybody, think you, understand any name of anything, when he does not know its correct meaning?

Theaetetus:: Not at all.

Socrates:: Then he who is ignorant of ‘knowledge,’ does not understand ‘knowledge of shoes.’

Theaetetus:: He does not.

Socrates:: And he who is ignorant of knowledge does not understand leather-dressing or any other art?

Theaetetus:: True.

Socrates:: Then an answer made to the question—What is knowledge? is ridiculous, when a person gives in his reply the name of some art, For he names ‘the knowledge of something,’ when that was not the thing asked from him.

Theaetetus:: Apparently.

Socrates:: In the next place, when he might have answered easily and briefly, he goes an infinite way round. For instance, in the question about clay, it was easy and simple to say, that clay is moistened earth, and to abstain from adding whose it is.

Theaetetus:: Yes, Socrates; this method now indeed appears easy. You seem to be asking the same sort of question that occurred some time since to us in our discussions;—to myself I mean, and your namesake, Socrates here.

Socrates:: What was that, Theaetetus?

Theaetetus:: Theodorus was writing out for us something about ‘powers,’ proving, as to the ‘tripod’ and the ‘pente-pod,’ that in length they are not commensurable with the foot-unit: and so proceeding one by one as far as seventeen: but here he somehow came to a pause. We then bethought us of such a notion as this: since the ‘powers’ were evidently infinite in number, to try to comprise them under one term, by which we should entitle all these ‘powers.’

Socrates:: Did you find any such term?

Theaetetus:: I think we did. Consider it yourself.

Socrates:: Speak on.

Theaetetus:: We divided number generally into two classes, one, that which is capable of being formed by the multiplication of equal factors into one another, we likened in form to the square, and called it square and equilateral.

Socrates:: Very good.

Theaetetus:: All intervening numbers, to which belong 3 and 5 and every one that is incapable of being formed by the multiplication of equal factors, but is formed either by a larger number having a smaller—or by a smaller number having a larger—as its multiplier, we likened on the other hand to the oblong figure, which in every instance has greater and lesser sides, and called it oblong number.

Socrates:: Excellent. What next?

Theaetetus:: All lines which being squared form an equilateral plane figure we defined to be ‘length’; all which form an oblong, we comprised under the name ‘powers’ (i.e. irrational roots), as not being commensurable with the others except through the surfaces which they have power to form. And similarly with respect to the solids (cubes).

Socrates:: Nobody in the world could do better, my boys. So I do not think Theodorus will incur the guilt of perjury.

Theaetetus:: But as to your question about knowledge, Socrates, I could not answer it in the same way as that about length and power. Yet you seem to me to be looking for some such answer. So that now Theodorus again appears to be a false speaker.

Socrates:: Well, but if he had praised your running, and said he had never met with any young man so fleet, and then in a racing-match you had been defeated by one in the prime of life, and very fleet, do you think his praise would have been any the less true?

Theaetetus:: I do not.

Socrates:: And, as to knowledge, as I was saying a little while since, do you think it a small thing to discover its nature, and not one of the highest achievements?

Theaetetus:: Nay indeed, Socrates, I do place it among the very highest of all.

Socrates:: Then be at ease about yourself: and consider that Theodoras speaks truly, and show desire in every way to obtain a right definition of knowledge, as of all other things.

Theaetetus:: As for desire, Socrates, it will not be found wanting.

Socrates:: Come then: you made a good suggestion just now. Imitate your answer about the 'powers'. As you comprised their vast number under one term, so also try to describe the many kinds of knowledge by a single definition.

Theaetetus:: I assure you, Socrates, I have often endeavored to gain insight into that matter, while listening to the questions you put. But, though I cannot persuade myself that I have anything important of my own to say, or that I have heard from some one else any such statement as you require, nevertheless I cannot rid myself of the feeling that I am on the point of doing so.

Socrates:: Oh! you are in the throes of labor, dear Theaetetus, through being not empty, but pregnant.

Theaetetus:: I do not know, Socrates. I tell you my feeling, at all events.

Socrates:: Have you not heard then, simpleton, that I am the son of a very famous and solid midwife, Phaenarete?

Theaetetus:: I have heard it before now.

Socrates:: Have you heard too that I practice the same art?

Theaetetus:: Never.

Socrates:: I do really. But don't tell of me to other people. I am not known, my friend, to have this skill. And others, being unaware, do not say this of me, but only that I am a very strange person, and that I perplex people. Have you heard this too?

Theaetetus:: I have.

Socrates:: Shall I tell you the reason?

Theaetetus:: Pray do.

Socrates:: Reflect then upon the general situation of midwives, and you will more easily learn what I mean. You know, I suppose, that none of them practice while they are still conceiving and bearing children, but those alone who are past child-bearing.

Theaetetus:: Certainly.

Socrates:: This custom is said to be derived from Artemis, for that she, though a virgin, has the charge of parturition. Accordingly, she did not indeed allow barren women to become midwives, because human nature is too weak to acquire an art of which it has no experience: but she assigned it to those who are past the age of childbearing, in honor of their resemblance to herself.

Theaetetus:: Naturally.

Socrates:: Is not this also natural, that those who conceive and those who do not are better known by midwives than by others?

Theaetetus:: Quite so.

Socrates:: Moreover also midwives, by giving drugs and. chanting incantations, are able to excite the throes and to quell them, if they will, and to make those who have a hard time bring forth: and they produce abortion, if the case require it.

Theaetetus:: True.

Socrates:: Have you furthermore noted this in them, that they are also very clever match-makers, being well skilled to know what woman uniting with what man must bear the finest children?

Theaetetus:: I was not quite aware of that.

Socrates:: I assure you they pride themselves on this much more than on their special practice. Just consider. Do you think the care and collection of the fruits of the earth belongs to one art, and the knowledge of what soil you must plant or sow to another?

Theaetetus:: No, to the same.

Socrates:: And do you consider it different in the case of a woman?

Theaetetus:: Seemingly not.

Socrates:: No, truly. But on account of the unlawful and unscientific conciliation of man and woman, which is termed ‘procuration,’ midwives, being a respectable body, shun match-making, fearing lest by this they should incur the other charge. For it is only to genuine midwives, I suppose, that the art of correct match-making belongs.

Theaetetus:: Apparently so.

Socrates:: Thus highly important is the function of midwives; but less so than my procedure. For, it does not happen to women at one time to bear idols, at another true children, so that it shall not be easy to distinguish them. Had they been liable to this, the greatest and noblest task for midwives would have been to decide between the true child and the untrue. Do you not think so?

Theaetetus:: I do.

Socrates:: But my art of midwifery, though it has in other respects the same conditions as theirs, differs in these points, that I attend men, not women, and that I inspect the labor of their souls, not of their bodies. The most important skill in our art is, the being able to test in every way whether the young man's mind is bringing forth an idol and an unreality, or a genuine and true progeny. For to me as well as to the midwives belongs the following condition. I am incapable of producing wisdom, and the reproach which many ere now have cast on me, that, while I question others, I myself give no answer about anything, because I have no wisdom in me, is a just reproach. The reason of it is this: the god compels me to act the midwife, but hindered me from engendering. I then am not indeed perfectly wise myself, nor have I brought to birth any discovery of that kind, as the outcome of my own soul. But of those who resort to me, some indeed appear in the outset utterly ignorant, but all, as the intercourse proceeds, and the god gives opportunity, make wonderful progress, in their own opinion and in that of others. And it is evident that they do so not by any learning they have gained from me, but because they have of themselves discovered many excellent things, which they retain. Of that midwifery however I and the god are authors. The proof is this. Many persons ere now, not knowing that fact, and imputing all to themselves while they despised me, quitted me earlier than they ought, either of their own will or by the persuasion of others. After this, they baulked all subsequent conceptions by evil intercourse, and lost by ill nurture the offspring which I had helped them to, valuing unrealities and idols more than truths; and ended by seeming to themselves, as to everybody else, mere blockheads. One of these, though there are many more, is Aristeides son of Lysimachus. When these truants come back and pray for admission to my society, and move heaven and earth to gain it, with some of them my familiar genius forbids me to consort, with others it allows me: and these latter improve again. And this affection also they that associate with me have in common with women in labor: they feel throes and are full of worry day and night much more than the women. And my art has the power to excite and allay that throe. So much then for them. And sometimes, Theaetetus, when any do not seem to me to be pregnant, perceiving that they do not need me, I very kindly make a match for them, and, with the blessing of heaven, I guess very aptly by whose conversation they will profit. Many I have made over to Prodicus, many to other wise and inspired men. I have spoken at this length to you because I suspect, in conformity with your own opinion, that you are suffering throes from some inward conception. Deal with me then as the son of a midwife, and a practitioner myself, and try to answer my questions as well as you are able. And if, on examining anything you say, I consider it an idol and not a true progeny, and so remove it quietly and put it away, don’t be angry as women at their first lying in are about their infants. For many, my good friend, have felt towards me so that they are actually ready to bite me when I take from them any cherished trifle: and they imagine I am not acting kindly; so little are they aware that no god is unkind to men, and that I do nothing of this sort from ill will. But my sense of duty will in no wise allow me to accept falsehood and stifle truth.

So now again, returning to the point, Theaetetus, endeavor to say what knowledge is: and never reply that you are unable: for if the god please and you play the man, you will be able.

Theaetetus:: Well, Socrates, when you thus exhort, I must own it were disgraceful not to use one’s utmost endeavor to state what suggests itself to the mind. It seems to me then that he who knows anything perceives what he knows; and, in my present view, knowledge is nothing else than perception.

Socrates:: Well and nobly said, my boy. It is quite proper to speak with such open frankness. But now let us examine the doctrine in common, to see whether it is a genuine product or a wind-egg. Knowledge, you say, is perception?

Theaetetus:: Yes.

Socrates:: I really think you have given an account of knowledge which is not insignificant, being one which Protagoras also gave. But he has said the same thing in a different way. He says, I fancy, that ‘man is the measure of all things;’ of things existing, that they do exist; of non-existing things, that they do not exist. Have you perhaps read this?

Theaetetus:: Yes, I have read it often.

Socrates:: He speaks then to this effect, that such as things appear to me, they severally are to me; and such as they appear to you, they severally are to you. The term ‘man’ includes you and me.

Theaetetus:: He does speak so.

Socrates:: Yes; and it is probable that a wise man is not talking nonsense: so let us follow his track. Does it not sometimes happen that, when the same wind is blowing, one of us is cold, the other not; and one is slightly cold, the other exceedingly?

Theaetetus:: No doubt.

Socrates:: Shall we then in that case say the wind in itself is cold or not cold; or shall we assent to Protagoras that to one who feels it cold it is cold, to one who does not feel it, not?

Theaetetus:: The latter, I should say.

Socrates:: And this is apparent to each?

Theaetetus:: Yes.

Socrates:: And the term ‘is apparent’ implies ‘perceiving’?

Theaetetus:: It does.

Socrates:: Appearance then and perception concur in things warm and the like generally. For such as each perceives them, they probably are to each.

Theaetetus:: Yes.

Socrates:: Perception then is always of that which ‘is’; and it is unerring, since it is knowledge.

Theaetetus:: Manifestly.

Socrates:: In the name of the Graces, then, was Protagoras a man of consummate shrewdness, and did he hint this darkly to us of the common herd, while to his disciples he spoke ‘the truth in secret confidence?

Theaetetus:: What do you mean by this, Socrates?

Socrates:: I will state to you a doctrine of no slight importance: namely, that nothing in itself 'is one,' nor can you rightly call a thing 'some' or 'of some kind,' but, if you style it great, it will turn out also small, and if heavy, light, and so in every case; since nothing 'is' 'one' or 'some,' or 'of some kind': but from vection and motion and mixture with each other all things 'come to be,' of which we say that they 'are,' using a wrong term: for nothing at any time 'is,' but always 'comes to be.' And on this point let all philosophers except Parmenides be compared in their order, Protagoras and Heracleitus and Empedocles: and of the poets those that are consummate in each poetic kind, in the comic, Epicharmus, in the tragic, Homer; for in saying Ocean of gods progenitor and Tethys mother he has said that all things are born from flux and motion. Does he not seem to say so?

Theaetetus:: I think he does.

Socrates:: After this then, who that disputes with so great a host, and Homer its captain, can avoid making himself ridiculous?

Theaetetus:: It were not easy, Socrates.

Socrates:: No indeed, Theaetetus. Since our statement—that motion produces the semblance 'being,' and the 'coming to be,' while 'non-being' and 'perishing' are produced by rest—has in its favor many competent proofs. The heat of fire, which engenders and protects other things, is itself engendered by vection and attrition. And these are motions. Are not these the parents of fire?

Theaetetus:: They are.

Socrates:: Moreover the race of animals is produced from them?

Theaetetus:: To be sure.

Socrates:: Again: is not the habit of bodies ruined by rest and laziness, and preserved in general by exercise and motion?

Theaetetus:: Yes.

Socrates:: And does not the habit of the soul by learning and study, which are motions, acquire doctrines and preserve them and become better, while through rest, which is the absence of study and learning, it both learns nothing, and forgets what it has learnt?

Theaetetus:: Decidedly.

Socrates:: The one then, namely motion, is a good both in soul and body, the other is the reverse.

Theaetetus:: Seemingly.

Socrates:: Must I farther mention to you calms and serenities and such-like things, showing that quietudes rot and destroy, while their opposites preserve? and besides these must I clinch the matter, and evince that by the golden cord Homer means nothing but the sun, and indicates that, as long as the revolution continues, and the sun keeps moving, all things in heaven and earth exist and are preserved; but should this stand still as if fettered, all things would be spoilt, and, as the saying is, turned upside down?

Theaetetus:: In my judgment, Socrates, he does indicate what you say.

Socrates:: Conceive the matter in this way, my good friend. As to vision first: that what you call white color is not in itself something outside your eyes or in your eyes. And do not assign to it any place: for then, being somewhere in position, it would ‘be’ and remain, and would not by generation ‘come to be.’

Theaetetus:: How so?

Socrates:: Let us follow the doctrine we were lately stating, that nothing exists as an independent unit; and in that way we shall see that black and white and every other color have 'come to be' from the coincidence of the eyes with the suitable motion; and that what in each case we call color, is neither that which makes nor that which receives the impact, but something between, which is peculiar to each. Or would you insist that what each color appears to you, such it appears also to a dog or any other animal?

Theaetetus:: No indeed, I would not.

Socrates:: Again: does anything appear to another man like what it appears to you? Are-you strongly convinced it does, or are you much rather sure that even to yourself it is not the same, because at no two times are you exactly the same?

Theaetetus:: The latter seems to me truer than the former.

Socrates:: Accordingly, if a thing beside which we measure ourselves, or which we handle, were large or white or hot, it would never have become different by contact with some other, unless it underwent a change in itself, And if again the measuring or handling subject had been any of these, it would not have become different when another approached or suffered any affection, if there were no affection in itself. For now, my friend, we are compelled in a careless sort of way to say marvelous and ridiculous things, as Protagoras would affirm, and every one who ventures to propound the same that he does.

Theaetetus:: How do you mean? and what kind of things?

Socrates:: Take a small sample, and you will know what I mean. Six dice, if you place four beside them, we say are more in number and half as many again. If you bring twelve, we say the six are fewer in number, and half the second set. To say otherwise were intolerable. Will you tolerate it?

Theaetetus:: No, I will not.

Socrates:: Well: suppose Protagoras or some one else were to ask you:—Theaetetus, is it possible for anything to become greater or more, except by being increased? What answer would you give?

Theaetetus:: If I were to answer what I think in reply to your present question, Socrates, I should say ‘no’: but if with reference to the former one, to avoid self-contradiction, I should say ‘yes.’

Socrates:: Well said, my friend, by Hera, and divinely. But if you answer ‘yes,’ something will occur like the case in Euripides: our tongue will be unconvicted, but our mind not unconvicted.

Theaetetus:: True.

Socrates:: So then, if you and I were clever and wise folk who had intimately studied the whole sphere of mind, and from that time forth amused ourselves with trying one another’s powers, we should have engaged in a sophistical conflict of this kind, and be bandying arguments with each other. But now, as we are not professors, we shall wish to look at the statements comparatively, and see what it is we mean; whether they are consistent with each other or inconsistent.

Theaetetus:: Certainly that is what I should wish.

Socrates:: So should I. But, since this is the case, shall we not calmly, as we have plenty of leisure, re-examine (not losing our temper, but really probing ourselves) what these fancies in us are? Looking at the first of them, we shall say, I think, that nothing ever becomes greater or less either in bulk or number, so long as it is equal to itself. Is it not thus?

Theaetetus:: Yes.

Socrates:: Secondly, that what suffers neither addition nor subtraction, is never either increased or wasted, but is always equal to itself.

Theaetetus:: Unquestionably.

Socrates:: Is not this also a third proposition, that what was not before, cannot afterwards be without 'having come to be' and 'coming to be'?

Theaetetus:: So it seems.

Socrates:: These three admissions, I think, severally clash with each other in our soul, when we say what was said about the dice, or when we say that I, being of the age I am, without having suffered increase or decrease, within the space of a year begin by being bigger than you, who are young, and afterwards become less,—when nothing has been withdrawn from my size, but yours has increased. For thus 'I am' afterwards what before I was not, without having 'come to be' so. Now without 'coming to be' it is impossible 'to have come to be,' and without losing any size could never 'come to be' Smaller. And other like instances there are, myriads upon myriads, if we choose to admit these. I suppose you follow me, Theaetetus: at all events you seem to me not inexperienced in such matters.

Theaetetus:: I do, Socrates; and by all the gods I wonder immensely what these things are, and really sometimes I feel dizzy when I look at them.

Socrates:: Ay, my friend; evidently Theodorus forms no bad estimate of your genius. This affection, I mean of wondering, is quite that of a philosopher; for philosophy has no other origin but this; and he who said that Iris is the child of giant Wonder seems to be no bad genealogist.

But do you by this time understand why these things result from the statements we ascribe to Protagoras?

Theaetetus:: Not yet, I think.

Socrates:: You will be thankful to me then, if, when a notable man, or rather when notable men have truth hidden away in the mind, I help you to search it out from them.

Theaetetus:: Thankful indeed I must be in the highest degree.

Socrates:: Look about then, and see that none of the uninitiated are listening. These are men who think that nothing ‘is’ but what they are able to grasp with their hands, not accepting actions and generations and all that is invisible as in the category of being.

Theaetetus:: Upon my word, Socrates, stubborn and refractory people are these you tell of.

Socrates:: They are indeed, my boy, a fine set of boors’. Others there are much more refined, whose mysteries I am going to describe to you. Their principle is, and upon it all we were just now saying depends—that the whole universe is motion, and nothing else but this, and of motions two kinds, each in number infinite, but, in respect of power, the one involving action, the other suffering. From the association and attrition of these with each other are formed products in number infinite, but of two sorts, one perceptible, the other perception, which continually breaks forth and is born with the perceptible objects. Perceptions, we find, have the following names; sight, hearing, smell, feelings of cold and heat, pleasure and pain and desire and fear and others: infinite are those without names; and those with names very numerous. And the objects of perception again are born with each of these, colors of all kinds with all kinds of vision, sounds with hearing similarly, and with the other perceptions other objects of perception are connate and ‘come to be.’ What meaning has this tale for us, Theaetetus, in reference to the former questions? do you perceive?

Theaetetus:: No, Socrates.

Socrates:: See then if it can be brought to its closing point. It means that all these things, as we say, are in motion, and in their motion are found swiftness and slowness. That which is slow has its motion in the same place and in reference to things near, and so engenders: and the things thus engendered [are slower. But that which is swift has its motion in reference to things at a distance, and so engenders, and the things thus engendered] are swifter, for they are conveyed, and their motion naturally consists in vection. When then the eye and any other of its suitable objects approach and beget whiteness and its kindred perception, which could never have ‘come to be’ if either of them had gone to something else, then, while the sight on the part of the eyes and the whiteness on the part of that which co-engenders the color are moving in mid space, the eye becomes full of sight, and at length sees and ‘comes to be,’ nowise sight, but a seeing eye, and that which co-engendered the color is filled full with whiteness, and ‘comes to be’ not whiteness but a white thing, whether it be wood or stone or anything else that happens to have been colored with this hue. And other things similarly, hard and warm and all the rest, we must understand in the same manner ‘to be’ nothing by themselves, as we heretofore said, but in their mutual intercourse ‘to become’ all and of all kinds from motion: since of agent and patient, as they affirm, taken apart (ἐπὶ ἑνὸς) it is impossible to form any definite notion: for nothing is an agent till it concurs with a patient, nor a patient till it concurs with an agent: and that which concurs with one thing and is an agent, if it lights upon -another, proves to be a patient, so that, as we before said, nothing is ‘one by itself,’ but always ‘comes to be’ to some other; and the term ‘being’ must be removed on all sides, although we are often, even in our present discussion, compelled to use it from habit and ignorance. But it is not proper, as the wise lay down, to allow the use of the word ‘some,’ or ‘of some’ or ‘me’ or ‘this’ or ‘that’ or any other term which ‘fixes,’ but in accordance with nature to speak of things as ‘coming to be’ and ‘being created’ and ‘perishing’ and ‘taking new forms.’ Since if any one fixes anything in speech, he who does so is easily confuted. And we ought to speak in this way both of individuals and of many in the aggregate, by which aggregation we determine ‘man’ and ‘stone’ and each class of animals. Do these views seem pleasant to you, Theaetetus, and will you find a taste of them agreeable?

Theaetetus:: I don’t know, Socrates; for about you too I cannot discern, whether you are speaking these as your own opinions, or trying me.

Socrates:: Do you not remember, my friend, that I indeed neither know nor adopt any of such things as mine? but I am barren, and act as midwife to you, and on that account I charm, and offer you, to be tasted, wise things of various sorts, until I can help to bring to light your opinion; and when it is brought forth, then and not before I will examine if it shall prove a wind-egg or a genuine offspring. So then with courage and patience answer well and manfully whatsoever appears to you to be right concerning my several questions.

Theaetetus:: Ask then.

Socrates:: Say then again, whether you are satisfied that nothing should ‘be,’ but ever ‘come to be,’ good and noble and all things which we were lately recounting.

Theaetetus:: Yes; since I have heard this recital of yours, it appears to me marvelously clear that it is reasonable, and that we must accept the principles as you have stated them.

Socrates:: Let us then not abandon what remains of our question. There remains the topic of dreams and diseases, madness especially, and all that is called mis-hearing or mis-seeing or any other wrong perception. For you know, I suppose, that in all these cases the principle we lately explained seems by admission to be confuted, since undoubtedly false perceptions occur to us in them, and things that appear to each are far from 'being,' but, quite contrariwise, none of the things that appear 'are.'

Theaetetus:: You speak most truly, Socrates.

Socrates:: What reason then is left, my boy, to him who lays down that perception is knowledge' and that things which appear to each 'are' in every such case?

Theaetetus:: For my own part, Socrates, I shrink from answering that I have nothing to urge, because just now you rebuked me for saying so. Yet in very truth I cannot contend that maniacs or dreamers do not imagine falsities, when some of them think they are gods, and others suppose they are fowls, and imagine they are flying in their sleep.

Socrates:: Have you not in mind then a certain difficulty raised about them, especially as to the sleeping and waking vision?

Theaetetus:: What difficulty?

Socrates:: A question which I think you have often heard people ask, what proof one would have to give, if somebody were to ask at this moment, whether we are sleeping and dreaming all that we imagine, or are awake and talking to one another in that state.

Theaetetus:: Indeed, Socrates, it is a perplexing thing to say by what proof we could establish it: for all the facts succeed one another as counterparts. Even the whole discussion we have now held there is nothing to prevent our seeming to have held in a dream. And when in a dream we seem to be relating dreams, the similarity between the cases is marvelous.

Socrates:: You see then that it is not difficult to raise a question, since it can be questioned even whether we are waking or dreaming. And as the time during which we are asleep is equal to that in which we are awake, our soul in each state contends that the fancies which from time to time occur are true, so that for half the time we say that the one are existent, for half the other, and we are equally confident in regard to each.

Theaetetus:: Yes, unquestionably.

Socrates:: And is not the same true of diseases and madness, except that the times are not equal?

Theaetetus:: Yes.

Socrates:: Well, shall truth be determined by length or shortness of time?

Theaetetus:: That were ridiculous on many grounds.

Socrates:: Have you then any other clear sign to show which of these fancies are true?

Theaetetus:: I think not.

Socrates:: Hear then from me what they will say on this point, who lay it down that what from time to time 'seems,' 'is' true for him who so beholds it. Their opinion, I think, is expressed by this question: 'O Theaetetus, of two things which are totally different, can the one and the other have any identical powers?' We must not assume that the things in question are in one respect the same, in another different, but that they are wholly different.

Theaetetus:: It is impossible that they should have anything the same, either in power or in aught else, when they are wholly different.

Socrates:: Must we not also perforce confess the two things to be unlike?

Theaetetus:: I think so.

Socrates:: If, then, anything happens ‘to become’ like, either to itself or to another, shall we say that when made like it ‘becomes’ the same; when it gets unlike, different?

Theaetetus:: Necessarily.

Socrates:: Were we not previously saying that agents are many and infinite, and patients likewise?

Theaetetus:: Yes.

Socrates:: And also that a thing combining first with one, then with another, will not produce the same things, but different?

Theaetetus:: Certainly.

Socrates:: Let us now specify myself, or you, or anything else, in the same relations. Say Socrates in health and Socrates out of health. Shall we say the latter is like the former, or unlike?

Theaetetus:: Socrates out of health, you say; do you compare this as a whole with the former as a whole, with Socrates in health?

Socrates:: Very well put: that is my meaning.

Theaetetus:: Unlike, of course.

Socrates:: And different, as being unlike?

Theaetetus:: Necessarily.

Socrates:: And you will say the same of Socrates sleeping, and in all the states we cited?

Theaetetus:: I would.

Socrates:: And will not each of the things which have an active nature, when they find Socrates in health, deal with me as one thing; when out of health, as a different one?

Theaetetus:: They must.

Socrates:: And I, the patient, and that agent, will in each case produce different things?

Theaetetus:: To be sure.

Socrates:: When I drink wine in health, does it appear to me agreeable and sweet?

Theaetetus:: Yes.

Socrates:: True; for, by our admissions, the agent and the patient produced sweetness and perception, both of them in motion together; and perception on the side of the patient sweetness on the part of the wine, moving about it, made the wine to be and to appear sweet to the healthy tongue.

Theaetetus:: Such certainly were our previous admissions.

Socrates:: But when it finds me out of health, does it not in the first place find one who is not the same? It comes to an unlike object.

Theaetetus:: Yes.

Socrates:: Such a Socrates, then, and the draught of wine, produce different things; in regard to the tongue a perception of bitterness, in regard to the wine a bitterness beginning to be and moving; and the wine it makes not bitterness, but bitter, and me not perception, but one that perceives.

Theaetetus:: Assuredly.

Socrates:: I then shall never become percipient of anything else in the same way; for perception of another is another thing, and makes the percipient different and another; nor will that which acts on me, if it concur with another, ever engender the same and become similar: for from another it will engender another and become different.

Theaetetus:: That is true.

Socrates:: I then shall never become similar to my former self; nor will the object become similar to its former self.

Theaetetus:: No, surely not.

Socrates:: When I perceive, I must needs become percipient of something: for to become percipient, yet percipient of nothing, is impossible; and the object, when it becomes sweet or bitter, or anything of the kind, must become so to some one: for to become sweet, yet sweet to no one, is impossible.

Theaetetus:: Assuredly.

Socrates:: Then, I think, the inference remains, that to each other we 'are,' if we are, or we 'come to be,' if we come to be: since necessity binds our essence indeed, but binds it to nothing else, nor yet to ourselves individually; it remains then that we are bound to one another. So that if a person says that anything 'is' or 'becomes,' he must say that it 'is' or 'becomes' 'to something,' or 'of something,' or 'in relation to something'; but, if we have come to a right conclusion, he must not say or allow of anyone else saying, that anything 'is' or 'comes to be' absolutely.

Theaetetus:: Undoubtedly, Socrates.

Socrates:: And so, when that which acts on me is to myself and not to another, I perceive it, and no one else does.

Theaetetus:: Certainly.

Socrates:: Then my perception is true to me: for it belongs always to my being; and, according to Protagoras, I am judge of things which are to me, that they are, and of things which are not, that they are not.

Theaetetus:: So it seems.

Socrates:: How then, being infallible and unerring in mind as regards things which ‘are’ and ‘come to be,’ can I be unknowing of things whereof I am percipient?

Theaetetus:: In no sort of way.

Socrates:: Therefore you have said very well that knowledge is nothing else than perception; and it turns out to be one and the same thing, that (as Homer and Heracleitus, and their whole tribe, affirm) all things move like streams, and that (after the opinion of the consummately wise Protagoras) man is the measure of all things, and that (as Theaetetus infers from these premises) perception is proved to be knowledge. Is it so, Theaetetus? Must we say. that this, as it were, is your newborn child, and the product of my midwifery? What say you?

Theaetetus:: It must be so, Socrates.

Socrates:: This then, seemingly, we have with much difficulty brought to birth, whatever it prove to be. And now, after its birth, we must, in good sooth, run round the hearth with it in our discourse, not failing to observe whether the child be worth nurture, and not a wind-egg and an unreality. Or do you deem it absolutely necessary to rear your offspring, and not to put it away? Can you bear to see it confuted, and not be greatly out of temper if some one should filch from you your firstborn?

Theodorus:: Theaetetus will bear it, Socrates. He is not the least ill-tempered. But in heaven’s name tell me, is not this then true?

Socrates:: You are a very gourmand of discussion, Theodoras, and a good creature, in that you take me to be a sack of arguments, and think I can pull out another, and aver that what we have said is untrue. But you do not note what is taking place: that none of the arguments proceed from myself, but from him who is conversing with me at the time; and that I know nothing more than this little feat, how to obtain an argument from another wise person and to treat it fairly. And I will now try to obtain one from our friend, and not to say something of my own.

Theodorus:: You put the thing well, Socrates: so be it.

Socrates:: Do you know then, Theodorus, what surprises me in your friend Protagoras?

Theodorus:: What is that?

Socrates:: I am much pleased with everything else he has said, how what 'seems' to each 'is' to each. But the commencement of his treatise does surprise me. I wonder that in the outset of his 'Truth' he did not say that a pig, or a dog-faced baboon, or any other more monstrous specimen of things that have perception, is the measure of all things, that so he might have spoken to us at once in a magnificent and very disdainful style, ostentatiously showing that, while we were marveling at his wisdom, as if he were a god, he was all the while not a whit superior in judgment to a tadpole, not to say, to any of his fellow-men. Or how are we to put the case, Theodorus? For if that opinion shall be true to each man which he gets by perception, and nobody's affection shall be better determined by another person, nor one be more entitled than another to review opinion, and to say whether it be true or false, but, as has been often said, each person singly shall form his own opinions, and all these shall be right and true—why in the world, my friend, is Protagoras so wise as to be justly deemed a worthy teacher with high fees, and we dunces in comparison, who must go to school to him, though each of us is the measure of his own wisdom? Must we not say that Protagoras speaks thus to amuse the vulgar? while as to my case, and that of my art of midwifery, I forbear to say what ridicule we incur: so indeed does the whole practice of dialectic. For, as to reviewing and criticizing each other's fancies and opinions, when each man's are right, is it not a tedious and monstrous folly, if the 'Truth' of Protagoras is true, and he did not proclaim it in jest from the shrine of his book?

Theodorus:: He was my friend, Socrates, as you said just now. I cannot therefore allow Protagoras to be confuted by my admissions, nor yet resist you contrary to my opinion. So take in hand Theaetetus again. For certainly he appeared some time back to follow your lead very prettily.

Socrates:: If you went to the wrestling-courts at Lacedaemon, Theodorus, and there beheld naked people, some your inferiors, would you refuse to strip yourself beside them, and exhibit your own form competitively?

Theodorus:: Why do you think I would not refuse, Socrates, with their permission and consent? So now I shall try to persuade you to let me look on, rather than be dragged to the play-ground in my present stiff condition, and to wrestle it out yourself with one who is younger and more supple.

Socrates:: If such is your will, Theodorus, I don't say 'nil],' as proverbialists have it. So I must turn again to the wise Theaetetus. Tell me then, Theaetetus, first of all, as to our late discussions; do you not share my surprise if thus all of a sudden you shall turn out to be no wise inferior in wisdom to any man or even any god? Or do you suppose that the 'measure' of Protagoras is less applicable to gods than to men?

Theaetetus:: Upon my word I do not. And as to your question, I am much surprised. For when we were engaged in showing how that which ‘seemed’ to each ‘was’ also to him who thought it, the statement appeared to me very good; but now another view has taken its place all of a sudden.

Socrates:: You are young, my dear boy: you quickly succumb to popular declamation, and become a convert. For Protagoras, or some one on his part, will say in reply: My fine gentlemen, young and old, ye sit together and declaim, bringing gods into question, whom I, after speaking and writing about them, as to their existence or non-existence, set aside: and you say just what the populace would hear with approval, that it is too bad for mankind not to differ in wisdom from every kind of beast: but you offer no convincing proof whatever; you resort to probability, which if Theodorus or any other geometrician sought to use in geometry, he would be good for nothing. Just consider then, you and Theodorus, if on such important subjects you will accept arguments relying on mere persuasion and probability.

Theaetetus:: No, Socrates, we should not any more than yourself affirm that to be just.

Socrates:: We must view it then in some other way, as you and Theodorus suggest.

Theaetetus:: In some other way certainly.

Socrates:: In this way then let us consider it: whether knowledge and perception are the same or different. For to this point, I ween, our whole argument tended; and for this purpose we stirred all these many strange questions. Did we not?

Theaetetus:: Assuredly.

Socrates:: Shall we then admit that all the things which we perceive by sight and hearing we at the same time know? For instance, before we have learnt the language of the barbarians, shall we say that we do not hear them when they speak, or that we both hear and understand what they say? And again, if we do not know letters, shall we, when we look at them, say we do not see them, or shall we insist that we know, since we see them?

Theaetetus:: So much of them, Socrates, as we see and hear, we shall say we know; we shall say we both see and know the figure and the color, and that we both hear and know the sharp and flat sound: but what grammarians and interpreters teach concerning them we shall say we neither perceive by sight and hearing, nor know.

Socrates:: Excellent, Theaetetus. And it is not worth while to dispute these positions of yours, that you may grow. But look at this other question also which approaches, and consider how we shall repel it.

Theaetetus:: What is that?

Socrates:: This. If any one shall ask—'Suppose a man has become cognizant of anything, is it possible that, having and preserving memory of this thing, at the time when he remembers he should not know the very thing which he remembers?' But I am verbose, apparently, when I wish to ask if a man remembering anything he has learnt does not know it.

Theaetetus:: How could that be, Socrates? The thing you suggest would be a miracle.

Socrates:: Perhaps then I am trifling: but consider. Do you not call seeing perceiving, and sight perception?

Theaetetus:: I do.

Socrates:: Has not then one who has seen something become cognizant of the thing he saw according to your last statement?

Theaetetus:: Yes.

Socrates:: Well: do you not grant there is such a thing as memory?

Theaetetus:: Yes.

Socrates:: Memory of something or of nothing?

Theaetetus:: Of something, certainly.

Socrates:: Of what one has learnt then, and of what one has perceived; of such things, is it not?

Theaetetus:: Undoubtedly.

Socrates:: What a man has seen, he remembers at times, I suppose?

Theaetetus:: He does.

Socrates:: Even when he has shut his eyes? or on doing so has he forgotten?

Theaetetus:: It were monstrous to suppose that, Socrates.

Socrates:: We must, I can tell you, if we are to maintain our former argument. If not, there is an end of it.

Theaetetus:: I really suspect so myself; but I cannot quite make up my mind. Tell me how.

Socrates:: In this way. One who sees becomes, we say, cognizant of what he sees. For sight and perception and knowledge are admitted to be the same.

Theaetetus:: Quite so.

Socrates:: And he who saw and became cognizant of what he saw, if he shuts his eyes, remembers, but does not see the thing. Is it so?

Theaetetus:: Yes.

Socrates:: And not seeing means not knowing, if seeing means knowing.

Theaetetus:: True.

Socrates:: The inference then is, that, while a man remembers something of which he has become cognizant, yet, since he does not see, he does not know it: and this we said would be a miracle.

Theaetetus:: All quite true.

Socrates:: If then anybody says that knowledge and perception are the same, there results an evident impossibility.

Theaetetus:: So it seems.

Socrates:: Therefore we must distinguish one from the other.

Theaetetus:: I suppose so.

Socrates:: What then will knowledge be? We must begin our statement over again, it seems. Yet what are we going to do, Theaetetus?

Theaetetus:: About what?

Socrates:: We seem to me, like an ignoble cock, to hop away from the argument and crow, before we have gained the victory.

Theaetetus:: How so?

Socrates:: Like rhetorical disputants we seem to be content that we have come to a mutual agreement as to the admitted uses of words, and by some such method mastered the question. And though we say we are not Eristics but philosophers, we unconsciously imitate the practice of those clever fellows.

Theaetetus:: I do not yet understand your meaning.

Socrates:: Well then, I will try to explain my view of the matter. We were asking whether a man who has learnt and remembers something does not know it; and taking the case of one who had seen, and after shutting his eyes remembered though he did not see, we showed that he did not know at the same time that he remembered; and this, we said, was impossible. And so the Protagorean fable came to ruin, and yours with it, as to knowledge and perception being the same.

Theaetetus:: Apparently.

Socrates:: But it would not, my friend, if the father of the former fable had been alive. He would have made a strong defense for it: but now that it is an orphan, we insult it. For even those trustees, whom Protagoras appointed, one of whom was Theodoras here, do not come to the rescue. Well, in the interest of justice, I will run the risk of helping him myself.

Theodorus:: No, Socrates, I was not his children's trustee, but rather Callias son of Hipponicus. I diverged somewhat earlier from abstract studies to geometry. But we shall be much obliged to you if you will succor him.

Socrates:: Well said, Theodoras. Have an eye then to my succor. For a man would have to make stranger admissions than we lately made, if he did not attend to the terms in which we are generally wont to affirm and deny. Shall I explain how to you or to Theaetetus?

Theodorus:: To the company generally, but let the younger one answer. For he will incur less disgrace by defeat.

Socrates:: I put now the most startling question. To this effect, I think Is it possible for the same man knowing a thing not to know what he knows?

Theodorus:: What answer shall we give, Theaetetus?

Theaetetus:: Impossible, in my opinion.

Socrates:: Not if you lay it down that seeing is knowing. For how will you deal with that inevitable question, when, as they say, you are caught in a well, and an unabashed man claps his hand to one of your eyes and asks, whether with the closed eye you see your cloak.

Theaetetus:: Not with that one, I suppose I shall say, but with the other.

Socrates:: Then you see and do not see the same thing at the same time?

Theaetetus:: In a sort of way.

Socrates:: I do not, he will say, define anything, nor did I ask how, but only whether you know that which you do not know. And now you are shown to see what you do not see; and you have admitted that seeing is knowing and not seeing not knowing. Consider the inference from these premises.

Theaetetus:: I consider that it directly contradicts my former assertion.

Socrates:: Probably, my fine gentleman, you would have had more such experiences, if somebody had further asked you whether it is possible to know keenly or to know bluntly, and to know near and not at a distance, and to know the same thing intensely or moderately, and other questions, countless in number, which a light-armed mercenary ambushed in the arguments might have asked, when you laid it down that knowledge and perception are the same; and attacking your senses of hearing and smelling and the like he might have worried you with incessant confutation, until, admiring his accursed wisdom, you were entangled by him so far, that after mastering and binding you tight he might then have ransomed you for what sum you and he agreed on. Now what argument, perhaps you may say, will Protagoras advance in aid of his doctrine? Must we not try to state it?

Theaetetus:: Certainly we must.

Socrates:: Besides all this that we urge in his defense, he will also, methinks, come to close quarters, contemning us, and saying: Here's this good creature Socrates, who—when a lad got frightened on being asked whether it is possible for the same person at once to remember some particular thing and not know it, and in his fright said 'no,' because he could not see before him,—made a laughing-stock of me in the course of his arguments. But the fact, my easy-going Socrates, stands thus: when you examine any of my doctrines by the method of interrogation, if the person questioned give such answers as I should, and be defeated, I am confuted; but if they differ from mine, then the person questioned is confuted. For instance, if mutual word-catching is the thing to guard against, do you think anybody will concede to you that the memory of a past feeling is anything like what the feeling itself was at the time when it was experienced? Far from it. Or again, that he will shrink from admitting that it is possible for the same person to know and not to know the same thing? Or, if he dread this—that he will grant an altered person to be the same he was before he was altered? Or rather—that anybody can be called 'one' and not 'many'—infinitely multiplied, if alteration goes on. But, O my good sir, he will say, encounter my main doctrine more generously, if you can, and prove against it that individual perceptions do not come-to-be' to each of us, or that, supposing they do, it does not follow that the appearance will  come-to-be' (or be,' if that is the proper term) to that person alone, unto whom it appears. When you talk of swine and dog-headed baboons, you are not merely swinish yourself, but you likewise induce your hearers to act as such towards my treatises without any decency. For I say that the Truth is as I have written: that each of us is a measure of things that are and are not: but that, nevertheless, one man differs vastly from another in this very respect, that to one man some things are and appear, to another other things. And I am far from denying that wisdom and a wise man exist, but the man I call wise is he who, by working changes, makes things to appear and to be good to any one of us, to whom they appear and are evil. And again, do not press my argument literally; but understand from the following explanation more clearly what I mean. Recollect how it was formerly said, that to a sick man his food appears to be and is bitter, but to a man in health the opposite is the fact and appears so. Neither of these persons ought we to make wiser than the other; that is impossible: nor may we declare that the sick man is ignorant for holding such an opinion, or the man in health is wise for holding another. We must effect a change to the opposite state: for the one habit is better than the other. So also in education we must cause a change from the one habit to the better. Now the physician changes by medicines; the wise teacher by arguments. Never indeed did anybody make one who had false opinions afterwards to hold true ones. For it is not possible either to think what is not, or anything but what one feels; and this is always true. But, I suppose, when through a bad habit of mind a man has corresponding opinions, a good habit makes him hold opinions resembling it; phantasms which some persons from inexperience call true: but I call some better than others, not truer. And wise men, dear Socrates, I am far from calling frogs: but in relation to bodies I call them physicians, in relation to plants husbandmen. For I say that these last also produce in plants, instead of evil sensations when any of them are sickly, good and healthy sensations and truths, while wise and good rhetoricians make good things instead of evil seem just to states. Since whatever things seem just and good to each state, are such to it, as long as it deems them lawful; but the wise man, in the place of those things which are severally evil to each, makes the good both to be and to seem right. And on the same principle the sophist also, who is able to instruct his pupils thus, is both wise and worthy of high fees at their hands. And thus some are wiser than others, and nobody thinks falsities; and you, whether you will or not, must submit to be a measure. For on these grounds this doctrine is maintained. And, if you wish to revive your dispute with it, dispute by counter-arguing at full; or if you prefer the method of questioning, adopt it; for no person of sense will avoid this method, but will pursue it most willingly. Mind this however; you must not question unfairly. For it is most unreasonable in one who professes esteem for virtue to be constantly pursuing an unfair method of argument. Now unfairness is shown, when a man fails to conduct his arguments diversely; in one way as a combatant, in another as a dialectician: in the former case rallying and tripping up as much as he can, in the latter being serious, and correcting his respondent, showing him only those errors into which he was led by his own fault or in consequence of former discussions. If you act thus, your fellow-debaters will impute to themselves the fault of their own confusion and perplexity, not to you; and they will follow and love you, and fly from themselves to philosophy, that they may become different, and get rid of their former selves. But if you take the contrary course, as most do, you will find an opposite result, and your pupils instead of philosophers will turn out haters of philosophy, when they grow older. If then you will follow my advice, as was before said, you will, in no hostile or contentious spirit, but with a really mild and condescending temper, consider what we mean, when we declare that all things are in motion, and that what seems ‘is’ also to each, individual as well as state. From these considerations you will discern whether knowledge and perception are the same: but not, as you lately sought, from the use of words and names, which most people pervert in every sort of way, causing each other all kinds of perplexity. Such, Theodorus, is the slight assistance which, from slight resources, I have supplied, as I best could, to your old friend. Had he been alive, he would have helped his own cause in grander language.

Theodorus:: You are joking, Socrates: for you have helped him most valiantly.

Socrates:: You are very obliging, my friend. Allow me one word. You noticed probably that Protagoras in what he said reproached us for holding our discussions with a boy, and using that boy’s alarm as a weapon of contention against his propositions: and while he represented this as mere amusement, he called ‘the measure of all things’ a grave topic, and urged us to deal seriously with his argument.

Theodorus:: Of course I noticed it, Socrates.

Socrates:: Well: do you bid us take his advice?

Theodorus:: Very earnestly.

Socrates:: Do you see that all here are boys except you? If then we are to take his advice, you and I must deal seriously with his doctrine by mutual questions and answers, that he may not have to reproach us with considering this subject in a jocular manner with lads.

Theodorus:: Nay, but would not Theaetetus follow the investigation of a doctrine better than many who have great beards?

Socrates:: Not better than you, Theodorus. Do not suppose that I am bound to defend your deceased friend in every manner, and that you are bound in no manner. But come, good sir, follow the argument a little way, till such time as we know whether you are to be the measure of diagrams, or if all are competent in themselves, equally with you, to treat of astronomy and the other subjects wherein you are reported to excel.

Theodorus:: When one sits beside you, Socrates, it is not easy to decline discussion. Indeed I spoke nonsense just now when I said you would allow me not to strip, and that you would not compel me as the Lacedaemonians do: you seem rather to tend in Sciron's direction. The Lacedaemonians indeed bid one depart or strip, but you seem to me to act your part like Antaeus: you will not let one who comes to you go away before you have forced him to strip and wrestle with you in argument.

Socrates:: You have found very good precedents for my malady, Theodorus: but I am more robust than they were. Many a Hercules and Theseus strong in argument have ere now met and thumped me very hard; but I do not flinch for all that: with such a wonderful love of this kind of exercise am I possessed. Do not then refuse to benefit yourself as well as me by trying a fall with me.

Theodorus:: Be it as you will: I refuse no longer. I must inevitably endure by cross-examination whatever destiny you spin for me in this discussion. I shall not however be able to put myself in your hands beyond the limit which you have proposed.

Socrates:: That limit is sufficient. And pray help me to be careful of this, that we do not unawares carry on any childish kind of argument, and incur reproach again for doing so.

Theodorus:: Very well, I'll try my best.

Socrates:: Let us first revert to the objection we took before, and see whether we were right or wrong in being out of humor and censuring the doctrine, in that it made every one competent in wisdom; and whether Protagoras rightly conceded to us, that, in respect of better and worse, some do surpass, and they are wise. Is it not so?

Theodorus:: Yes.

Socrates:: Now if he had himself been present and made this admission, instead of our making it in his defense, we need not have strengthened ourselves by recurring to the subject: but now perhaps some one may allege that we are incompetent to make the confession on his part. It is better to come to a clearer mutual understanding on this special point. For whether it is so or not makes a great difference.

Theodorus:: Very true.

Socrates:: Let us obtain the admission not through others, but from his statement, as briefly as we can.

Theodorus:: How?

Socrates:: In this way. He says, does he not, that what seems to every one 'is' also to him unto whom it seems?

Theodorus:: Yes, he does.

Socrates:: Do not we also, Protagoras, state a man's opinion, or rather the opinions of all men, when we say that there is nobody who does not deem himself wiser than others in some respects, and others wiser than himself in other respects; and, moreover, that in the greatest perils, when they are distressed in war or disease or at sea, men regard their rulers on such occasions as gods, expecting them to be their saviors, though they differ from them in nothing but knowledge? And all human life teems with people who are seeking teachers and rulers of themselves and of other living creatures and of the various trades; and teems, again, with other people who deem themselves competent to teach and competent to rule. And in all these cases what else can we say than that men themselves think there exists among them wisdom and ignorance?

Theodorus:: Nothing else.

Socrates:: Do they not deem wisdom to be true thought, and ignorance false opinion?

Theodorus:: Certainly.

Socrates:: Well then, how shall we deal with the argument, Protagoras? Must we say that men always have true opinions, or sometimes true, sometimes false? From both views it results that they do not always think true things, but at times true things, at times false. For consider, Theodoras, whether any Protagorean, or you yourself, would wish to contend that no one person considers any other to be unlearned and to have false opinions.

Theodorus:: That is incredible, Socrates.

Socrates:: And yet the doctrine which says that man is the measure of all things is brought to this unavoidable conclusion.

Theodorus:: How so?

Socrates:: When you, after forming some judgment in your own mind on any point, declare to me your opinion, be it granted according to his doctrine that this is true to you: but is it not allowed to the rest of us to become judges respecting your judgment? must we always judge that you have true opinions? do not a countless number in each instance contend against you with contrary opinions, believing that you judge and think falsities?

Theodorus:: Yes verily, Socrates, countless myriads indeed, as Homer says, who give me all the trouble in the world.

Socrates:: Well? would you have us say that in that case you have opinions true to yourself but false to the countless myriads?

Theodorus:: Such seems to be the necessary inference from the statement.

Socrates:: And how as to Protagoras himself? Supposing he did not think man a measure, and the public did not think so, (as indeed they do not), would it not necessarily follow that what he delivered in writing as Truth, is Truth to nobody? or if he thought so, and the public does not agree with him, do you see that in proportion as those who deny are more numerous than those who affirm, so much more decidedly it is or is not so?

Theodorus:: Of necessity, if according to each individual opinion it will be or will not be so.

Socrates:: In the next place it involves this very queer result, that he on his side, by confessing that all men hold true opinions, admits that the opinion of the opposite party about his opinion (which they deem false) is a true one.

Theodorus:: Certainly.

Socrates:: Will he not admit that his own is false, if he confesses that the opinion of those who suppose him to think falsely is true?

Theodorus:: Of course.

Socrates:: But the others on their side do not admit that they think falsely.

Theodorus:: No, they do not.

Socrates:: And he again confesses also this opinion to be true according to his written doctrines.

Theodorus:: Evidently.

Socrates:: By all parties then it will be contended, including Protagoras (by him it will rather be confessed, for when he grants to a gainsayer that the latter thinks what is true, then does Protagoras himself confess), that no dog or man he meets with is a measure concerning anything which he has not learnt. Is it not so?

Theodorus:: Yes.

Socrates:: Since this is the contention of all, to nobody will the Truth of Protagoras be true, neither to himself nor to anyone else.

Theodorus:: We run down my friend very hard, Socrates.

Socrates:: But it is doubtful, my friend, if we are outrunning the fact. It is likely that he being older is wiser than we: and if he could at once pop up his head where we are, he would not sink down and run away again, until, probably, he had convicted me of talking much nonsense, and you of agreeing to it. As it is, we must needs, I think, make the best of ourselves, such as we are, and state our real opinions for the time being. And must we not now say that everybody will confess this—that one man is wiser, one more ignorant, than another?

Theodorus:: Yes, I think so.

Socrates:: Must we not also say that our argument is most stably conducted on the lines we prescribed in our defense of Protagoras, averring that most things are as they seem to each, hot, dry, sweet, all such-like? but that, if he will grant that one excels another in anything, he will be ready to say so in judgments upon health and disease: not every woman or child or beast, he will admit, knows what is wholesome in its own case, and is competent to cure itself: here, if anywhere, one excels another.

Theodorus:: I think so.

Socrates:: In politics, too, will he not say, that of things honorable and dishonorable, just and unjust, holy and unholy, whatsoever each state shall deem and enact to be lawful for itself are also lawful in truth for each, and that in these no individual or state is wiser than another? but in enacting things expedient or inexpedient, here, if anywhere, he will confess that counselor differs from counselor and the opinion of one city from that of another in respect of truth, and he will certainly not venture to affirm, that whatever a state shall deem and enact to be expedient for itself will most assuredly be expedient. But of the former things I named, justice and injustice, holiness and unholiness, they (the Protagoreans) are ready to insist that none has any essential nature, but that whatever has seemed good by public consent is true when it has seemed good, and as long as it seems good. And those who do not altogether echo the doctrine of Protagoras, take some such philosophic view. But now, Theodorus, we have question growing out of question, greater out of less.

Theodorus:: Are we not at leisure, Socrates?

Socrates:: We appear to be. On many occasions, my good sir, I have noticed, but especially on this, how natural it is for those who have spent much time on philosophy, when they go into the law-courts, to show themselves absurd orators.

Theodorus:: How do you mean?

Socrates:: People who from their youth have been knocking about in law-courts and such like scenes, as compared with those who have been reared in philosophic and literary society, seem to have had a breeding like that of slaves compared with freemen.

Theodorus:: In what respects?

Socrates:: In that (referring to your last observation) philosophers have leisure at all times, and hold their discussions peacefully and with leisurely ease, and as we have now been pursuing three arguments in succession, so do they also, if one which follows pleases them better than the preceding; nor do they care whether they speak briefly or at length, if only they can attain truth. The other class always speak in haste; for the flow of water quickens them, and they are not allowed to make their speeches on anything they desire; and the opponent stands over them holding compulsion in the shape of a prescribing document read in the ear, beyond the limits of which they must not speak, yclept an affidavit: and the arguments are always about a fellow-slave addressed to a master on the bench, who holds justice between his finger and thumb; and the contests are never away from the point, but to the point of self-interest; and often too the race is for life. So that on all these grounds they become keen and shrewd, knowing how to wheedle the master by word and gratify him by deed, being stunted and crooked in soul. For their slavery from childhood has robbed them of growth and uprightness and freedom, compelling them to act tortuously, setting before their yet tender souls great perils and fears. And as they cannot bear up against these with the help of justice and truth, they have recourse at once to falsehood and mutual injury, and twist themselves in many ways, and become warped; and so they pass from youth to manhood without any mental soundness, becoming, as they imagine, clever and wise. Such is this class of men, Theodoras. Would you wish us now to describe those of our circle, or to pass them by and return to our argument, that we may not, as we just now said, abuse too far our freedom in the change of topics?

Theodorus:: Not so, Socrates; finish the description. For you have said with great truth that we who form a circle like this are not servants of our discussions: our discussions are, as it were, our servants, and each of them waits to be completed when we think fit. For amongst us there is no presiding authority; neither dicast to rule, nor spectator, as in the case of poets, to censure.

Socrates:: We must speak then, seemingly, since you think proper, concerning the leaders of such a circle; for why need one mention the inferior students of philosophy?

This class from their youth, in the first place, do not know the way to the agora, nor where a law-court is or a council-hall or any other political meeting-room: laws and decrees spoken or written they neither see nor hear. Societies agitating for office and clubs and dinners and wine-bouts with flute-girls—these are practices which even in dreams do not occur to them. Whether any one in the city is well or ill born, whether a person has inherited any disgrace from ancestors on the male or female side, he knows no more than he does of the proverbial 'gallons in the sea.' He does not even know that he is ignorant of all these things; for it is not for credit's sake that he stands aloof from them, but in point of fact it is only his body that reposes and resides in the city, while his mind, deeming all these things petty and Insignificant, moves in every direction, as Pindar says, measuring things beneath the earth and on its surface, and star-gazing above the heaven, and searching out everywhere the nature of each class of existing things, condescending to none of those which are near it.

Theodorus:: How do you mean, Socrates?

Socrates:: Compare the case of Thales, O Theodoras. While he was astronomising and gazing upward he fell into a well; and a clever and witty Thracian maidservant is said to have taunted him with desiring to know what was in heaven, but not seeing what was before him and at his feet. The same taunt is good for all who are devoted to philosophy. For in fact such a student is not only unaware of what his next neighbor is doing, but does not even know whether he is a man or some other creature. But what man is, and what it belongs to such a nature to do or to suffer differently from all others, this he inquires, and takes pains to search out. You understand, I hope, Theodoras, do you not?

Theodorus:: I do, and your words are true.

Socrates:: Therefore, my friend, a man like this, in his associations private and public, as I said at first, when in a law-court or elsewhere he is compelled to discourse of things at his feet and before his eyes, becomes a laughingstock not only to Thracian maids, but to the general public, falling into wells and perplexities of every kind from inexperience; and his awkwardness is marvelous, raising a suspicion of imbecility. For when personal reviling is the order of the day, he has no scandalous charge to bring, knowing no evil of anybody, because he has never taken the trouble. So he gets laughed at for his helplessness. And when eulogies and glorification of others are the theme, he is seen to laugh in right earnest without any affectation; and so he seems to be silly. When a tyrant or a king is extolled, he thinks he hears one of the herdsmen, swineherd or shepherd or cowherd, congratulated for his large milking: but he considers that the royal proprietors in their tending and milking have to deal with a more untoward and insidious animal than the others have, and that any one of them must, for want of leisure, perforce prove quite as rude and uninstructed as the real herdsmen, having his fortification built round him like a stall upon the mountain. When he hears it said that somebody, who has got ten thousand acres of land or more, has a wonderfully large estate, he thinks the quantity named a very small one, from being in the habit of contemplating the whole earth. And when they extol birth, and say that some one is a gentleman for being able to show seven rich ancestors, this he regards as praise emanating from very dull and short-sighted persons, who through want of education can never take a comprehensive view, so as to see that every man has had countless myriads of forefathers, among whom in every case are found many rich and poor, kings and slaves, both Greeks and barbarians, recurring again and again. He is amazed at the manifestly narrow conception of those who pride themselves on a list of twenty-five ancestors, carried back to Heracles, son of Amphitryon; and he laughs at men who cannot bear in mind that the twenty-fifth ancestor, counting back from Amphitryon, and again the fiftieth before him, were just whatever they might happen to be—and by such reflection get rid of their foolish vanity. On all these occasions such a man is scorned by the multitude, partly, it would seem, on the charge of arrogance, partly for not knowing what stares him in the face, and for helplessness in general.

Theodorus:: It certainly does happen as you say, Socrates.

Socrates:: But when he himself, my friend, leads any man to take a higher view, and that man consents to quit his ‘How do I wrong you or you me,’ for the consideration of justice and injustice—what each is in itself, and wherein they differ from all other things or from each other,—or to turn from the maxim ‘Happy the king, happy the possessor of much gold,’ to the consideration of kingship itself and human happiness and misery generally—what they are and how it befits human nature to attain the one and escape the other—on all these subjects, I say, when that petty narrow-minded legal personage is required to render reason, he presents a counterpart of the philosopher. Stationed upon a height and gazing down from his elevated position, he turns dizzy from inexperience, and, uneasy perplexed and stuttering, he is a laughing-stock, not to Thracian girls or any uneducated person, for they do not see the absurdity, but to all whose training has not been that of slaves. Such are their several characters, Theodorus. One is that of the man really bred in freedom and leisure, whom you call philosopher; who may without reproach seem simple and be incompetent when he is engaged in menial services; when he does not, for instance, know how to pack a trunk of linen, or to season a dish or a flattering speech. The other is that of him who can perform all such services thoroughly and briskly, but who does not know how to don his cloak like a gentleman, or, by acquiring harmony of language, to sing well the true life of gods and blessed men.

Theodorus:: If you could bring home what you say to all men, Socrates, as you do-to me, there would be more peace and less evil in the world.

Socrates:: Nay, Theodorus, evil cannot, on the one hand, perish altogether, for something opposite to good there must ever be; nor, on the other, can it find a seat in heaven: but our mortal nature and this lower region it haunts perforce. Wherefore we must endeavor to fly from this world to the other as soon as we can. Now that flight means the becoming like to God as much as possible; and the way to be like God is to become just and holy and wise. But indeed, my excellent friend, it is by no means an easy task to convince the world that the reasons on which most people found the duty of shunning vice and pursuing virtue are not the just motives for practicing the latter and avoiding the former: in order, to wit, that a man may not seem to be wicked, and that he may seem to be good. These views, in my clear opinion, are what is called an old woman's fable: the real truth we may state as follows. God is in no way and in no degree unjust, but just in the highest extreme; and nothing is more like to him than one of us who in his own sphere shall become as just as possible. Hereby is shown a man's veritable power, in the one case; in the other, his worthless and unmanly character. For the cognition of this truth is genuine wisdom and virtue, while the ignorance of it is manifest unintelligence and viciousness. Everything else which is taken for mental power and wisdom is in political government vulgar, in art ignoble. It is by far the best way then not to allow for a moment that one who acts unjustly and speaks or practices impiety is a man of powerful mind because he is a rogue. Such people pride themselves on the reproach, and suppose it to mean that they are no whipsters, no mere loungers about the streets, but the sort of men they ought to be to hold their own in the state. They must be told the truth therefore; namely—that their belief of not being what they are makes them what they are so much the more. For they do not know the penalty of injustice, a thing of all others which it is most proper to know. It is not what they suppose, stripes and capital punishments, which men sometimes do not incur when they act unjustly, but one from which it is impossible to escape.

Theodorus:: What do you refer to?

Socrates:: There are, my friend, established in the world two types; of supreme happiness in the godly nature, of supreme misery in the ungodly: and these men, not seeing this truth, in their weakness and utter folly do by their unjust deeds insensibly become like the latter nature, unlike the former. The punishment they suffer is that of living a life correspondent with that nature to which they become like. And if we tell them that, unless they get rid of their wondrous wisdom, when they are dead, yon place pure from evil will not receive them, and they will ever continue to live in this world a life resembling themselves—evil amidst evil associations—such language they will undoubtedly hear as clever and cunning rogues listening to a pack of fools.

Theodorus:: To be sure they will, Socrates.

Socrates:: I know it well, my friend. There is however one thing that befalls them. If in private they are required to give a reasonable account of their censures, though for a long time they are willing to abide the brunt manfully and not to flee like cowards, at last, my good sir, they are strangely dissatisfied with their own reasoning; and that rhetoric of theirs dies out, somehow or other, so that they seem no better than children. As to these people, however, since the topic is a mere digression, let us drop the conversation: or else further considerations will continue to stream in and stifle our original argument. Let us return to the previous question, with your leave.

Theodorus:: For my own part, Socrates, I lend an ear to such digressions with quite as much pleasure, as they are easier for a man of my age to follow. But, if you prefer it, let us return to our subject.

Socrates:: We had, I think, reached this point in our argument. Speaking of those who teach the notion of moving essence, and who aver that what at any time seems to each is for him to whom it seems, we said that—while on other points, and specially with respect to justice, such men would insist strongly, that what a state enacts as its pleasure, is just for the enacting state as long as it remains enacted—yet with respect to good, none are so bold as to contend that what a state enacts considering it useful, is useful so long as it remains enacted, unless one choose to lay stress on the mere term; and that would be quibbling as to our real question. Would it not?

Theodorus:: Certainly.

Socrates:: He should not dwell on the term, but on the thing which under that term is considered.

Theodorus:: True.

Socrates:: Whatever term the state give to it, that which the state aims at in its legislation is, I suppose, this: all its laws, so far as its opinion and power extend, are framed in order to be as useful to itself as possible. Does it legislate with any other view?

Theodorus:: None.

Socrates:: Does it always succeed? or do all states err in many cases?

Theodorus:: I think they sometimes err.

Socrates:: Ay, and one may be led to this same admission more readily, by putting the question as to the whole class, of which the useful is a part. I suppose it relates to future time as well as to present. When we legislate, we enact our laws as intended to be useful for the time that is to follow. This we should rightly term 'future'?

Theodorus:: Certainly.

Socrates:: Well then: let us ask Protagoras, or any of those who adopt his doctrine, this question. Man is the measure of all things, as ye say, O Protagoras; of things white, heavy, light, all such-like. For, having the test in himself, thinking what he feels, he thinks what is, and what is to himself true. Is it not so?

Theodorus:: It is.

Socrates:: And of things which are hereafter to be, we shall say, O Protagoras, has he the test in himself, and do they turn out to him such as he thinks they will be? Heat, for instance: when an unskilled person thinks that he will be seized with fever, and that this state of heat mil occur, and another, who is a medical man, has an opposite opinion, shall we say that the future will turn out according to the opinion of one of the two, or according to that of both, and that to the medical man he will not be hot or feverish, but to himself both these?

Theodorus:: This would be absurd.

Socrates:: And, I suppose, with respect to the future sweetness or harshness of wine, the vine-grower's opinion, not that of the harp-player, will prevail?

Theodorus:: Of course.

Socrates:: Again, as to good and bad music, a gymnast cannot judge beforehand so well as a musician, even of that which, after he has heard it, the gymnast himself will deem to be good music.

Theodorus:: Certainly not.

Socrates:: The judgment also of one who, without culinary skill, is preparing to feast, will, while the banquet is in preparation, be less valid concerning the future pleasure than the judgment of the cook. We must not in our present argument inquire as to that which now is or which has been pleasant to each, but as to that which is about to seem and to be pleasant,—whether each individual is the best judge for himself. For example, would not you, Protagoras, form beforehand a better opinion than an untutored person of the arguments which each of us would find persuasive in a court of law?

Theodorus:: The very point, Socrates, in which he used to declare strongly that he had no rival.

Socrates:: To be sure he did, my dear friend; and nobody would have paid large sums of money to converse with him, if he had tried to persuade his pupils that no person, prophet, or other, is a better judge of what in the future will be, and seem to be, than a man's own self.

Theodorus:: Very true.

Socrates:: Are not legislation and expediency concerned ‘with the future, and will not every one confess that a state, when legislating, must of necessity often fail to attain that which is most useful?

Theodorus:: Certainly.

Socrates:: Then it will be a fair thing to say to your master,—he must perforce confess that one man is wiser than another, and that such a man is indeed a measure: while for me, who am unknowing, there is no kind of necessity to become a measure, compelled though I was just now to be one, whether I would or not, by my argument in his defense.

Theodorus:: In my judgment, Socrates, that is the best way of confuting his doctrine, though it is also confuted by this consideration, that it makes other people's opinions valid, and by these opinions (as was shown) his statements are deemed to be anything but true.

Socrates:: In many other ways, also, Theodorus, a doctrine such as this, that every opinion of every person is true, can be confuted. But, in respect to momentary affections, from which arise perception and correspondent opinion, it is more difficult to convict these of untruth. I am very likely wrong, however: possibly they are irrefragable; and those who assert them to be clear, and to be cognitions, may perhaps tell the truth, and our friend Theaetetus may not have missed the mark in laying down that perception and knowledge are the same. We must come closer then and examine this moving essence, by tapping it to see whether it sounds whole or cracked. No slight war is waged about this between combatants not a few.

Theodorus:: Far indeed from being a slight one; in Ionia the doctrine makes great strides. The followers of Heracleitus support it very vigorously.

Socrates:: On that account, dear Theodorus, we must examine it more fundamentally, as they suggest.

Theodorus:: Decidedly. For indeed, Socrates, as to these followers of Heracleitus, or, as you say, of Homer, and of others still more ancient, if we take their leading men about Ephesus, who pretend to be learned in the doctrines, there is no possibility of holding an argument with them any more than with lunatics. They are always in motion after the manner of their writings, and as to pausing on one subject, and inquiring and answering quietly in turn, their power of doing this is below zero. An infinite minus quantity goes nearer to expressing that these men have not in them the least particle of quietness. If you ask them any question, they pluck as it were out of their quiver a little riddling phrase or two and shoot them at you, and if you try to get any account from the man of what he has said, you will be smitten with another under some novel change of name, and so you will never reach a conclusion with any one of them. Nor indeed will they themselves do so in their mutual discussions. They carefully guard themselves from allowing any certainty to appear either in an argument or in their own souls, deeming this, I suppose, a stable principle. Any such they are at war with and repel, as much as they can, on every side.

Socrates:: Probably, Theodoras, you have seen these men in battle, and never met with them in a pacific state, as they are no companions of yours. But, I suppose, they do teach certain principles at leisure to their scholars, whom they wish to make like themselves.

Theodorus:: What do you mean by scholars, my good sir? These folk are not scholars one of another; they arise by spontaneous growth, each from some casual inspiration, and there is not one of them that supposes another to know anything. From these men, as I was going to say, you can never get a reason with or against their will. We must ourselves receive their doctrine, and examine it like a mathematical problem.

Socrates:: Very fairly suggested. We have however received the problem in another shape, from the ancients first, who hide it from the multitude in poetry, how that Oceanus and Tethys, the progenitors of all things, are streams, and that nothing stands still: from later writers secondly, who, being wiser, proclaim their views openly, that even a cobbler may hear and learn their wisdom, and cease to suppose some existences stand still while others are moving, and so, having been taught that all things move, may honor his teachers. I almost forgot, Theodoras, that others again put forth the doctrine opposite to this: for instance;

'Unmoved is that they call the universe,'

and other dogmas, which, in opposition to all the preceding, such men as Melissus and Parmenides insist upon, how that all things are one, and that this one stands self-supported, having no region wherein it moves. How shall we deal with all these, my friend? for we have gone on little by little till we find ourselves unexpectedly thrown midway between them, and if we do not struggle to find an escape, we shall be punished like those who play across a line in wrestling-grounds, when they are seized by both parties and dragged in opposite directions. So I think we must begin by considering the one party, to whom we first addressed ourselves, the fluent gentlemen. And if they appear to have good reasons, we will help them to drag us over, and try to escape from their opponents; but if the standard-bearers of 'the Whole' seem to give the true account, to them will we fly from those who move even the immoveable. If we find that neither of them have any satisfactory account to give, we shall get laughed at for supposing that poor creatures like us have anything of weight to say, and for disavowing men of the highest antiquity and wisdom. Consider, Theodoras, whether it is our interest to incur so great a risk.

Theodorus:: Nay, Socrates, it cannot be endured that we should refuse to consider what each of these parties has to say.

Socrates:: We must consider them, as you urge it so strongly. I think the first step in our consideration is concerning motion, to see what they intend by saying that all things move. What I mean to say is this. Do they speak of one kind of motion, or, as I think evident, two? But let it. not be my sole opinion; share it with me yourself, that we may abide in common any result. Do you say a thing is moved when it changes from place to place, or revolves in the same place?

Theodorus:: I do.

Socrates:: Let this be one kind. Now, when it stays in the same place, but grows old, or becomes black from being white, or hard from being soft, or undergoes any other variation, is it not proper to say this is another kind of motion?

Theodorus:: I think so.

Socrates:: You cannot help it. These then I name are two kinds of motion, variation one, revolution another.

Theodorus:: You name them rightly.

Socrates:: Having made this division, let us now argue with those who say that all things move, and put to them this question: do you say that all things move in both ways, by local movement and by variation, or that one thing moves in both ways, another in one of the two?

Theodorus:: Nay, upon my word I cannot pronounce. I think they would say all things move in both ways.

Socrates:: Yes; for if not, my friend, they will evidently make them to be both in motion and at rest, and it will be no more right to say that all things move than that they stand still.

Theodorus:: Most truly stated.

Socrates:: Accordingly, since they must move, and it is impossible for anything not to be moving, all things are always moving with every kind of motion.

Theodorus:: Necessarily.

Socrates:: Now consider this point in their statements. ) Did we not say that they state the generation of heat or whiteness or any other perception in some such way as this—that each of these things at the moment of perception moves between the agent and the patient, and that the patient comes to be a percipient but not perception, and the agent a qualified thing but not a quality? Perhaps however quality seems to you to be a strange term, and you do not understand it when named in the general. Hear it then in particulars. The agent comes to be neither heat nor whiteness, but a hot thing and a white thing, and so with everything else. You remember, I suppose, that in our former statements we laid it down thus; that nothing 'is' one by itself, so also neither agent nor patient; but that from both 'coming to be' together in mutual relation, sensations and sensible things are engendered, and the one comes to be of some quality and the other percipient.

Theodorus:: I remember, of course.

Socrates:: Let us now spare ourselves the pains of considering their other various propositions, and, noting the one which is the subject of our discussion, let us put to them this question: 'All things, you say, move and are in flux.' Is this right?

Theodorus:: Yes.

Socrates:: Do they then move with both kinds of motion which we distinguished, locomotion and variation?

Theodorus:: Of course they do, if they are to move completely.

Socrates:: If they moved only, and were not changed, I suppose we should be able to say what kinds of things they are that move in flux. Should we not?

Theodorus:: Yes.

Socrates:: Since it is not even an abiding fact, that what is in flux flows white, but it changes, and so there is a flux of this very thing, whiteness, and a change to another color, that it may not be convicted of abiding in this one—is it ever possible to name any color so as to give a correct name?

Theodorus:: What possibility can there be, Socrates, in this or any other such thing, if it always slips away as one is speaking, being in constant flux?

Socrates:: And what shall we say of any kind of perception, such as sight or hearing? Shall we say that it ever abides in the act of seeing or hearing?.

Theodorus:: Certainly it must not, seeing that all things are moving.

Socrates:: We cannot therefore aver that we see a thing more than that we do not see it, or that we have any perception more than that we have it not, since all things are in every way moving?

Theodorus:: We cannot indeed.

Socrates:: And yet knowledge is perception, as I and Theaetetus settled it.

Theodorus:: So it was.

Socrates:: Accordingly, when asked what knowledge is,. in our reply we no more stated what it is than what it is not.

Theodorus:: Seemingly not.

Socrates:: A fine issue to the supplement of our answer, when we were so eager to show that all things move:—for the purpose, forsooth, of proving that answer right. Now the thing proved seems to be, that, if all things move, every answer on every possible subject is equally right—to say it is' so and it 'is' not so, or if you prefer the term, 'comes to be,' that our terminology may not make them stationary.

Theodorus:: You say rightly.

Socrates:: Except, Theodorus, that I said 'So' and 'Not so.' I ought not to use this word 'So,' for no motion would be expressed by it; nor yet 'Not so,' for here again is no motion. But we must supply some other language to those who state this doctrine; since now in fact they have no words to convey their own hypothesis, except perhaps 'Nowise.' This might suit them best, being an indefinite expression.

Theodorus:: Yes, that style of speech would be most natural to them.

Socrates:: Thus, Theodoras, we have got rid of your friend, and do not yet concede to him that every man is the measure of every thing, if he be not a wise man; nor yet will we concede that knowledge is perception, at least on the supposition of all things moving.

Theodorus:: A good hearing, Socrates: for, as this topic is concluded, I must be rid of the task of answering you, as by our compact I was to be, when the question about the doctrine of Protagoras should come to an end.

Theaetetus:: Nay, Theodoras, not before you and Socrates have discussed, as you just now proposed, the doctrine of those who on the other hand affirm that the universe is at rest.

Theodorus:: What? you, Theaetetus, a mere youth, teaching your elders to commit the sin of violating compacts! Come, gird yourself up to debate with Socrates that which remains.

Theaetetus:: Oh, certainly, if he wishes. But I should have been delighted to hear the other topic discussed.

Theodorus:: You challenge cavalry to the plain when you challenge Socrates to argument. Ask him, and you will hear his answer.

Socrates:: Ay, Theodorus; but I do not think I shall obey the call which Theaetetus makes.

Theodorus:: Why not obey it?

Socrates:: As to Melissus and the others who represent the universe as one and at rest, I respect them too much to treat their views cursorily; but in still greater respect do I hold the single name of Parmenides. He appears to me to meet Homer's definition, 'venerable and likewise awful,' I was brought into contact with him when I was very young and he very old, and he struck me as possessing a depth of character pre-eminently noble. I fear that we may not understand his language, still more that we may fail to achieve his meaning: above all, I am afraid that our original question, the definition of knowledge, may cease to be considered, if a fresh crowd of arguments rushes in, and gains our attention. In particular, this hopelessly large argument which we are awakening, if considered as a digression, would be unworthily treated; or, if pursued adequately at full length, it will swamp the question of knowledge. We should do neither one nor the other, but endeavor by our art of midwifery to deliver Theaetetus of his conceptions about knowledge.

Theodorus:: Very well; we must, if you please.

Socrates:: Once more then, Theaetetus, consider this part of our previous discourse. You said in reply to me that knowledge is perception. Did you not?

Theaetetus:: Yes.

Socrates:: If anybody were to ask you the question, with what a man sees white things and black, and with what he hears sharp things and flat, you would say, I suppose, with the eyes and with the ears.

Theaetetus:: I should.

Socrates:: The easy acceptance of names and terms, and the non-exaction of strict accuracy, is indeed generally not out of place in a well-bred man; we may rather say the reverse is vulgar, yet is it occasionally necessary. And so in the present instance I must perforce take exception to the answer which you give, in so far as it is wrong. Consider which answer is more correct, that the eyes are that with which, or that through which we see, and the ears that with which, or that through which we hear.

Theaetetus:: 'Through' which in each case, I think, Socrates, rather than 'with' which.

Socrates:: Yes, my boy; it is strange, I ween, if in us, as though we were 'wooden horses,' many independent senses are seated, instead of all these tending in common to some centre, whether we call it soul or anything else, whereby, through these senses as instruments, we perceive all things perceptible.

Theaetetus:: I think this latter view the truer one.

Socrates:: Why am I putting these minute questions to you? If with some one and the same part of ourselves we through the eyes apprehend things white and black, and through the other organs other things, and you will be able, on being asked, to refer all such perceptions at once to the body...perhaps however it is better you should specify them in answer to me than that I should save you that trouble. Now tell me. The organs through which you perceive hot things and hard and light and sweet—do you not state them to belong severally to the body, or do they belong to anything else?

Theaetetus:: To nothing else.

Socrates:: Will you also be ready to admit, that what you perceive through any one organ, you cannot possibly perceive through another; for instance, what you perceive by hearing, you cannot perceive by sight, or the converse?

Theaetetus:: I most readily admit it.

Socrates:: If you have any common notion about both, you would not acquire it from the one organ or from the other concerning both?

Theaetetus:: I should not.

Socrates:: As to sound and color, in the first place, have you this same notion respecting both, that both ‘are?

Theaetetus:: I have.

Socrates:: You suppose also, that each is different from each, and the same with itself?

Theaetetus:: To be sure.

Socrates:: And that both are twain, but each is one?

Theaetetus:: Yes.

Socrates:: Are you not also able to observe whether they are like one another or unlike?

Theaetetus:: Probably.

Socrates:: Through what do you form all these notions concerning both? For neither through hearing nor through sight is it possible to obtain a common notion of them. Here again is another instance in point. If it were possible to examine, whether both are briny or not, you know that you will be able to say with what you will examine, and this is evidently neither sight nor hearing, but something else.

Theaetetus:: No doubt it is; namely, the power exercised through the tongue.

Socrates:: Well said. Now, through what does the power act which makes manifest to you what all things generally have in common with these particularly—what you mean, to wit, in saying ‘is,’ ‘is not,’ and all else comprised in our late questions? What organs will you assign as those through which our percipient faculty perceives all these severally?

Theaetetus:: You mean being and non-being, and likeness and unlikeness, and sameness and difference, and moreover unity and any other number applicable to things perceived? Evidently too your question includes the even and the odd, and all other such notions; asking through what bodily organ we perceive them with the soul.

Socrates:: You follow me admirably, Theaetetus, and these are the very questions I ask.

Theaetetus:: Well, Socrates, I really can give no other answer than this, that in my opinion these have originally no organ peculiar to them, such as the sensible objects have, but the soul through its own individual power appears to me to observe the common properties of all.

Socrates:: Yes, Theaetetus, you are a beauty, and not, as Theodorus said, ugly: for he who speaks beautifully is beautiful and good. And besides your beauty, I am much obliged to you for releasing me from a world of talk, if the soul appears to you to observe some things through itself, and other things through the bodily organs. This was my own opinion, and  was wishing it to be yours.

Theaetetus:: Yes: to me it is apparent.

Socrates:: To which of the two classes do you assign ‘being’? For this is the notion most universally present.

Theaetetus:: I assign it to that class which the soul attains to by itself.

Socrates:: Do you say the same of likeness and unlikeness, of sameness and difference?

Theaetetus:: Yes.

Socrates:: And again of nobleness and baseness, good and evil?

Theaetetus:: Yes: these are things the essence of which, above all others, I believe that the soul observes in their mutual relativity, comparing within itself the past and the present with the future.

Socrates:: Wait a moment. Will it not perceive the hardness of a hard object through the touch, and so again the softness of a soft one?

Theaetetus:: Yes.

Socrates:: But their being, and what they are, and their mutual opposition, and again the being of that opposition, the soul itself, by reflecting and by comparing them with each other, endeavors to determine for us?

Theaetetus:: Quite so.

Socrates:: Men and beasts then, as soon as they are born, are able by nature to perceive some things, those affections I mean which reach through the body to the soul. But the reflections concerning these in regard to essence and use are acquired, by those who do acquire them, painfully and gradually through the troublesome process of education.

Theaetetus:: Undoubtedly.

Socrates:: Can any one attain truth, who does not attain being?

Theaetetus:: He cannot.

Socrates:: And if he fail to attain the truth of a thing, will he ever have knowledge of it?

Theaetetus:: Impossible, Socrates.

Socrates:: Knowledge, then, does not lie in the affections of sense, but in the reasoning concerning them: for in this it seems possible to grasp essence and truth, and not in the affections?

Theaetetus:: Evidently.

Socrates:: Do you call two things the same which are in so many respects different?

Theaetetus:: There were no justice in doing so.

Socrates:: What name do you give to the one class—seeing, hearing, smelling, being cold and hot?

Theaetetus:: 'Perceiving' I would certainly call them.

Socrates:: Their common notion then you would call perception?

Theaetetus:: Of course.

Socrates:: And this, we say, has no share in the attainment of truth, having none in the attainment of being.

Theaetetus:: It has none.

Socrates:: Nor yet in the attainment of knowledge?

Theaetetus:: No.

Socrates:: Then, Theaetetus, perception and knowledge will not be the same?

Theaetetus:: Evidently not, Socrates. Now especially has knowledge been very clearly proved to be a different thing from perception.

Socrates:: But it was not by any means with this view that we began our argument, to find what knowledge is not, but to find what it is. Nevertheless we have so far advanced as not to seek it in perception at all, but in that name which, whatever it be, is applicable to the soul's action when by itself it deals with existing things.

Theaetetus:: This, I imagine, Socrates, is called 'opining' (forming opinion).

Socrates:: You imagine rightly, my friend. Now go back again and, erasing all that went before, see if you have any clearer view, after having advanced to this point. Tell me once more what knowledge is.

Theaetetus:: To say that it is opinion generally, Socrates, is impossible, since there is false opinion. But true opinion probably is knowledge: so let this be my answer. If it shall be disproved while we proceed, as in the last case, we will try some other statement.

Socrates:: Your present forwardness to speak, Theaetetus, is more to the purpose than your original reluctance to answer. For in this way, we shall secure one of two advantages: we shall either find what we are in quest of, or our conceit of knowing what we do not know will be diminished. And this will be no despicable reward. Now let us see what it is you say. There being two kinds of opinion, the true and the false, do you make true opinion the definition of knowledge?

Theaetetus:: I do, according to my present view.

Socrates:: Is it worth while to resume the question of opinion?

Theaetetus:: Which do you mean?

Socrates:: I am somewhat disturbed now, as often before, and have found myself sorely perplexed in my own mind and in conversation, from my inability to say what this condition is in us, and in what way engendered.

Theaetetus:: What condition?

Socrates:: The holding of false opinion. Now again I am still considering and doubting whether we should leave it, or review it in a way different from that we took some little time ago.

Theaetetus:: Why not review it, Socrates, if there is any clear gain in doing so? For, as to leisure, you and Theodorus said very justly, that there is nothing to hurry us in such cases.

Socrates:: Well reminded. And perhaps it is not unreasonable to return upon our tracks. It is better, you'll allow, to achieve a little well than much inadequately.

Theaetetus:: Of course.

Socrates:: Well then? What do we in fact affirm? do we say that there is in each case false opinion, and that some one of us opines falsely, another again truly, as if such were the natural rule?

Theaetetus:: Yes, we do.

Socrates:: Does not this occur to us in respect of all things generally, and of each particularly—either knowing or not-knowing? for learning and forgetting, which lie between these, I set aside for the moment, as having no relation to our present argument.

Theaetetus:: In fact, Socrates, nothing else remains in each case but knowing and not-knowing.

Socrates:: Is it not a necessary consequence that he who opines must opine about one of the things which he knows, or one of those which he does not know?

Theaetetus:: It is.

Socrates:: And it is impossible, if he knows a thing, not to know it, or, if he knows it not, to know it?

Theaetetus:: Quite impossible.

Socrates:: Does then he who holds a false opinion think that things which he knows are not what they are, but some other things within his knowledge, and knowing both, is he ignorant of both?

Theaetetus:: It cannot be so, Socrates.

Socrates:: Or does he suppose things which he does not know to be some other things outside of his knowledge? Does it happen to one who knows neither Theaetetus nor Socrates to imagine that Socrates is Theaetetus or Theaetetus Socrates?

Theaetetus:: How can that be?

Socrates:: But surely a man does not think that what he knows is what he does not know, or that what he does not know is what he knows.

Theaetetus:: That were a miracle.

Socrates:: In what other way then can any one hold false opinions? Except under the conditions stated it is impossible, I suppose, to have opinion. In every case we either know or do not know, and so situated, it is manifestly impossible for us ever to have false opinions.

Theaetetus:: Very true.

Socrates:: Perhaps we ought to examine our question with reference not to knowing and not-knowing, but to being and not-being.

Theaetetus:: How do you mean?

Socrates:: Consider if it be not a simple truth that one who thinks concerning anything that which is not, will inevitably think what is false, whatever the condition of his mind in other respects.

Theaetetus:: This again is probable, Socrates.

Socrates:: How then? What shall we reply, Theaetetus, if any one examine us: 'Is what you say possible for any one, and will any human being think what is not, either about some existing thing, or in the abstract?' Seemingly we shall say in reply: 'Yes, when he thinks, and does not think what is true.' Or how are we to speak?

Theaetetus:: As you say.

Socrates:: Does the like happen in any other case?

Theaetetus:: What do you mean?

Socrates:: That a person sees something, yet sees nothing.

Theaetetus:: How can that be?

Socrates:: If he sees some one thing, that 'something' is among things that are. Or do you think 'the one' is ever among the things that are not?

Theaetetus:: Not I.

Socrates:: He then, who sees some one thing, sees some thing that is.

Theaetetus:: Evidently.

Socrates:: And he who hears something hears some one thing, and a thing that is.

Theaetetus:: Yes.

Socrates:: And he who touches, I suppose, touches some one thing, and a thing that is, since it is one.

Theaetetus:: Yes.

Socrates:: And does not he who opines form opinion of some one thing?

Theaetetus:: He must.

Socrates:: And does not he who forms opinion of some one thing form it of some thing that is?

Theaetetus:: I grant this.

Socrates:: He then who opines what is not opines nothing.

Theaetetus:: Evidently.

Socrates:: Well, but he who opines nothing does not opine at all.

Theaetetus:: That seems clear.

Socrates:: Therefore it is not possible to think what is not, either about things that arc, or in the abstract.

Theaetetus:: Manifestly not.

Socrates:: Thinking falsities is therefore different from thinking what is not.

Theaetetus:: It seems different.

Socrates:: And thus neither from our present consideration (of being and not-being), nor from our previous one (of knowing and not knowing), do we find false opinion to exist in us.

Theaetetus:: No, we do not.

Socrates:: But can we not speak of it as happening in this way?

Theaetetus:: How?

Socrates:: We can say that an opinion which may be called an 'allodoxy' is false when anybody says that some one existing thing is another existing thing, exchanging them in his mind. For thus he always thinks of what exists, but of one thing instead of another, and, as missing that which he had in view, he may be said to have false opinion.

Theaetetus:: Your present statement seems to me very correct. For when any one opines that a thing is ugly instead of beautiful, or beautiful instead of ugly, then he very truly has false opinion.

Socrates:: Evidently, Theaetetus, you speak in contempt of me, and without fear.

Theaetetus:: Pray why?

Socrates:: You do not expect, I fancy, that I shall lay hold of your term 'truly false', and ask if it is possible for the swift to 'come-to-be' slowly, or the light heavily, or for any other opposite to come-to-be—not according to its own nature, but according to the nature of its opposite—in a manner opposed to itself. This however—that your confidence may not be fruitless—I pass over. You say you are pleased with the notion that opining falsities is allodoxy.

Theaetetus:: I am.

Socrates:: Then in your opinion it is possible to determine in your mind that one thing is another, and not itself.

Theaetetus:: It is.

Socrates:: When therefore the mind does this, must it not perforce think either of both things, or of one of the two?

Theaetetus:: Yes, it must.

Socrates:: At the same time, or else by turns.

Theaetetus:: Very good.

Socrates:: Do you employ the term 'thinking' in the same sense that I do?

Theaetetus:: How do you define it?

Socrates:: A discourse which the soul holds with itself about what it considers. I am representing this to you not as a fact that I know. In the exercise of thought, the soul, as I fancy it, is simply engaged in conversation, questioning itself and answering, affirming and denying. And when, having reached a definition, whether slowly or by a more rapid impulse, it at length agrees and affirms undoubtedly, we state this to be its opinion. So that I call opining the soul's speaking, and opinion its spoken word, not addressed to another or uttered by the voice, but silently to itself.

Theaetetus:: So do I.

Socrates:: Therefore, when any one opines that one thing is another, he says to himself, it would seem, that one thing is another.

Theaetetus:: Certainly.

Socrates:: Try to remember whether you ever said to yourself, 'Assuredly the noble is base,' or, 'The unjust is just.' Or, to sum up, consider if you ever attempted to convince yourself that assuredly one thing was another: or if, on the contrary, you never even in sleep ventured to say to yourself, Undoubtedly the odd is even, or any such thing?

Theaetetus:: You say the truth.

Socrates:: Do you think any body in or out of his senses ever ventured seriously to say to himself, trying to make himself believe, that an ox must needs be a horse, or two things one?

Theaetetus:: No indeed, not I.

Socrates:: If then to speak to oneself is to opine, nobody who speaks and thinks of both things, and apprehends both with his soul, can say and think that one is the other. But you must avoid the terms 'one and other.' I'll state the point in this way: Nobody thinks that the noble is base, or anything of the sort.

Theaetetus:: Well, Socrates, I give up the terms, and I agree with you.

Socrates:: That one who thinks of both cannot possibly opine that one is the other?

Theaetetus:: Seemingly not.

Socrates:: Again, if he thinks of the one alone, and of the other not at all, he will never opine that one is the other.

Theaetetus:: True: for so he would be forced to apprehend that of which he has no thought.

Socrates:: Accordingly allodoxy is inadmissible for any one who thinks either of both or of one. So that whoever shall define false opinion to be heterodoxy will talk nonsense: for it is shown by this method as well as by the former that false opinion cannot exist in us.

Theaetetus:: Seemingly not.

Socrates:: And yet, Theaetetus, if this shall be proved impossible, we shall be compelled to admit many absurd consequences.

Theaetetus:: What are they?

Socrates:: I will not say till I have tried every point of view. For I should blush for us if, in a moment of perplexity, we were forced to admit such things as I allude to. But if we find a way to get free, then and not before we will speak of others as thus perplexed, standing clear of ridicule ourselves. But, if we find ourselves posed on every side, then, in a humble frame, I suppose, like sea-sick men, we shall allow the argument to trample on us and treat us as it will. Listen, while I tell you how I may still find a way of escape from our inquiry.

Theaetetus:: Pray tell me.

Socrates:: I will say we were wrong in admitting that it is impossible to opine that what one knows is what one does not know, and so to be deceived: for it is in a certain way possible.

Theaetetus:: Do you mean what I myself suspected at the time we made the assertion—a case occurring sometimes like this, that I, knowing Socrates, and seeing at a distance another whom I do not know, think it is the

Socrates whom I know? For in such a case something like what you say comes to pass.

Socrates:: Did we not abandon that view, because it made us, while knowing, not to know what we do know?

Theaetetus:: Certainly.

Socrates:: Suppose we do not state it thus, but in the following manner. Perhaps it will give way to us, perhaps resist. But indeed we are in such a strait, that we must perforce turn about and examine every argument. See if I ask a rational question. Is it not possible to learn something which you formerly did not know?

Theaetetus:: Yes, it is.

Socrates:: And one thing after another?

Theaetetus:: Why not?

Socrates:: Suppose, for the sake of argument, that there is in our souls a waxen block, in one soul larger, in another smaller, of purer wax in one, in another of less pure, harder in some, moister in others; in some of medium quality.

Theaetetus:: Well.

Socrates:: Let us say it is a gift of Mnemosyne, mother of the Muses, and that on this we strike off, as if we were impressing ring-seals, any thing we wish to remember among those we see or hear or imagine, submitting the block to our senses and imaginations; and that whatever is impressed, we remember and know as long as its image subsists; but that, when it is obliterated or fails to be impressed, we have forgotten and do not know.

Theaetetus:: Be it so.

Socrates:: See then if he who knows things, and considers anything he sees or hears, may have false opinions in some such way as the following:

Theaetetus:: In what way?

Socrates:: By thinking sometimes that what he knows is what he does know, sometimes what he does not know. In our previous statements we were wrong in denying this to be possible.

Theaetetus:: How do you state it now?

Socrates:: Our statement on the subject must be this. We first determine, that what a person knows, having a record of it in his soul, but without perceiving it, he cannot possibly think to be some other thing which he knows, having an image of this also, but not perceiving it. And again it is impossible to think that what he knows is what he knows not and has no seal of: and that what he knows not is [something else] which he knows not: and that what he knows not is what he knows: and to think what he perceives is some other thing which he perceives; and what he perceives, a thing which he does not perceive; and what he does not perceive to be another thing which he does not perceive; and what he does not perceive to be a thing which he perceives. And again to think that a thing which he knows and perceives, having the seal of it according to perception, is some other thing which he knows and perceives having its seal also according to perception—this is, if it can be, still more impossible than the preceding suppositions. And what one knows and perceives, having its record correctly, it is impossible to think [something else] which one knows: and what one knows and perceives under similar conditions, to be [something else] which one perceives: and what one neither knows nor perceives to be [something else] which one neither knows nor perceives: and what one neither knows nor perceives, to be [something else] which one does not know; and what one neither knows nor perceives, to be [something else] which one does not perceive. All these things involve the very utmost impossibility of having any false opinion about them. There remain the following cases, in which, if anywhere, such a thing may happen.

Theaetetus:: What are they? perhaps they may help me to understand. At present I do not follow you.

Socrates:: In the case of things which a person knows, to think that they are some other things which he knows and perceives; or some other things which he does not know, but perceives: or that [some things] which he knows and perceives are [some others] which he also knows and perceives.

Theaetetus:: I am more in the dark now than before.

Socrates:: Listen to this restatement. Do not I, knowing Theodoras and remembering in my mind what sort of man he is, and Theaetetus similarly, sometimes see them, sometimes not, and sometimes touch them, at other times not, and hear them or have some other perception of them, and again have no perception of you, but not the less remember you and know you in my mind?

Theaetetus:: Certainly.

Socrates:: This is the first lesson which I wish to make known to you, that a man may not perceive, or may perceive, things which he knows.

Theaetetus:: True.

Socrates:: Things too which he does not know, a man may often not perceive, often perceive merely?

Theaetetus:: This too is possible.

Socrates:: Now see if you follow me more easily. Socrates knows Theodoras and Theaetetus, but sees neither, and has no other present perception about them. He could never form an opinion in his mind that Theaetetus is Theodorus? Do I speak sense or not?

Theaetetus:: All quite true.

Socrates:: This was the first of the cases spoken of.

Theaetetus:: It was.

Socrates:: The second was, that knowing one of you, and not knowing the other, and perceiving neither, I can never suppose the one I know to be the one I do not know.

Theaetetus:: Right.

Socrates:: Thirdly, knowing and perceiving neither, I cannot suppose one whom I do not know to be some other whom I do not know. And as to all my former suppositions, imagine that you have heard them stated again in order, wherein I can never have false opinions about you and Theodorus, either if I know or if I do not know both, or if I know one, but not the other. And similarly with regard to perceptions, if you follow me.

Theaetetus:: I do.

Socrates:: False opinion remains possible in a case like this: when, knowing you and Theodorus, and having in that waxen block the seals of both of you as from rings, then, seeing both at a distance and indistinctly, I strive to assign the proper seal of each to its proper visage, and to introduce and adapt this to its own mould, in order that recognition may take place: but if, failing in the attempt, and interchanging, like those who put on the wrong shoes, I apply the visage of each to the other's seal; or again, if I go wrong by an affection like that of sight in mirrors, when it flows from right to left:—then heterodoxy and false opinion occur.

Theaetetus:: You describe with marvelous truth, Socrates, the conditions to which opinion is liable.

Socrates:: Moreover [false opinion happens] when, knowing both, I perceive one, as well as know him, but not the other, and so my knowledge of the second of the two is not according to perception—a case put in my former statement, which you did not then understand.

Theaetetus:: I did not.

Socrates:: Well, I meant to say that a person knowing and perceiving the one, and having his knowledge according to perception, will never think that he is some other whom he knows and perceives, and of whom his knowledge is also according to perception. Was it so?

Theaetetus:: Yes.

Socrates:: There remained, I think, the case we now deal with, in which we say that false opinion happens when a person knowing and seeing both, or having any other perception of both, does not keep each of the seals in accordance with his perception, but like a bad archer shoots beside the mark and so errs; and such error is called a falsity.

Theaetetus:: And reasonably.

Socrates:: And so, when to one of the seals perception is present, but not to the other, and the mind adapts the seal which is without perception to the perception present, in every such case it is deceived. In one word, about things which a person knows not and never perceived, error and false opinion seem out of the question, if there is any soundness in our present argument: but in those things about which we have knowledge and perception, opinion turns and twists about, becoming true or false; true, when it brings the proper impressions and forms to meet oppositely and straightly; false, when it brings them crosswise and crookedly.

Theaetetus:: Is not this a noble statement, Socrates?

Socrates:: You will say so with more assurance after hearing what I have further to state: for to think the truth is noble, to be deceived is base.

Theaetetus:: No doubt.

Socrates:: These things are said to happen as follows. When the wax in any person's soul is deep and abundant and smooth and nicely wrought, the impressions become durable which pass through the senses and are sealed on this (waxen) heart of the soul, as Homer called it in allusion to the resemblance of wax; for then, and in all such cases, they are formed in it pure, and have depth enough. And such persons are in the first place quick to learn, in the next retentive, and finally they do not interchange the seals of the perceptions, but form true opinions. For as their impressions are distinct and have ample room, they rapidly distribute them to their several niches; and such impressions are called 'real:' and these persons are termed 'wise.' Do you not think so?

Theaetetus:: With entire conviction.

Socrates:: When any person's heart is shaggy, as that all-wise poet sang, or when it is miry and of impure wax, or exceedingly soft or hard—they whose heart is soft, are quick to learn, but forgetful; they whose heart is hard, the opposite: and they who have a shaggy and rough and gritty heart, or one defiled with a mixture of earth or mire, have their impressions indistinct. In those who have hard hearts, they are indistinct too, for depth is wanting: likewise in those who have soft hearts, for through confusion they soon become faint. And if besides all these faults they are furthermore crushed one upon another for want of room, when a man's soul is small, they are still more indistinct than in the former cases. All these people are capable of having false opinions. For when they see or hear or imagine anything, being unable to assign each thing quickly to its proper impression, they go tardily to work, and, assorting erroneously, they see and hear and conceive most things wrongly. And of these persons again we say, that they have false notions of things, and are ignorant.

Theaetetus:: Never was a truer statement, Socrates.

Socrates:: May we say then that false opinions exist in us?

Theaetetus:: Decidedly.

Socrates:: And true?

Theaetetus:: Yes.

Socrates:: Now we think it sufficiently agreed that both these kinds of opinion certainly exist?

Socrates:: What a truly terrible and disagreeable creature, Theaetetus, a chattering man appears to be.

Theaetetus:: How so? What do you say this for?

Socrates:: Because I am so annoyed by my own dullness and manifest garrulity. For what else can one call the conduct of a man, who wears every argument threadbare, and cannot be made to quit it, because he is too stupid to be convinced?

Theaetetus:: What vexes you?

Socrates:: I am not only vexed, but at a loss how to answer, should any one question me and say: 'Have you now, Socrates, discovered that false opinion lies neither in the mutual relation of perceptions, nor in that of thoughts, but in the union of perception with thought?' I shall say, 'Yes,' I suppose, with a triumphant air, as if we had made some beautiful discovery.

Theaetetus:: I see nothing the reverse, Socrates, in what has now been proved.

Socrates:: Do you mean, he will say, that we can never suppose the man, whom we think of but do not see, to be a horse, which again we neither see nor touch but only think of, and in no way perceive? I suppose I shall say that I do mean it.

Theaetetus:: Yes, and rightly.

Socrates:: Well, he will say, as to the number eleven, which is an object of thought only, must it not follow from this statement that nobody could ever suppose it to be twelve, which is also an object of thought only? Come now, reply yourself.

Theaetetus:: I shall reply that any one who saw and touched them might think eleven to be twelve, but so far as he had them in thought, he could never conceive such an opinion regarding them.

Socrates:: Well, take the case of one who set before himself and regarded in his own mind five and seven. I don't mean seven and five men or anything of the sort, but the notions of five and seven, of which we say that they are recorded there on the waxen block, and that as to them it is impossible to have false opinion. Of these things I ask if it never chanced, that while people were considering them, and conversing with themselves, and inquiring how many they come to—one person would think and say they were eleven, another twelve:—or would all say and think that they make twelve?

Theaetetus:: No, indeed, not all; many will say, eleven. And if a person has higher figures under consideration, he is still more liable to error. I suppose you are speaking of number generally.

Socrates:: Your supposition is right. Consider whether anything happens in such a case but imagining the number twelve, in the block, to be eleven.

Theaetetus:: Nothing else, seemingly.

Socrates:: We are thus carried back to our former discussion. The person in such a case supposes a thing which he knows to be another thing which he knows. This we said was impossible; and on this very ground we forced the conclusion that false opinion does not exist, in order that the same person might not be compelled to know and not know the same things at the same time.

Theaetetus:: Very true.

Socrates:: Therefore we must declare that holding false opinion is something else than a discrepancy between thought and sensation. For, if it were this, we could never be deceived in our mental concepts themselves. But now either there is no false opinion, or it is possible for a person not to know what he knows. Which alternative do you choose?

Theaetetus:: You offer an impossible choice, Socrates.

Socrates:: Ay, but the argument will hardly allow both. Nevertheless, as we must risk the utmost, suppose we venture to be shameless?

Theaetetus:: How?

Socrates:: By making up our minds to say what 'to know' means.

Theaetetus:: Why is this a shameless act?

Socrates:: You seem not to bear in mind that all our discussion from the first has been a quest of knowledge, assuming that we do not know what it is.

Theaetetus:: I do bear this in mind.

Socrates:: Is it not then shameless, if we do not know knowledge, to proclaim what knowing means? But in fact, Theaetetus, we have been long infected with an impure method of discussion. Over and over again we have used the terms 'we know,' and 'we do not know,' 'we have knowledge' and 'we have not knowledge,' as if we could understand one another, while we are yet ignorant of knowledge. If you remark, at this very moment we have again used the terms ignorance and understanding, as though it were fit for us to use them, if we are destitute of knowledge.

Theaetetus:: But in what way will you argue, Socrates, if you abstain from these terms?

Socrates:: In no way, while I am the man I am: but I could if I were a votary of contention. Were a man of that school now present, he would-profess to abstain from such terms, and would rebuke us sternly for our conduct. Since however we are such poor creatures, will you let me venture to say what 'knowing' is? For I am clear that it will be of some help to us.

Theaetetus:: Oh yes  pray venture. You will have great excuse for not abandoning these terms.

Socrates:: You have heard then what people now mean by 'knowing?'

Theaetetus:: Possibly: but I do not remember at the moment.

Socrates:: They say it is a having of knowledge.

Theaetetus:: True.

Socrates:: Let us make a slight change and say, possession of knowledge.

Theaetetus:: What will you say is the difference between them?

Socrates:: Perhaps none: but you may as well hear, and help me to test my opinion.

Theaetetus:: I will if I can.

Socrates:: 'Having' does not appear to me the same thing as 'possessing.' For instance, if any one bought a coat, and being master of it did not wear it, we should not say he had, but possessed it.

Theaetetus:: Right.

Socrates:: Now see if it is possible in the same manner to possess knowledge without having it. Suppose a person had caught wild birds, doves or any other sort, and built a dove-cage in his dwelling and fed them. In a certain way we should say he always has them, because he possesses them. Should we not?

Theaetetus:: Yes.

Socrates:: In another sense we should say he has none of them, but he has got a power over them, since he has made them subject to him in a domestic enclosure of his own.

He can take and hold them when he likes, catching any one he wishes, and he can let it go again. And it is free to him to do this as often as he thinks proper?

Theaetetus:: It is.

Socrates:: So then, even as in the previous part of our discourse we framed in human souls a strange sort of waxen figment, let us again make in every soul a certain cage of various kinds of birds, some in flocks apart from the rest; others in small groups; others alone, flying among all wherever they may chance.

Theaetetus:: Suppose it made. What next?

Socrates:: While we are children (we must say) this structure is empty: and we must think of sciences instead of birds: and whatever science any one has acquired and shut up in his enclosure, we must say that he has learnt or discovered the thing of which it is the science: and this is 'knowing.'

Theaetetus:: Be it so.

Socrates:: Again, as to catching any one of the sciences a person chooses, and taking and holding it, and letting it go again,—consider by what terms these acts should be described, whether by the same as when he was first acquiring the sciences, or by others. You will learn what I mean more clearly from the following illustration. There is an art you call arithmetic?

Theaetetus:: Yes.

Socrates:: Suppose this to be a pursuit of the knowledge of odd and even.

Theaetetus:: Well, I do.

Socrates:: By this art, I imagine, a person both has the cognitions of all numbers in his power, and transmits them to another.

Theaetetus:: Yes.

Socrates:: And we say that one who transmits teaches, and one who receives learns, and one who has them by possessing in that cage 'knows?'

Theaetetus:: Quite so.

Socrates:: Attend and see what next follows. Does not a perfect arithmetician know all numbers? For he has in his soul the science of all numbers.

Theaetetus:: Certainly.

Socrates:: Could not such a person count any sum mentally, or any outward objects capable of numeration?

Theaetetus:: No doubt he could.

Socrates:: And shall we say that counting means anything but considering how great any number is?

Theaetetus:: Such is its meaning.

Socrates:: Then what a person 'knows,' he is shown to consider as if he did not know, though we have allowed that he knows all number. You have heard, I suppose, of these vexed questions?

Theaetetus:: I have.

Socrates:: We then, following the similitude of the possession and chase of doves, will say that the chase was double; one before acquirement, with a view to possession: the other after possession, in order to take and hold in hand what the owner had long ago acquired. So even those same things of which a person had the knowledge long since by learning, and which he then knew, he may again thoroughly learn by resuming and holding the knowledge of each, which he had indeed long ago acquired, but had not within his mental grasp.

Theaetetus:: True.

Socrates:: I was just now asking what terms we must use to speak of such cases, as when the arithmetician proceeds to count or the grammarian to read. Does he in this case, although he knows, come to learn from himself what he knows?

Theaetetus:: That were absurd, Socrates.

Socrates:: But must we say that he will read and count what he does not know, after allowing him to know all letters and all number?

Theaetetus:: This again is unreasonable.

Socrates:: Would you have us state that, as to terms, we do not care at all in what way anybody likes to twist the words 'knowing' and 'learning;' but that since we defined 'possessing' knowledge to be one thing, 'having' it another, we say it is impossible for any one not to possess what he has acquired; so that it never happens that any one does not know what he knows, but it is possible to get hold of a false opinion concerning it: for it is possible not to have the knowledge of this one, but of another in its stead, when chasing any of the sciences which flit from him, he mistakes and lays hold on one instead of another, as in the case when he thought eleven to be twelve, getting hold of the knowledge of eleven, instead of that of twelve, the ring-dove as it were within him instead of the pigeon?

Theaetetus:: Yes, that is reasonable.

Socrates:: But when he gets hold of that which he tries to take, shall we say, that then he is free from error and opines realities, and that in this way there is true and false opinion, and that none of the difficulties which we found in our foregoing arguments come in our way? Perhaps you will endorse my statement. Will you?

Theaetetus:: I will.

Socrates:: Then so far we are rid of the notion that people do not know what they know: for it no longer happens in any case not to possess what we do possess, whether deceived about it or not. And yet there seems to glance sideways on me a trouble still more formidable.

Theaetetus:: Of what nature?

Socrates:: Whether the interchange of cognitions will ever come to be false opinion.

Theaetetus:: How do you mean?

Socrates:: First, as to the notion of anybody's having knowledge of a thing, and at the same time being ignorant of it, not by inacquaintance, but by his own knowledge: next, as to opining this to be one thing, and the other thing to be this—is it not the height of unreason, that, when knowledge is present the soul should recognize nothing, and be ignorant of everything? for on this principle there is nothing to prevent ignorance being present and causing one to know something, and blindness causing to see, if knowledge shall ever cause any one to be ignorant.

Theaetetus:: Perhaps, Socrates, we did not arrange the birds well in placing sciences only, but we ought to have placed also nesciences flying about with them in the soul; and the chaser, at one time getting hold of a science, at another of a nescience, has about the same thing opinions false by nescience, true by science.

Socrates:: It is not easy, Theaetetus, to avoid praising you. But review your proposition. Suppose it as you state. He who lays hold on nescience, you say, will have false opinions. Is it so?

Theaetetus:: Yes.

Socrates:: He will not, I suppose, think he has false opinions?

Theaetetus:: How can he?

Socrates:: He will think he has true ones then, and as to things in which he is deceived, he will be in the same condition as if he knew them?

Theaetetus:: No doubt.

Socrates:: He will think that he has chased and got science, not nescience?

Theaetetus:: Evidently.

Socrates:: Accordingly, after a long circuit we have reached our original perplexity. Our critic will again laugh and say: ‘My right worthy friends, will one who knows them both, science and nescience, suppose that which he knows to be the other which he knows? or knowing neither of them, does he imagine what he knows not to be the other which he knows not: or, knowing one but not the other, does he suppose the one he knows to be the one he knows not, or the one he knows not to be the one he knows? Or will you tell me again that there are also sciences of sciences and of nesciences, which he who possesses has shut up in some other ridiculous dove-cage or waxen figment, and knows as long as he possesses them, even if he have them not ready to hand in his soul? and so will you be compelled to run round and round to the same point without gaining anything by it?' What answer shall we give to these questions, Theaetetus?

Theaetetus:: Really, Socrates, I do not know what we ought to say.

Socrates:: Does not the argument, my boy, rebuke us justly, and show that we are wrong in leaving the question of knowledge, and investigating false opinion first? It is impossible to know this latter, before we have adequately settled what knowledge is.

Theaetetus:: At this point, Socrates, I must accept your view.

Socrates:: Returning to the original question, what is one to say that knowledge is? For we shall not give in yet, I suppose.

Theaetetus:: Certainly not, if you do not set the example.

Socrates:: Say then how we must define it in order to escape best from self-contradiction.

Theaetetus:: As we proposed in our foregoing discussion, Socrates. I have no other suggestion to make.

Socrates:: What was the definition?

Theaetetus:: That true opinion is knowledge. True opinion is, I suppose, free from error, and its results are all noble and good.

Socrates:: The man who led the way into the river, Theaetetus, said 'the trial will prove;' and if we search for this as we go, perhaps the fact will stop us and exhibit what we are looking for. If we stand still, we shall see nothing.

Theaetetus:: Right. Let us proceed and look out.

Socrates:: This look-out of ours will be a brief one: for a whole profession indicates that true opinion is not knowledge.

Theaetetus:: How so? What is that profession?

Socrates:: The profession of the mightiest in wisdom, who are called orators and lawyers. These men in their art persuade, not by teaching, but by making men opine whatever they will. Do you suppose there are any teachers clever enough, within the flowing of a little water, to teach adequately the truth of facts to certain persons, who were not present when they were robbed of money, or when they received some other violence?

Theaetetus:: I do not suppose they could; but they would persuade.

Socrates:: By persuading you mean, 'causing to form an opinion?'

Theaetetus:: Certainly.

Socrates:: When therefore dicasts are justly persuaded about things which can be known by seeing only, not otherwise, in that case, judging the things by what they hear, they judged without knowledge, though persuaded rightly, if their verdict was good?

Theaetetus:: Unquestionably.

Socrates:: If, my friend, true opinion and knowledge were the same, a perfect dicast would never form a right opinion without knowledge. But now it seems they are not one ¦ and the same.

Theaetetus:: As to this I had forgotten, Socrates, a thing which I once heard somebody say: but I now recollect it. He said that true opinion accompanied with rational explanation was knowledge, but unexplained opinion out of the sphere of knowledge: things of which there is no explanation are, he said, not knowable, using that very term; but those which have explanation are knowable.

Socrates:: Well said. But what distinction did he draw between these knowable and unknowable things? Tell me, that I may see whether you and I have heard the same version or not.

Theaetetus:: I am not sure that I can recall it: but, if another told it, I think I could follow him.

Socrates:: Hear then dream for dream. Methought I heard some say that the primal elements, as it were, of which we and all other things are compounded, have no reason: for it is only possible to name each by itself, not to predicate anything else of it, either that it is or is not, as in such case 'being' or 'not-being' is attached: while it is wrong to ascribe either, if one is to speak of the thing itself alone. We must not, they say, ascribe the term 'self' or 'that' or 'each' or 'single' or 'this,' or many other like expressions: for these run about and are applied to all things, being different from the things to which they are attached. If the primal element were capable of being described, and had a proper description of its own, the fitting course would be, that it should be described apart from all others. Since, however, it is impossible for any one of the first rudiments to be defined in words, there is nothing for it except to be named only: name is all it has. But, as to the things compounded of these, as they are themselves complex, so also their names being combined constitute definition: for a complex of names is the essence of definition. Thus I dreamed that the elements are undescribed and unknown, but perceptible; while their combinations are known and expressed and conceived by true opinion. Whenever any one gains the true opinion of anything without definition, his soul is truthful with regard to it, but does not know it, for one who cannot give and receive a spoken account of anything is incognisant of it. But after adding such an account, he is capable of becoming all this, and is perfect in knowledge. Have you heard the dream thus or otherwise?

Theaetetus:: Exactly thus.

Socrates:: Are you content with it, and do you lay it down that true opinion combined with explanation is knowledge?

Theaetetus:: Quite so.

Socrates:: Have we to-day, Theaetetus, in this manner found at last what from ancient time so many wise men have grown old without finding?

Theaetetus:: At all events, Socrates, I think our present statement a good one.

Socrates:: It may naturally seem so. For what can be called knowledge apart from definition and right opinion? Yet I am displeased with one of the things we said.

Theaetetus:: What was that?

Socrates:: One that seems to be stated very neatly, how that the elements are unknown, but the class of combinations known.

Theaetetus:: Is not that true?

Socrates:: We must see. For we have as hostages all the examples which he used in saying what he did.

Theaetetus:: What are they?

Socrates:: Letters and syllables. Do you think the speaker had anything but these in view when he said what we cite?

Theaetetus:: No: he thought of these.

Socrates:: Let us then take and test them; or, rather test ourselves, whether we learnt letters on this principle or any other. To begin: can syllables be defined, but letters not?

Theaetetus:: Probably.

Socrates:: I take the same view. If some one asked about the first syllable of Socrates for instance and said, ‘Tell me, Theaetetus, what Sō is: how would you answer?

Theaetetus:: Sigma and Ōmega.

Socrates:: This then you hold to be the definition of the syllable?

Theaetetus:: I do.

Socrates:: Well now, tell me similarly the definition of Sigma.

Theaetetus:: How can one tell the elements of an element? For indeed, Socrates, Sigma is one of the consonants, a sort of noise only, as when the tongue hisses; Beta again has neither sound nor noise: nor have most of the letters. So they may very well be called undefined, as the clearest of them have sound alone, but no definition at all.

Socrates:: So much then, my friend, we have rightly determined concerning knowledge?

Theaetetus:: Apparently.

Socrates:: Well now? Have we rightly admitted that the letter is not known, but only the syllable?

Theaetetus:: Seemingly.

Socrates:: Do we now say that the syllable is both letters, or if there be more than two, all these, or some one idea arising from their combination?

Theaetetus:: I think we should say, all of them.

Socrates:: Take the case of two, Sigma and Ōmega. These two form the first syllable of my name. Does not one who knows the syllable know both?

Theaetetus:: To be sure.

Socrates:: He knows Sigma and Ōmega?

Theaetetus:: Yes.

Socrates:: How then? is he ignorant of each, and, knowing neither, does he know both?

Theaetetus:: That were strange and unreasonable, Socrates.

Socrates:: And yet, if a person must perforce know each, in order to know both, it is absolutely necessary for one who is ever to know a syllable, to know the letters first. And thus our beautiful argument will have run clear away from us.

Theaetetus:: Ay, and in a very sudden way.

Socrates:: We do not keep a good watch on it. Perhaps we ought to have laid it down that a syllable is not the letters themselves, but some notion arising from them, having one form belonging to itself, while another belongs to the separate letters.

Theaetetus:: Quite so. And perhaps this statement may be truer than the other.

Socrates:: We must consider the point, and not abandon in this cowardly way a great and dignified theory.

Theaetetus:: Surely not.

Socrates:: Suppose it be as we now say. The syllable is one general form arising from the harmonious adaptation of the several elements; both in grammar and everywhere else.

Theaetetus:: Very well.

Socrates:: Then there must be no parts of it.

Theaetetus:: Why?

Socrates:: Because, if a thing has parts, the whole must necessarily be all the parts. Or do you say that a whole formed of parts is a notion distinct from all its parts?

Theaetetus:: Yes, I do.

Socrates:: Do you call the all and the whole the same or different?

Theaetetus:: I have no clear view: but as you bid me answer readily, I take the risk of saying they are different.

Socrates:: Your readiness, Theaetetus, is right. Whether the answer is so too, we must consider.

Theaetetus:: We must.

Socrates:: Will not the whole differ from the all, according to your present argument?

Theaetetus:: Yes.

Socrates:: Well now, is there any difference between all (plural) and the all (singular)? For instance, when we say, one, two, three, four, five, six, and if we say twice three or thrice two, or four and two, or three and two and one, do we in all these cases speak of the same or something different?

Theaetetus:: Of the same.

Socrates:: That is, six; is it not?

Theaetetus:: Yes.

Socrates:: In each form of speech we have spoken of all the six?

Theaetetus:: Yes.

Socrates:: Again, when we speak of all, do we not speak of one thing?

Theaetetus:: We must.

Socrates:: Is it not of the six?

Theaetetus:: Yes.

Socrates:: Do we predicate the same unity of all things consisting of number, whether under the term πᾶν or τὰ πάντα (in singular or plural form)?

Theaetetus:: Evidently.

Socrates:: Let us now state the question as follows: The number of the acre and the acre are the same; are they not?

Theaetetus:: Yes.

Socrates:: And so of the furlong?

Theaetetus:: Yes.

Socrates:: Again, the number of the camp and the camp, and all such things similarly? For the whole number is the essential whole in each case?

Theaetetus:: Yes.

Socrates:: And is not the number of each the parts of each?

Theaetetus:: Yes.

Socrates:: And all things which have parts will consist of parts?

Theaetetus:: Evidently.

Socrates:: And all the parts have been admitted to be the all, if the entire number is to be the all.

Theaetetus:: True.

Socrates:: Then the whole does not consist of parts. For it would be the all, being all the parts?

Theaetetus:: Seemingly not.

Socrates:: But can any thing which is a part, be a part of any thing except of a whole?

Theaetetus:: Yes, of the all.

Socrates:: You show fight manfully, Theaetetus. But is it not in the very case when nothing is absent that the all is all?

Theaetetus:: Necessarily.

Socrates:: And will not the whole be the very same thing—that from which nothing is anywhere absent? For that from which anything is absent, is neither a whole nor an all, each of these being equally constituted by the same combination of parts.

Theaetetus:: I now think there is no difference between an all and a whole.

Socrates:: Did we not say, that whenever a thing has parts, the whole and all will mean all the parts?

Theaetetus:: Certainly.

Socrates:: Again: to resume my late essay, if the syllable is not the letters, does it not follow that it has not the letters for its parts, or if it be the same with them, it must be known equally with them?

Theaetetus:: Yes.

Socrates:: Was it not to obviate this result that we defined it to be different from them?

Theaetetus:: Yes.

Socrates:: Well, if the letters are not parts of a syllable, have you any other things to name, which are parts of a syllable, besides its letters?

Theaetetus:: By no means. For if I allowed it to have parts, it would be ridiculous to abandon the letters, and seek anything else.

Socrates:: Decidedly, Theaetetus, according to the present view a syllable must be a single generality without parts.

Theaetetus:: Seemingly.

Socrates:: Do you remember, my friend, that a short time back we accepted the statement, deeming it a good one, that of the primal elements, of which all things are composed, there is no definition, because each by itself is uncompounded, and that it is not right to apply to it the term ‘is,’ nor yet ‘this,’ which are alien and foreign to it; and this cause makes such element indefinable and unknown?

Theaetetus:: I remember.

Socrates:: Is there any other cause than this of its being simple and indivisible? I see no other.

Theaetetus:: Apparently none.

Socrates:: Accordingly, the syllable is shown to belong to the same class as the element, if it has no parts, and is one general notion?

Theaetetus:: Undoubtedly.

Socrates:: If then the syllable has many letters, and is a certain whole, and they are its parts, syllables and letters are alike knowable and utterable, since ‘all the parts’ were shown to be the same with the whole?

Theaetetus:: Assuredly.

Socrates:: But if it is one and indivisible, both syllable and letter are equally indefinable and unknowable: for the same cause will make them both so?

Theaetetus:: I cannot contradict you.

Socrates:: Let us not accept this statement from anybody, that a syllable can be known and expressed, but not a letter.

Theaetetus:: We must not, if we concur with the argument.

Socrates:: Yet further: would you not rather accept the opposite view, from knowing what happened to yourself when you learnt to read?

Theaetetus:: What is that?

Socrates:: That all you went on doing in the course of learning was, to try to distinguish each individual letter as you saw and heard it, that their order might not confuse you when they were spoken and written.

Theaetetus:: Very true.

Socrates:: And did not a complete instruction at your music-master's mean the being able to follow each note, and say what string answered to it? These everybody would own to be properly called the elements of music.

Theaetetus:: Yes.

Socrates:: So far then as we have experience of letters and syllables, if from these cases we may draw inferences as to others, we shall say that the class of elements admits of a knowledge much clearer than the syllable, and more important for the perfect mastery of each study; and, if any one shall say that the syllable is naturally known, but the element unknown, we shall think he is joking or talking nonsense?

Theaetetus:: Undoubtedly.

Socrates:: Other proofs of this fact might be shown, I think; but let us not for their sake forget to keep in view the proposed topic, namely, what is meant by saying that true opinion combined with rational explanation is the most perfect knowledge.

Theaetetus:: We must keep it in view.

Socrates:: Well now, what does the term explanation indicate to us? I think it means one of three things.

Theaetetus:: What are they?

Socrates:: The first will be—making one's meaning clear through the voice with verbs and nouns, imaging opinion in the stream through the voice as in a mirror or in water. Do you not consider explanation to be something of this sort?

Theaetetus:: I do. We say therefore that one who does so explains.

Socrates:: This however is not everybody able to do sooner or later,—to show what he thinks about anything—if he is not born deaf or dumb? and so all those who have any right opinion, will appear to have with it the faculty of explanation, and right opinion will thus nowhere be formed without knowledge.

Theaetetus:: True.

Socrates:: Let us not however lightly pronounce sentence on him who defined knowledge in the way we are now considering—that he is guilty of talking nonsense. Perhaps he did not mean to say this, but rather the being able, when asked what anything is, to make answer to the questioner in terms of its elements.

Theaetetus:: Instance what you mean, Socrates.

Socrates:: As Hesiod speaking of a wagon says, ‘A wagon consists of a hundred planks.’ I cannot describe them, probably you cannot. If we were asked what a wagon is, we should be content if we could say, wheels, axle, body, seat, yoke.

Theaetetus:: Quite so.

Socrates:: The questioner might perhaps think us ridiculous, as he would if being asked your name and making answer by syllables,—while all we thought and said was right—we deemed that as skilful grammarians we had in mind and stated grammatically the definition of the name Theaetetus; though the fact is that nobody can define anything with knowledge, until he fully describe it in its elements with true opinion; as was before, I think, laid down.

Theaetetus:: It was.

Socrates:: So too he might consider, with respect to a wagon, that we have right opinion indeed, but’ that one who was able to detail its nature by those hundred planks, had, through this addition, joined explanation to true opinion, and instead of opinion had got technical knowledge about the nature of a wagon, having fully described the whole in its elements.

Theaetetus:: Do you not think his opinion good, Socrates?

Socrates:: If you think so, my friend, and accept this view, that the full description of everything by its elements is explanation, but the description by syllables or anything more comprehensive is failure of explanation, tell me so, that we may criticize it.

Theaetetus:: I quite accept that view.

Socrates:: Do you accept it under the belief that a person is cognizant of anything when he thinks that the same thing sometimes belongs to the same, sometimes to another, or when he thinks that to the same thing at one time one thing belongs, at another time another?

Theaetetus:: I believe nothing of the sort.

Socrates:: Do you forget that, when you learnt your letters at first, you and the other scholars did such things?

Theaetetus:: Do you mean that we thought first one letter, then another, belonged to the same syllable, and that we assigned the same letter sometimes to its proper syllable, sometimes to another?

Socrates:: That is what I mean.

Theaetetus:: No, I do not forget; nor do I consider that they who are in this condition have yet acquired knowledge.

Socrates:: Well, when a child of that age writing 'Theaetetus,' thinks he ought to write, and does write 'theta' and 'epsilon,' and again attempting to write Theodorus thinks he ought to write and does write 'tau' and ‘epsilon,’ shall we say that he knows the first syllable of your names?

Theaetetus:: It has been just allowed that such an one does not yet know.

Socrates:: Is there anything to hinder the same child from making a similar error in respect of the second, third, and fourth syllables?

Theaetetus:: Nothing at all.

Socrates:: Will one who has in mind the description by elements write ‘Theaetetus  with true opinion, whensoever he writes it in just order?

Theaetetus:: Evidently.

Socrates:: Being still without knowledge, though having right opinion, do we say?

Theaetetus:: Yes.

Socrates:: And yet he unites explanation with right opinion: for he wrote that description by elements which we admitted to be rational explanation?

Theaetetus:: True.

Socrates:: And thus, my friend, there is a right opinion with explanation, which we cannot yet call knowledge.

Theaetetus:: Apparently.

Socrates:: So we seem only to have dreamt we were rich in thinking we had the truest explanation of knowledge. Or must we suspend this charge? Somebody, perhaps, will not define ‘explanation’ thus: but rather as the remaining form of those three, one or other of which we said would be taken as ‘explanation,’ by one who defined knowledge to be ‘true opinion with explanation.’

Theaetetus:: You justly remind me. There was one form left. The first was the image, as it were, of thought in utterance: the second, now discussed, was the road to the whole through the elements. What do you call the third?

Socrates:: That which most people would define as being able to mention some sign by which the thing in question differs from all others.

Theaetetus:: Can you give me an instance of any such explanation of anything?

Socrates:: Yes, one which, if you like, I think you may competently accept concerning the sun, that it is the brightest of the bodies which travel in the heaven round the earth.

Theaetetus:: Certainly.

Socrates:: Now learn why this is said. The fact is, as we were lately saying, that, if you take the difference between each individual and all others, you will get a definition, as some say: but, as long as you lay hold of some common feature only, your account will be about those things which have that community.

Theaetetus:: I understand. And I think it right to call such a process definition.

Socrates:: But whosoever with right opinion about any thing learns furthermore its difference from others, will have gained knowledge of that of which before he had opinion.

Theaetetus:: Yes, we state it so.

Socrates:: Now then most decidedly, Theaetetus, since I have come near to our proposition, as it were to a drawing, I do not understand it in the least. As long as I stood at a distance from it, there appeared to be some sense in it.

Theaetetus:: What do you mean by this?

Socrates:: I will tell you, if I can. Having a right opinion of you, if I add to this your definition, I know you; if not, I have opinion of you only.

Theaetetus:: Yes.

Socrates:: And the definition was the interpretation of your distinction.

Theaetetus:: Even so.

Socrates:: When I was opining only, was it not the case that I did not grasp with my mind any of the points in which you differ from others?

Theaetetus:: Seemingly.

Socrates:: Then I was taking note of some of the common features, which belong no more to you than to other people?

Theaetetus:: Of course.

Socrates:: Now do pray tell me: in such a case how will you more than anybody else have been conceived by me? Suppose me to imagine that this is Theaetetus, whoever is a man, and has a nose and eyes and mouth, and any other individual member. Will this imagination cause me to conceive Theaetetus more than Theodorus, or, proverbially speaking, any rapscallion whatever?

Theaetetus:: How can it?

Socrates:: Or, if I imagine him having not only nose and eyes, but also as the one who has a flat nose and prominent eyes, shall I have a notion of you more than of myself, or of any other with these features?

Theaetetus:: No.

Socrates:: Theaetetus, I fancy, will not be conceived in my mind until this flatness of nose shall have stamped and deposited in my heart some memorial different from all other snubnesses of nose seen by me (I might say the same of all your other features), which shall bring you to my mind, if I meet you to-morrow, and make me to have right opinion about you.

Theaetetus:: Most true.

Socrates:: Right opinion then in each case will be concerned with differentiation.

Theaetetus:: Evidently.

Socrates:: What then will be c the adding explanation to right opinion?' For if it means, to add an opinion of the manner in which one thing differs from all others, this direction becomes utterly ridiculous.

Theaetetus:: How?

Socrates:: Of things whereof we have a right opinion as to the nature of their difference from others, it bids us add a right opinion of the nature of their difference from others. And thus the proverbial twirl of the scytal or the pestle or anything else would be a mere trifle compared with this direction: nay it might more fairly be called a blind man's direction: for to bid us add what we have got already, that we may learn what we think already, is a splendid illustration of a man groping in the dark.

Theaetetus:: Tell me now what answer you meant to give to your last question.

Socrates:: If bidding us to add explanation is bidding us to know distinction,—not to have an opinion of distinction—the finest of our definitions of knowledge will turn out to be a nice sort of thing. For to know is, I suppose, to get knowledge. Is it not?

Theaetetus:: Yes.

Socrates:: Then, if asked, it seems, what knowledge is, a person will reply that it is right opinion with a knowledge of difference: for the addition of explanation will mean this in his view.

Theaetetus:: Seemingly.

Socrates:: Yet it is utterly silly, when we are seeking knowledge, to say that it is right opinion with knowledge whether of difference or of anything else. So, Theaetetus, neither sensible perception, nor true opinion, nor explanation accompanying true opinion will be knowledge.

Theaetetus:: Seemingly not.

Socrates:: Do we still conceive anything and feel throes, my friend, about knowledge, or have we given birth to everything?

Theaetetus:: By all that's sacred, Socrates, with your help I have said more than I had in my own mind.

Socrates:: And does not our art declare that all these products have turned out to be wind, and not worth rearing?

Theaetetus:: Decidedly so.

Socrates:: Well, Theaetetus, if you seek to become, and do become, pregnant with other thoughts hereafter, the present enquiry will have improved your conceptions; and, if you do not, you will be less severe to your associates, more mild and temperate, not supposing that you know what you do not know. So much only as this my art can do, no more. Nor do I know any of the things which others do, who are—and have made themselves—great and wondrous men. This midwifery I and my mother received as our function from God, she to practice it on women, I on young, noble and beautiful men.

Now, however, I. must encounter Melitus and his indictment against me at the Porch of the King. In the morning, Theodorus, let us meet again here.

# Theaetetus

Translated by M. J. Levett, rev. Myles Burnyeat.

Socrates, Theodorus, Theaetetus, Euclides, Terpsion

Euclid:: Are you only just in from the country, Terpsion? Or have you been here some time?

Terpsion:: I’ve been here a good while. In fact, I have been looking for you in the market-place and wondering that I couldn’t find you.

Euclid:: Well, you couldn’t, because I was not in the city.

Terpsion:: Where have you been, then?

Euclid:: I went down to the harbor; and as I was going, I met Theaetetus, being taken to Athens from the camp at Corinth.

Terpsion:: Alive or dead?

Euclid:: Alive; but that’s about all one could say. Badly wounded for one thing; but the real trouble is this sickness that has broken out in the army.

Terpsion:: Dysentery?

Euclid:: Yes.

Terpsion:: What a man to lose!

Euclid:: Yes. A fine man, Terpsion. Only just now I was listening to some people singing his praises for the way he behaved in the battle.

Terpsion:: Well, there’s nothing extraordinary about that. Much more to be wondered at if he hadn’t distinguished himself. But why didn’t he put up here at Megara?

Euclid:: He was in a hurry to get home. I kept asking him myself, and advising him; but he wouldn’t. So I saw him on his way. And as I was coming back, I thought of Socrates and what a remarkably good prophet he was—as usual—about Theaetetus. It was not long before his death, if I remember rightly, that he came across Theaetetus, who was a boy at the time. Socrates met him and had a talk with him, and was very much struck with his natural ability; and when I went to Athens, he repeated to me the discussion they had had, which was well worth listening to. And he said to me then that we should inevitably hear more of Theaetetus, if he lived to grow up.

Terpsion:: Well, he appears to have been right enough.—But what was this discussion? Could you tell it to me?

Euclid:: Good Lord, no. Not from memory, anyway. But I made some notes of it at the time, as soon as I got home; then afterwards I recalled it at my leisure and wrote it out, and whenever I went to Athens, I used to ask Socrates about the points I couldn't remember, and correct my version when I got home. The result is that I have got pretty well the whole discussion in writing.

Terpsion:: Yes, of course. I have heard you say that before, and I have always been meaning to ask you to show it to me, though I have been so long about it. But is there any reason why we shouldn't go through it now? I want a rest, in any case, after my journey in from the country.

Euclid:: Well, I shouldn't mind sitting down either. I saw Theaetetus as far as Erineum. Come along. We will get the slave to read it to us while we rest.

Terpsion:: Right.

Euclid:: This is the book, Terpsion. You see, I have written it out like this: I have not made Socrates relate the conversation as he related it to me, but I represent him as speaking directly to the persons with whom he said he had this conversation. (These were, he told me, Theodorus the geometer and Theaetetus.) I wanted, in the written version, to avoid the bother of having the bits of narrative in between the speeches—I mean, when Socrates, whenever he mentions his own part in the discussion, says ‘And I maintained’ or ‘I said,’ or, of the person answering, ‘He agreed’ or ‘He would not admit this.’ That is why I have made him talk directly to them and have left out these formulae.

Terpsion:: Well, that’s quite in order, Euclides.

Euclid:: Now, boy, let us have it.

Socrates:: If Cyrene were first in my affections, Theodorus, I should be asking you how things are there, and whether any of your young people are taking up geometry or any other branch of philosophy. But, as it is, I love Athens better than Cyrene, and so I’m more anxious to know which of our young men show signs of turning out well. That, of course, is what I am always trying to find out myself, as best I can; and I keep asking other people too—anyone round whom I see the young men are inclined to gather. Now you, of course, are very much sought after, and with good reason; your geometry alone entitles you to it, and that is not your only claim. So if you have come across anyone worth mentioning, I should be glad to hear.

Theodorus:: Well, Socrates, I think you ought to be told, and I think I ought to tell you, about a remarkable boy I have met here, one of your fellow countrymen. And if he were beautiful, I should be extremely nervous of speaking of him with enthusiasm, for fear I might be suspected of being in love with him. But as a matter of fact—if you’ll excuse my saying such a thing—he is not beautiful at all, but is rather like you, snub-nosed, with eyes that stick out; though these features are not quite so pronounced in him. I speak without any qualms; and I assure you that among all the people I have ever met—and I have got to know a good many in my time—I have never yet seen anyone so amazingly gifted. Along with a quickness beyond the capacity of most people, he has an unusually gentle temper; and, to crown it all, he is as manly a boy as any of his fellows. I never thought such a combination could exist; I don’t see it arising elsewhere. People as acute and keen and retentive as he is are apt to be very unbalanced. They get swept along with a rush, like ships without ballast; what stands for courage in their makeup is a kind of mad excitement; while, on the other hand, the steadier sort of people are apt to come to their studies with minds that are sluggish, somehow—freighted with a bad memory. But this boy approaches his studies in a smooth, sure, effective way, and with great good temper; it reminds one of the quiet flow of a stream of oil. The result is that it is astonishing to see how he gets through his work, at his age.

Socrates:: That is good news. And he is an Athenian—whose son is he?

Theodorus:: I have heard the name, but I don’t remember it. But he is the middle one of this group coming toward us. He and his companions were greasing themselves outside just now; it looks as if they have finished and are coming in here. But look and see if you recognize him.

Socrates:: Yes, I know him. He’s the son of Euphronius of Sunium— very much the kind of person, my friend, that you tell me his son is. A distinguished man in many ways; he left a considerable property too. But I don’t know the boy’s name.

Theodorus:: His name, Socrates, is Theaetetus. As for the property, that, I think, has been made away with by trustees. All the same, he is wonderfully open-handed about money, Socrates.

Socrates:: A thoroughbred, evidently. I wish you would ask him to come and sit with us over here.

Theodorus:: All right. Theaetetus, come here beside Socrates.

Socrates:: Yes, come along, Theaetetus. I want to see for myself what sort of a face I have. Theodorus says I am like you. But look. If you and I had each had a lyre, and Theodorus had told us that they were both similarly tuned, should we have taken his word for it straightaway? Or should we have tried to find out if he was speaking with any expert knowledge of music?

Theaetetus:: Oh, we should have inquired into that.

Socrates:: And if we had found that he was a musician, we should have believed what he said; but if we found he had no such qualification, we should have put no faith in him.

Theaetetus:: Yes, that's true.

Socrates:: And now, I suppose, if we are interested in this question of our faces being alike, we ought to consider whether he is speaking with any knowledge of drawing or not?

Theaetetus:: Yes, I should think so.

Socrates:: Then is Theodorus an artist?

Theaetetus:: No, not so far as I know.

Socrates:: Nor a geometer, either?

Theaetetus:: Oh, there's no doubt about his being that, Socrates.

Socrates:: And isn't he also a master of astronomy and arithmetic and music—of all that an educated man should know?

Theaetetus:: Well, he seems to me to be.

Socrates:: Then if he asserts that there is some physical resemblance between us—whether complimenting us or the reverse—one ought not to pay much attention to him?

Theaetetus:: No, perhaps not.

Socrates:: But supposing it were the soul of one of us that he was praising? Suppose he said one of us was good and wise? Oughtn't the one who heard that to be very anxious to examine the object of such praise? And oughtn't the other to be very willing to show himself off?

Theaetetus:: Yes, certainly, Socrates.

Socrates:: Then, my dear Theaetetus, now is the time for you to show yourself and for me to examine you. For although Theodorus often gives me flattering testimonials for people, both Athenians and foreigners, I assure you I have never before heard him praise anybody in the way he has just praised you.

Theaetetus:: That's all very well, Socrates; but take care he wasn't saying that for a joke.

Socrates:: That is not Theodorus' way. Now don't you try to get out of what we have agreed upon with the pretence that our friend is joking, or you may make it necessary for him to give his evidence—since no charge of perjury is ever likely to be brought against him. So have the pluck to stand by your agreement.

Theaetetus:: All right, I must, then, if that's what you've decided.

Socrates:: Tell me now. You are learning some geometry from Theodorus, I expect?

Theaetetus:: Yes, I am.

Socrates:: And some astronomy and music and arithmetic?

Theaetetus:: Well, I'm very anxious to, anyway.

Socrates:: And so am I, my son—from Theodorus or from anyone who seems to me to know about these things. But although I get on with them pretty well in most ways, I have a small difficulty, which I think ought to be investigated, with your help and that of the rest of the company.— Now isn't it true that to learn is to become wiser about the thing one is learning?

Theaetetus:: Yes, of course.

Socrates:: And what makes men wise, I take it, is wisdom?

Theaetetus:: Yes.

Socrates:: And is this in any way different from knowledge?

Theaetetus:: What?

Socrates:: Wisdom. Isn't it the things which they know that men are wise about?

Theaetetus:: Well, yes.

Socrates:: So knowledge and wisdom will be the same thing?

Theaetetus:: Yes.

Socrates:: Now this is just where my difficulty comes in. I can't get a proper grasp of what on earth knowledge really is. Could we manage to put it into words? What do all of you say? Who'll speak first? Anyone who makes a mistake shall sit down and be Donkey, as the children say when they are playing ball; and anyone who comes through without a miss shall be King and make us answer any question he likes.— Well, why this silence? Theodorus, I hope my love of argument is not making me forget my manners—just because I'm so anxious to start a discussion and get us all friendly and talkative together?

Theodorus:: No, no, Socrates—that's the last thing one could call forgetting your manners. But do make one of the young people answer you. I am not used to this kind of discussion, and I'm too old to get into the way of it. But it would be suitable enough for them and they would profit more by it. For youth can always profit, that's true enough.

So do go on; don't let Theaetetus off but ask him some more questions.

Socrates:: Well, Theaetetus, you hear what Theodorus says. You won't want to disobey him, I'm sure; and certainly a wise man shouldn't be disobeyed by his juniors in matters of this kind—it wouldn't be at all the proper thing. Now give me a good frank answer. What do you think knowledge is?

Theaetetus:: Well, I ought to answer, Socrates, as you and Theodorus tell me to. In any case, you and he will put me right, if I make a mistake.

Socrates:: We certainly will, if we can.

Theaetetus:: Then I think that the things Theodorus teaches are knowledge—I mean geometry and the subjects you enumerated just now. Then again there are the crafts such as cobbling, whether you take them together or separately. They must be knowledge, surely.

Socrates:: That is certainly a frank and indeed a generous answer, my dear lad. I asked you for one thing and you have given me many; I wanted something simple, and I have got a variety.

Theaetetus:: And what does that mean, Socrates?

Socrates:: Nothing, I dare say. But I'll tell you what I think. When you talk about cobbling, you mean just knowledge of the making of shoes?

Theaetetus:: Yes, that's all I mean by it.

Socrates:: And when you talk about carpentering, you mean simply the knowledge of the making of wooden furniture?

Theaetetus:: Yes, that's all I mean, again.

Socrates:: And in both cases you are putting into your definition what the knowledge is of?

Theaetetus:: Yes.

Socrates:: But that is not what you were asked, Theaetetus. You were not asked to say what one may have knowledge of, or how many branches of knowledge there are. It was not with any idea of counting these up that the question was asked; we wanted to know what knowledge itself is.— Or am I talking nonsense?

Theaetetus:: No, you are perfectly right.

Socrates:: Now think about this too. Supposing we were asked about some commonplace, everyday thing; for example, what is clay? And supposing we were to answer, ‘clay of the potters’ and ‘clay of the stove-makers’ and ‘clay of the brick-makers’, wouldn’t that be absurd of us?

Theaetetus:: Well, perhaps it would.

Socrates:: Absurd to begin with, I suppose, to imagine that the person who asked the question would understand anything from our answer when we say ‘clay’, whether we add that it is doll-makers’ clay or any other craftsman’s. Or do you think that anyone can understand the name of a thing when he doesn’t know what the thing is?

Theaetetus:: No, certainly not.

Socrates:: And so a man who does not know what knowledge is will not understand ‘knowledge of shoes’ either?

Theaetetus:: No, he won’t.

Socrates:: Then a man who is ignorant of what knowledge is will not understand what cobbling is, or any other craft?

Theaetetus:: That is so.

Socrates:: So when the question raised is ‘What is knowledge?’, to reply by naming one of the crafts is an absurd answer; because it points out something that knowledge is of when this is not what the question was about.

Theaetetus:: So it seems.

Socrates:: Again, it goes no end of a long way round, in a case where, I take it, a short and commonplace answer is possible. In the question about clay, for example, it would presumably be possible to make the simple, commonplace statement that it is earth mixed with liquid, and let the question of whose clay it is take care of itself.

Theaetetus:: That seems easier, Socrates, now you put it like that. But I believe you’re asking just the sort of question that occurred to your namesake Socrates here and myself, when we were having a discussion a little while ago.

Socrates:: And what was that, Theaetetus?

Theaetetus:: Theodorus here was demonstrating to us with the aid of diagrams a point about powers. He was showing us that the power of three square feet and the power of five square feet are not commensurable in length with the power of one square foot; and he went on in this way, taking each case in turn till he came to the power of seventeen square feet; there for some reason he stopped. So the idea occurred to us that, since the powers were turning out to be unlimited in number, we might try to collect the powers in question under one term, which would apply to them all.

Socrates:: And did you find the kind of thing you wanted?

Theaetetus:: I think we did. But I'd like you to see if it’s all right.

Socrates:: Go on, then.

Theaetetus:: We divided all numbers into two classes. Any number which can be produced by the multiplication of two equal numbers, we compared to a square in shape, and we called this a square or equilateral number.

Socrates:: Good, so far.

Theaetetus:: Then we took the intermediate numbers, such as three and five and any number which can't be produced by multiplication of two equals but only by multiplying together a greater and a less; a number such that it is always contained by a greater and a less side. A number of this kind we compared to an oblong figure, and called it an oblong number.

Socrates:: That's excellent. But how did you go on?

Theaetetus:: We defined under the term 'length' any line which produces in square an equilateral plane number; while any line which produces in square an oblong number we defined under the term 'power', for the reason that although it is incommensurable with the former in length, it is commensurable in the plane figures which they respectively have the power to produce. And there is another distinction of the same sort with regard to solids.

Socrates:: Excellent, my boys. I don't think Theodorus is likely to be had up for false witness.

Theaetetus:: And yet, Socrates, I shouldn't be able to answer your question about knowledge in the same way that I answered the one about lengths and powers—though you seem to me to be looking for something of the same sort. So Theodorus turns out a false witness after all.

Socrates:: Well, but suppose now it was your running he had praised; suppose he had said that he had never met anyone among the young people who was such a runner as you. And then suppose you were beaten by the champion runner in his prime—would you think Theodorus' praise had lost any of its truth?

Theaetetus:: No, I shouldn't.

Socrates:: But do you think the discovery of what knowledge is is really what I was saying just now—a small thing? Don’t you think that’s a problem for the people at the top?

Theaetetus:: Yes, rather, I do; and the very topmost of them.

Socrates:: Then do have confidence in yourself and try to believe that Theodorus knew what he was talking about. You must put your whole heart into what we are doing—in particular into this matter of getting a statement of what knowledge really is.

Theaetetus:: If putting one’s heart into it is all that is required, Socrates, the answer will come to light.

Socrates:: Go on, then. You gave us a good lead just now. Try to imitate your answer about the powers. There you brought together the many powers within a single form; now I want you in the same way to give one single account of the many branches of knowledge.

Theaetetus:: But I assure you, Socrates, I have often tried to think this out, when I have heard reports of the questions you ask. But I can never persuade myself that anything I say will really do; and I never hear anyone else state the matter in the way that you require. And yet, again, you know, I can’t even stop worrying about it.

Socrates:: Yes; those are the pains of labor, dear Theaetetus. It is because you are not barren but pregnant.

Theaetetus:: I don’t know about that, Socrates. I’m only telling you what’s happened to me.

Socrates:: Then do you mean to say you’ve never heard about my being the son of a good hefty midwife, Phaenarete?

Theaetetus:: Oh, yes, I’ve heard that before.

Socrates:: And haven’t you ever been told that I practice the same art myself?

Theaetetus:: No, I certainly haven’t.

Socrates:: But I do, believe me. Only don't give me away to the rest of the world, will you? You see, my friend, it is a secret that I have this art. That is not one of the things you hear people saying about me, because they don't know; but they do say that I am a very odd sort of person, always causing people to get into difficulties. You must have heard that, surely?

Theaetetus:: Yes, I have.

Socrates:: And shall I tell you what is the explanation of that?

Theaetetus:: Yes, please do.

Socrates:: Well, if you will just think of the general facts about the business of midwifery, you will see more easily what I mean. You know, I suppose, that women never practice as midwives while they are still conceiving and bearing children themselves. It is only those who are past child-bearing who take this up.

Theaetetus:: Oh, yes.

Socrates:: They say it was Artemis who was responsible for this custom; it was because she, who undertook the patronage of childbirth, was herself childless. She didn't, it's true, entrust the duties of midwifery to barren women, because human nature is too weak to acquire skill where it has no experience. But she assigned the task to those who have become incapable of child-bearing through age—honoring their likeness to herself.

Theaetetus:: Yes, naturally.

Socrates:: And this too is very natural, isn't it?—or perhaps necessary? I mean that it is the midwives who can tell better than anyone else whether women are pregnant or not.

Theaetetus:: Yes, of course.

Socrates:: And then it is the midwives who have the power to bring on the pains, and also, if they think fit, to relieve them; they do it by the use of simple drugs, and by singing incantations. In difficult cases, too, they can bring about the birth; or, if they consider it advisable, they can promote a miscarriage.

Theaetetus:: Yes, that is so.

Socrates:: There's another thing too. Have you noticed this about them, that they are the cleverest of matchmakers, because they are marvelously knowing about the kind of couples whose marriage will produce the best children?

Theaetetus:: No, that is not at all familiar to me.

Socrates:: But they are far prouder of this, believe me, than of cutting the umbilical cord. Think now. There's an art which is concerned with the cultivation and harvesting of the crops. Now is it the same art which prescribes the best soil for planting or sowing a given crop? Or is it a different one?

Theaetetus:: No, it is all the same art.

Socrates:: Then applying this to midwifery, will there be one art of the sowing and another of the harvesting?

Theaetetus:: That doesn't seem likely, certainly.

Socrates:: No, it doesn't. But there is also an unlawful and unscientific practice of bringing men and women together, which we call procuring; and because of that the midwives—a most august body of women—are very reluctant to undertake even lawful matchmaking. They are afraid that if they practice this, they may be suspected of the other. And yet, I suppose, reliable matchmaking is a matter for no one but the true midwife.

Theaetetus:: Apparently.

Socrates:: So the work of the midwives is a highly important one; but it is not so important as my own performance. And for this reason, that there is not in midwifery the further complication, that the patients are sometimes delivered of phantoms and sometimes of realities, and that the two are hard to distinguish. If there were, then the midwife's greatest and noblest function would be to distinguish the true from the false offspring— don't you agree?

Theaetetus:: Yes, I do.

Socrates:: Now my art of midwifery is just like theirs in most respects. The difference is that I attend men and not women, and that I watch over the labor of their souls, not of their bodies. And the most important thing about my art is the ability to apply all possible tests to the offspring, to determine whether the young mind is being delivered of a phantom, that is, an error, or a fertile truth. For one thing which I have in common with the ordinary midwives is that I myself am barren of wisdom. The common reproach against me is that I am always asking questions of other people but never express my own views about anything, because there is no wisdom in me; and that is true enough. And the reason of it is this, that God compels me to attend the travail of others, but has forbidden me to procreate. So that I am not in any sense a wise man; I cannot claim as the child of my own soul any discovery worth the name of wisdom. But with those who associate with me it is different. At first some of them may give the impression of being ignorant and stupid; but as time goes on and our association continues, all whom God permits are seen to make progress— a progress which is amazing both to other people and to themselves. And yet it is clear that this is not due to anything they have learned from me; it is that they discover within themselves a multitude of beautiful things, which they bring forth into the light. But it is I, with God’s help, who deliver them of this offspring. And a proof of this may be seen in the many cases where people who did not realize this fact took all the credit to themselves and thought that I was no good. They have then proceeded to leave me sooner than they should, either of their own accord or through the influence of others. And after they have gone away from me they have resorted to harmful company, with the result that what remained within them has miscarried; while they have neglected the children I helped them to bring forth, and lost them, because they set more value upon lies and phantoms than upon the truth; finally they have been set down for ignorant fools, both by themselves and by everybody else. One of these people was Aristides the son of Lysimachus; and there have been very many others. Sometimes they come back, wanting my company again, and ready to move heaven and earth to get it. When that happens, in some cases the divine sign that visits me forbids me to associate with them; in others, it permits me, and then they begin again to make progress.

There is another point also in which those who associate with me are like women in child-birth. They suffer the pains of labor, and are filled day and night with distress; indeed they suffer far more than women. And this pain my art is able to bring on, and also to allay.

Well, that’s what happens to them; but at times, Theaetetus, I come across people who do not seem to me somehow to be pregnant. Then I realize that they have no need of me, and with the best will in the world I undertake the business of match-making; and I think I am good enough— God willing—at guessing with whom they might profitably keep company. Many of them I have given away to Prodicus; and a great number also to other wise and inspired persons.

Well, my dear lad, this has been a long yarn; but the reason was that I have a suspicion that you (as you think yourself) are pregnant and in labor. So I want you to come to me as to one who is both the son of a midwife and himself skilled in the art; and try to answer the questions I shall ask you as well as you can. And when I examine what you say, I may perhaps think it is a phantom and not truth, and proceed to take it quietly from you and abandon it. Now if this happens, you mustn't get savage with me, like a mother over her first-born child. Do you know, people have often before now got into such a state with me as to be literally ready to bite when I take away some nonsense or other from them. They never believe that I am doing this in all goodwill; they are so far from realizing that no God can wish evil to man, and that even I don't do this kind of thing out of malice, but because it is not permitted to me to accept a lie and put away truth.

So begin again, Theaetetus, and try to say what knowledge is. And don't on any account tell me that you can't. For if God is willing, and you play the man, you can.

Theaetetus:: Well, Socrates, after such encouragement from you, it would hardly be decent for anyone not to try his hardest to say what he has in him. Very well then. It seems to me that a man who knows something perceives what he knows, and the way it appears at present, at any rate, is that knowledge is simply perception.

Socrates:: There's a good straight answer, my son. That's the way to speak one's mind. But come now, let us look at this thing together, and see whether what we have here is really fertile or a mere wind-egg. You hold that knowledge is perception?

Theaetetus:: Yes.

Socrates:: But look here, this is no ordinary account of knowledge you’ve come out with: it’s what Protagoras used to maintain. He said the very same thing, only he put it in rather a different way. For he says, you know, that ‘Man is the measure of all things: of the things which are, that they are, and of the things which are not, that they are not.’ You have read this, of course?

Theaetetus:: Yes, often.

Socrates:: Then you know that he puts it something like this, that as each thing appears to me, so it is for me, and as it appears to you, so it is for you—you and I each being a man?

Theaetetus:: Yes, that is what he says.

Socrates:: Well, it is not likely that a wise man would talk nonsense. So let us follow him up. Now doesn’t it sometimes happen that when the same wind is blowing, one of us feels cold and the other not? Or that one of us feels rather cold and the other very cold?

Theaetetus:: That certainly does happen.

Socrates:: Well then, in that case are we going to say that the wind itself, by itself, is cold or not cold? Or shall we listen to Protagoras, and say it is cold for the one who feels cold, and for the other, not cold?

Theaetetus:: It looks as if we must say that.

Socrates:: And this is how it appears to each of us?

Theaetetus:: Yes.

Socrates:: But this expression ‘it appears’ means ‘he perceives it’?

Theaetetus:: Yes, it does.

Socrates:: The appearing of things, then, is the same as perception, in the case of hot and things like that. So it results, apparently, that things are for the individual such as he perceives them.

Theaetetus:: Yes, that seems all right.

Socrates:: Perception, then, is always of what is, and unerring—as befits knowledge.

Theaetetus:: So it appears.

Socrates:: But, I say, look here. Was Protagoras one of those omniscient people? Did he perhaps put this out as a riddle for the common crowd of us, while he revealed the Truth as a secret doctrine to his own pupils?

Theaetetus:: What do you mean by that, Socrates?

Socrates:: I'll tell you; and this, now, is certainly no ordinary theory— I mean the theory that there is nothing which in itself is just one thing: nothing which you could rightly call anything or any kind of thing. If you call a thing large, it will reveal itself as small, and if you call it heavy, it is liable to appear as light, and so on with everything, because nothing is one or anything or any kind of thing. What is really true, is this: the things of which we naturally say that they 'are', are in process of coming to be, as the result of movement and change and blending with one another. We are wrong when we say they 'are', since nothing ever is, but everything is coming to be.

And as regards this point of view, let us take it as a fact that all the wise men of the past, with the exception of Parmenides, stand together. Let us take it that we find on this side Protagoras and Heraclitus and Empedocles; and also the masters of the two kinds of poetry, Epicharmus in comedy and Homer in tragedy. For when Homer talked about 'Ocean, begetter of gods, and Tethys their mother', he made all things the offspring of flux and motion.—Or don't you think he meant that?

Theaetetus:: Oh, I think he did.

Socrates:: And if anyone proceeded to dispute the field with an army like that—an army led by Homer—he could hardly help making a fool of himself, could he?

Theaetetus:: It would not be an easy matter, Socrates.

Socrates:: It would not, Theaetetus. You see, there is good enough evidence for this theory that being (what passes for such) and becoming are a product of motion, while not-being and passing-away result from a state of rest. There is evidence for it in the fact that heat or fire, which presumably generates and controls everything else, is itself generated out of movement and friction—these being motions.—Or am I wrong in saying these are the original sources of fire?

Theaetetus:: Oh no, they certainly are.

Socrates:: Moreover, the growth of living creatures depends upon these same sources?

Theaetetus:: Yes, certainly.

Socrates:: And isn't it also true that bodily condition deteriorates with rest and idleness? While by exertion and motion it can be preserved for a long time?

Theaetetus:: Yes.

Socrates:: And what about the condition of the soul? Isn't it by learning and study, which are motions, that the soul gains knowledge and is preserved and becomes a better thing? Whereas in a state of rest, that is, when it will not study or learn, it not only fails to acquire knowledge but forgets what it has already learned?

Theaetetus:: That certainly is so.

Socrates:: And so we may say that the one thing, that is, motion, is beneficial to both body and soul, while the other has the opposite effect?

Theaetetus:: Yes, that's what it looks like.

Socrates:: Yes, and I might go on to point out to you the effect of such conditions as still weather on land and calms on the sea. I might show you how these conditions rot and destroy things, while the opposite conditions make for preservation. And finally, to put the crown on my argument, I might bring in Homer's golden cord, and maintain that he means by this simply the sun; and is here explaining that so long as the revolution continues and the sun is in motion, all things are and are preserved, both in heaven and in earth, but that if all this should be 'bound fast', as it were, and come to a standstill, all things would be destroyed and, as the saying goes, the world would be turned upside down. Do you agree with this?

Theaetetus:: Yes, Socrates, I think that is the meaning of the passage.

Socrates:: Then, my friend, you must understand our theory in this way. In the sphere of vision, to begin with, what you would naturally call a white color is not itself a distinct entity, either outside your eyes or in your eyes. You must not assign it any particular place; for then, of course it would be standing at its post; it wouldn't be in process of becoming.

Theaetetus:: But what do you mean?

Socrates:: Let us follow what we stated a moment ago, and posit that there is nothing which is, in itself, one thing. According to this theory, black or white or any other color will turn out to have come into being through the impact of the eye upon the appropriate motion; and what we naturally call a particular color is neither that which impinges nor that which is impinged upon, but something which has come into being between the two, and which is private to the individual percipient.—Or would you be prepared to insist that every color appears to a dog, or to any other animal, the same as it appears to you?

Theaetetus:: No, I most certainly shouldn’t.

Socrates:: Well, and do you even feel sure that anything appears to another human being like it appears to you? Wouldn’t you be much more disposed to hold that it doesn’t appear the same even to yourself because you never remain like yourself?

Theaetetus:: Yes, that seems to me nearer the truth than the other.

Socrates:: Well now, supposing such things as size or warmth or whiteness really belonged to the object we measure ourselves against or touch, it would never be found that this object had become different simply by coming into contact with another thing and without any change in itself. On the other hand, if you suppose them to belong to what is measuring or touching, this again could never become different simply because something else had come into its neighborhood, or because something had happened to the first thing—nothing having happened to itself. As it is, you see, we may easily find ourselves forced into saying the most astonishing and ridiculous things, as Protagoras would point out or anyone who undertook to expound the same views.

Theaetetus:: What do you mean? What sort of ridiculous things?

Socrates:: Let me give you a simple example of what I mean, and you will see the rest for yourself. Here are six dice. Put four beside them, and they are more, we say, than the four, that is, half as many again; but put twelve beside them, and we say they are less, that is, half the number. And there is no getting out of that—or do you think there is?

Theaetetus:: No, I don’t.

Socrates:: Well now, supposing Protagoras or anyone else were to ask you this question: 'Is it possible, Theaetetus, for any thing to become bigger or more in number in any other way than by being increased?' What is your answer to that?

Theaetetus:: Well, Socrates, if I answer what seems true in relation to the present question, I shall say 'No, it is not possible'; but if I consider it in relation to the question that went before, then in order to avoid contradicting myself, I say 'Yes, it is.'

Socrates:: That's a good answer, my friend, by Jove it is; you are inspired. But, I think, if you answer 'Yes', it will be like that episode in Euripides— the tongue will be safe from refutation but the mind will not.

Theaetetus:: That's true.

Socrates:: Now if you and I were professional savants, who had already analyzed all the contents of our minds, we should now spend our superfluous time trying each other out; we should start a regular Sophists' set-to, with a great clashing of argument on argument. But, as it is, we are only plain men; and so our first aim will be to look at our thoughts themselves in relation to themselves, and see what they are—whether, in our opinion, they agree with one another or are entirely at variance.

Theaetetus:: That would certainly be my aim, anyway.

Socrates:: And mine. That being so, as we are not in any way pressed for time, don't you think the thing to do is to reconsider this matter quietly and patiently, in all seriousness 'analyzing' ourselves, and asking what are these apparitions within us?—And when we come to review them, I suppose we may begin with the statement that nothing can possibly have become either greater or less, in bulk or in number, so long as it is equal to itself. Isn't that so?

Theaetetus:: Yes.

Socrates:: Secondly, we should say that a thing to which nothing is added and from which nothing is taken away neither increases nor diminishes but remains equal.

Theaetetus:: Yes, certainly.

Socrates:: Thirdly, that it is impossible that a thing should ever be what it was not before without having become and without any process of becoming?

Theaetetus:: Yes, I think so.

Socrates:: Now it seems to me that these three statements that we have admitted are fighting one another in our souls when we speak of the example of the dice; or when we say that, within the space of a year, I (a full-grown man) without having been either increased or diminished, am now bigger than you (who are only a boy) and, later on, smaller—though I have lost nothing and it is only that you have grown. For this means that I am, at a later stage, what I was not before, and that, too, without having become—for without becoming it is not possible to have become, and without suffering any loss in size I could never become less. And there are innumerable other examples of the same thing if once we admit these. You follow me, I take it, Theaetetus—I think you must be familiar with this kind of puzzle.

Theaetetus:: Oh yes, indeed, Socrates, I often wonder like mad what these things can mean; sometimes when I'm looking at them I begin to feel quite giddy.

Socrates:: I dare say you do, my dear boy. It seems that Theodorus was not far from the truth when he guessed what kind of person you are. For this is an experience which is characteristic of a philosopher, this wondering: this is where philosophy begins and nowhere else. And the man who made Iris the child of Thaumas was perhaps no bad genealogist—But aren't you beginning to see now what is the explanation of these puzzles, according to the theory which we are attributing to Protagoras?

Theaetetus:: I don’t think I am, yet.

Socrates:: Then I dare say you will be grateful to me if I help you to discover the veiled truth in the thought of a great man—or perhaps I should say, of great men?

Theaetetus:: Of course I shall be, Socrates, very grateful.

Socrates:: Then you have a look round, and see that none of the uninitiated are listening to us—I mean the people who think that nothing exists but what they can grasp with both hands; people who refuse to admit that actions and processes and the invisible world in general have any place in reality.

Theaetetus:: They must be tough, hard fellows, Socrates.

Socrates:: They are, my son—very crude people. But these others, whose mysteries I am going to tell you, are a much more subtle type. These mysteries begin from the principle on which all that we have just been saying also depends, namely, that everything is really motion, and there is nothing but motion. Motion has two forms, each an infinite multitude, but distinguished by their powers, the one being active and the other passive. And through the intercourse and mutual friction of these two there comes to be an offspring infinite in multitude but always twin births, on the one hand what is perceived, on the other, the perception of it, the perception in every case being generated together with what is perceived and emerging along with it. For the perceptions we have such names as sight, hearing, smelling, feeling cold and feeling hot; also what are called pleasures and pains, desires and fears; and there are others besides, a great number which have names, an infinite number which have not. And on the other side there is the race of things perceived, for each of these perceptions perceived things born of the same parentage, for all kinds of visions all kinds of colors, for all kinds of hearings all kinds of sounds; and so on, for the other perceptions the other things perceived, that come to be in kinship with them.

Now what does this tale really mean, from our point of view, Theaetetus? How does it bear on what we were saying before? Do you see?

Theaetetus:: Not really, Socrates.

Socrates:: Look here, then, let us see if we can somehow round it off. What it is trying to express, presumably, is this. All these things are in motion, just as we say; and their motion is distinguished by its swiftness or slowness. What is slow has its motion in one and the same place, and in relation to the things in the immediate neighborhood; in this way it generates and the offspring are swifter, as they move through space, and their motion takes the form of spatial movement.

Thus the eye and some other thing—one of the things commensurate with the eye—which has come into its neighborhood, generate both whiteness and the perception which is by nature united with it (things which would never have come to be if it had been anything else that eye or object approached). In this event, motions arise in the intervening space, sight from the side of the eye and whiteness from the side of that which cooperates in the production of the color. The eye is filled with sight; at that moment it sees, and becomes not indeed sight, but a seeing eye; while its partner in the process of producing color is filled with whiteness, and becomes not whiteness but white, a white stick or stone or whatever it is that happens to be colored this sort of color.

This account of course may be generally applied; it applies to all that we perceive, hard or hot or anything else. Of these we must understand in the same way—as indeed we were saying before—that no one of them is anything in itself; all things, of all kinds whatsoever, are coming to be through association with one another, as the result of motion. For even in the case of the active and passive motions it is impossible, as they say, for thought, taking them singly, to pin them down to being anything. There is no passive till it meets the active, no active except in conjunction with the passive; and what, in conjunction with one thing, is active, reveals itself as passive when it falls in with something else.

And so, wherever you turn, there is nothing, as we said at the outset, which in itself is just one thing; all things become relatively to something.

The verb 'to be' must be totally abolished—though indeed we have been led by habit and ignorance into using it ourselves more than once, even in what we have just been saying. That is wrong, these wise men tell us, nor should we allow the use of such words as 'something', 'of something', or 'mine', 'this' or 'that', or any other name that makes things stand still. We ought, rather, to speak according to nature and refer to things as 'becoming', 'being produced', 'passing away', 'changing'; for if you speak in such a way as to make things stand still, you will easily be refuted. And this applies in speaking both of the individual case and of many aggregated together—such an aggregate, I mean, as people call 'man' or 'stone', or to which they give the names of the different animals and sorts of thing.

—Well, Theaetetus, does this look to you a tempting meal and could you take a bite of the delicious stuff?

Theaetetus:: I really don't know, Socrates. I can't even quite see what you're getting at—whether the things you are saying are what you think yourself, or whether you are just trying me out.

Socrates:: You are forgetting, my friend. I don’t know anything about this kind of thing myself, and I don’t claim any of it as my own. I am barren of theories; my business is to attend you in your labor. So I chant incantations over you and offer you little tidbits from each of the wise till I succeed in assisting you to bring your own belief forth into the light. When it has been born, I shall consider whether it is fertile or a wind-egg. But you must have courage and patience; answer like a man whatever appears to you about the things I ask you.

Theaetetus:: All right, go on with the questions.

Socrates:: Tell me again, then, whether you like the suggestion that good and beautiful and all the things we were just speaking of cannot be said to ‘be’ anything, but are always ‘coming to be’.

Theaetetus:: Well, as far as I’m concerned, while I’m listening to your exposition of it, it seems to me an extraordinarily reasonable view; and I feel that the way you have set out the matter has got to be accepted.

Socrates:: In that case, we had better not pass over any point where our theory is still incomplete. What we have not yet discussed is the question of dreams, and of insanity and other diseases; also what is called mishearing or misseeing or other cases of misperceiving. You realize, I suppose, that it would be generally agreed that all these cases appear to provide a refutation of the theory we have just expounded. For in these conditions, we surely have false perceptions. Here it is far from being true that all things which appear to the individual also are. On the contrary, no one of the things which appear to him really is.

Theaetetus:: That is perfectly true, Socrates.

Socrates:: Well then, my lad, what argument is left for the person who maintains that knowledge is perception and that what appears to any individual also is, for him to whom it appears to be?

Theaetetus:: Well, Socrates, I hardly like to tell you that I don’t know what to say, seeing I’ve just got into trouble with you for that. But I really shouldn’t know how to dispute the suggestion that a madman believes what is false when he thinks he is a god; or a dreamer when he imagines he has wings and is flying in his sleep.

Socrates:: But there’s a point here which is a matter of dispute, especially as regards dreams and real life—don’t you see?

Theaetetus:: What do you mean?

Socrates:: There’s a question you must often have heard people ask— the question what evidence we could offer if we were asked whether in the present instance, at this moment, we are asleep and dreaming all our thoughts, or awake and talking to each other in real life.

Theaetetus:: Yes, Socrates, it certainly is difficult to find the proof we want here. The two states seem to correspond in all their characteristics. There is nothing to prevent us from thinking when we are asleep that we are having the very same discussion that we have just had. And when we dream that we are telling the story of a dream, there is an extraordinary likeness between the two experiences.

Socrates:: You see, then, it is not difficult to find matter for dispute, when it is disputed even whether this is real life or a dream. Indeed we may say that, as our periods of sleeping and waking are of equal length, and as in each period the soul contends that the beliefs of the moment are preeminently true, the result is that for half our lives we assert the reality of the one set of objects, and for half that of the other set. And we make our assertions with equal conviction in both cases.

Theaetetus:: That certainly is so.

Socrates:: And doesn't the same argument apply in the cases of disease and madness, except that the periods of time are not equal?

Theaetetus:: Yes, that is so.

Socrates:: Well now, are we going to fix the limits of truth by the clock?

Theaetetus:: That would be a very funny thing to do.

Socrates:: But can you produce some other clear indication to show which of these beliefs are true?

Theaetetus:: I don't think I can.

Socrates:: Then you listen to me and I'll tell you the kind of thing that might be said by those people who propose it as a rule that whatever a man thinks at any time is the truth for him. I can imagine them putting their position by asking you this question: 'Now, Theaetetus, suppose you have something which is an entirely different thing from something else. Can it have in any respect the same powers as the other thing?' And observe, we are not to understand the question to refer to something which is the same in some respects while it is different in others, but to that which is wholly different.

Theaetetus:: In that case, then, it is impossible that it should have anything the same, either as regards its powers or in any other respect, if it is a completely different thing.

Socrates:: And aren't we obliged to admit that such a thing is also unlike the other?

Theaetetus:: Yes, I think so.

Socrates:: Now supposing a thing is coming to be like or unlike to something, whether to itself or to something else;

are we to say that when it is growing like it is coming to be the same, and when it is growing unlike it is coming to be a different thing?

Theaetetus:: Yes, that must be so.

Socrates:: Now weren't we saying, at an earlier stage, that there is a number—indeed an infinite number—of both active and passive factors?

Theaetetus:: Yes.

Socrates:: Also this, that when a thing mixes now with one thing and now with another, it will not generate the same things each time but different things?

Theaetetus:: Yes, certainly.

Socrates:: Well, now let us apply this same statement to you and me and things in general. Take, for example, Socrates ill and Socrates well. Shall we say Socrates in health is like or unlike Socrates in sickness?

Theaetetus:: You mean the ill Socrates as a whole compared with the well Socrates as a whole?

Socrates:: You get my point excellently; that is just what I mean.

Theaetetus:: Unlike, then, I suppose.

Socrates:: And different also, in so far as he is unlike?

Theaetetus:: Yes, that follows.

Socrates:: Similarly, you would say, when he is asleep or in any of the conditions we enumerated just now?

Theaetetus:: Yes, I should.

Socrates:: Then it must surely be true that, when any one of the naturally active factors finds Socrates well, it will be dealing with one me, and when it finds Socrates ill, with a different me?

Theaetetus:: Yes, surely.

Socrates:: Then in these two events the combination of myself as passive and it as the active factor will generate different things?

Theaetetus:: Of course.

Socrates:: Now if I drink wine when I am well, it appears to me pleasant and sweet?

Theaetetus:: Yes.

Socrates:: Going by what we earlier agreed, that is so because the active and passive factors, moving simultaneously, generate both sweetness and a perception; on the passive side, the perception makes the tongue percipient, while on the side of the wine, sweetness moving about it makes it both be and appear sweet to the healthy tongue.

Theaetetus:: That's certainly the sense of what we agreed to before.

Socrates:: But when the active factor finds Socrates ill, then, to begin with, it is not in strict truth the same man that it gets hold of, is it? Because here, as we saw, it has come upon an unlike.

Theaetetus:: Yes.

Socrates:: Then this pair, Socrates ill and the draft of wine, generates, presumably, different things again: a perception of bitterness in the region of the tongue, and bitterness coming to be and moving in the region of the wine. And then the wine becomes, not bitterness, but bitter; and I become, not perception, but percipient.

Theaetetus:: Yes, quite.

Socrates:: And I shall never again become thus percipient of anything else. A perception of something else is another perception, and makes another and a changed percipient. Nor again, in the case of that which acts on me, will it ever, in conjunction with something else, generate the same thing and itself become such as it now is. From something else it will generate something else, and itself become a changed thing.

Theaetetus:: That is so.

Socrates:: Nor will I become such for myself or it such for itself.

Theaetetus:: No.

Socrates:: But I must necessarily become percipient of something when I become percipient; it is impossible to become percipient, yet percipient of nothing. And it again, when it becomes sweet or bitter or anything of that kind, must become so for somebody, because it is impossible to become sweet and yet sweet for no one.

Theaetetus:: Quite impossible.

Socrates:: It remains, then, that I and it, whether we are or whether we become, are or become for each other. For our being is, by Necessity's decree, tied to a partner; yet we are tied neither to any other thing in the world nor to our respective selves. It remains, then, that we are tied to each other. Hence, whether you apply the term 'being' to a thing or the term 'becoming', you must always use the words 'for somebody' or 'of something' or 'relatively to something'. You must not speak of anything as in itself either being or becoming nor let anyone else use such expressions. That is the meaning of the theory we have been expounding.

Theaetetus:: Yes, that's certainly true, Socrates.

Socrates:: Then since that which acts on me is for me, and not for anyone else, it is I who perceive it too, and nobody else?

Theaetetus:: Undoubtedly.

Socrates:: Then my perception is true for me—because it is always a perception of that being which is peculiarly mine; and I am judge, as Protagoras said, of things that are, that they are, for me; and of things that are not, that they are not.

Theaetetus:: So it seems.

Socrates:: How then, if I am thus unerring and never stumble in my thought about what is—or what is coming to be—how can I fail to be a knower of the things of which I am perceiver?

Theaetetus:: There is no way you could fail.

Socrates:: Then that was a grand idea of yours when you told us that knowledge is nothing more or less than perception. So we find the various theories have converged to the same thing: that of Homer and Heraclitus and all their tribe, that all things flow like streams; of Protagoras, wisest of men, that man is the measure of all things; and of Theaetetus that, these things being so, knowledge proves to be perception. What about it, Theaetetus? Shall we say we have here your first-born child, the result of my midwifery? Or what would you say?

Theaetetus:: Oh, there's no denying it, Socrates.

Socrates:: This, then, it appears, is what our efforts have at last brought forth—whatever it really is. And now that it has been born, we must perform the rite of running round the hearth with it; we must make it in good earnest go the round of discussion. For we must take care that we don't overlook some defect in this thing that is entering into life; it may be something not worth bringing up, a wind-egg, a falsehood. What do you say? Is it your opinion that your child ought in any case to be brought up and not exposed to die? Can you bear to see it found fault with, and not get into a rage if your first-born is stolen away from you?

Theodorus:: Theaetetus will put up with it, Socrates. He is not at all one to lose his temper. But tell me, in Heaven's name, in what way is it not as it should be?

Socrates:: You are the complete lover of discussion, Theodorus, and it is too good of you to think that I am a sort of bag of arguments, and can easily pick one out which will show you that this theory is wrong. But you don't realize what is happening. The arguments never come from me; they always come from the person I am talking to. All that I know, such as it is, is how to take an argument from someone else—someone who is wise—and give it a fair reception. So, now, I propose to try to get our answer out of Theaetetus, not to make any contribution of my own.

Theodorus:: That's a better way of putting it, Socrates; do as you say.

Socrates:: Well then, Theodorus, do you know what astonishes me about your friend Protagoras?

Theodorus:: No—what is it?

Socrates:: Well, I was delighted with his general statement of the theory that a thing is for any individual what it seems to him to be; but I was astonished at the way he began. I was astonished that he did not state at the beginning of the Truth that 'Pig is the measure of all things' or 'Baboon' or some yet more out-of-the-way creature with the power of perception. That would have made a most imposing and disdainful opening. It would have made it clear to us at once that, while we were standing astounded at his wisdom as though he were God, he was in reality no better authority than a tadpole—let alone any other man.

Or what are we to say, Theodorus? If whatever the individual judges by means of perception is true for him; if no man can assess another's experience better than he, or can claim authority to examine another man's judgment and see if it be right or wrong; if, as we have repeatedly said, only the individual himself can judge of his own world, and what he judges is always true and correct: how could it ever be, my friend, that Protagoras was a wise man, so wise as to think himself fit to be the teacher of other men and worth large fees; while we, in comparison with him the ignorant ones, needed to go and sit at his feet—we who are ourselves each the measure of his own wisdom? Can we avoid the conclusion that Protagoras was just playing to the crowd when he said this? I say nothing about my own case and my art of midwifery and how silly we look. So too, I think, does the whole business of philosophical discussion. To examine and try to refute each other's appearances and judgments, when each person's are correct—this is surely an extremely tiresome piece of nonsense, if the Truth of Protagoras is true, and not merely an oracle speaking in jest from the impenetrable sanctuary of the book.

Theodorus:: Protagoras was my friend, Socrates, as you have just remarked. I could not consent to have him refuted through my admissions; and yet I should not be prepared to resist you against my own judgment. So take on Theaetetus again. He seemed to be following you very sympathetically just now.

Socrates:: Now, Theodorus, supposing you went to Sparta and were visiting the wrestling-schools. Would you think it right to sit and watch other men exercising naked—some of them not much to look at—and refuse to strip yourself alongside of them, and take your turn of letting people see what you look like?

Theodorus:: Why not, if I could persuade them to leave the choice to me? Similarly I am hoping to persuade you to allow me to be a spectator and not drag me into the arena now that I am grown stiff; but to take on someone who is younger and more supple.

Socrates:: Well, Theodorus, what you like I'll not dislike, as the saying goes. So we must again resort to our wise Theaetetus. Come, Theaetetus. Think, to begin with, of what we have just been saying, and tell me if you are not yourself astonished at suddenly finding that you are the equal in wisdom of any man or even a god?—Or do you think the Protagorean measure isn't meant to be applied to gods as much as to men?

Theaetetus:: I most certainly don't. And, to answer your question, yes, I am very much astonished. When we were working out the meaning of the principle that a thing is for each man what it seems to him to be, it appeared to me a very sound one. But now, all in a minute, it is quite the other way round.

Socrates:: Yes, because you are young, dear lad; and so you lend a ready ear to mob-oratory and let it convince you. For Protagoras, or anyone speaking on his behalf, will answer us like this: 'My good people, young and old,' he will say, 'you sit here orating; you drag in gods, whose existence or nonexistence I exclude from all discussion, written or spoken; you keep on saying whatever is likely to be acceptable to the mob, telling them that it would be a shocking thing if no man were wiser than any cow in a field; but of proof or necessity not a word. You just rely on plausibility; though if Theodorus or any other geometer were to do that in his branch of science, it's a good-for-nothing geometer he would be'. So you and Theodorus had better consider whether, in matters of such importance, you are going to accept arguments which are merely persuasive or plausible.

Theaetetus:: You wouldn't say we had any business to do that, Socrates; and neither should we.

Socrates:: Then, it seems, you and Theodorus say our criticism should take a different line?

Theaetetus:: Yes, it certainly should.

Socrates:: Here, then, is another way in which we might consider whether knowledge and perception are the same or different things—for that is the question which our argument has held in view throughout, isn't it? And it was for its sake that we have unearthed all this extraordinary stuff?

Theaetetus:: Undoubtedly.

Socrates:: Well, now, are we going to agree that when we perceive things by seeing or hearing them, we always at the same time know them? Take, for example, the case of hearing people speaking a foreign language which we have not yet learned. Are we going to say that we do not hear the sound of their voices when they speak? Or that we both hear it and know what they are saying? Again, supposing we do not know our letters, are we going to insist that we do not see them when we look at them? Or shall we maintain that, if we see them, we know them?

Theaetetus:: We shall say, Socrates, that we know just that in them which we see and hear. We both see and know the shape and the color of the letters; and with the spoken words we both hear and know the rise and fall of the voice. But what schoolmasters and interpreters tell us about them, we don't perceive by seeing or hearing, and we don't know, either.

Socrates:: Very good indeed, Theaetetus; and it would not be right for me to stand in the way of your progress by raising objections to what you say. But look, there is another difficulty coming upon us. You must think now how we are going to fend it off.

Theaetetus:: What kind of difficulty?

Socrates:: I mean something like this. Supposing you were asked, ‘If a man has once come to know a certain thing, and continues to preserve the memory of it, is it possible that, at the moment when he remembers it, he doesn’t know this thing that he is remembering?’ But I am being long-winded, I’m afraid. What I am trying to ask is, ‘Can a man who has learned something not know it when he is remembering it?’

Theaetetus:: How could that happen, Socrates? That would be a most extraordinary thing.

Socrates:: Then am I perhaps talking nonsense? But think now. You say that seeing is perceiving and sight is perception?

Theaetetus:: Yes.

Socrates:: Then a man who has seen something has come to know that which he saw, according to the statement you made just now?

Theaetetus:: Yes.

Socrates:: But you do say—don’t you?—that there is such a thing as memory?

Theaetetus:: Yes.

Socrates:: Memory of nothing? Or of something?

Theaetetus:: Of something, surely.

Socrates:: That is to say, of things which one has learned, that is, perceived—that kind of ‘something’?

Theaetetus:: Of course.

Socrates:: And what a man has once seen, he recalls, I take it, from time to time?

Theaetetus:: He does.

Socrates:: Even if he shuts his eyes? Or does he forget it if he does this?

Theaetetus:: That would be a strange thing to say, Socrates.

Socrates:: Yet it is what we must say, if we are to save our previous statement. Otherwise, it's all up with it.

Theaetetus:: Yes, by Jove, I begin to have my suspicions too; but I don't quite see it yet. You explain.

Socrates:: This is why. According to us, the man who sees has acquired knowledge of what he sees, as sight, perception and knowledge are agreed to be the same thing.

Theaetetus:: Yes, certainly.

Socrates:: But the man who sees and has acquired knowledge of the thing he saw, if he shuts his eyes remembers but does not see it. Isn't that so?

Theaetetus:: Yes.

Socrates:: But to say 'He doesn't see' is to say 'He doesn't know', if 'sees' is 'knows'?

Theaetetus:: True.

Socrates:: Then we have this result, that a man who has come to know something and still remembers it doesn't know it because he doesn't see it? And that's what we said would be a most extraordinary thing to happen.

Theaetetus:: That's perfectly true.

Socrates:: Then apparently we get an impossible result when knowledge and perception are identified?

Theaetetus:: It looks like it.

Socrates:: Then we have got to say that perception is one thing and knowledge another?

Theaetetus:: Yes, I'm afraid so.

Socrates:: Then what is knowledge? We shall have to begin again at the beginning, it seems. And yet—whatever are we thinking about, Theaetetus?

Theaetetus:: What do you mean?

Socrates:: We appear to be behaving like a base-born fighting-cock, jumping away off the theory, and crowing before we have the victory over it.

Theaetetus:: How are we doing that?

Socrates:: We seem to have been adopting the methods of professional controversialists: we've made an agreement aimed at getting words to agree consistently; and we feel complacent now that we have defeated the theory by the use of a method of this kind. We profess to be philosophers, not champion controversialists; and we don't realize that we are doing just what those clever fellows do.

Theaetetus:: I still don't quite see what you mean.

Socrates:: Well, I will try to explain what I have in mind here. We were enquiring into the possibility that a man should not know something that he has learned and remembers. And we showed that a man who has seen something, and then shuts his eyes, remembers but does not see it; and that showed that he does not know the thing at the very time that he remembers it. We said that this was impossible. And so the tale of Protagoras comes to an untimely end; yours too, your tale about the identity of knowledge and perception.

Theaetetus:: So it appears.

Socrates:: But I don't think this would have happened, my friend, if the father of the other tale were alive. He would find plenty of means of defending it. As things are, it is an orphan we are trampling in the mud. Not even the people Protagoras appointed its guardians are prepared to come to its rescue; for instance, Theodorus here. In the interests of justice, it seems that we shall have to come to the rescue ourselves.

Theodorus:: I think you must. It is not I, you know, Socrates, but Callias, the son of Hipponicus, who is the guardian of Protagoras' relicts. As it happened, I very soon inclined away from abstract discussion to geometry. But I shall be very grateful if you can rescue the orphan.

Socrates:: Good, Theodorus. Now will you give your mind to this rescue work of mine—what little I can do? Because one might be driven into making even more alarming admissions than we have just made, if one paid as little attention to the words in which we express our assertions and denials as we are for the most part accustomed to doing. Shall I tell you how this might happen? Or shall I tell Theaetetus?

Theodorus:: Tell us both, Socrates; but the younger had better answer. It will not be so undignified for him to get tripped up.

Socrates:: Well, then, here is the most alarming poser of all. It goes something like this, I think: 'Is it possible for a man who knows something not to know this thing which he knows?'

Theodorus:: What are we going to answer now, Theaetetus?

Theaetetus:: That it is impossible, I should think.

Socrates:: But it is not, if you are going to premise that seeing is knowing. For what are you going to do when some intrepid fellow has you 'trapped in the well-shaft', as they say, with a question that leaves you no way out: clapping his hand over one of your eyes, he asks you whether you see his cloak with the eye that is covered—how will you cope with that?

Theaetetus:: I shall say that I don't see it with this one, but I do with the other.

Socrates:: So you both see and do not see the same thing at the same time?

Theaetetus:: Well, yes, in that sort of way I do.

Socrates:: 'That's not the question I'm setting you,' he will say, 'I was not asking you in what way it happened. I was asking you "Does it happen that you don't know what you know?" You now appear to be seeing what you don't see; and you have actually admitted that seeing is knowing, and not to see is not to know. I leave you to draw your conclusion.'

Theaetetus:: Well, I draw a conclusion that contradicts my original suppositions.

Socrates:: And that is the kind of thing that might have happened to you more than once, you wonderful fellow. It might have happened if someone had gone on asking you whether it was possible to know sometimes clearly and sometimes dimly; or to know near at hand and not from a distance; or to know the same thing both intensely and slightly. And there are a million other questions with which one of the mercenary skirmishers of debate might ambush you, once you had proposed that knowledge and perception are the same thing. He would lay into hearing and smelling and other perceptions of that kind; and would keep on refuting you and not let you go till you had been struck with wonder at his wisdom—that 'answer to many prayers'—and had got yourself thoroughly tied up by him. Then, when he had you tamed and bound, he would set you free for a ransom—whatever price seemed appropriate to the two of you.

But perhaps you'll ask, what argument would Protagoras himself bring to the help of his offspring. Shall we try to state it?

Theaetetus:: Yes, surely.

Socrates:: Well, he will say all the things that we are saying in our attempt to defend him; and then, I imagine, he will come to grips with us, and in no respectful spirit either. I imagine him saying: 'This good Socrates here—what he did was to frighten a small boy by asking him if it were possible that the same man should at once remember and not know the same thing; and when the boy in his fright answered "No," because he couldn't see what was coming, then, according to Socrates, the laugh was against me in the argument. You are too easy-going, Socrates. The true position is this. When you are examining any doctrine of mine by the method of question and answer, if the person being questioned answers as I myself would answer, and gets caught, then it is I who am refuted;

but if his answers are other than I should give, then it is he who is put in the wrong.

'Now, to begin with, do you expect someone to grant you that a man's present memory of something which he has experienced in the past but is no longer experiencing is the same sort of experience as he then had? That is very far from being true. Again, do you suppose he will hesitate to admit that it is possible for the same man to know and not know the same thing? Or—if he has misgivings about this—do you expect him to concede to you that the man, who is in process of becoming unlike, is the same as he was before the process began? Do you expect him even to speak of "the man" rather than of "the men," indeed of an infinite number of these men coming to be in succession, assuming this process of becoming unlike? Not if we really must take every precaution against each other's verbal traps. Show a little more spirit, my good man,' he will say, 'and attack my actual statement itself, and refute it, if you can, by showing that each man's perceptions are not his own private events; or that, if they are his own private events, it does not follow that the thing which appears "becomes" or, if we may speak of being, "is" only for the man to whom it appears. You keep talking about pigs and baboons; you show the mentality of a pig yourself, in the way you deal with my writings, and you persuade your audience to follow your example. That is not the way to behave.

'I take my stand on the truth being as I have written it. Each one of us is the measure both of what is and of what is not; but there are countless differences between men for just this very reason, that different things both are and appear to be to different subjects. I certainly do not deny the existence of both wisdom and wise men: far from it. But the man whom I call wise is the man who can change the appearances—the man who in any case where bad things both appear and are for one of us, works a change and makes good things appear and be for him.

'And I must beg you, this time, not to confine your attack to the letter of my doctrine. I am now going to make its meaning clearer to you. For instance, I would remind you of what we were saying before, namely, that to the sick man the things he eats both appear and are bitter, while to the healthy man they both appear and are the opposite. Now what we have to do is not to make one of these two wiser than the other—that is not even a possibility—nor is it our business to make accusations, calling the sick man ignorant for judging as he does, and the healthy man wise, because he judges differently. What we have to do is to make a change from the one to the other, because the other state is better. In education, too, what we have to do is to change a worse state into a better state; only whereas the doctor brings about the change by the use of drugs, the professional teacher does it by the use of words. What never happens is that a man who judges what is false is made to judge what is true. For it is impossible to judge what is not, or to judge anything other than what one is immediately experiencing; and what one is immediately experiencing is always true. This, in my opinion, is what really happens: when a man's soul is in a pernicious state, he judges things akin to it, but giving him a sound state of the soul causes him to think different things, things that are good. In the latter event, the things which appear to him are what some people, who are still at a primitive stage, call "true"; my position, however, is that the one kind are better than the others, but in no way truer.

'Nor, my dear Socrates, should I dream of suggesting that we might look for wisdom among frogs. I look for wisdom, as regards animal bodies, in doctors; as regards plant-life, in gardeners—for I am quite prepared to maintain that gardeners too, when they find a plant sickly, proceed by causing it to have good and healthy, that is, "true" perceptions, instead of bad ones. Similarly, the wise and efficient politician is the man who makes wholesome things seem just to a city instead of pernicious ones. Whatever in any city is regarded as just and admirable is just and admirable, in that city and for so long as that convention maintains itself; but the wise man replaces each pernicious convention by a wholesome one, making this both be and seem just. Similarly the professional teacher who is able to educate his pupils on these lines is a wise man, and is worth his large fees to them.

'In this way we are enabled to hold both that some men are wiser than others, and also that no man judges what is false. And you, too, whether you like it or not, must put up with being a "measure." For this is the line we must take if we are to save the theory.

'If you feel prepared to go back to the beginning, and make a case against this theory, let us hear your objections set out in a connected argument. Or, if you prefer the method of question and answer, do it that way; there is no reason to try to evade that method either, indeed an intelligent person might well prefer it to any other. Only I beg that you will observe this condition: do not be unjust in your questions. It is the height of unreasonableness that a person who professes to care for moral goodness should be consistently unjust in discussion. I mean by injustice, in this connection, the behavior of a man who does not take care to keep controversy distinct from discussion; a man who forgets that in controversy he may play about and trip up his opponent as often as he can, but that in discussion he must be serious, he must keep on helping his opponent to his feet again, and point out to him only those of his slips which are due to himself or to the intellectual society which he has previously frequented. If you observe this distinction, those who associate with you will blame themselves for their confusion and their difficulties, not you. They will seek your company, and think of you as their friend; but they will loathe themselves, and seek refuge from themselves in philosophy, in the hope that they may thereby become different people and be rid forever of the men that they once were. But if you follow the common practice and do the opposite, you will get the opposite results. Instead of philosophers, you will make your companions grow up to be the enemies of philosophy.

'So, if you take my advice, as I said before, you will sit down with us without ill will or hostility, in a kindly spirit. You will genuinely try to find out what our meaning is when we maintain (a) that all things are in motion and (b) that for each person and each city, things are what they seem to them to be. And upon this basis you will inquire whether knowledge and perception are the same thing or different things. But you will not proceed as you did just now. You will not base your argument upon the use and wont of language; you will not follow the practice of most men, who drag words this way and that at their pleasure, so making every imaginable difficulty for one another.'

Well, Theodorus, here is my contribution to the rescue of your friend— the best I can do, with my resources, and little enough that is. If he were alive himself, he would have come to the rescue of his offspring in a grander style.

Theodorus:: That must be a joke, Socrates. It was a very spirited rescue.

Socrates:: You are kind, my friend. Tell me now, did you notice that Protagoras was complaining of us, in the speech that we have just heard, for addressing our arguments to a small boy and making the child's nervousness a weapon against his ideas? And how he disparaged our method of arguments as merely an amusing game, and how solemnly he upheld his 'measure of all things' and commanded us to be serious when we dealt with his theory?

Theodorus:: Yes, of course I noticed that, Socrates.

Socrates:: Then do you think we should obey his commands?

Theodorus:: Most certainly I do.

Socrates:: Look at the company then. They are all children but you. So if we are to obey Protagoras, it is you and I who have got to be serious about his theory. It is you and I who must question and answer one another. Then he will not have this against us, at any rate, that we turned the criticism of his philosophy into sport with boys.

Theodorus:: Well, isn't our Theaetetus better able to follow the investigation of a theory than many an old fellow with a long beard?

Socrates:: But not better than you, Theodorus. Do not go on imagining that it is my business to be straining every nerve to defend your dead friend while you do nothing. Come now, my very good Theodorus, come a little way with me. Come with me at any rate until we see whether in questions of geometrical proofs it is really you who should be the measure or whether all men are as sufficient to themselves as you are in astronomy and all the other sciences in which you have made your name.

Theodorus:: Socrates, it is not easy for a man who has sat down beside you to refuse to talk. That was all nonsense just now when I was pretending that you were going to allow me to keep my coat on, and not use compulsion like the Spartans. So far from that, you seem to me to have leanings towards the methods of Sciron. The Spartans tell one either to strip or to go away; but you seem rather to be playing the part of Antaeus. You don't let any comer go till you have stripped him and made him wrestle with you in an argument.

Socrates:: That, Theodorus, is an excellent simile to describe what is the matter with me. But I am more of a fiend for exercise than Sciron and Antaeus. I have met with many and many a Heracles and Theseus in my time, mighty men of words; and they have well battered me. But for all that I don't retire from the field, so terrible a lust has come upon me for these exercises. You must not grudge me this, either; try a fall with me and we shall both be the better.

Theodorus:: All right. I resign myself; take me with you where you like. In any case, I see, I have got to put up with the fate you spin for me, and submit to your inquisition. But not further than the limits you have laid down; beyond that I shall not be able to offer myself.

Socrates:: It will do if you will go with me so far. Now there is one kind of mistake I want you to be specially on your guard against, namely, that we do not unconsciously slip into some childish form of argument. We don't want to get into disgrace for this again.

Theodorus:: I will do my best, I promise you.

Socrates:: The first thing, then, is to tackle the same point that we were dealing with before. We were making a complaint. Now let us see whether we were right or wrong in holding it to be a defect in this theory that it made every man self-sufficient in wisdom; and whether we were right or wrong when we made Protagoras concede that some men are superior to others in questions of better and worse, these being ‘the wise’. Do you agree?

Theodorus:: Yes.

Socrates:: It would be a different matter if Protagoras were here in person and agreed with us, instead of our having made this concession on his behalf in our attempt to help him. In that case, there would be no need to take this question up again and make sure about it. In the circumstances, however, it might be decided that we had no authority on his behalf, and so it is desirable that we should come to a clearer agreement on this point; for it makes no small difference whether this is so or not.

Theodorus:: True.

Socrates:: Then don’t let us obtain this concession through anybody else. Let us take the shortest way, an appeal to his own statement.

Theodorus:: How?

Socrates:: In this way. He says, does he not, that things are for every man what they seem to him to be?

Theodorus:: Yes, that is what he says.

Socrates:: Well, then, Protagoras, we too are expressing the judgments of a man—I might say, of all men—when we say that there is no one in the world who doesn’t believe that in some matters he is wiser than other men; while in other matters, they are wiser than he. In emergencies—if at no other time—you see this belief. When they are in distress, on the battlefield, or in sickness or in a storm at sea, all men turn to their leaders in each sphere as to God, and look to them for salvation because they are superior in precisely this one thing—knowledge. And wherever human life and work goes on, you find everywhere men seeking teachers and masters, for themselves and for other living creatures and for the direction of all human works. You find also men who believe that they are able to teach and to take the lead. In all these cases, what else can we say but that men do believe in the existence of both wisdom and ignorance among themselves?

Theodorus:: There can be no other conclusion.

Socrates:: And they believe that wisdom is true thinking? While ignorance is a matter of false judgment?

Theodorus:: Yes, of course.

Socrates:: What then, Protagoras, are we to make of your argument? Are we to say that all men, on every occasion, judge what is true? Or that they judge sometimes truly and sometimes falsely? Whichever we say, it comes to the same thing, namely, that men do not always judge what is true; that human judgments are both true and false. For think, Theodorus. Would you, would anyone of the school of Protagoras be prepared to contend that no one ever thinks his neighbor is ignorant or judging falsely?

Theodorus:: No, that’s not a thing one could believe, Socrates.

Socrates:: And yet it is to this that our theory has been driven—this theory that man is the measure of all things.

Theodorus:: How is that?

Socrates:: Well, suppose you come to a decision in your own mind and then express a judgment about something to me. Let us assume with Protagoras that your judgment is true for you. But isn’t it possible that the rest of us may criticize your verdict? Do we always agree that your judgment is true? Or does there rise up against you, every time, a vast army of persons who think the opposite, who hold that your decisions and your thoughts are false?

Theodorus:: Heaven knows they do, Socrates, in their ‘thousands and tens of thousands’, as Homer says, and give me all the trouble that is humanly possible.

Socrates:: Then do you want us to say that you are then judging what is true for yourself, but false for the tens of thousands?

Theodorus:: It looks as if that is what we must say, according to the theory, at any rate.

Socrates:: And what of Protagoras himself? Must he not say this, that supposing he himself did not believe that man is the measure, any more than the majority of people (who indeed do not believe it), then this Truth which he wrote is true for no one? On the other hand, suppose he believed it himself, but the majority of men do not agree with him; then you see— to begin with—the more those to whom it does not seem to be the truth outnumber those to whom it does, so much the more it isn’t than it is?

Theodorus:: That must be so, if it is going to be or not be according to the individual judgment.

Socrates:: Secondly, it has this most exquisite feature: Protagoras admits, I presume, that the contrary opinion about his own opinion (namely, that it is false) must be true, seeing he agrees that all men judge what is.

Theodorus:: Undoubtedly.

Socrates:: And in conceding the truth of the opinion of those who think him wrong, he is really admitting the falsity of his own opinion?

Theodorus:: Yes, inevitably.

Socrates:: But for their part the others do not admit that they are wrong?

Theodorus:: No.

Socrates:: But Protagoras again admits this judgment to be true, according to his written doctrine?

Theodorus:: So it appears.

Socrates:: It will be disputed, then, by everyone, beginning with Protagoras—or rather, it will be admitted by him, when he grants to the person who contradicts him that he judges truly—when he does that, even Protagoras himself will be granting that neither a dog nor the 'man in the street' is the measure of anything at all which he has not learned. Isn't that so?

Theodorus:: It is so.

Socrates:: Then since it is disputed by everyone, the Truth of Protagoras is not true for anyone at all, not even for himself?

Theodorus:: Socrates, we are running my friend too hard.

Socrates:: But it is not at all clear, my dear Theodorus, that we are running off the right track. Hence it is likely that Protagoras, being older than we are, really is wiser as well; and if he were to stick up his head from below as far as the neck just here where we are, he would in all likelihood convict me twenty times over of talking nonsense, and show you up too for agreeing with me, before he ducked down to rush off again. But we have got to take ourselves as we are, I suppose, and go on saying the things which seem to us to be. At the moment, then, mustn't we maintain that any man would admit at least this, that some men are wiser than their fellows and others more ignorant?

Theodorus:: So it seems to me, at any rate.

Socrates:: We may also suggest that the theory would stand firm most successfully in the position which we sketched out for it in our attempt to bring help to Protagoras. I mean the position that most things are for the individual what they seem to him to be; for instance, warm, dry, sweet and all this type of thing. But if the theory is going to admit that there is any sphere in which one man is superior to another, it might perhaps be prepared to grant it in questions of what is good or bad for one's health. Here it might well be admitted that it is not true that every creature— woman or child or even animal—is competent to recognize what is good for it and to heal its own sickness; that here, if anywhere, one person is better than another. Do you agree?

Theodorus:: Yes, that seems so to me.

Socrates:: Then consider political questions. Some of these are questions of what may or may not fittingly be done, of just and unjust, of what is sanctioned by religion and what is not; and here the theory may be prepared to maintain that whatever view a city takes on these matters and establishes as its law or convention, is truth and fact for that city. In such matters neither any individual nor any city can claim superior wisdom. But when it is a question of laying down what is to the interest of the state and what is not, the matter is different. The theory will again admit that here, if anywhere, one counselor is better than another; here the decision of one city may be more in conformity with the truth than that of another. It would certainly not have the hardihood to affirm that when a city decides that a certain thing is to its own interest, that thing will undoubtedly turn out to be to its interest. It is in those other questions I am talking about— just and unjust, religious and irreligious— that men are ready to insist that no one of these things has by nature any being of its own; in respect of these, they say, what seems to people collectively to be so is true, at the time when it seems that way and for just as long as it so seems. And even those who are not prepared to go all the way with Protagoras take some such view of wisdom. But I see, Theodorus, that we are becoming involved in a greater discussion emerging from the lesser one.

Theodorus:: Well, we have plenty of time, haven't we, Socrates?

Socrates:: We appear to … That remark of yours, my friend, reminds me of an idea that has often occurred to me before—how natural it is that men who have spent a great part of their lives in philosophical studies make such fools of themselves when they appear as speakers in the law courts.

Theodorus:: How do you mean now?

Socrates:: Well, look at the man who has been knocking about in law courts and such places ever since he was a boy; and compare him with the man brought up in philosophy, in the life of a student. It is surely like comparing the upbringing of a slave with that of a free man.

Theodorus:: How is that, now?

Socrates:: Because the one man always has what you mentioned just now—plenty of time. When he talks, he talks in peace and quiet, and his time is his own. It is so with us now: here we are beginning on our third new discussion; and he can do the same, if he is like us, and prefers the newcomer to the question in hand. It does not matter to such men whether they talk for a day or a year, if only they may hit upon that which is. But the other—the man of the law courts—is always in a hurry when he is talking; he has to speak with one eye on the clock. Besides, he can't make his speeches on any subject he likes; he has his adversary standing over him, armed with compulsory powers and with the sworn statement, which is read out point by point as he proceeds, and must be kept to by the speaker. The talk is always about a fellow-slave, and is addressed to a master, who sits there holding some suit or other in his hand. And the struggle is never a matter of indifference; it always directly concerns the speaker, and sometimes life itself is at stake.

Such conditions make him keen and highly strung, skilled in flattering the master and working his way into favor; but cause his soul to be small and warped. His early servitude prevents him from making a free, straight growth; it forces him into doing crooked things by imposing dangers and alarms upon a soul that is still tender. He cannot meet these by just and honest practice, and so resorts to lies and to the policy of repaying one wrong with another; thus he is constantly being bent and distorted, and in the end grows up to manhood with a mind that has no health in it, having now become—in his own eyes—a man of ability and wisdom.

There is your practical man, Theodorus. What about our own set? Would you like us to have a review of them, or shall we let them be, and return to the argument? We don't want to abuse this freedom to change our subject of which we were speaking just now.

Theodorus:: No, no, Socrates. Let us review the philosophers. What you said just now was quite right; we who move in such circles are not the servants but the masters of our discussions. Our arguments are our own, like slaves; each one must wait about for us, to be finished whenever we think fit. We have no jury, and no audience (as the dramatic poets have), sitting in control over us, ready to criticize and give orders.

Socrates:: Very well, then; we must review them, it seems, since you have made up your mind. But let us confine ourselves to the leaders; why bother about the second-rate specimens? To begin with, then, the philosopher grows up without knowing the way to the market-place, or the whereabouts of the law courts or the council chambers or any other place of public assembly. Laws and decrees, published orally or in writing, are things he never sees or hears. The scrambling of political cliques for office; social functions, dinners, parties with flute-girls—such doings never enter his head even in a dream. So with questions of birth—he has no more idea whether a fellow citizen is high-born or humble, or whether he has inherited some taint from his forebears, male or female, than he has of the number of pints in the sea, as they say. And in all these matters, he knows not even that he knows not; for he does not hold himself aloof from them in order to get a reputation, but because it is in reality only his body that lives and sleeps in the city. His mind, having come to the conclusion that all these things are of little or no account, spurns them and pursues its winged way, as Pindar says, throughout the universe, 'in the deeps below the earth' and 'in the heights above the heaven'; geometrizing upon earth, measuring its surfaces, astronomizing in the heavens; tracking down by every path the entire nature of each whole among the things that are, and never condescending to what lies near at hand.

Theodorus:: What do you mean by that, Socrates?

Socrates:: Well, here's an instance: they say Thales was studying the stars, Theodorus, and gazing aloft, when he fell into a well; and a witty and amusing Thracian servant-girl made fun of him because, she said, he was wild to know about what was up in the sky but failed to see what was in front of him and under his feet. The same joke applies to all who spend their lives in philosophy. It really is true that the philosopher fails to see his next-door neighbor; he not only doesn't notice what he is doing; he scarcely knows whether he is a man or some other kind of creature. The question he asks is, What is Man? What actions and passions properly belong to human nature and distinguish it from all other beings? This is what he wants to know and concerns himself to investigate. You see what I mean, Theodorus, don’t you?

Theodorus:: Yes, and what you say is true.

Socrates:: This accounts, my friend, for the behavior of such a man when he comes into contact with his fellows, either privately with individuals or in public life, as I was saying at the beginning. Whenever he is obliged, in a law court or elsewhere, to discuss the things that lie at his feet and before his eyes, he causes entertainment not only to Thracian servant-girls but to all the common herd, by tumbling into wells and every sort of difficulty through his lack of experience. His clumsiness is awful and gets him a reputation for fatuousness. On occasions when personal scandal is the topic of conversation, he never has anything at all of his own to contribute; he knows nothing to the detriment of anyone, never having paid any attention to this subject—a lack of resource which makes him look very comic. And again, when compliments are in order, and self-laudation, his evident amusement—which is by no means a pose but perfectly genuine—is regarded as idiotic. When he hears the praises of a despot or a king being sung, it sounds to his ears as if some stock-breeder were being congratulated—some keeper of pigs or sheep, or cows that are giving him plenty of milk; only he thinks that the rulers have a more difficult and treacherous animal to rear and milk, and that such a man, having no spare time, is bound to become quite as coarse and uncultivated as the stock-farmer; for the castle of the one is as much a prison as the mountain fold of the other. When he hears talk of land—that so-and-so has a property of ten thousand acres or more, and what a vast property that is, it sounds to him like a tiny plot, used as he is to envisage the whole earth. When his companions become lyric on the subject of great families, and exclaim at the noble blood of one who can point to seven wealthy ancestors, he thinks that such praise comes of a dim and limited vision, an inability, through lack of education, to take a steady view of the whole, and to calculate that every single man has countless hosts of ancestors, near and remote, among whom are to be found, in every instance, rich men and beggars, kings and slaves, Greeks and foreigners, by the thousand. When men pride themselves upon a pedigree of twenty-five ancestors, and trace their descent back to Heracles the son of Amphitryon, they seem to him to be taking a curious interest in trifles. As for the twenty-fifth ancestor of Amphitryon, what he may have been is merely a matter of luck, and similarly with the fiftieth before him again. How ridiculous, he thinks, not to be able to work that out, and get rid of the gaping vanity of a silly mind.

On all these occasions, you see, the philosopher is the object of general derision, partly for what men take to be his superior manner, and partly for his constant ignorance and lack of resource in dealing with the obvious.

Theodorus:: What you say exactly describes what does happen, Socrates.

Socrates:: But consider what happens, my friend, when he in his turn draws someone to a higher level, and induces him to abandon questions of ‘My injustice towards you, or yours towards me’ for an examination of justice and injustice themselves—what they are, and how they differ from everything else and from each other; or again, when he gets him to leave such questions as Ts a king happy?’ or ‘a man of property?’ for an inquiry into kingship, and into human happiness and misery in general—what these two things are, and what, for a human being, is the proper method by which the one can be obtained and the other avoided. When it is an account of matters like all these that is demanded of our friend with the small, sharp, legal mind, the situation is reversed; his head swims as, suspended at such a height, he gazes down from his place among the clouds; disconcerted by the unusual experience, he knows not what to do next, and can only stammer when he speaks. And that causes great entertainment, not to Thracian servant-girls or any other uneducated persons—they do not see what is going on—but to all men who have not been brought up like slaves.

These are the two types, Theodorus. There is the one who has been brought up in true freedom and leisure, the man you call a philosopher; a man to whom it is no disgrace to appear simple and good-for-nothing when he is confronted with menial tasks, when, for instance, he doesn't know how to make a bed, or how to sweeten a sauce or a flattering speech. Then you have the other, the man who is keen and smart at doing all these jobs, but does not know how to strike up a song in his turn like a free man, or how to tune the strings of common speech to the fitting praise of the life of gods and of the happy among men.

Theodorus:: Socrates, if your words convinced everyone as they do me, there would be more peace and less evil on earth.

Socrates:: But it is not possible, Theodorus, that evil should be destroyed—for there must always be something opposed to the good; nor is it possible that it should have its seat in heaven. But it must inevitably haunt human life, and prowl about this earth. That is why a man should make all haste to escape from earth to heaven; and escape means becoming as like God as possible; and a man becomes like God when he becomes just and pure, with understanding. But it is not at all an easy matter, my good friend, to persuade men that it is not for the reasons commonly alleged that one should try to escape from wickedness and pursue virtue. It is not in order to avoid a bad reputation and obtain a good one that virtue should be practiced and not vice; that, it seems to me, is only what men call ‘old wives’ talk’.

Let us try to put the truth in this way. In God there is no sort of wrong whatsoever; he is supremely just, and the thing most like him is the man who has become as just as it lies in human nature to be. And it is here that we see whether a man is truly able, or truly a weakling and a nonentity; for it is the realization of this that is genuine wisdom and goodness, while the failure to realize it is manifest folly and wickedness. Everything else that passes for ability and wisdom has a sort of commonness—in those who wield political power a poor cheap show, in the manual workers a matter of mechanical routine. If, therefore, one meets a man who practices injustice and is blasphemous in his talk or in his life, the best thing for him by far is that one should never grant that there is any sort of ability about his unscrupulousness; such men are ready enough to glory in the reproach, and think that it means not that they are mere rubbish, cumbering the ground to no purpose, but that they have the kind of qualities that are necessary for survival in the community. We must therefore tell them the truth—that their very ignorance of their true state fixes them the more firmly therein. For they do not know what is the penalty of injustice, which is the last thing of which a man should be ignorant. It is not what they suppose—scourging and death—things which they may entirely evade in spite of their wrongdoing. It is a penalty from which there is no escape.

Theodorus:: And what is that?

Socrates:: My friend, there are two patterns set up in the world. One is divine and supremely happy; the other has nothing of God in it, and is the pattern of the deepest unhappiness. This truth the evildoer does not see; blinded by folly and utter lack of understanding, he fails to perceive that the effect of his unjust practices is to make him grow more and more like the one, and less and less like the other. For this he pays the penalty of living the life that corresponds to the pattern he is coming to resemble. And if we tell him that, unless he is delivered from this ‘ability’ of his, when he dies the place that is pure of all evil will not receive him; that he will forever go on living in this world a life after his own likeness—a bad man tied to bad company: he will but think, This is the way fools talk to a clever rascal like me.’

Theodorus:: Oh, yes, Socrates, sure enough.

Socrates:: I know it, my friend. But there is one accident to which the unjust man is liable. When it comes to giving and taking an account in a private discussion of the things he disparages; when he is willing to stand his ground like a man for long enough, instead of running away like a coward, then, my friend, an odd thing happens. In the end the things he says do not satisfy even himself; that famous eloquence of his somehow dries up, and he is left looking nothing more than a child.

But we had better leave it there; all this is really a digression; and if we go on, a flood of new subjects will pour in and overwhelm our original argument. So, if you don’t mind, we will go back to what we were saying before.

Theodorus:: As a matter of fact, Socrates, I like listening to this kind of talk; it is easier for a man of my years to follow. Still, if you like, let us go back to the argument.

Socrates:: Well, then, we were at somewhere about this point in the argument, weren’t we? We were speaking of the people who assert a being that is in motion, and who hold that for every individual things always are whatever they seem to him to be; and we said that they were prepared to stand upon their principle in almost every case—not least in questions of what is just and right. Here they are perfectly ready to maintain that whatever any community decides to be just and right, and establishes as such, actually is what is just and right for that community and for as long as it remains so established. On the other hand, when it is a question of what things are good, we no longer find anyone so heroic that he will venture to contend that whatever a community thinks useful, and establishes, really is useful, so long as it is the established order—unless, of course, he means that it is called 'useful'; but that would be making a game of our argument, wouldn't it?

Theodorus:: It would indeed.

Socrates:: Let us suppose, then, that he is not talking about the name 'useful' but has in view the thing to which it is applied.

Theodorus:: Agreed.

Socrates:: It is surely this that a government aims at when it legislates, whatever name it calls it. A community always makes such laws as are most useful to it—so far as the limits of its judgment and capacity permit.— Or do you think legislation may have some other object in view?

Theodorus:: Oh no, not at all.

Socrates:: And does a community always achieve this object? Or are there always a number of failures?

Theodorus:: It seems to me that there are failures.

Socrates:: Now we might put this matter in a rather different way and be still more likely to get people generally to agree with our conclusions. I mean, one might put a question about the whole class of things to which 'what is useful' belongs. These things are concerned, I take it, with future time; thus when we legislate, we make laws that are going to be useful in the time to come. This kind of thing we may properly call ‘future’.

Theodorus:: Yes, certainly.

Socrates:: Come then, let’s put a question to Protagoras (or to anyone who professes the same views): ‘Now, Protagoras, “Man is the measure of all things” as you people say—of white and heavy and light and all that kind of thing without exception. He has the criterion of these things within himself; so when he thinks that they are as he experiences them, he thinks what is true and what really is for him.’ Isn’t that so?

Theodorus:: It is.

Socrates:: ‘Then, Protagoras,’ we shall say, ‘what about things that are going to be in the future? Has a man the criterion of these within himself? When he thinks certain things will be, do they actually happen, for him, as he thought they would? Take heat, for example. Suppose the ordinary man thinks he is going to take a fever, and that his temperature will go up to fever point; while another man, this time a doctor, thinks the opposite. Do we hold that the future will confirm either the one judgment or the other? Or are we to say that it will confirm both; that is, that for the doctor the man will not have a temperature or be suffering from fever, while for himself he will?’

Theodorus:: That would be absurd.

Socrates:: But, when there is a question of the sweetness and dryness of the next vintage, I presume it would always be the grower’s judgment that would carry authority, rather than that of a musician?

Theodorus:: Of course.

Socrates:: Nor again, in any question of what will be in tune or out of tune, would the judgment of a teacher of gymnastic be superior to that of a musician—even about what is going to seem to be in tune to the gymnastic master himself?

Theodorus:: No, never.

Socrates:: Or suppose a dinner is being prepared. Even the guest who is going to eat it, if he has no knowledge of cooking, will not be able to pronounce so authoritative a verdict as the professional cook on how nice it is going to be. I say 'going to be', because we had better not at this stage press our point as regards what is now pleasant to any individual, or what has been in the past. Our question for the moment is, whether the individual himself is the best judge, for himself, of what is going to seem and be for him in the future. 'Or,' we will ask, 'would not you, Protagoras, predict better than any layman about the persuasive effect that speeches in a law court will have upon any one of us?'

Theodorus:: And in fact, Socrates, this at any rate is a point on which Protagoras used to make strong claims to superiority over other people.

Socrates:: Of course he did, my dear good fellow. No one would have paid large fees for the privilege of talking with him if he had not been in the habit of persuading his pupils that he was a better judge than any fortune-teller—or anyone else—about what was going to be and seem to be in the future.

Theodorus:: That's true enough.

Socrates:: Legislation also and 'what is useful' is concerned with the future; and it would be generally admitted to be inevitable that a city when it legislates often fails to achieve what is the most useful.

Theodorus:: Yes, surely.

Socrates:: Then we shall be giving your master fair measure if we tell him that he has now got to admit that one man is wiser than another, and that it is such a man who is ‘the measure’; but that I, the man with no special knowledge, have not by any means got to be a measure—a part which the recent speech in his defense was trying to force upon me, whether I liked it or not.

Theodorus:: Now that, Socrates, seems to me to be the chief point on which the theory is convicted of error—though it stands convicted also when it makes other men’s judgments carry authority and these turn out to involve thinking that Protagoras’ statements are completely untrue.

Socrates:: There is more than one point besides these, Theodorus, on which a conviction might be secured—at least so far as it is a matter of proving that not every man’s judgment is true. But so long as we keep within the limits of that immediate present experience of the individual which gives rise to perceptions and to perceptual judgments, it is more difficult to convict these latter of being untrue—but perhaps I’m talking nonsense. Perhaps it is not possible to convict them at all; perhaps those who profess that they are perfectly evident and are always knowledge may be saying what really is. And it may be that our Theaetetus was not far from the mark with his proposition that knowledge and perception are the same thing. We shall have to come to closer grips with the theory, as the speech on behalf of Protagoras required us to do. We shall have to consider and test this moving Being, and find whether it rings true or sounds as if it had some flaw in it. There is no small fight going on about it, anyway—and no shortage of fighting men.

Theodorus:: No, indeed; but in Ionia it seems to be even growing, and assuming vast dimensions. On the side of this theory, the Heraclitean party is conducting a most vigorous campaign.

Socrates:: The more reason, then, my dear Theodorus, why we should examine it by going back to its first principle, which is the way they present it themselves.

Theodorus:: I quite agree. You know, Socrates, these Heraclitean doctrines (or, as you say, Homeric or still more ancient)—you can't discuss them in person with any of the people at Ephesus who profess to be adepts, any more than you could with a maniac. They are just like the things they say in their books—always on the move. As for abiding by what is said, or sticking to a question, or quietly answering and asking questions in turn, there is less than nothing of that in their capacity. That's an exaggeration, no doubt. I mean there isn't so much as a tiny bit of repose in these people. If you ask any one of them a question, he will pull out some little enigmatic phrase from his quiver and shoot it off at you; and if you try to make him give an account of what he has said, you will only get hit by another, full of strange turns of language. You will never reach any conclusion with any of them, ever; indeed they never reach any conclusion with each other, they are so very careful not to allow anything to be stable, either in an argument or in their own souls. I suppose they think that if they did it would be something that stands still—this being what they are totally at war with, and what they are determined to banish from the universe, if they can.

Socrates:: I dare say, Theodorus, you have seen these men only on the field of battle, and never been with them in times of peace—as you don't belong to their set. I expect they keep such matters to be explained at leisure to their pupils whom they want to make like themselves.

Theodorus:: Pupils, my good man? There are no pupils and teachers among these people. They just spring up on their own, one here, one there, wherever they happen to catch their inspiration; and no one of them will credit another with knowing anything. As I was just going to say, you will never get these men to give an account of themselves, willingly or unwillingly. What we must do is to take their doctrine out of their hands and consider it for ourselves, as we should a problem in geometry.

Socrates:: What you say is very reasonable. This problem now, we have inherited it, have we not, from the ancients? They used poetical forms which concealed from the majority of men their real meaning, namely, that Ocean and Tethys, the origin of all things, are actually flowing streams, and nothing stands still. In more modern times, the problem is presented to us by men who, being more accomplished in these matters, plainly demonstrate their meaning so that even shoemakers may hear and assimilate their wisdom, and give up the silly idea that some things in this world stand still while others move, learn that all things are in motion, and recognize the greatness of their instructors.

But I was almost forgetting, Theodorus, that there are other thinkers who have announced the opposite view; who tell us that 'Unmoved is the Universe', and other similar statements which we hear from a Melissus or a Parmenides as against the whole party of Heracliteans. These philosophers insist that all things are One, and that this One stands still, itself within itself, having no place in which to move.

What are we to do with all these people, my friend? We have been gradually advancing till, without realizing it, we have got ourselves in between the two parties; and if we don't in some way manage to put up a fight and make our escape, we shall pay for it, like the people who play that game on the line in the wrestling schools, and get caught by both parties and pulled in opposite directions.

Now I think we ought to begin by examining the other party, the fluent fellows we started to pursue. If they appear to us to be talking sense, we will help them to drag us over to their side, and try to escape the others. But if those who make their stand for the whole appear to be nearer the truth, we will take refuge with them from the men who ‘move what should not be moved’. And if it appears that neither party has a reasonable theory, then we shall be very absurd if we think that insignificant people like ourselves can have anything to say, after we have rejected the views of men who lived so long ago and possessed all wisdom. Think now, Theodorus, is it of any use for us to go forward upon such a dangerous venture?

Theodorus:: We can’t refuse to examine the doctrines of these two schools, Socrates; that couldn’t be allowed.

Socrates:: Then we must examine them, if you feel so strongly about it. Now it seems to me that the proper starting point of our criticism is the nature of motion; what is this thing that they are talking about when they say that all things are in motion? I mean, for example, are they referring to one form of motion only, or, as I think, to two—but don’t let this be only what I think. You commit yourself as well, so that we may come to grief together, if need be. Tell me, do you call it ‘motion’ when a thing changes from one place to another or turns round in the same place?

Theodorus:: I do, yes.

Socrates:: Here then is one form of motion. Then supposing a thing remains in the same place, but grows old, or becomes black instead of white, or hard instead of soft, or undergoes any other alteration; isn’t it right to say that here we have motion in another form?

Theodorus:: Unquestionably.

Socrates:: Then I now have two forms of motion, alteration and spatial movement.

Theodorus:: Yes; and that’s quite correct.

Socrates:: Then now that we have made this distinction, let us have a talk with the people who allege that all things are in motion. Let us ask them, ‘Do you hold that everything is in motion in both ways, that is, that it both moves through space and undergoes alteration? Or do you suggest that some things are in motion in both ways, and some only in one or the other?’

Theodorus:: Heaven knows, I can’t answer that. I suppose they would say, in both ways.

Socrates:: Yes; otherwise, my friend, it will turn out that, in their view, things are both moving and standing still; and it will be no more correct to say that all things are in motion than to say that all things stand still.

Theodorus:: That’s perfectly true.

Socrates:: Then since they must be in motion, and there is no such thing anywhere as absence of motion, it follows that all things are always in every kind of motion.

Theodorus:: Yes, that must be so.

Socrates:: Then I want you to consider this point in their theory. As we were saying, they hold that the genesis of things such as warmth and whiteness occurs when each of them is moving, together with a perception, in the space between the active and passive factors: the passive factor thereby becoming percipient, but not a perception, while the active factor becomes such or such, but not a quality—isn’t that so? But perhaps ‘quality’ seems a strange word to you; perhaps you don’t quite understand it as a general expression. So I will talk about particular cases. What I mean is that the active factor becomes not warmth or whiteness, but warm and white; and so on. You will remember, perhaps, that we said in the earlier stages of the argument that there is nothing which in itself is just one thing; and that this applies also to the active and passive factors. It is by the association of the two with one another that they generate perceptions and the things perceived; and in so doing, the active factor becomes such and such, while the passive factor becomes percipient.

Theodorus:: Yes, I remember that, of course.

Socrates:: Then we need not concern ourselves about other points in their doctrine, whether they mean what we say or something else. We must keep our eyes simply upon the object of our discussion. We must ask them this question: ‘According to you, all things move and flow; isn’t that so?’

Theodorus:: Yes.

Socrates:: And they have both the motions that we distinguished, that is to say, they both move and alter?

Theodorus:: That must be so, if they are to be wholly and completely in motion.

Socrates:: Now if they were only moving through space and not altering, we should presumably be able to say what the moving things flow? Or how do we express it?

Theodorus:: That’s all right.

Socrates:: But since not even this abides, that what flows flows white, but rather it is in process of change, so that there is flux of this very thing also, the whiteness, and it is passing over into another color, lest it be convicted of standing still in this respect—since that is so, is it possible to give any name to a color which will properly apply to it?

Theodorus:: I don’t see how one could, Socrates; nor yet surely to anything else of that kind, if, being in flux, it is always quietly slipping away as you speak?

Socrates:: And what about any particular kind of perception; for example, seeing or hearing? Does it ever abide, and remain seeing or hearing?

Theodorus:: It ought not to, certainly, if all things are in motion.

Socrates:: Then we may not call anything seeing rather than not-seeing; nor indeed may we call it any other perception rather than not—if it be admitted that all things are in motion in every way?

Theodorus:: No, we may not.

Socrates:: Yet Theaetetus and I said that knowledge was perception?

Theodorus:: You did.

Socrates:: And so our answer to the question, 'What is knowledge?' gave something which is no more knowledge than not.

Theodorus:: It seems as if it did.

Socrates:: A fine way this turns out to be of making our answer right. We were most anxious to prove that all things are in motion, in order to make that answer come out correct; but what has really emerged is that, if all things are in motion, every answer, on whatever subject, is equally correct, both 'it is thus' and 'it is not thus'—or if you like 'becomes', as we don't want to use any expressions which will bring our friends to a standstill.

Theodorus:: You are quite right.

Socrates:: Well, yes, Theodorus, except that I said 'thus' and 'not thus'. One must not use even the word 'thus'; for this 'thus' would no longer be in motion; nor yet 'not thus' for here again there is no motion. The exponents of this theory need to establish some other language; as it is, they have no words that are consistent with their hypothesis—

unless it would perhaps suit them best to use ‘not at all thus’ in a quite indefinite sense.

Theodorus:: That would at least be an idiom most appropriate to them.

Socrates:: Then we are set free from your friend, Theodorus. We do not yet concede to him that every man is the measure of all things, if he be not a man of understanding. And we are not going to grant that knowledge is perception, not at any rate on the line of inquiry which supposes that all things are in motion; we are not going to grant it unless Theaetetus here has some other way of stating it.

Theodorus:: That’s very good hearing, Socrates, for when these matters were concluded I was to be set free from my task of answering you, according to our agreement, which specified the end of the discussion of Protagoras’ theory.

Theaetetus:: Oh, no, indeed, Theodorus! Not till you and Socrates have done what you proposed just now, and dealt with the other side, the people who say that the Universe stands still.

Theodorus:: What’s this, Theaetetus? You at your age teaching your elders to be unjust and break their agreements? What you have got to do is to prepare to render account to Socrates yourself for the rest of the discussion.

Theaetetus:: All right, if he likes. But I would rather have listened to a discussion of these views.

Theodorus:: Well, challenging Socrates to an argument is like inviting ‘cavalry into the plain’. So ask your questions and you shall hear.

Socrates:: But I don’t think, Theodorus, that I am going to be persuaded by Theaetetus to do what he demands.

Theodorus:: But what is it makes you unwilling?

Socrates:: Shame. I am afraid our criticism might be a very cheap affair. And if I feel like this before the many who have made the universe one and unmoved, Melissus and the rest of them, I feel it still more in the face of the One—Parmenides. Parmenides seems to me, in the words of Homer, to be ‘reverend’ and ‘awful’. I met him when I was very young and he was a very old man; and he seemed to me to have a wholly noble depth. So I am afraid we might not understand even what he says; still less should we attain to his real thought. Above all, I am afraid that the very object of our discussion, the nature of knowledge, might be left unexamined amid the crowd of theories that will rush in upon us if we admit them; especially as the theory we have now brought up is one which involves unmanageably vast issues. To treat it as a sideshow would be insult and injury; while if it is adequately discussed, it is likely to spread out until it completely eclipses the problems of knowledge. We must not do either. What we must do is to make use of our midwife’s art to deliver Theaetetus of the thoughts which he has conceived about the nature of knowledge.

Theodorus:: Well, if that is what you think proper, it must be done.

Socrates:: Now, Theaetetus, I want you to think about one point in what has been said. Your answer was that knowledge is perception, wasn’t it?

Theaetetus:: Yes.

Socrates:: Now supposing you were asked: ‘With what does a man see white and black, and with what does he hear high and low notes?’ You would reply, I imagine, ‘With his eyes and ears.’

Theaetetus:: I should, yes.

Socrates:: Now as a rule it is no sign of ill-breeding to be easy in the use of language and take no particular care in one’s choice of words; it is rather the opposite that gives a man away. But such exactness is sometimes necessary; and it is necessary here, for example, to fasten upon something in your answer that is not correct. Think now. Is it more correct to say that the eyes are that with which we see, or that through which we see? Do we hear with the ears or through the ears?

Theaetetus:: Well, I should think, Socrates, that it is ‘through which’ we perceive in each case, rather than ‘with which.’

Socrates:: Yes, my son. It would be a very strange thing, I must say, if there were a number of perceptions sitting inside us as if we were Wooden Horses, and there were not some single form, soul or whatever one ought to call it, to which all these converge—something with which, through the senses, as if they were instruments, we perceive all that is perceptible.

Theaetetus:: That sounds to me better than the other way of putting it.

Socrates:: Now the reason why I am being so precise with you is this. I want to know if it is with one and the same part of ourselves that we reach, through our eyes to white and black, and through the other means to yet further things; and whether, if asked, you will be able to refer all these to the body. But perhaps it would be better if you stated the answers yourself, rather than that I should busy myself on your behalf. Tell me: the instruments through which you perceive hot, hard, light, sweet—do you consider that they all belong to the body? Or can they be referred elsewhere?

Theaetetus:: No, they all belong to the body.

Socrates:: And are you also willing to admit that what you perceive through one power, you can’t perceive through another? For instance, what you perceive through hearing, you couldn’t perceive through sight, and similarly what you perceive through sight you couldn’t perceive through hearing?

Theaetetus:: I could hardly refuse to grant that.

Socrates:: Then suppose you think something about both; you can’t possibly be having a perception about both, either through one of these instruments or through the other?

Theaetetus:: No.

Socrates:: Now take a sound and a color. First of all, don’t you think this same thing about both of them, namely, that they both are?

Theaetetus:: I do.

Socrates:: Also that each of them is different from the other and the same as itself?

Theaetetus:: Of course.

Socrates:: And that both together are two, and each of them is one?

Theaetetus:: Yes, I think that too.

Socrates:: Are you also able to consider whether they are like or unlike each other?

Theaetetus:: Yes, I may be.

Socrates:: Now what is it through which you think all these things about them? It is not possible, you see, to grasp what is common to both either through sight or through hearing. Let us consider another thing which will show the truth of what we are saying. Suppose it were possible to inquire whether both are salty or not. You can tell me, of course, with what you would examine them. It would clearly be neither sight nor hearing, but something else.

Theaetetus:: Yes, of course; the power which functions through the tongue.

Socrates:: Good. Now through what does that power function which reveals to you what is common in the case both of all things and of these two—I mean that which you express by the words ‘is’ and ‘is not’ and the other terms used in our questions about them just now? What kind of instruments will you assign for all these? Through what does that which is percipient in us perceive all of them?

Theaetetus:: You mean being and not-being, likeness and unlikeness, same and different; also one, and any other number applied to them. And obviously too your question is about odd and even, and all that is involved with these attributes; and you want to know through what bodily instruments we perceive all these with the soul.

Socrates:: You follow me exceedingly well, Theaetetus. These are just the things I am asking about.

Theaetetus:: But I couldn’t possibly say. All I can tell you is that it doesn’t seem to me that for these things there is any special instrument at all, as there is for the others. It seems to me that in investigating the common features of everything the soul functions through itself.

Socrates:: Yes, Theaetetus, you would say that, because you are handsome and not ugly as Theodorus would have it. For handsome is as handsome says. And besides being handsome, you have done me a good turn; you have saved me a vast amount of talk if it seems to you that, while the soul considers some things through the bodily powers, there are others which it considers alone and through itself. This was what I thought myself, but I wanted you to think it too.

Theaetetus:: Well, it does seem to me to be so.

Socrates:: Now in which class do you put being? For that, above all, is something that accompanies everything.

Theaetetus:: I should put it among the things which the soul itself reaches out after by itself.

Socrates:: Also like and unlike, same and different?

Theaetetus:: Yes.

Socrates:: What about beautiful and ugly, good and bad?

Theaetetus:: Yes, these too; in these, above all, I think the soul examines their being in comparison with one another. Here it seems to be making a calculation within itself of past and present in relation to future.

Socrates:: Not so fast, now. Wouldn't you say that it is through touch that the soul perceives the hardness of what is hard, and similarly the softness of what is soft?

Theaetetus:: Yes.

Socrates:: But as regards their being—the fact that they are—their opposition to one another, and the being, again, of this opposition, the matter is different. Here the soul itself attempts to reach a decision for us by rising to compare them with one another.

Theaetetus:: Yes, undoubtedly.

Socrates:: And thus there are some things which all creatures, men and animals alike, are naturally able to perceive as soon as they are born; I mean, the experiences which reach the soul through the body. But calculations regarding their being and their advantageousness come, when they do, only as the result of a long and arduous development, involving a good deal of trouble and education.

Theaetetus:: Yes, that certainly is so.

Socrates:: Now is it possible for someone who does not even get at being to get at truth?

Theaetetus:: No; it's impossible.

Socrates:: And if a man fails to get at the truth of a thing, will he ever be a person who knows that thing?

Theaetetus:: I don't see how, Socrates.

Socrates:: Then knowledge is to be found not in the experiences but in the process of reasoning about them; it is here, seemingly, not in the experiences, that it is possible to grasp being and truth.

Theaetetus:: So it appears.

Socrates:: Then in the face of such differences, would you call both by the same name?

Theaetetus:: One would certainly have no right to.

Socrates:: Now what name do you give to the former—seeing, hearing, smelling, feeling cold or warm?

Theaetetus:: I call that perceiving—what else could I call it?

Socrates:: So the whole lot taken together you call perception?

Theaetetus:: Necessarily.

Socrates:: Which, we say, has no share in the grasping of truth, since it has none in the grasping of being.

Theaetetus:: No, it has none.

Socrates:: So it has no share in knowledge either.

Theaetetus:: No.

Socrates:: Then, Theaetetus, perception and knowledge could never be the same thing.

Theaetetus:: No, apparently not, Socrates; we have now got the clearest possible proof that knowledge is something different from perception.

Socrates:: But our object in beginning this discussion was not to find out what knowledge is not, but to find out what it is. However, we have made a little progress. We shall not now look for knowledge in sense-perception at all, but in whatever we call that activity of the soul when it is busy by itself about the things which are.

Theaetetus:: Well, the name, Socrates, I suppose is judgment.

Socrates:: Your opinion, my dear lad, is correct. Now look back to the beginning. Wipe out all that we have said hitherto, and see if you can see any better from where you have now progressed to. Tell me again, what is knowledge?

Theaetetus:: Well, Socrates, one can't say that it is judgment in general, because there is also false judgment—but true judgment may well be knowledge. So let that be my answer. If the same thing happens again, and we find, as we go on, that it turns out not to be so, we'll try something else.

Socrates:: And even so, Theaetetus, you have answered me in the way one ought—with a good will, and not reluctantly, as you did at first. If we continue like this, one of two things will happen. Either we shall find what we are going out after; or we shall be less inclined to think we know things which we don't know at all—and even that would be a reward we could not fairly be dissatisfied with. Now what is this that you say? There are two forms of judgment, true and false; and your definition is that true judgment is knowledge?

Theaetetus:: Yes. That is how it looks to me now.

Socrates:: Now I wonder if it's worth while, at this stage, to go back to an old point about judgment—

Theaetetus:: What point do you mean?

Socrates:: I have something on my mind which has often bothered me before, and got me into great difficulty, both in my own thought and in discussion with other people—I mean, I can't say what it is, this experience we have, and how it arises in us.

Theaetetus:: What experience?

Socrates:: Judging what is false. Even now, you know, I'm still considering; I'm in two minds whether to let it go or whether to look into it in a different manner from a short while ago.

Theaetetus:: Why not, Socrates, if this appears for any reason to be the right thing to do? As you and Theodorus were saying just now, and quite rightly, when you were talking about leisure, we are not pressed for time in talk of this kind.

Socrates:: A very proper reminder. Perhaps it would not be a bad moment to go back upon our tracks. It is better to accomplish a little well than a great deal unsatisfactorily.

Theaetetus:: Yes, it certainly is.

Socrates:: Now how are we to proceed? And actually what is it that we are saying? We claim, don't we, that false judgment repeatedly occurs and one of us judges falsely, the other truly, as if it was in the nature of things for this to happen?

Theaetetus:: That is what we claim.

Socrates:: Now isn't it true about all things, together or individually, that we must either know them or not know them? I am ignoring for the moment the intermediate conditions of learning and forgetting, as they don't affect the argument here.

Theaetetus:: Of course, Socrates, in that case there is no alternative. With each thing we either know it or we do not.

Socrates:: Then when a man judges, the objects of his judgment are necessarily either things which he knows or things which he doesn't know?

Theaetetus:: Yes, that must be so.

Socrates:: Yet if he knows a thing, it is impossible that he should not know it; or if he does not know it, he cannot know it.

Theaetetus:: Yes, of course.

Socrates:: Now take the man who judges what is false. Is he thinking that things which he knows are not these things but some other things which he knows—so that knowing both he is ignorant of both?

Theaetetus:: But that would be impossible, Socrates.

Socrates:: Then is he imagining that things which he doesn't know are other things which he doesn't know? Is it possible that a man who knows neither Theaetetus nor Socrates should take it into his head that Socrates is Theaetetus or Theaetetus Socrates?

Theaetetus:: I don't see how that could happen.

Socrates:: But a man certainly doesn't think that things he knows are things he does not know, or again that things he doesn't know are things he knows.

Theaetetus:: No, that would be a very odd thing.

Socrates:: Then in what way is false judgment still possible? There is evidently no possibility of judgment outside the cases we have mentioned, since everything is either a thing we know or a thing we don't know; and within these limits there appears to be no place for false judgment to be possible.

Theaetetus:: That's perfectly true.

Socrates:: Then perhaps we had better take up a different line of inquiry; perhaps we should proceed not by way of knowing and not-knowing, but by way of being and not-being?

Theaetetus:: How do you mean?

Socrates:: Perhaps the simple fact is this: it is when a man judges about anything things which are not, that he is inevitably judging falsely, no matter what may be the nature of his thought in other respects.

Theaetetus:: That again is very plausible, Socrates.

Socrates:: Now how will that be? What are we going to say, Theaetetus, if somebody sets about examining us, and we are asked, 'Is what these words express possible for anyone? Can a man judge what is not, either about one of the things which are, or just by itself?' I suppose we shall reply, 'Yes, when he is thinking, but thinking what is not true.' Or how shall we answer?

Theaetetus:: That's our answer.

Socrates:: Now does this kind of thing happen elsewhere?

Theaetetus:: What kind of thing?

Socrates:: Well, for instance, that a man sees something, yet sees nothing.

Theaetetus:: How could he?

Socrates:: On the contrary, in fact, if he is seeing any one thing, he must be seeing a thing which is. Or do you think that a 'one' can be found among the things which are not?

Theaetetus:: I certainly don't.

Socrates:: Then a man who is seeing any one thing is seeing something which is?

Theaetetus:: Apparently.

Socrates:: It also follows that a man who is hearing anything is hearing some one thing and something which is.

Theaetetus:: Yes.

Socrates:: And a man who is touching anything is touching some one thing, and a thing which is, if it is one?

Theaetetus:: Yes, that also follows.

Socrates:: And a man who is judging is judging some one thing, is he not?

Theaetetus:: Necessarily.

Socrates:: And a man who is judging some one thing is judging something which is?

Theaetetus:: I grant that.

Socrates:: Then that means that a man who is judging something which is not is judging nothing?

Theaetetus:: So it appears.

Socrates:: But a man who is judging nothing is not judging at all.

Theaetetus:: That seems clear.

Socrates:: And so it is not possible to judge what is not, either about the things which are or just by itself.

Theaetetus:: Apparently not.

Socrates:: False judgment, then, is something different from judging things which are not?

Theaetetus:: It looks as if it were.

Socrates:: Then neither on this approach nor on the one we followed just now does false judgment exist in us.

Theaetetus:: No, indeed.

Socrates:: Then is it in this way that the thing we call by that name arises?

Theaetetus:: How?

Socrates:: We say that there is false judgment, a kind of 'other-judging', when a man, in place of one of the things that are, has substituted in his thought another of the things that are and asserts that it is in this way, he is always judging something which is, but judges one thing in place of another; and having missed the thing which was the object of his consideration, he might fairly be called one who judges falsely.

Theaetetus:: Now you seem to me to have got it quite right. When a man judges 'ugly' instead of 'beautiful', or 'beautiful' instead of 'ugly', then he is truly judging what is false.

Socrates:: Evidently, Theaetetus, you have not much opinion of me; you don’t find me at all alarming.

Theaetetus:: What in particular makes you say that?

Socrates:: Well, I suppose you don’t think me capable of taking up your ‘truly false’, and asking you whether it is possible that a thing should be slowly swift, or heavily light, or whether anything else can possibly occur in a way not in accordance with its own nature but in accordance with that of its opposite and contrary to itself. But let that pass; I don’t want your boldness to go unrewarded. You like the suggestion, you say, that false judgment is ‘other-judging’?

Theaetetus:: Yes, I do.

Socrates:: Then, according to your judgment, it is possible to set down a thing in one’s thought as another thing and not itself?

Theaetetus:: Surely it is.

Socrates:: Now when a man’s thought is accomplishing this, isn’t it essential that he should be thinking of either one or both of these two things?

Theaetetus:: It is essential; either both together, or each in turn.

Socrates:: Very good. Now by ‘thinking’ do you mean the same as I do?

Theaetetus:: What do you mean by it?

Socrates:: A talk which the soul has with itself about the objects under its consideration. Of course, I’m only telling you my idea in all ignorance; but this is the kind of picture I have of it. It seems to me that the soul when it thinks is simply carrying on a discussion in which it asks itself questions and answers them itself, affirms and denies. And when it arrives at something definite, either by a gradual process or a sudden leap, when it affirms one thing consistently and without divided counsel, we call this its judgment. So, in my view, to judge is to make a statement, and a judgment is a statement which is not addressed to another person or spoken aloud, but silently addressed to oneself. And what do you think?

Theaetetus:: I agree with that.

Socrates:: So that when a man judges one thing to be another, what he is doing, apparently, is to say to himself that the one thing is the other.

Theaetetus:: Yes, of course.

Socrates:: Now try to think if you have ever said to yourself 'Surely the beautiful is ugly', or 'The unjust is certainly just'. Or—to put it in the most general terms—have you ever tried to persuade yourself that 'Surely one thing is another'? Wouldn't the very opposite of this be the truth? Wouldn't the truth be that not even in your sleep have you ever gone so far as to say to yourself 'No doubt the odd is even', or anything of that kind?

Theaetetus:: Yes, that's so.

Socrates:: And do you think that anyone else, in his right mind or out of it, ever ventured seriously to tell himself, with the hope of winning his own assent, that 'A cow must be a horse' or 'Two must be one'?

Theaetetus:: No, indeed I don't.

Socrates:: Well, then, if to make a statement to oneself is to judge, no one who makes a statement, that is, a judgment, about both things, getting hold of both with his soul, can state, or judge, that one is the other. And you, in your turn, must let this form of words pass. What I mean by it is this: no one judges 'The ugly is beautiful' or makes any other such judgment.

Theaetetus:: All right, Socrates, I pass it; and I think you're right.

Socrates:: Thus a man who has both things before his mind when he judges cannot possibly judge that one is the other.

Theaetetus:: So it seems.

Socrates:: But if he has only one of them before his mind in judging, and the other is not present to him at all, he will never judge that one is the other.

Theaetetus:: That's true. For he would have to have hold also of the one that is not present to his judgment.

Socrates:: Then 'other-judging' is not possible for anyone either when he has both things present to him in judgment or when he has one only. So, if anyone is going to define false judgment as 'heterodoxy', he will be saying nothing. The existence of false judgment in us cannot be shown in this way any more than by our previous approaches.

Theaetetus:: It seems not.

Socrates:: And yet, Theaetetus, if it is not shown to exist, we shall be driven into admitting a number of absurdities.

Theaetetus:: And what would they be?

Socrates:: I am not going to tell you until I have tried every possible way of looking at this matter. I should be ashamed to see us forced into making the kind of admissions I mean while we are still in difficulties. If we find what we're after, and become free men, then we will turn round and talk about how these things happen to other people—having secured our own persons against ridicule. While if we can't find any way of extricating ourselves, then I suppose we shall be laid low, like seasick passengers, and give ourselves into the hands of the argument and let it trample all over us and do what it likes with us. And now let me tell you where I see a way still open to this inquiry.

Theaetetus:: Yes, do tell me.

Socrates:: I am going to maintain that we were wrong to agree that it is impossible for a man to be in error through judging that things he knows are things he doesn't know. In a way, it is possible.

Theaetetus:: Now I wonder if you mean the same thing as I too suspected at the time when we suggested it was like that—I mean, that sometimes I, who know Socrates, have seen someone else in the distance whom I don't know and thought it to be Socrates whom I do know. In a case like that, the sort of thing you are referring to does happen.

Socrates:: But didn't we recoil from this suggestion because it made us not know, when we do know, things which we know?

Theaetetus:: Yes, we certainly did.

Socrates:: Then don't let us put the case in that way; let's try another way. It may prove amenable or it may be obstinate; but the fact is we are in such an extremity that we need to turn every argument over and over and test it from all sides. Now see if there is anything in this. Is it possible to learn something you didn't know before?

Theaetetus:: Surely it is.

Socrates:: And again another and yet another thing?

Theaetetus:: Well, why not?

Socrates:: Now I want you to suppose, for the sake of the argument, that we have in our souls a block of wax, larger in one person, smaller in another, and of purer wax in one case, dirtier in another; in some men rather hard, in others rather soft, while in some it is of the proper consistency.

Theaetetus:: All right, I'm supposing that.

Socrates:: We may look upon it, then, as a gift of Memory, the mother of the Muses. We make impressions upon this of everything we wish to remember among the things we have seen or heard or thought of ourselves; we hold the wax under our perceptions and thoughts and take a stamp from them, in the way in which we take the imprints of signet rings. Whatever is impressed upon the wax we remember and know so long as the image remains in the wax; whatever is obliterated or cannot be impressed, we forget and do not know.

Theaetetus:: Let that be our supposition.

Socrates:: Then take the case of a man who knows these things, but is also considering something he is seeing or hearing; and see if he might judge falsely in this way.

Theaetetus:: In what kind of way?

Socrates:: In thinking, of things which he knows, sometimes that they are things which he knows and sometimes that they are things which he doesn't know—these cases being what at an earlier stage we wrongly admitted to be impossible.

Theaetetus:: And what do you say now?

Socrates:: We must begin this discussion by making certain distinctions. We must make it clear that it is impossible to think () that a thing you know, because you possess the record of it in your soul, but which you are not perceiving, is another thing which you know—you have its imprint too—but are not perceiving, () that a thing you know is something you do not know and do not have the seal of, () that a thing you don't know is another thing you don't know, () that a thing you don't know is a thing you know.

Again, it is impossible to think () that a thing you are perceiving is another thing that you are perceiving, () that a thing you are perceiving is a thing which you are not perceiving, () that a thing you are not perceiving is another thing you are not perceiving, () that a thing you are not perceiving is a thing you are perceiving.

Yet again, it is impossible to think () that a thing you both know and are perceiving, when you are holding its imprint in line with your perception of it, is another thing which you know and are perceiving, and whose imprint you keep in line with the perception (this indeed is even more impossible than the former cases, if that can be), () that a thing which you both know and are perceiving, and the record of which you are keeping in its true line, is another thing you know, () that a thing you both know and are perceiving and of which you have the record correctly in line as before, is another thing you are perceiving, () that a thing you neither know nor are perceiving is another thing you neither know nor perceive, () that a thing you neither know nor perceive is another thing you don't know, () that a thing you neither know nor perceive is another thing you are not perceiving.

In all these cases, it is a sheer impossibility that there should be false judgment. It remains that it arises, if anywhere, in the cases I am just going to tell you.

Theaetetus:: What are they? Perhaps I may understand a little better from them; at present, I don't follow.

Socrates:: In these cases of things you know: when you think () that they are other things you know and are perceiving, () that they are things you don't know but are perceiving, () that things you both know and are perceiving are other things you both know and are perceiving.

Theaetetus:: Well, now you have left me further behind than ever.

Socrates:: I'll go over it again in another way. I know Theodorus and remember within myself what he is like; and in the same way I know Theaetetus. But sometimes I am seeing them and sometimes not; sometimes I am touching them, and sometimes not; or I may hear them or perceive them through some other sense, while at other times I have no perception about you two at all, but remember you none the less, and know you within myself—isn’t that so?

Theaetetus:: Yes, certainly.

Socrates:: Now please take this first point that I want to make clear to you—that we sometimes perceive and sometimes do not perceive the things that we know.

Theaetetus:: That’s true.

Socrates:: Then as regards the things we don’t know, we often don’t perceive them either, but often we only perceive them.

Theaetetus:: That is so, also.

Socrates:: Now see if you can follow me a little better. Supposing Socrates knows both Theodorus and Theaetetus, but is not seeing either of them, or having any other perception about them: he could never in that case judge within himself that Theaetetus was Theodorus. Is that sense or not?

Theaetetus:: Yes, that’s quite true.

Socrates:: This, then, was the first of the cases I was speaking of.

Theaetetus:: It was.

Socrates:: Secondly then. Supposing I am acquainted with one of you and not the other, and am perceiving neither of you: in that case, I could never think the one I do know to be the one I don’t know.

Theaetetus:: That is so.

Socrates:: Thirdly, supposing I am not acquainted with either of you, and am not perceiving either of you: I could not possibly think that one of you, whom I don’t know, is another of you whom I don’t know. Now will you please take it that you have heard all over again in succession the other cases described before—the cases in which I shall never judge falsely about you and Theodorus, either when I am familiar or when I am unfamiliar with both of you; or when I know one and not the other. And similarly with perceptions, you follow me.

Theaetetus:: I follow.

Socrates:: So there remains the possibility of false judgment in this case,  I know both you and Theodorus; I have your signs upon that block of wax, like the imprints of rings. Then I see you both in the distance, but cannot see you well enough; but I am in a hurry to refer the proper sign to the proper visual perception, and so get this fitted into the trace of itself, that recognition may take place. This I fail to do; I get them out of line, applying the visual perception of the one to the sign of the other. It is like people putting their shoes on the wrong feet, or like what happens when  we look at things in mirrors, when left and right change places. It is then that ‘heterodoxy’ or false judgment arises.

Theaetetus:: Yes, that seems very likely, Socrates; it is an awfully good description of what happens to the judgment.

Socrates:: Then, again, supposing I know both of you, and am also perceiving one of you, and not the other, but am not keeping my knowledge of the former in line with my perception—that’s the expression I used before and you didn’t understand me then.

Theaetetus:: No, I certainly didn’t.

Socrates:: Well, I was saying that if you know one man and perceive him as well, and keep your knowledge of him in line with your perception, you will never take him for some other person whom you know and are perceiving, and the knowledge of whom you are holding straight with the perception. Wasn’t that so?

Theaetetus:: Yes.

Socrates:: There remained, I take it, the case we have just mentioned where false judgment arises in the following manner: you know both men and you are looking at both, or having some other perception of them; and you don't hold the two signs each in line with its own perception, but like a bad archer you shoot beside the mark and miss—which is precisely what we call falsehood.

Theaetetus:: Naturally so.

Socrates:: And when for one of the signs there is also a present perception but there is not for the other, and you try to fit to the present perception the sign belonging to the absent perception, in all such cases thought is in error.

We may sum up thus: it seems that in the case of things we do not know and have never perceived, there is no possibility of error or of false judgment, if what we are saying is at all sound; it is in cases where we both know things and are perceiving them that judgment is erratic and varies between truth and falsity. When it brings together the proper stamps and records directly and in straight lines, it is true; when it does so obliquely and crosswise, it is false.

Theaetetus:: Well, isn't that beautiful, Socrates?

Socrates:: Ah, when you've heard what is coming next, you will say so all the more. For true judgment is beautiful, right enough, and error is ugly.

Theaetetus:: No doubt about that.

Socrates:: Well, this, then, they say, is why the two things occur. In some men, the wax in the soul is deep and abundant, smooth and worked to the proper consistency; and when the things that come through the senses are imprinted upon this 'heart' of the soul—as Homer calls it, hinting at the likeness to the wax—the signs that are made in it are lasting, because they are clear and have sufficient depth. Men with such souls learn easily and remember what they learn; they do not get the signs out of line with the perceptions, but judge truly. As the signs are distinct and there is plenty of room for them, they quickly assign each thing to its own impress in the wax—the things in question being, of course, what we call the things that are and these people being the ones we call wise.

Or do you feel any doubts about this?

Theaetetus:: No, I find it extraordinarily convincing.

Socrates:: But it is a different matter when a man’s ‘heart’ is ‘shaggy’ (the kind of heart our marvelously knowing poet praises), or when it is dirty and of impure wax; or when it is very soft or hard. Persons in whom the wax is soft are quick to learn but quick to forget; when the wax is hard, the opposite happens. Those in whom it is ‘shaggy’ and rugged, a stony thing with earth or filth mixed all through it, have indistinct impressions. So too if the wax is hard, for then the impressions have no depth; similarly they are indistinct if the wax is soft, because they quickly run together and are blurred. If, in addition to all this, the impresses in the wax are crowded upon each other for lack of space, because it is only some little scrap of a soul, they are even more indistinct. All such people are liable to false judgment. When they see or hear or think of anything, they can’t quickly allot each thing to each impress; they are slow and allot things to impresses which do not belong to them, misseeing, mishearing and misthinking most of them—and these in turn are the ones we describe as in error about the things that are and ignorant.

Theaetetus:: That’s exactly it, Socrates; no man could improve on your account.

Socrates:: Then are we to say that false judgments do exist in us?

Theaetetus:: Yes, most emphatically.

Socrates:: And true ones, of course?

Theaetetus:: And true ones.

Socrates:: And we think we have now reached a satisfactory agreement, when we say that these two kinds of judgment certainly exist?

Theaetetus:: There's no earthly doubt about it, Socrates.

Socrates:: Theaetetus, I'm afraid a garrulous man is really an awful nuisance.

Theaetetus:: Why, what are you talking about?

Socrates:: I'm annoyed at my own stupidity—my own true garrulousness. What else could you call it when a man will keep dragging arguments up and down, because he is too slow-witted to reach any conviction, and will not be pulled off any of them?

Theaetetus:: But why should you be annoyed?

Socrates:: I am not only annoyed; I am alarmed. I am afraid of what I may say if someone asks me: 'So, Socrates, you've discovered false judgment, have you? You have found that it arises not in the relation of perceptions to one another, or of thoughts to one another, but in the connecting of perception with thought?' I believe I am very likely to say 'Yes', with an air of flattering myself upon our having made some beautiful discovery.

Theaetetus:: Well, Socrates, what you have just shown us looks to me quite a presentable thing anyway.

Socrates:: 'You mean', he goes on, 'that we would never suppose that a man we are merely thinking of but not seeing is a horse which again we are not seeing or touching, but just thinking of and not perceiving anything else about it?' I suppose I shall agree that we do mean this.

Theaetetus:: Yes, and quite rightly.

Socrates:: ‘Well then,’ he goes on, ‘doesn’t it follow from this theory that a man couldn’t possibly suppose that eleven, which he is merely thinking about, is twelve, which again he is merely thinking about?’ Come now, you answer.

Theaetetus:: Well, my answer will be that someone who is seeing or touching them could suppose that eleven are twelve, but not with those that he has in his thought: he would never judge this in that way about them.

Socrates:: Well, now, take the case where a man is considering five and seven within himself—I don’t mean seven men and five men, or anything of that sort, but five and seven themselves; the records, as we allege, in that waxen block, things among which it is not possible that there should be false judgment. Suppose he is talking to himself about them, and asking himself how many they are. Do you think that in such a case it has ever happened that one man thought they were eleven and said so, while another thought and said that they were twelve? Or do all men say and all men think that they are twelve?

Theaetetus:: Oh, good Heavens, no; lots of people would make them eleven. And with larger numbers they go wrong still more often—for I suppose what you say is intended to apply to all numbers.

Socrates:: Quite right. And I want you to consider whether what happens here is not just this, that a man thinks that twelve itself, the one on the waxen block, is eleven.

Theaetetus:: It certainly looks as if he does.

Socrates:: Then haven’t we come back to the things we were saying at the outset? You see, anyone to whom this happens is thinking that one thing he knows is another thing he knows. And this we said was impossible; in fact, it was just this consideration which led us to exclude the possibility of false judgment, because, if admitted, it would mean that the same man must, at one and the same time, both know and not know the same objects.

Theaetetus:: That’s perfectly true.

Socrates:: Then we shall have to say that false judgment is something other than a misapplication of thought to perception; because if this were so, we could never be in error so long as we remained within our thoughts themselves. But as the matter now stands, either there is no such thing as false judgment; or a man may not know what he knows. Which do you choose?

Theaetetus:: You are offering me an impossible choice, Socrates.

Socrates:: But I’m afraid the argument will not permit both. Still— we must stop at nothing; supposing now we were to set about being quite shameless?

Theaetetus:: How?

Socrates:: By consenting to say what knowing is like.

Theaetetus:: And why should that be shameless?

Socrates:: You don’t seem to realize that our whole discussion from the beginning has been an inquiry about knowledge, on the assumption that we do not yet know what it is.

Theaetetus:: Oh but I do.

Socrates:: Well, then, don’t you think it is a shameless thing that we, who don’t know what knowledge is, should pronounce on what knowing is like? But as a matter of fact, Theaetetus, for some time past our whole method of discussion has been tainted. Time and again we have said ‘we are acquainted with’ and ‘we are not acquainted with’, ‘we know’ and ‘we do not know’, as if we could to some extent understand one another while we are still ignorant of what knowledge is. Or here’s another example, if you like: at this very moment, we have again used the words ‘to be ignorant of, and ‘to understand’, as if these were quite proper expressions for us when we are deprived of knowledge.

Theaetetus:: But how are you going to carry on the discussion at all, Socrates, if you keep off these words?

Socrates:: Quite impossible, for a man like me; but if I were one of the experts in contradiction, I might be able to. If one of those gentlemen were present, he would have commanded us to refrain from them, and would keep coming down upon us heavily for the faults I’m referring to. But since we are no good anyway, why don’t I make bold to tell you what knowing is like? It seems to me that this might be of some help.

Theaetetus:: Then do be bold, please. And if you don’t keep from using these words, we’ll forgive you all right.

Socrates:: Well, then, have you heard what people are saying nowadays that knowing is?

Theaetetus:: I dare say I have; but I don’t remember it at the moment.

Socrates:: Well, they say, of course, that it is ‘the having of knowledge’.

Theaetetus:: Oh, yes, that’s true.

Socrates:: Let us make a slight change; let us say ‘the possession of knowledge’.

Theaetetus:: And how would you say that was different from the first way of putting it?

Socrates:: Perhaps it isn’t at all; but I will tell you what I think the difference is, and then you must help me to examine it.

Theaetetus:: All right—if I can.

Socrates:: Well, then, to ‘possess’ doesn’t seem to me to be the same as to ‘have’. For instance, suppose a man has bought a coat and it is at his disposal but he is not wearing it; we would not say that he ‘has’ it on, but we would say he ‘possesses’ it.

Theaetetus:: Yes, that would be correct.

Socrates:: Now look here: is it possible in this way to possess knowledge and not ‘have’ it? Suppose a man were to hunt wild birds, pigeons or something, and make an aviary for them at his house and look after them there; then, in a sense, I suppose, we might say he ‘has’ them all the time, because of course he possesses them. Isn’t that so?

Theaetetus:: Yes.

Socrates:: But in another sense he ‘has’ none of them; it is only that he has acquired a certain power in respect of them, because he has got them under his control in an enclosure of his own. That is to say, he has the power to hunt for any one he likes at any time, and take and ‘have’ it whenever he chooses, and let it go again; and this he can do as often as he likes.

Theaetetus:: That is so.

Socrates:: Well a little while ago we were equipping souls with I don’t know what sort of a waxen device. Now let us make in each soul a sort of aviary of all kinds of birds; some in flocks separate from the others, some in small groups, and others flying about singly here and there among all the rest.

Theaetetus:: All right, let us suppose it made. What then?

Socrates:: Then we must say that when we are children this receptacle is empty; and by the birds we must understand pieces of knowledge. When anyone takes possession of a piece of knowledge and shuts it up in the pen, we should say that he has learned or has found out the thing of which this is the knowledge; and knowing, we should say, is this.

Theaetetus:: That’s given, then.

Socrates:: Now think: when he hunts again for any one of the pieces of knowledge that he chooses, and takes it and ‘has’ it, then lets it go again, what words are appropriate here? The same as before, when he took possession of the knowledge, or different ones?—You will see my point more clearly in this way. There is an art you call arithmetic, isn’t there?

Theaetetus:: Yes.

Socrates:: Now I want you to think of this as a hunt for pieces of knowledge concerning everything odd and even.

Theaetetus:: All right, I will.

Socrates:: It is by virtue of this art, I suppose, that a man both has under his control pieces of knowledge concerning numbers and also hands them over to others?

Theaetetus:: Yes.

Socrates:: And we call it ‘teaching’ when a man hands them over to others, and ‘learning’ when he gets them handed over to him; and when he ‘has’ them through possessing them in this aviary of ours, we call that ‘knowing’.

Theaetetus:: Yes, certainly.

Socrates:: Now you must give your attention to what is coming next. It must surely be true that a man who has completely mastered arithmetic knows all numbers? Because there are pieces of knowledge covering all numbers in his soul.

Theaetetus:: Of course.

Socrates:: And a man so trained may proceed to do some counting, either counting to himself the numbers themselves, or counting something else, one of the external things which have number?

Theaetetus:: Yes, surely.

Socrates:: And counting we shall take to be simply a matter of considering how large a number actually is?

Theaetetus:: Yes.

Socrates:: Then it looks as if this man were considering something which he knows as if he did not know it (for we have granted that he knows all numbers). I've no doubt you've had such puzzles put to you.

Theaetetus:: I have, yes.

Socrates:: Then using our image of possessing and hunting for the pigeons, we shall say that there are two phases of hunting; one before you have possession in order to get possession, and another when you already possess in order to catch and have in your hands what you previously acquired. And in this way even with things you learned and got the knowledge of long ago and have known ever since, it is possible to learn them—these same things—all over again. You can take up again and 'have' that knowledge of each of them which you acquired long ago but had not ready to hand in your thought, can't you?

Theaetetus:: True.

Socrates:: Now this is what I meant by my question a moment ago. What terms ought we to use about them when we speak of what the arithmetician does when he proceeds to count, or the scholar when he proceeds to read something? Here, it seems, a man who knows something is setting out to learn again from himself things which he already knows.

Theaetetus:: But that would be a very odd thing, Socrates.

Socrates:: But are we to say that it is things which he does not know that such a man is going to read and count—

remembering that we have granted him knowledge of all letters and all numbers?

Theaetetus:: That wouldn't be reasonable, either.

Socrates:: Then would you like us to take this line? Suppose we say we do not mind at all about the names; let people drag around the terms 'knowing' and 'learning' to their heart's content. We have determined that to 'possess' knowledge is one thing and to 'have' it is another; accordingly we maintain that it is impossible for anyone not to possess that which he has possession of, and thus, it never happens that he does not know something he knows. But he may yet make a false judgment about it. This is because it is possible for him to 'have', not the knowledge of this thing, but another piece of knowledge instead. When he is hunting for one piece of knowledge, it may happen, as they fly about, that he makes a mistake and gets hold of one instead of another. It was this that happened when he thought eleven was twelve. He got hold of the knowledge of eleven that was in him, instead of the knowledge of twelve, as you might catch a ring-dove instead of a pigeon.

Theaetetus:: Yes; that is reasonable, now.

Socrates:: But when he gets hold of the one he is trying to get hold of, then he is free from error; when he does that, he is judging what is. In this way, both true and false judgment exist; and the things that worried us before no longer stand in our way. I daresay you'll agree with me? Or, if not, what line will you take?

Theaetetus:: I agree.

Socrates:: Yes; we have now got rid of this 'not knowing what one knows'. For we now find that at no point does it happen that we do not possess what we possess, whether we are in error about anything or not. But it looks to me as if something else more alarming is by way of coming upon us.

Theaetetus:: What's that?

Socrates:: I mean, what is involved if false judgment is going to become a matter of an interchange of pieces of knowledge.

Theaetetus:: What do you mean?

Socrates:: To begin with, it follows that a man who has knowledge of something is ignorant of this very thing not through want of knowledge but actually in virtue of his knowledge. Secondly, he judges that this is something else and that the other thing is it. Now surely this is utterly unreasonable; it means that the soul, when knowledge becomes present to it, knows nothing and is wholly ignorant. According to this argument, there is no reason why an accession of ignorance should not make one know something, or of blindness make one see something, if knowledge is ever going to make a man ignorant.

Theaetetus:: Well, perhaps, Socrates, it wasn't a happy thought to make the birds only pieces of knowledge. Perhaps we ought to have supposed that there are pieces of ignorance also flying about in the soul along with them, and what happens is that the hunter sometimes catches a piece of knowledge and sometimes a piece of ignorance concerning the same thing; and the ignorance makes him judge falsely, while the knowledge makes him judge truly.

Socrates:: I can hardly refrain from expressing my admiration of you, Theaetetus; but do think again about that. Let us suppose it is as you say: then, you maintain, the man who catches a piece of ignorance will judge falsely. Is that it?

Theaetetus:: Yes.

Socrates:: But presumably he will not think he is judging falsely?

Theaetetus:: No, of course he won't.

Socrates:: He will think he is judging what is true; and his attitude towards the things about which he is in error will be as if he knew them.

Theaetetus:: Of course.

Socrates:: He will think he has hunted down and 'has' a piece of knowledge and not a piece of ignorance.

Theaetetus:: Yes, that's clear.

Socrates:: So, after going a long way round, we are back at our original difficulty. Our friend the expert in refutation will laugh. 'My very good people,' he will say, 'do you mean that a man who knows both knowledge and ignorance is thinking that one of them which he knows is the other which he knows? Or is it that he knows neither, and judges the one he doesn't know to be the other which he doesn't know? Or is it that he knows one and not the other, and judges that the one he knows is the one he doesn't know? Or does he think that the one he doesn't know is the one he does? Or are you going to start all over again and tell me that there's another set of pieces of knowledge concerning pieces of knowledge and ignorance, which a man may possess shut up in some other ridiculous aviaries or waxen devices, which he knows so long as he possesses them though he may not have them ready to hand in his soul—and in this way end up forced to come running round to the same place over and over again and never get any further?' What are we going to say to that, Theaetetus?

Theaetetus:: Oh, dear me, Socrates, I don't know what one ought to say.

Socrates:: Then don't you think, my boy, that the argument is perhaps dealing out a little proper chastisement, and showing us that we were wrong to leave the question about knowledge and proceed to inquire into false judgment first? While as a matter of fact it's impossible to know this until we have an adequate grasp of what knowledge is.

Theaetetus:: Well, at the moment, Socrates, I feel bound to believe you.

Socrates:: Then, to go back to the beginning, what are we going to say knowledge is?—We are not, I suppose, going to give up yet?

Theaetetus:: Certainly not, unless you give up yourself.

Socrates:: Tell me, then, how could we define it with the least risk of contradicting ourselves?

Theaetetus:: In the way we were attempting before, Socrates; I can't think of any other.

Socrates:: In what way do you mean?

Theaetetus:: By saying that knowledge is true judgment. Judging truly is at least something free of mistakes, I take it, and everything that results from it is admirable and good.

Socrates:: Well, Theaetetus, as the man who was leading the way across the river said, 'It will show you.' If we go on and track this down, perhaps we may stumble on what we are looking for; if we stay where we are, nothing will come clear.

Theaetetus:: You're right; let's go on and consider it.

Socrates:: Well, this won't take long to consider, anyway; there is a whole art indicating to you that knowledge is not what you say.

Theaetetus:: How's that? What art do you mean?

Socrates:: The art of the greatest representatives of wisdom—the men called orators and lawyers. These men, I take it, use their art to produce conviction not by teaching people, but by making them judge whatever they themselves choose. Or do you think there are any teachers so clever that within the short time allowed by the clock they can teach adequately to people who were not eye-witnesses the truth of what happened to people who have been robbed or assaulted, in a case where there were no eye-witnesses?

Theaetetus:: No, I don't think they possibly could; but they might be able to persuade them.

Socrates:: And by 'persuading them,' you mean 'causing them to judge,' don't you?

Theaetetus:: Of course.

Socrates:: Then suppose a jury has been justly persuaded of some matter which only an eye-witness could know, and which cannot otherwise be known; suppose they come to their decision upon hearsay, forming a true judgment: then they have decided the case without knowledge, but, granted they did their job well, being correctly persuaded?

Theaetetus:: Yes, certainly.

Socrates:: But, my dear lad, they couldn't have done that if true judgment is the same thing as knowledge; in that case the best juryman in the world couldn't form a correct judgment without knowledge. So it seems they must be different things.

Theaetetus:: Oh, yes, Socrates, that's just what I once heard a man say;

I had forgotten, but now it's coming back to me. He said that it is true judgment with an account that is knowledge; true judgment without an account falls outside of knowledge. And he said that the things of which there is no account are not knowable (yes, he actually called them that), while those which have an account are knowable.

Socrates:: Very good indeed. Now tell me, how did he distinguish these knowables and unknowables? I want to see if you and I have heard the same version.

Theaetetus:: I don’t know if I can find that out; but I think I could follow if someone explained it.

Socrates:: Listen then to a dream in return for a dream. In my dream, too, I thought I was listening to people saying that the primary elements, as it were, of which we and everything else are composed, have no account.

Each of them, in itself, can only be named; it is not possible to say anything else of it, either that it is or that it is not. That would mean that we were adding being or not-being to it; whereas we must not attach anything, if we are to speak of that thing itself alone. Indeed we ought not to apply to it even such words as ‘itself’ or ‘that’, ‘each’, ‘alone’, or ‘this’, or any other of the many words of this kind; for these go the round and are applied to all things alike, being other than the things to which they are added, whereas if it were possible to express the element itself and it had its own proprietary account, it would have to be expressed without any other thing. As it is, however, it is impossible that any of the primaries should be expressed in an account; it can only be named, for a name is all that it has. But with the things composed of these, it is another matter.

Here, just in the same way as the elements themselves are woven together, so their names may be woven together and become an account of something—an account being essentially a complex of names. Thus the elements are unaccountable and unknowable, but they are perceivable, whereas the complexes are both knowable and expressible and can be the objects of true judgment.

Now when a man gets a true judgment about something without an account, his soul is in a state of truth as regards that thing, but he does not know it; for someone who cannot give and take an account of a thing is ignorant about it. But when he has also got an account of it, he is capable of all this and is made perfect in knowledge. Was the dream you heard the same as this or a different one?

Theaetetus:: No, it was the same in every respect.

Socrates:: Do you like this then, and do you suggest that knowledge is true judgment with an account?

Theaetetus:: Yes, certainly.

Socrates:: Theaetetus, can it be that all in a moment, you and I have today laid hands upon something which many a wise man has searched for in the past—and gone gray before he found it?

Theaetetus:: Well, it does seem to me anyway, Socrates, that what has just been said puts the matter very well.

Socrates:: And it seems likely enough that the matter is really so; for what knowledge could there be apart from an account and correct judgment? But there is one of the things said which I don't like.

Theaetetus:: And what's that?

Socrates:: What looks like the subtlest point of all—that the elements are unknowable and the complexes knowable.

Theaetetus:: And won't that do?

Socrates:: We must make sure; because, you see, we do have as hostages for this theory the original models that were used when all these statements were made.

Theaetetus:: What models?

Socrates:: Letters—the elements of language—and syllables. It must have been these, mustn't it, that the author of our theory had in view— it couldn't have been anything else?

Theaetetus:: No, he must have been thinking of letters and syllables.

Socrates:: Let's take and examine them then. Or rather let us examine ourselves, and ask ourselves whether we really learned our letters in this way or not. Now, to begin with, one can give an account of the syllables but not of the letters—is that it?

Theaetetus:: Well, perhaps.

Socrates:: It most certainly looks like that to me. At any rate, supposing you were asked about the first syllable of 'Socrates': 'Tell me, Theaetetus, what is SO?' What would you answer to that?

Theaetetus:: That it's S and O.

Socrates:: And there you have an account of the syllable?

Theaetetus:: Yes.

Socrates:: Come along then, and let us have the account of S in the same way.

Theaetetus:: How can anyone give the letters of a letter? S is just one of the voiceless letters, Socrates, a mere sound like a hissing of the tongue. B again has neither voice nor sound, and that's true of most letters. So the statement that they themselves are unaccountable holds perfectly good. Even the seven clearest have only voice; no sort of account whatever can be given of them.

Socrates:: So here, my friend, we have established a point about knowledge.

Theaetetus:: We do appear to have done so.

Socrates:: Well then: we have shown that the syllable is knowable but not the letter—is that all right?

Theaetetus:: It seems the natural conclusion, anyway.

Socrates:: Look here, what do we mean by 'the syllable'? The two letters (or if there are more, all the letters)? Or do we mean some single form produced by their combination?

Theaetetus:: I think we mean all the letters.

Socrates:: Then take the case of the two letters, S and O; these two are the first syllable of my name. If a man knows the syllable, he must know both the letters?

Theaetetus:: Of course.

Socrates:: So he knows S and O.

Theaetetus:: Yes.

Socrates:: But can it be that he is ignorant of each one, and knows the two of them without knowing either?

Theaetetus:: That would be a strange and unaccountable thing, Socrates.

Socrates:: And yet, supposing it is necessary to know each in order to know both, then it is absolutely necessary that anyone who is ever to know a syllable must first get to know the letters. And in admitting this, we shall find that our beautiful theory has taken to its heels and got clean away from us.

Theaetetus:: And very suddenly too.

Socrates:: Yes; we are not keeping a proper watch on it. Perhaps we ought not to have supposed the syllable to be the letters; perhaps we ought to have made it some single form produced out of them, having its own single nature—something different from the letters.

Theaetetus:: Yes, certainly; that might be more like it.

Socrates:: We must look into the matter; we have no right to betray a great and imposing theory in this faint-hearted manner.

Theaetetus:: Certainly not.

Socrates:: Then let it be as we are now suggesting. Let the complex be a single form resulting from the combination of the several elements when they fit together; and let this hold both of language and of things in general.

Theaetetus:: Yes, certainly.

Socrates:: Then it must have no parts.

Theaetetus:: Why is that, now?

Socrates:: Because when a thing has parts, the whole is necessarily all the parts. Or do you mean by ‘the whole’ also a single form arising out of the parts, yet different from all the parts?

Theaetetus:: I do.

Socrates:: Now do you call ‘sum’ and ‘whole’ the same thing or different things?

Theaetetus:: I don’t feel at all certain; but as you keep telling me to answer up with a good will, I will take a risk and say they are different.

Socrates:: Your good will, Theaetetus, is all that it should be. Now we must see if your answer is too.

Theaetetus:: We must, of course.

Socrates:: As the argument stands at present, the whole will be different from the sum?

Theaetetus:: Yes.

Socrates:: Well now, is there any difference between all the things and the sum? For instance, when we say ‘one, two, three, four, five, six’; or, ‘twice three’, or ‘three times two’, ‘four and two’, ‘three and two and one’; are we speaking of the same thing in all these cases or different things?

Theaetetus:: The same thing.

Socrates:: That is, six?

Theaetetus:: Precisely.

Socrates:: Then with each expression have we not spoken of all the six?

Theaetetus:: Yes.

Socrates:: And when we speak of them all, aren’t we speaking of a sum?

Theaetetus:: We must be.

Socrates:: That is, six?

Theaetetus:: Precisely.

Socrates:: Then in all things made up of number, at any rate, by ‘the sum’ and ‘all of them’ we mean the same thing?

Theaetetus:: So it seems.

Socrates:: Now let us talk about them in this way. The number of an acre is the same thing as an acre, isn’t it?

Theaetetus:: Yes.

Socrates:: Similarly with a mile.

Theaetetus:: Yes.

Socrates:: And the number of an army is the same as the army? And so always with things of this sort; their total number is the sum that each of them is.

Theaetetus:: Yes.

Socrates:: But is the number of each anything other than its parts?

Theaetetus:: No.

Socrates:: Now things which have parts consist of parts?

Theaetetus:: That seems true.

Socrates:: And it is agreed that all the parts are the sum, seeing that the total number is to be the sum.

Theaetetus:: That is so.

Socrates:: Then the whole does not consist of parts. For if it did, it would be all the parts and so would be a sum.

Theaetetus:: It looks as if it doesn’t.

Socrates:: But can a part, as such, be a part of anything but the whole?

Theaetetus:: Yes; of the sum.

Socrates:: You are putting up a good fight anyway, Theaetetus. But this sum now—isn't it just when there is nothing lacking that it is a sum?

Theaetetus:: Yes, necessarily.

Socrates:: And won't this very same thing—that from which nothing anywhere is lacking—be a whole? While a thing from which something is absent is neither a whole nor a sum—the same consequence having followed from the same condition in both cases at once?

Theaetetus:: Well, it doesn't seem to me now that there can be any difference between whole and sum.

Socrates:: Very well. Now were we not saying that in the case of a thing that has parts, both the whole and the sum will be all the parts?

Theaetetus:: Yes, certainly.

Socrates:: Now come back to the thing I was trying to get at just now. Supposing the syllable is not just its letters, doesn't it follow that it cannot contain the letters as parts of itself? Alternatively, if it is the same as the letters, it must be equally knowable with them?

Theaetetus:: That is so.

Socrates:: Well, wasn't it just in order to avoid this result that we supposed it different from the letters?

Theaetetus:: Yes.

Socrates:: Well then, if the letters are not parts of the syllable, can you tell me of any other things, not its letters, which are?

Theaetetus:: No, indeed. If I were to admit that it had component parts, Socrates, it would be ridiculous, of course, to set aside the letters and look for other components.

Socrates:: Then, Theaetetus, according to our present argument, a syllable is an absolutely single form, indivisible into parts.

Theaetetus:: It looks like it.

Socrates:: Now, my friend, a little while ago, if you remember, we were inclined to accept a certain proposition which we thought put the matter very well—I mean the statement that no account can be given of the primaries of which other things are constituted, because each of them is in itself incomposite; and that it would be incorrect to apply even the term 'being' to it when we spoke of it or the term 'this', because these terms signify different and alien things; and that is the reason why a primary is an unaccountable and unknowable thing. Do you remember?

Theaetetus:: I remember.

Socrates:: And is that the reason also why it is single in form and indivisible into parts or is there some other reason for that? I can see no other myself.

Theaetetus:: No, there really doesn't seem to be any other.

Socrates:: And hasn't the complex now fallen into the same class as the primary, seeing it has no parts and is a single form?

Theaetetus:: Yes, it certainly has.

Socrates:: Well now, if the complex is both many elements and a whole, with them as its parts, then both complexes and elements are equally capable of being known and expressed, since all the parts turned out to be the same thing as the whole.

Theaetetus:: Yes, surely.

Socrates:: But if, on the other hand, the complex is single and without parts, then complexes and elements are equally unaccountable and unknowable—both of them for the same reason.

Theaetetus:: I can’t dispute that.

Socrates:: Then if anyone tries to tell us that the complex can be known and expressed, while the contrary is true of the element, we had better not listen to him.

Theaetetus:: No, we'd better not, if we go along with the argument.

Socrates:: And, more than this, wouldn’t you more easily believe somebody who made the contrary statement, because of what you know of your own experience in learning to read and write?

Theaetetus:: What kind of thing do you mean?

Socrates:: I mean that when you were learning you spent your time just precisely in trying to distinguish, by both eye and ear, each individual letter in itself so that you might not be bewildered by their different positions in written and spoken words.

Theaetetus:: That’s perfectly true.

Socrates:: And at the music-teacher’s, wasn’t the finished pupil the one who would follow each note and tell to which string it belonged—the notes being generally admitted to be the elements in music?

Theaetetus:: Yes, that’s just what it amounted to.

Socrates:: Then if the proper procedure is to take such elements and complexes as we ourselves have experience of, and make an inference from them to the rest, we shall say that the elements are much more clearly known, and the knowledge of them is more decisive for the mastery of any branch of study than knowledge of the complex. And if anyone maintains that the complex is by nature knowable, and the element unknowable, we shall regard this as tomfoolery, whether it is intended to be or not.

Theaetetus:: Oh, quite.

Socrates:: I think that might be proved in other ways too. But we mustn’t let them distract us from the problem before us. We wanted to see what can be meant by the proposition that it is in the addition of an account to a true judgment that knowledge is perfected.

Theaetetus:: Well yes, we must try to see that.

Socrates:: Come then, what are we intended to understand by an ‘account’? I think it must be one of three meanings.

Theaetetus:: What are they?

Socrates:: The first would be, making one’s thought apparent vocally by means of words and verbal expressions—when a man impresses an image of his judgment upon the stream of speech, like reflections upon water or in a mirror. Don’t you think this kind of thing is an account?

Theaetetus:: Yes, I do. At least, a man who does this is said to be giving an account.

Socrates:: But isn’t that a thing that everyone is able to do more or less readily—I mean, indicate what he thinks about a thing, if he is not deaf or dumb to begin with? And that being so, anyone at all who makes a correct judgment will turn out to have it ‘together with an account’; correct judgment without knowledge will no longer be found anywhere.

Theaetetus:: True.

Socrates:: Well then, we mustn’t be too ready to condemn the author of the definition of knowledge now before us for talking nonsense. Perhaps he didn’t mean this; perhaps he meant being able, when questioned about what a thing is, to give an answer by reference to its elements.

Theaetetus:: As for example, Socrates?

Socrates:: As for example, what Hesiod is doing when he says, ‘One hundred are the timbers of a wagon.’ Now I couldn’t say what they are; and I don’t suppose you could either. If you and I were asked what a wagon is, we should be satisfied if we could answer, ‘Wheels, axle, body, rails, yoke.’

Theaetetus:: Yes, surely.

Socrates:: But he might think us ridiculous, just as he would if we were asked what your name is, and replied by giving the syllables. In that case, he would think us ridiculous because although we might be correct in our judgment and our expression of it, we should be fancying ourselves as scholars, thinking we knew and were expressing a scholar’s account of Theaetetus’ name. Whereas in fact no one gives an account of a thing with knowledge till, in addition to his true judgment, he goes right through the thing element by element—as I think we said before.

Theaetetus:: We did, yes.

Socrates:: In the same way, in the example of the wagon, he would say that we have indeed correct judgment; but it is the man who can explore its being by going through those hundred items who has made the addition which adds an account to his true judgment. It is this man who has passed from mere judgment to expert knowledge of the being of a wagon; and he has done so in virtue of having gone over the whole by means of the elements.

Theaetetus:: And doesn’t that seem sound to you, Socrates?

Socrates:: Well, tell me if it seems sound to you, my friend. Tell me if you are prepared to accept the view that an account is a matter of going through a thing element by element, while going through it by ‘syllables’ or larger divisions falls short of being an account. Then we shall be able to discuss it.

Theaetetus:: I’m certainly prepared to accept that.

Socrates:: And do you at the same time think that a man has knowledge of anything when he believes the same thing now to be part of one thing and now part of something else? Or when he judges that now one thing and now something different belongs to one and the same object?

Theaetetus:: No, indeed I don’t.

Socrates:: Then have you forgotten that at first when you were learning to read and write that is just what you and the other boys used to do?

Theaetetus:: You mean we used to think that sometimes one letter and sometimes another belonged to the same syllable, and used to put the same letter sometimes into its proper syllable and sometimes into another?

Socrates:: Yes, that is what I mean.

Theaetetus:: Well, I certainly haven’t forgotten; and I don’t think people at that stage can be said to have knowledge yet.

Socrates:: Well, suppose now that someone who is at this sort of stage is writing the name ‘Theaetetus’; he thinks he ought to write THE and does so. Then suppose another time he is trying to write ‘Theodorus’, and this time he thinks he should write TE and proceeds to do so. Are we going to say that he knows the first syllable of your names?

Theaetetus:: No. We’ve admitted that anyone who is at that stage has not yet knowledge.

Socrates:: And is there anything to prevent the same person being in that situation as regards the second and third and fourth syllables?

Theaetetus:: No, nothing.

Socrates:: Now at the time when he does this, he will be writing Theaetetus' not only with correct judgment, but with command of the way through its letters; that must be so whenever he writes them out one after another in their order.

Theaetetus:: Yes, clearly.

Socrates:: And still without knowledge though with correct judgment— isn't that our view?

Theaetetus:: Yes.

Socrates:: Yet possessing an account of it along with his correct judgment. He was writing it, you see, with command of the way through its letters; and we agreed that that is an account.

Theaetetus:: True.

Socrates:: So here, my friend, we have correct judgment together with an account, which we are not yet entitled to call knowledge.

Theaetetus:: Yes, I'm afraid that's so.

Socrates:: So it was only the poor man's dream of gold that we had when we thought we had got the truest account of knowledge. Or is it early days to be harsh? Perhaps this is not the way in which one is to define 'account'. We said that the man who defines knowledge as correct judgment together with an account would choose one of three meanings for 'account'. Perhaps the last is the one to define it by.

Theaetetus:: Yes, you're right to remind me; there is one possibility still left. The first was, a kind of vocal image of thought; the one we have just discussed was the way to the whole through the elements. Now what's your third suggestion?

Socrates:: What the majority of people would say—namely, being able to tell some mark by which the object you are asked about differs from all other things.

Theaetetus:: Can you give me an example of such an 'account' of something?

Socrates:: Well, take the sun, if you like. You would be satisfied, I imagine, with the answer that it is the brightest of the bodies that move round the earth in the heavens.

Theaetetus:: Oh yes, quite.

Socrates:: Now I want you to get hold of the principle that this illustrates. It is what we were just saying—that if you get hold of the difference that distinguishes a thing from everything else, then, so some people say, you will have got an account of it. On the other hand, so long as it is some common feature that you grasp, your account will be about all those things which have this in common.

Theaetetus:: I see; I think it's very good to call this kind of thing an account.

Socrates:: Then if a man with correct judgment about any one of the things that are grasps in addition its difference from the rest, he has become a knower of the thing he was a judger of before.

Theaetetus:: That's our present position, anyway.

Socrates:: Well, at this point, Theaetetus, as regards what we are saying, I'm for all the world like a man looking at a shadow-painting; when I'm close up to it I can't take it in in the least, though when I stood well back from it, it appeared to me to have some meaning.

Theaetetus:: How's that?

Socrates:: I'll see if I can explain. Suppose I have formed a correct judgment about you; if I can grasp your account in addition, I know you, but if not, I am merely judging you.

Theaetetus:: Yes.

Socrates:: And an account was to be a matter of expounding your differentness?

Theaetetus:: That is so.

Socrates:: Then when I was merely judging, my thought failed to grasp any point of difference between you and the rest of mankind?

Theaetetus:: Apparently.

Socrates:: What I had in mind, it seems, was some common characteristic—something that belongs no more to you than to anybody else.

Theaetetus:: Yes, that must be so.

Socrates:: Then tell me, in Heaven’s name how, if that was so, did it come about that you were the object of my judgment and nobody else? Suppose my thought is that ‘This is Theaetetus—one who is a human being, and has a nose and eyes and mouth’, and so on through the whole list of limbs. Will this thought cause me to be thinking of Theaetetus rather than of Theodorus, or of the proverbial ‘remotest Mysian’?

Theaetetus:: No, how could it?

Socrates:: But suppose I think not merely of ‘the one with nose and eyes’, but of ‘the one with a snub nose and prominent eyes’. Shall I even then be judging you any more than myself or anyone who is like that?

Theaetetus:: Not at all.

Socrates:: It will not, I take it, be Theaetetus who is judged in my mind until this snub-nosedness of yours has left imprinted and established in me a record that is different in some way from the other snub-nosednesses I have seen; and so with the other details of your makeup. And this will remind me, if I meet you tomorrow, and make me judge correctly about you.

Theaetetus:: That’s perfectly true.

Socrates:: Then correct judgment also must be concerned with the differentness of what it is about?

Theaetetus:: So it seems, anyway.

Socrates:: Then what more might this ‘adding an account to correct judgment’ be? If, on the one hand, it means that we must make another judgment about the way in which a thing differs from the rest of things, we are being required to do something very absurd.

Theaetetus:: How’s that?

Socrates:: Because we already have a correct judgment about the way a thing differs from other things; and we are then directed to add a correct judgment about the way it differs from other things. At that rate, the way a roller goes round or a pestle or anything else proverbial would be nothing compared with such directions; they might be more justly called a matter of ‘the blind leading the blind’. To tell us to add what we already have, in order to come to know what we are judging about, bears a generous resemblance to the behavior of a man benighted.

Theaetetus:: Whereas if, on the other hand, …? What else were you going to suggest when you started this inquiry just now?

Socrates:: Well, if ‘adding an account’ means that we are required to get to know the differentness, not merely judge it, this most splendid of our accounts of knowledge turns out to be a very amusing affair. For getting to know of course is acquiring knowledge, isn’t it?

Theaetetus:: Yes.

Socrates:: So, it seems, the answer to the question 'What is knowledge?' will be 'Correct judgment accompanied by knowledge of the differentness'— for this is what we are asked to understand by the 'addition of an account.'

Theaetetus:: Apparently so.

Socrates:: And it is surely just silly to tell us, when we are trying to discover what knowledge is, that it is correct judgment accompanied by knowledge, whether of differentness or of anything else? And so, Theaetetus, knowledge is neither perception nor true judgment, nor an account added to true judgment.

Theaetetus:: It seems not.

Socrates:: Well now, dear lad, are we still pregnant, still in labor with any thoughts about knowledge? Or have we been delivered of them all?

Theaetetus:: As far as I'm concerned, Socrates, you've made me say far more than ever was in me, Heaven knows.

Socrates:: Well then, our art of midwifery tells us that all of these offspring are wind-eggs and not worth bringing up?

Theaetetus:: Undoubtedly.

Socrates:: And so, Theaetetus, if ever in the future you should attempt to conceive or should succeed in conceiving other theories, they will be better ones as the result of this inquiry. And if you remain barren, your companions will find you gentler and less tiresome; you will be modest and not think you know what you don't know. This is all my art can achieve—nothing more. I do not know any of the things that other men know—the great and inspired men of today and yesterday. But this art of midwifery my mother and I had allotted to us by God; she to deliver women, I to deliver men that are young and generous of spirit, all that have any beauty. And now I must go to the King's Porch to meet the indictment that Meletus has brought against me; but let us meet here again in the morning, Theodorus.

# Theaetetus.

Translated by F. A. Payley.

PERSONS OF THE DIALOGUE.

Socrates, Theodorus, Theaetetus.
Euclides and Terpsio.
(Scene, at Megara.)

Euclid:: Have you only just come from the country, Terpsio, or have you been here some time?

Terpsion:: A considerable time; and what is more, I have been looking for you in the agora, and began to wonder that I could not find you.

Euclid:: No wonder at all; the fact is, I was not in town.

Terpsion:: Where were you, then?

Euclid:: I was going down to the harbor when I fell in with Theætetus as they were carrying him from the camp at Corinth towards Athens.

Terpsion:: Alive, or dead?

Euclid:: Alive, and that is all: for he is in a very sad state from some wounds he has received; but worse than that, the disorder that has broken out in the camp has been gradually getting hold of him.

Terpsion:: The dysentery, you mean?

Euclid:: Exactly.

Terpsion:: What a hero we seem likely to lose if what you say is true!

Euclid:: A fine lad and a brave one, Terpsio. Indeed, it was but just now that I heard some persons praising him warmly for his conduct in the fight.

Terpsion:: There is nothing strange in that: it would be much more surprising if he were not what they describe. But how is it that he did not stop here at Megara?

Euclid:: He was anxious to get home; of course, I begged and advised him to stay; but he would not consent. So I went part of the way with him, and on returning I bethought myself of Socrates with feelings of wonder, for having spoken so like a prophet on many subjects, and especially about our young friend. If I mistake not, it was shortly before his death that he met Theætetus, then a mere stripling; and after an interview and a conversation with him he expressed great admiration for his genius. When I came to Athens, he told me the subjects he had talked to him about, and well worth hearing they were. He also made the remark, 'That boy will surely some day be distinguished, if he lives to be a man.'

Terpsion:: And he spoke truly, as the result seems to show. But what was the subject of the conversation? Could you give me a full account of it?

Euclid:: No, certainly not, at least verbally, at the present moment. No! I made some notes of it for myself at the time on returning home, and afterwards recalled it to mind at leisure: and wrote it out. If there was any point I could not remember, I used to ask Socrates when I went to Athens, and then when I got back to Megara I made corrections; so that I now have pretty nearly the whole conversation written out.

Terpsion:: True; I heard you say so before. Indeed, I intended always to ask you to let me see it, but up to this time I have delayed doing so. But what prevents us from going through it now? Anyhow, I want a rest, having come all the way from the country.

Euclid:: For my own part, too, I may say that as I went with Theætetus as far as the Fig-tree, I should not be sorry to rest. Let us therefore go to my house, and the boy shall read to us while we are taking our ease.

Terpsion:: By all means.

[They enter Euclides' house.]

Euclid:: Well then, Terpsio, here is the book I spoke of. I wrote the dialogue, you will understand, in this way: I did not make Socrates describe to me how he held the conversation, but I made him actually converse with the parties he named,—that is to say, with Theodore the geometer and our friend Theætetus. In order therefore that in the writing of it I might be spared the trouble of saying anything about the persons between the speeches,—as about Socrates, whenever he spoke, such as Then I said, or Then I remarked, or again, about the respondent, as He agreed, or He dissented from this,—to avoid these interruptions, I say, in my written account Socrates himself is made to talk to the company, and I have cut out such clauses as these.

Terpsion:: And not without good precedent, Euclides.

Euclid:: Now, boy, take the book and read on.

[Socrates is supposed to speak; the scene is at Athens.]

Socrates:: If, my Theodore, I cared more for Cyrene and the state of affairs there, I should ask about them and the people, if you have any young men in your town who are interested in geometry or any other branch of learning. But I will not; I have a great regard for them, but more for those here, and therefore I am the more anxious to know what young men we have who are expected to make a figure. To this subject then I not only direct my own attention, as far as I can, but I make inquiry of others whenever I see our youths willing to attend their instructions. Now you attract to yourself more pupils than any one else, and with good reason, for you are held in esteem on other grounds beside your skill in geometry. So now, if you have met with any one worthy of special mention, it would give me pleasure to hear it.

Theodorus:: Then, Socrates, it will be as much worth my while to tell you as yours to hear what a promising young fellow I have met with among your citizens. If, indeed, he were good-looking, I should feel some scruple at giving al description of him, lest a certain person should suspect I am an admirer of his; but as it is,—and you will pardon what I am going to say,—he is not handsome, but rather like you in his broad flat nose and the external contour of the eyes; only he has these features less strongly marked than you have. So I have no fear in speaking of his other merits; for I assure: you that, of all I ever met with,—and I have conversed with very many,—I never found any one so favored by nature and of so good a disposition. Indeed, he is surprisingly so; for that one who is quick at learning, to a degree that is seldom equaled, should also be peculiarly gentle, and beside those qualities, as brave as any one,—I should not have supposed was a thing possible; nor do I observe such results of education in any young men. No; your quick pupils, like our friend, who have their wits about them, and good memories, are usually hasty in their tempers; they are carried along in an unsteady course like boats without ballast, and grow up impulsive rather than of a manly decision. While your dullards, on the other hand, come reluctantly to their lessons, and with nothing in their heads but forgetfulness. But our young friend comes so smoothly and without the least hitch, with such success too, to his books and problems, and with the greatest gentleness, like oil that makes no sound as it runs, that one feels surprised that one so young can perform his duties in so pleasing a way.

Socrates:: You give a promising account; but tell me further, who of our citizens is his father?

Theodorus:: I have heard his name, but don't recollect it. However, here he is between two friends coming this way. It seems that he and some of his companions have just been getting rubbed with oil in the outer portico; and now, I suppose, they have been anointed and are coming this way. See now, if you recognize him.

Socrates:: I know him. 'Tis the son of Euphronius of Sunium, a character much as you describe your friend, and of general good repute. If I mistake not, he left a very large property; but the name of the youth I don't know.

Theodorus:: His name, Socrates, is Theætetus. As for his fortune, I am afraid certain guardians of his have not improved it; yet even in liberality in money matters one can't help admiring him, Socrates.

Socrates:: 'Tis a generous fellow that you describe. Do oblige me by asking him to take a seat here by me.

Theodorus:: That shall be done.—Theætetus! come here and speak to Socrates.

Socrates:: Yes, pray do, Theætetus, if only that I may get a good sight of my own likeness; for Theodore tells me I have a face like yours. Now suppose each of us had a lute, and he said they were both tuned to the same pitch; should we at once believe him, or should we have considered whether the man who says so skilled in music?

Theaetetus:: We should have considered.

Socrates:: And if we found that he was, we should believe him; or, if ignorant of music, we should put no faith in him.

Theaetetus:: True.

Socrates:: So now, I suppose, if we care at all about our faces being alike, we must consider whether the person who says so is conversant with lines, or not.

Theaetetus:: I think he is that.

Socrates:: Has then Theodore any skill as a portrait painter?

Theaetetus:: Not that I know of.

Socrates:: What! do you mean to say he is not even a geometer?

Theaetetus:: He is that, of course, Socrates.

Socrates:: Well, is he also versed in astronomy, and abstract calculation, and music, and such other kinds of knowledge as belong to general education?

Theaetetus:: He appears to me to be so.

Socrates:: Then if he says we are like in any part of our bodies, either in praise or disparagement, we are by no means bound to listen to him.

Theaetetus:: Perhaps not.

Socrates:: But what if he were to praise the mind of either of us, in respect of virtue and wisdom? Would it not be worth while for the party who heard the remark to take a little trouble to examine the person praised, and for him to exhibit himself freely and readily?

Theaetetus:: Certainly it would, Socrates.

Socrates:: Then, my dear Theætetus, it is high time for you to exhibit and for me to observe. For I assure you, though Theodore has spoken favorably to me of very many, both strangers and citizens, he never praised any of them as he praised you.

Theaetetus:: It might be right then to do as you say; only I am afraid he was not in earnest when he spoke of me thus.

Socrates:: That is not Theodore's way; no, don't try to evade your promise by pretending that our friend here was only joking, or we may have to produce him in court as a witness. Whatever he says of you, no one will indict such a man for perjury. So take courage and abide by your agreement.

Theaetetus:: Well, I suppose I must do so, if you think it right.

Socrates:: Then tell me; you learn from Theodore, I presume, something about geometry?

Theaetetus:: I do.

Socrates:: And also something of astronomy, music, and figures?

Theaetetus:: I endeavor to do so, certainly.

Socrates:: Well, and so do I, my child, from him at all events, if not from others, whom I may suppose to have any knowledge of these subjects. Still, though I have a fair acquaintance with them, there is one little matter which I am in doubt about, and which I should like to consider with you and the present company. And now tell me; is not learning the becoming wiser in what one learns?

Theaetetus:: Of course.

Socrates:: And it is in wisdom that the wise are wise.

Theaetetus:: Yes.

Socrates:: Now, is there any difference between this and science?

Theaetetus:: Of what do you speak?

Socrates:: Wisdom. If we have accurate knowledge on any subjects, are we not also wise in them?

Theaetetus:: Of course.

Socrates:: Then science and wisdom are the same.

Theaetetus:: Yes.

Socrates:: This then is precisely the point that I am perplexed about, and unable to realize as I should wish in my own mind,—what ‘accurate knowledge’ is. Possibly now we may describe it. What say you? Which of you will be the first to speak? He who gives a wrong answer, and gets wrong always, shall be Donkey (as the boys say who play at ball), and have to sit down; while he who gets through the examination without a mistake, shall be King over us, and impose on us any subject on which he may choose that we should give answers. Why are you silent? I hope, Theodore, it is not I that am acting the churl from fondness of discussion, and in my eagerness to make you converse, and so become friends and have a chat with each other!

Theodorus:: That, Socrates, would be anything but churlish; but desire one of these young men to give you a reply; for I am not much used to this sort of conversation, and I am not of an age either to become used to it. But it will just suit our young friends here, and they will greatly improve; for it is quite true that youth has a capacity for improving in any thing. So, as you began, put the question to Theætetus, and don’t let him off.

Socrates:: You hear, Theætetus, what Theodore says, and I suppose you will not care to disobey him, as, indeed, it is not permitted for a younger man to do when a man learned in such matters gives his commands. So let us have a good clear answer without stint: what does ‘Science’ seem to you to be?

Theaetetus:: Well, I suppose I must reply, Socrates, since you and the rest desire me. For of course, if I do make some mistake, you will set me right.

Socrates:: Oh certainly,—that is, if we are able.

Theaetetus:: Well, then, I think that what one can learn from Theodore may be called sciences,—geometry and those you just named; and again, shoe-making and the trades of the other craftsmen, all and each of them, are nothing else than knowledge.

Socrates:: Like a generous and free-handed man, my friend, when asked for one you offer many, and various for simple.

Theaetetus:: What do you mean by that, Socrates?

Socrates:: It has no meaning, perhaps; but what I think I intended to say, I will explain. When you speak of a cobbler's art, do you mean by it anything else than the science of the manufacture of shoes?

Theaetetus:: Nothing else.

Socrates:: Well, when you speak of carpentry, is it of anything but the science of manufacturing wooden implements?

Theaetetus:: My reply is the same in this case too.

Socrates:: Then in both you confine your answer to that, of which each art is the science?

Theaetetus:: Yes.

Socrates:: But, my Theætetus, the question asked was not this, of what things 'Knowledge' is the science, nor how many sciences there are. For it was not with any wish to count them that we asked, but to get a clear knowledge about science, what it is in the abstract. Or is there nothing at all in what I say?

Theaetetus:: Indeed, you say very rightly.

Socrates:: Now then consider well what I am going further to remark. Supposing a person should ask us about some commonplace and obvious thing, for instance, What is clay? should we not appear ridiculous if we answered him, ‘Clay is the clay of the potters, and also of the porcelain-makers, and of the brick-makers likewise’?

Theaetetus:: Perhaps we should.

Socrates:: In the first place, I presume, in supposing that the questioner would understand what clay was from our answer, ‘Clay is clay,’—adding either ‘such as the image-makers use,’ or any other artists you please. Or do you believe that a man understands the name of a thing, if he does not know what the thing itself is?

Theaetetus:: By no means.

Socrates:: Then one who does not know what science means, cannot understand either the ‘science of shoes.’

Theaetetus:: He cannot.

Socrates:: And again, whoever is ignorant what science is, does not comprehend the knowledge of leather, or any other trade.

Theaetetus:: That is so.

Socrates:: Then the answer is absurd, when a man is asked ‘What is knowledge?’ if he gives in reply the name of some trade. For his answer is confined to the knowledge of some particular subject; but he was not asked that.

Theaetetus:: So it seems.

Socrates:: Thus then, when he might, I suppose, have answered in a common way, and in brief, he goes a roundabout way that has no end to it. For instance, in the question about clay, it was obvious, surely, and simple to reply, that ‘earth mixed up with any fluid would be clay’; and you need not concern yourself as to whose clay it is.

Theaetetus:: Yes, it appears easy enough now, Socrates, when you put it thus. But your question seems like one which lately presented itself to us when we were talking,—I and your namesake here, Socrates.

Socrates:: What was that, now, Theætetus?

Theaetetus:: Theodore here was writing down for us some facts about the powers of numbers, and showing us that a rectangle composed of a three-foot and a five-foot line (3 × 5) is not geometrically commensurable by the one-foot line; and so he went on taking examples one by one up to the seventeen-foot line; and at that he stopped. The idea then occurred to us, that as these powers seemed indefinitely numerous, we should try to comprehend them under some one general term by which we might describe all those of this kind.

Socrates:: Did you then find such a term?

Theaetetus:: I think we did; but consider it also yourself.

Socrates:: Tell me then.

Theaetetus:: We divided all number into two kinds. That which could be resolved into an equal number of factors we compared to a figure square in form, and called it both quadrangular and equal-sided.

Socrates:: And very appropriately too.

Theaetetus:: Well, the intervening numbers, such as three and five, and all such as cannot be resolved into equal factors, but can only become either more taken fewer times, or less taken more times, and so, do as you will, must ever be enclosed by one side that is greater than another side,—this kind of numbers we compared to the oblong form, and called it ‘Long number.

Socrates:: Very good indeed. But what next?

Theaetetus:: All the lines which make up an equilateral rectangular superficial area, we distinguished as ‘regular,’ and all that include a parallelogram, as ‘powers,’ on the ground that in linear figure they were not commensurable with those other lines, but only with the superficial squares they were equivalent to. And similarly with cube numbers.

Socrates:: None could possibly have done better, my dear boys; so that Theodore, as it seems to be, will not be held liable to the penalties of perjury.

Theaetetus:: But, Socrates, your question about knowledge I am not likely to answer as readily as that about the geometrical extension and the power of number, though it seems to me that you require some such a reply. I am afraid therefore that if Theodore was right in the other matter, he is wrong in this.

Socrates:: What! Suppose that, in praising you for running, he had said, 'I never met with any young man so good a runner,' and then, in running a race, you had been beaten by one who was in the very prime of his strength, and had no superior in speed; do you think our friend would have praised you the less truly for that?

Theaetetus:: No, I do not.

Socrates:: But now about this knowledge,—as I was saying just now,—do you-suppose it is a small matter to find out what it is, and not rather the part of very close thinkers?

Theaetetus:: Indeed, I think it is a task of quite first-rate men.

Socrates:: Then have confidence about yourself, and believe there is something in what Theodore says, and endeavor by every means in your power to get information about knowledge, among other things, and the true nature of it.

Theaetetus:: As far as painstaking is concerned, Socrates, it shall be found out.

Socrates:: Come, then, as you have just given a good example of your skill, so try to imitate the answer you gave about the powers of numbers, and as you comprehended them, numerous though they were, under one head, so also endeavor to call the various kinds of knowledge by some one term.

Theaetetus:: I assure you, Socrates, I have many, many times undertaken the consideration of this question, on hearing the answers that were brought away from you; but alas! I am neither able to convince myself that I give any satisfactory account of it, nor to hear any one else giving it in the way that you recommend; and yet, on the other hand, I cannot altogether resign my interest in the subject.

Socrates:: The fact is, my dear Theætetus, you are in travail; you are not empty-pated, but have conceived something in that brain of yours.

Theaetetus:: I don't know, Socrates. I only describe what I feel.

Socrates:: And do you mean to say, you ridiculous fellow, you have never heard that I am the son of a cross-faced old lady, Phaenarete?

Theaetetus:: Well, I have heard that before now.

Socrates:: And have you heard also that I practice the same art?

Theaetetus:: Certainly not.

Socrates:: But I can assure you I do; but don't tell of me to the other professors, for they are not aware that I have this faculty. And so, in their ignorance, they do not say this of me, but only that I am the strangest of men, and drive people into perplexities. Have you heard that about me?

Theaetetus:: I certainly have.

Socrates:: Must I tell you the reason, then?

Theaetetus:: By all means.

Socrates:: Consider now the whole case of these midwives, and you will more easily perceive my meaning. You are aware, of course, that none of them while she is herself having a family, acts as midwife to others, but only those who are now too old to have offspring.

Theaetetus:: Certainly.

Socrates:: And the reason of this, as men say, is that Artemis, without being a mother herself, has the office of bringing children into the world. Wow she does not permit women who have never borne children to act as midwives to others, because human nature is too weak to undertake the practice of anything of which it has had no experience. Therefore she assigned this duty only to those who are too old to have children, paying this compliment to her own likeness to them.

Theaetetus:: Perhaps that is so.

Socrates:: Then is not this not only probable, but a matter of course,—that women who are pregnant or not pregnant are more surely known by mid wives than by any others?

Theaetetus:: Certainly.

Socrates:: And these same midwives by giving drugs and using charms are able to bring on the birth-pains, or, if they choose, to make them more endurable; also to cause those who are in difficult labor to give the child birth, or, if it should be agreed to procure abortion of the fetus, then they can effect that.

Theaetetus:: All that is true.

Socrates:: Have you ever noticed this other office of theirs,—that they are matchmakers of the greatest skill, as being very clever at forming an opinion what kind of man and woman must consort together to produce the finest children?

Theaetetus:: I certainly am not aware of that at all.

Socrates:: Then let me tell you that they pique themselves more on this than on the surgical operation. For observe: would you say it belonged to the same, or to a different art, to grow and gather in the fruits of the earth, and also to know on what soil what trees and what seeds must be planted?

Theaetetus:: Not to a different, but to the same art.

Socrates:: Do you suppose then that in the case of a woman the judgment in question is one art, and the bringing of the child into the world is another?

Theaetetus:: Why it does not seem likely.

Socrates:: Of course not. But the fact is, it is through that dishonest traffic, which requires no skill at all, of procuring a meeting between a man and a woman, (which, as we all know, is called the trade of the procuress,) that your midwives, as having a proper pride, shun the practice of giving advice about marriages, fearing lest through this latter profession they should incur the odium of practicing the former. For, of course, none but real midwives are entitled to give a sound opinion on such subjects.

Theaetetus:: So it seems.

Socrates:: What the midwives do, then, I have said; but it is less than the part that I play. For it is not in the nature of women to bring forth sometimes mere semblances, at other times genuine offspring, and that without any means of distinguishing them. If it were so, there would be no greater or more honorable duty for midwives than to separate the true and the false. Do you not think so?

Theaetetus:: I do.

Socrates:: Well, my art of midwifery has all the duties attached to it which theirs has, but it differs in this, that I deliver men and not women, and look to their minds when there is anything to come from them, and not to their bodies. But the chief boast of our art is this, that it can put to the test in every way and ascertain whether it is a mere sham and a delusion that the ideas of the young man are giving birth to, or a true and genuine sentiment. This peculiarity, I grant, belongs to me as well as to midwives;—I have never given birth to any wisdom; and the taunt that many have before now uttered against me is quite true,—that I put questions to others, but never give an answer myself on any subject from having nothing clever to say. "Well, the reason of this I will explain. The god constrains me to play the part of midwife to others, but does not allow me to have a family myself. I am then on my own part anything but wise, for I have no such great results to show as any offspring of my genius that has seen the light. But, although those who converse with me seem at first to be, in some cases, even wholly ignorant, yet all, as our intercourse goes on,—that is, to whom the god permits it,—show a marvelous improvement, as both they and others imagine; and it is also evident, that this improvement is not due to anything they have ever learnt from me, but comes from the many fine ideas they have hit upon and retained in their own imaginations. But then the safe delivery of these conceptions is due to me and the god. And this is how we know it: many ‘ere now have not been aware of our part in the matter, but have thought it was all due to themselves; and so, despising me in their own hearts, or induced by others to do so, they have left me sooner than they ought, and thus, from keeping bad company, have not only brought to an untimely birth the other notions they had conceived, but have lost, from bad nursing, those which I had assisted them in bringing into the world, and that because they valued mere shams and semblances more than the truth. Thus in the end they seem both to themselves and to others to be utterly illiterate. One of these is Aristides, the son of Lysimachus; and there are very many more. Now, when such persons come back to me, wanting me to converse with them, and having recourse to all sorts of strange expedients, the Familiar that ever attends me prevents me from having any more to say to some of these, while it allows me to keep company with others: and then they again begin to improve of themselves. There is another point in which my pupils resemble women in labor: they are in travail and are filled with restless longings by night and by day even more than those of the other sex; and these labor-pains my skill can bring on or alleviate. So much then for these. But some there are, my Theætetus, who seem to me not to have an idea in them; and well knowing that they do not require my aid, I act the part of a friend in making other matches for them; and (to speak under favor of the god) I can make a pretty good guess at the sort of teachers by whose conversation they will be benefited. Many of them I have made over to Prodicus, and many to other wise and inspired teachers.—If I have made a long story, my good friend, it was on this account; I suspected that you,—as indeed you imagine yourself,—were in travail with some notion that you had conceived in your mind. Now, therefore, behave towards me as to the son of a midwife who himself knows something of the art; and do your best to answer such questions as I may put to you. If, on examining what you say, I shall consider it a mere sham and not a reality, and so try to remove and reject it, do not be savage with me as women are about their first offspring. For I can tell you that many have shown such a temper towards me as to be quite ready to bite me when I propose to rid them of some nonsensical idea. They fancy that I am not acting kindly in doing this; they are yet very far from understanding that, as no god bears any ill will to man, so I do nothing of this sort from unkindness; it is because it is not permitted me to concede falsehood or to put out of sight the truth.

Try, therefore, Theætetus, to begin again and say what you consider knowledge to be. And don't tell me that you can't; if the god wills, and you play the man, you will find yourself able.

Theaetetus:: Well, Socrates, when you so encourage me to try, it would be a shame not to do one's very best to say what one has to say. I think, then, that if a man knows anything, he has a perception of it; and so—according to my present view,—knowledge is nothing else than perception.

Socrates:: Well said, and right nobly, my boy! That is just as one ought to speak who wishes to say without any reserve what he really thinks. But come, now, let us consider the matter in common, to see if our egg has a chick in it, or is a mere wind-egg. Perception, you say, is knowledge?

Theaetetus:: I do.

Socrates:: Indeed, you seem to have delivered an opinion about knowledge that is by no means common-place: for it is one that Protagoras also gave, though it was in a somewhat different way that he expressed the same meaning. If I mistake not, he says that 'Man is the measure of all things,'—of things that are, that they are so, and of non-existing things that they are not. You have read it, I think?

Theaetetus:: I have read it many times.

Socrates:: Does he not then say, in effect, that as things appear severally to me, such they are to me, and as they seem to you, to you they are: and both of us, I suppose, are human beings.

Theaetetus:: Well, he does say so.

Socrates:: And we may be sure that a wise man is not in the habit of talking nonsense. Let us therefore follow him in his argument. Does it not happen sometimes, when the wind blows, that one of us feels cold, another does not? And one feels it but slightly, another very much?

Theaetetus:: Certainly.

Socrates:: Must we then on that particular occasion say that the wind is cold of itself, or not cold? Or must we accept the view of Protagoras, that to the man who shivers it is cold, but him who does not, it is not cold?

Theaetetus:: That is probable.

Socrates:: Then it also seems so to each of them?

Theaetetus:: Yes.

Socrates:: And this words 'seems' is perceiving.

Theaetetus:: It is so.

Socrates:: Then fancy and perception are the same, at least in feelings of heat and all sensations of that kind. For just as each person feels them, such, as it seems, they are to each.

Theaetetus:: Likely enough.

Socrates:: Then perception must always be of something that exists; and it cannot be mistaken, since it is exact science.

Theaetetus:: It seems so.

Socrates:: Then, in the name of all that is elegant and refined, was not Protagoras a truly wise man when he gave us, who are but the rabble multitude, a mere hint of this beautiful doctrine, but told his disciples the whole truth under the seal of secrecy?

Theaetetus:: In what sense do you say this, Socrates?

Socrates:: I will tell you a doctrine of no common-place kind. Nothing exists singly and by itself, and you cannot rightly call anything of itself by any name; but if you speak of it as great, it will seem under other conditions to be small; if heavy, also light; and so with everything else, on the ground of there being no single existence either as a thing or as a quality. The things we now speak of as existing, using thereby an incorrect expression, are really produced from change of position and motion and union of one with another; for nothing ever is; it is ever being produced. On this point all philosophers ranged together, Parmenides excepted, agree; Protagoras following Heraclitus, and Empedocles;—as well as the great composers of each kind of poetry, Epicharmus of comedy, Homer of tragedy. For Homer, in saying—

> ‘Ocean, from whom the gods were created, and Tethys
> their mother,’

has in effect declared that all things are produced from flux and movement. Does he not seem to you to mean this?

Theaetetus:: He does.

Socrates:: Then no one surely, in joining issue with so numerous a host with Homer for their leader, can hope to escape ridicule.

Theaetetus:: It would not be easy, Socrates.

Socrates:: No; indeed, Theætetus. For the following facts are sufficient proofs of the proposition, that what seems to exist, but is really production, is caused by motion, and non-existence or dissolution by rest;—heat and fire, which, as we all know, both generates and rears everything else, is itself produced from motion and friction, and this is a kind of movement. Are not these the processes by which fire is kindled?

Theaetetus:: Certainly they are.

Socrates:: But surely also animals of all kinds are generated by the same processes?

Theaetetus:: Of course they are.

Socrates:: Well, is not the condition of all living bodies impaired by quietness and inactivity, but kept up for long by exercises and movements?

Theaetetus:: Certainly.

Socrates:: And surely it is by learning and practice, which are stirrings of the mind, that the habit formed in the soul both acquires new information and retains it and becomes improved, while by lying by, which is non-practice and non-learning, it not only does not learn anything, but even forgets what it has learnt?

Theaetetus:: Assuredly so.

Socrates:: Then the one of these, motion, is a good in respect to both soul and body, and the other is the contrary?

Theaetetus:: It seems so.

Socrates:: Need I then further speak of lulls and calms and things of that kind, and say that states of rest sap and destroy, while the contrary conditions preserve? and beside these, as the final argument, shall I leave you no escape in bringing you over to my view, but assert that Homer means nothing else by his ‘golden chain’ than the sun,—in a word, that he means to show that so long as the revolving motion of the heaven is kept up, and the sun, all things are maintained in their existence both among gods and men; whereas, if this were to come to a stand, as if bound fast, all things would come to ruin, and there would ensue what is described by the proverb, ‘all topsy-turvy.’

Theaetetus:: To me, Socrates, Homer does seem to express just what you say.

Socrates:: Then, my excellent friend, view the matter in this light:—first, with respect to sight, that which you call white does not exist per se as something external to your eyes, nor is it in your eyes. Do not therefore assign any place to it at all; for it would at once be in existence, if it were somewhere in position; and it would be permanent, and not always in course of being produced.

Theaetetus:: Then how should I speak of it?

Socrates:: Let us follow our late argument, and assume that nothing exists as a one by itself. Thus black and white and any other color you please will be found to be produced by the eye being directed to the object with the kind of motion that suits that organ; and thus what we call color of any kind will not be the object that strikes nor the eye that is struck, but an intermediate effect brought into existence for the particular person at the time. Or would you insist that what seems any color to you, is also the same to a dog or to any creature?

Theaetetus:: Indeed I would not.

Socrates:: Well, does anything seem the same to another man as it does to you? Are you quite sure of this, or is it not much rather the case that it does not seem the same even to yourself, through your never being in precisely the same bodily condition?

Theaetetus:: This seems to me to be the case rather than that.

Socrates:: Then if any object by which we compare our own stature, or which we lay hold of, were really great, or really hot, it would not, by comparison with another thing, become different,—that is, of course, so long as it admitted no change in itself. And again, if that which measures itself or which touches something else had possessed any of these qualities absolutely, it never would have become different if another object had been brought to it or in some way altered, while the original object remained unchanged. As we now use terms, my friends, we are compelled in a careless easy way to say what is not only surprising, but ridiculous, as Protagoras would assert, and any one who essays to use the same course of reasoning that he does.

Theaetetus:: How? What reasoning, do you mean?

Socrates:: Take a small matter as an example, and you will understand my meaning fully. Suppose you place four dice near to six others. Then, of course, we say six are more than four, and half as many again. But if you put twelve dice, then six are fewer and only half the number. And we are obliged to use this language. Would you for a moment allow any other?

Theaetetus:: Not I, indeed.

Socrates:: Well, now, if Protagoras should ask you, or any one else, Can a thing, Theætetus, possibly become greater or more in any other way than by increase, what answer will you give?

Theaetetus:: Why, Socrates, if I answer what I think in reference to the question just put, I should say it is not possible; but if in reference to the former question about the dice, then, guarding my reply against contradiction, I should say it is possible.

Socrates:: By Hera, a clever and oracular answer, my friend! But it seems to me that if you say it is possible, a case will occur like that in the play of Euripides,—your language will be consistent, but your mind will still be open to conviction.

Theaetetus:: True.

Socrates:: Then if you and I were clever and wise, and had investigated all the phenomena in psychology, we might now, and for the rest of the argument, by way of pastime try each other's prowess, by engaging like sophists in a contest of this kind, and parry statement by statement. But, as we are not sophists, but ordinary men, we will endeavor first to get a clear view of the facts themselves, and what meaning we attach to them,—whether we find they can be reconciled with one another, or not at all.

Theaetetus:: Indeed, that is precisely what I should myself desire.

Socrates:: And so should I. And this being the case, shall we not now quite at our leisure, as having plenty of time at our disposal, again reconsider the matter, not in a spirit of peevishness, but really to put our own convictions to the test, and find out what these visionary notions in us are. In looking at the first, we shall say, I suppose that 'Nothing can ever become greater or less, either in bulk or in number, so long as it retains its own size.' Is it not so?

Theaetetus:: It is.

Socrates:: The second proposition is, 'What has nothing added to it and nothing taken away, neither increases nor diminishes, but is always the same in size.'

Theaetetus:: Undoubtedly.

Socrates:: Is there not then yet one more case; What was not before, but afterwards is, must have become so, and undergone a process of becoming.'

Theaetetus:: I should think that is true.

Socrates:: Well, now, these three propositions, as accepted by us, are at variance with each other in our minds, when we bring forward the case of the dice, or when we say that I, who am of a certain stature, without having grown or become less, in one year am first taller than you who are young, and then shorter, without my proper height having had anything taken off it, but simply because you have grown. For ‘I am afterwards what before I was not, without having become so.’ For without becoming it is impossible to have become; and if I lost nothing of my bulk, I never could have gone through the process of becoming less. There are countless other cases of the same kind, if, I suppose, we are to accept these views. You follow me, I think, Theætetus? You seem, indeed, to me to be very well versed in such inquiries.

Theaetetus:: I protest, Socrates, I am filled with exceeding wonder at these conclusions, and sometimes, when I look steadily at them, I seem to reel, as if darkness were coming over my sight.

Socrates:: Ah! Theodore, my friend, seems to have made a fair guess at your disposition. This feeling of wonder is very characteristic of your philosopher: indeed, that and nothing but that is the source of all philosophy, and the poet who said that Iris was the daughter of Thaumas seems to have been an adept in genealogy. But do you now begin to see why these things are so, from the doctrines we attribute to Protagoras, or are you still in doubt?

Theaetetus:: I don’t quite see it as yet.

Socrates:: Will you thank me then if I help you to investigate the true meaning, concealed as it is from the many, of the views held by a man, or rather by men, of note?

Theaetetus:: Of course I shall thank you, and very heartily too.

Socrates:: Then look round you in every direction, lest some of the uninitiated should overhear us. These are the people who do not believe in the existence of anything but what they can clutch in their hands, and do not admit in the category of Being natural operations or creations or any unseen agency.

Theaetetus:: In truth, Socrates, they are a hard and unimpressible set that you speak of.

Socrates:: They are, indeed, my son, an illiterate lot. But there are others much more subtle in language, whose mystical doctrines I am about to describe. And the leading principle, on which all the theories we have just mentioned depend, is this,—that Motion is everything, and beside that nothing else is. Of this motion there are two kinds, each infinite in its manifestations, the one having the faculty of acting, the other of being acted on. Well, from the union and close contact of these with each other offspring is produced, also infinite in its number of forms, but again of two kinds,—one the sensible, the other sense,—that is, a power of perception which always is produced along with the object of sense, and is born at the same instant with it. Now the senses we express by such terms as these: we call them acts of seeing, hearing, smelling, besides feelings of cold or heat, even the emotions of pleasure and pain, or desire and fear; and though there are endless varieties of these which have no names at all, yet those which have names are very numerous. Now the class of phenomena which we speak of as objects of sense are produced simultaneously with each of the senses,—colors of all kinds for different sorts of eye-sight, and in the same way sounds for hearing, and the other sensuous effects that are produced by a simultaneous birth with the other senses. Now, what has this story to do with our former inquiries? Do you understand?

Theaetetus:: I can’t say that I do, Socrates.

Socrates:: Then attend, and we will see if we can arrive at a conclusion. The import of the argument is this: that all things with which we are conversant have motion, but in that motion there is sometimes speed and sometimes slowness. Now the slow kind of movement takes place without change of position, and produces its results in this way; [that which has speed,] has a real motion towards the sentient faculties which will admit of a union, and the results so produced are quicker; for they have motion in space, and their movement is naturally one of change in position. Thus, when the eye, and any other object suited to the nature of that organ, unite and produce whiteness, and a perception of whiteness coincident and congenial with it,—which never could have resulted, had each of them gone to any other,—then, at the moment when the sight from the eyes, and the whiteness from the object which, in contact with the eyes, produces the color, meet in mid course, the eye becomes filled with sight, and then begins to see, and the result is, not sight, but a seeing eye; while the object which, together with the eye, gave birth to the appearance of the color, is invested with whiteness, and thus here, too, the effect produced is, not whiteness, but a white stick or stone or whatever object it may be, the surface of which happens to be colored with such a color. And so it is with all other qualities,—we must take the same view of hard and hot and everything else, viz. that, as we before said, nothing has an absolute existence by itself, but that all effects are produced by a relation and intercourse between patient and agent, and varied in their results according to the kind of movement. For to conceive of both an agent and also a patient in any one thing singly, so as to deny motion, is, they tell us, an impossibility. There can be no agent, till it has come into contact with a patient, nor a patient, unless it has an agent. And that which, by being in contact with one thing, is an agent, becomes in turn a patient combined with some other thing. So that from all these considerations we must conceive, as I said at first, that no one quality can exist singly and by itself; it only becomes so-and-so to the particular person who perceives it; and absolute existence must be taken away from everything, even though we, partly from familiarity and partly from want of skill, have been compelled to use it for many purposes in oar late discussion. We ought not, however, as the philosophers tell us, to concede the existence of anything belonging to me or to anybody else; nor 'this' nor 'that,' nor any other term that tends to fix a thing as constant. We should speak of them according to the true nature of the phenomena, as 'brought into being,' or 'created,' or 'perishing,' or 'being altered,' For if one adopts any term that fixes existence, he is easily proved to be in the wrong; we ought to use the above expressions both of things severally and of an aggregate of many,—such generalizations as they convey by the terms 'man,' or 'stone,' or any particular creature or kind of things. Well, Theætetus, do these doctrines seem nice? Would you like a further taste of them, as of food that you relish?

Theaetetus:: I don't know, Socrates; indeed, I cannot make up my mind even about you, whether you are stating what you really think, or are making an experiment on me.

Socrates:: Do you forget, my friend, that I myself neither know anything of these matters nor claim them as my own. I am not the parent; I only act as man-mid wife to you, and that is why I employ charms and set by you these clever things for you to take a taste of them severally, till at last I help you to bring your own views to light. When that has been done, I will then examine whether it shall prove of empty air or a product of real genius. Take heart then, and don’t give in, but bravely and like a man answer what you really think about the questions I may put.

Theaetetus:: Ask me then.

Socrates:: Then tell me once more, whether you accept the doctrine, that nothing really is, but becomes always right and good, as well as such other qualities as we lately spoke of.

Theaetetus:: Well, Socrates, now that I hear you arguing in this way, it does seem to me in the highest degree reasonable, and that we should view the matter as you have put it.

Socrates:: Then don’t let us leave off while any part of the argument is incomplete. We have yet to discuss the subject of dreams, and of madness among other diseases, and such fancies as result from wrong hearing, or wrong seeing, or any other false perception. For you are aware, of course, that in all such cases as these the argument we maintained is allowed to be proved false, since in these states and conditions there assuredly are such things as false perceptions’; and so far from each man’s fancies being true for himself, absolutely nothing of what seems, really is so to him.

Theaetetus:: Nothing can be more true than what you say, Socrates.

Socrates:: Then what reply to these facts remains for one who takes as his axiom that ‘Perception is Knowledge’, and that what each man fancies is so to him who fancies it?

Theaetetus:: For my own part, Socrates, I hesitate to say I have no reply to give, because just now you blamed me for saying so. For in truth I cannot dispute, that people who are mad or dreaming do imagine what is false, when some of them fancy they are gods, and others that they have wings, and conceive themselves in their sleep to be flying.

Socrates:: Here is another difficulty about them, which I think you will understand, and especially about the question of such imaginings being mere dreams or sober realities.

Theaetetus:: What is that?

Socrates:: What I dare say you have often heard people asking, what proof a man can show, if any one should ask him as at the present moment, whether we are asleep, and dreaming of all that is now in our thoughts, or awake, and talking to each other in sober earnest.

Theaetetus:: Well, certainly, Socrates, it is hard to say by what proof we could demonstrate it. For all the details are the same in both, and go together like counterparts. For instance, in the conversation we have just held, we might, for aught there is to prevent it, fancy we had been talking to each other in a dream; and conversely, when in a dream we fancy we are talking to each other, the latter case is strangely like the former.

Socrates:: You see then that to raise the doubt is at least not difficult, when it is called in question whether we are really talking or only dreaming. Nay, I go further, and say that if we are half of our lives asleep, and the other half awake, in each of these periods our minds are convinced that whatever opinions present themselves to us, these are really and certainly true; so that for the same general duration we say these are realities to us as much as those; and we insist on the truth of both alike.

Theaetetus:: Certainly we do.

Socrates:: Is not the very same to be said about diseases and mad-fits, except that the time is not in this case the same?

Theaetetus:: Rightly remarked.

Socrates:: What then? Is truth to be determined by the length or shortness of time?

Theaetetus:: That would indeed be absurd in many respects.

Socrates:: Can you then show any other clear proof which of these opinions are true?

Theaetetus:: I don’t think I can.

Socrates:: Then let me tell you the course of reasoning that would be pursued by those who make it an axiom that Whatever seems, that is so to him who fancies it.’ And if I mistake not, their argument is conveyed by a question, as thus:—”If, Theætetus, a thing is entirely different, has it any property the same as another thing?” Now mind, we are not to conceive the subject of the question to be partly the same as and partly different from the other, but as wholly and entirely different.

Theaetetus:: I say then that it is impossible for a thing to have any quality that is the same, either in its property or in any other respect, when it is quite different.

Socrates:: Must we not then allow that a thing of this sort is also unlike the other?

Theaetetus:: I suppose so.

Socrates:: Then if it happens that a thing is getting like or unlike something, viz. either to itself or to something else, we shall say that while it is thus assimilating itself it is becoming the same, and while it is varying from it, different.

Theaetetus:: That cannot be otherwise.

Socrates:: And we said before, I think, that the agents in nature were infinite in number, and so also the patients.

Theaetetus:: We did.

Socrates:: And also that one thing in union with another will produce not the same, but different results from what it would in combination with something else?

Theaetetus:: Assuredly so.

Socrates:: Now then let us speak of myself and yourself and of the agents that affect us, according to the same reasoning, and talk about Socrates in health and Socrates out of health. Are we to say the one case is like or unlike to the other?

Theaetetus:: Do you mean by 'Socrates out of health' Socrates as a whole compared with him also as a whole when in health?

Socrates:: You are quite right in your surmise: that is just what I mean.

Theaetetus:: Then, of course, I say unlike.

Socrates:: Then he is also another Socrates, in precisely the same way as he is unlike?

Theaetetus:: We must allow that.

Socrates:: And you will say the same, of course, of Socrates asleep, and in any of the states we just before mentioned?

Theaetetus:: I shall.

Socrates:: Will not now any one of those things that are in their nature agents, when it gets hold of Socrates in good health, deal with him as one person, and when out of health, as another?

Theaetetus:: Of course that will be so.

Socrates:: Then in such case I, as the patient, and it as the agent, will produce between us different results?

Theaetetus:: Of course.

Socrates:: Then when I drink wine, being in good health, it seems to me both fragrant and sweet to the taste.

Theaetetus:: Yes.

Socrates:: We assume that it produced, in accordance with what we have before stated,—that is to say, the agent and the patient together, and in mutual motion and relation with each other,—both sweetness and a sensation of it. This sensation on the part of the patient made his tongue to be sentient; and the sweetness from the wine, having a motion of its own in respect of the patient, made the wine sweet to the healthy tongue, in reality as well as in appearance.

Theaetetus:: Undoubtedly our former admissions were to this effect.

Socrates:: But when the wine finds me out of health, in the first place it finds me really and truly not the same person; for it came to me before when I was unlike my present self.

Theaetetus:: Yes.

Socrates:: Then Socrates in this, the unhealthy, condition, and the drinking of the wine, together produce on the tongue a sense of sourness, and in the wine a sourness which comes into being for him; and they make the wine not indeed sourness, but sour, and me not the sense of it, but sentient.

Theaetetus:: Quite so.

Socrates:: Then I, under these circumstances, shall always have the same perception,—for the sense of the other is itself different, and makes the person perceiving it different both in character and in identity,—and the thing which acts on me as an agent, if it were in contact with another, would never produce the same results and so become the same. For by producing a different result from a different patient it will itself become of a different character.

Theaetetus:: All that is true.

Socrates:: And I shall not become sentient of this or that for myself, nor will it be of this particular quality for itself.

Theaetetus:: Certainly not.

Socrates:: But of course I must become sentient of something, when I become sentient at all,—for one can't become sentient and yet sentient of nothing, you know,—and the agent must become something to somebody, when it becomes sweet or sour or anything of that kind. For to become sweet, yet sweet to nobody, is an impossibility.

Theaetetus:: Assuredly.

Socrates:: There is nothing left for it then but that this 'being or becoming' must be mutual; for, as we said, the being of both is necessarily coupled together. But it is not coupled to any other than what we are, nor to ourselves; it remains therefore for us only to be coupled to each other. So that, whether one uses the term 'is', he must say it is to somebody, or it is of something, or in relation to something, or the term 'becomes'; but he must not himself speak of anything either 'being' or 'becoming' singly of itself, nor allow another to use such expressions. This is the conclusion which the foregoing argument indicates.

Theaetetus:: It certainly does so, Socrates.

Socrates:: Then when anything which affects me is an agent to me and not to another, I also have perception of it, but another has not.

Theaetetus:: Of course.

Socrates:: It follows that my sense is a true sense to me; for it belongs to a union of which I am an essential member. Thus I am a judge, as Protagoras affirms, of whatever is, and I can fairly say that it is so to me; or of what is not, that it is not.

Theaetetus:: It seems so.

Socrates:: I want to know then how, if I am infallible and cannot be mistaken in my own views about what is or becomes, I can fail to have an accurate knowledge in whatever I have perception.

Theaetetus:: That would be impossible.

Socrates:: Then you put it very well when you said that Knowledge is nothing else than Perception. So it comes to the same thing whether, according to Homer and Heraclitus and all that school, all things are ever in motion, like currents; or, according to Protagoras, that wisest of men, man is the measure of all things; or, according to Theætetus, these facts being assumed, that Perception comes to be Knowledge. Is it not so, Theætetus? Must we say this doctrine is a newly-born brat of yours, and that I have been concerned only in the delivery of it? Or how say you?

Theaetetus:: So it must be, Socrates.

Socrates:: This child of ours then, as it seems,—whatever it be worth,—we have at last brought into the world. And now that it has been born, the next step will be to perform the ceremony (in good earnest, too,) of going round by reasoning on it, taking good heed that the thing born does not turn out unworthy of being brought up,—a mere creature of air and a sham. Or do you think that, as the doctrine is yours, we are bound to rear and not to discard it? Or will you patiently see it put to the test of inquiry, and not be very full of wrath if some one should try to take it from you, like a first child from a mother?

Theodorus:: Theætetus will stand it, Socrates; he is not ill-natured. But tell me, in Heaven’s name, is it not, on the other hand, just the other way?

Socrates:: You are quite an enthusiast in argument, and a worthy good man, Theodore, if you think I am a sort of bag of words, and can easily take out of it and deliver a speech to prove that all this is again not so! You don't comprehend what comes of these discussions, that none of these arguments proceeds from me, but always from the party who converses with me, and that I myself know nothing more, except just this trifling matter, how to get a subject from some other clever person, and to give it a fairly good reception. And so I will endeavor now to get this from our young friend here, and not to say it myself.

Theodorus:: What you propose, Socrates, is better, and therefore  act accordingly.

Socrates:: Do you know, then, Theodore, what it is that I am surprised at in your companion Protagoras?

Theodorus:: What is that?

Socrates:: The general account of his views he has given charmingly,—how that what seems to each man is so to him. But I wonder at the beginning of his treatise, and that he did not commence his 'Essay on Truth' with these words, 'The measure of all things is a Pig'—or a baboon, or some other still more outlandish specimen of such creatures as are endowed with the faculty for feeling. For then he would have began his address to us in grand style, and indeed with no little contempt for us, by showing that while we have been looking up to him, as to a god, for his wisdom, he all the time was no better in respect of intelligence than the tadpole of a frog, not to say, than any other human being. For if that is to be true and real to each man, which he forms an opinion of through perception, and if one man is not to give a decision on the state and the condition of another any better than himself, nor to have any better right to form a judgment about the opinion of another, as to its truth or falsehood, but if (I repeat) each man is to have his own views peculiar to himself, and in all these cases they are right and true views,—then why in the world, my friend, is Protagoras so very wise as justly to be thought worthy of being the teacher of others with large fees, while we are less intelligent, and have to go to school to him, when every man is in fact the measure of his own wisdom? Surely we must say that Protagoras is talking mere clap-trap in all this! As for my own poor services, and my obstetric art, I say nothing about the ridicule that we incur, and indeed, the whole profession and business of dialectic. For of course our examination of and our attempt to refute each other's fancies and opinions, if every man's are equally right, must be a long and dreary waste of breath, if Protagoras' 'Truth' is true, and did not give its oracular utterances from the depths of the book in mere joke.

Theodorus:: Socrates, the man is a friend of mine, as you yourself just now said. Therefore I don't wish to have Protagoras proved to be in the wrong through any admissions of mine, nor on the other hand to insist that my views are right against your convictions. Do therefore once more take Theætetus, who certainly seemed just now to respond very readily to your appeal.

Socrates:: Supposing, Theodore, you were to go to Sparta, to visit the wrestling-schools; would you expect to look at others stripped, some of them but poor figures, without having to display against theirs your own form by taking off your clothes to compare it?

Theodorus:: Do you think I would not, if I thought they were likely to allow me, and to comply with my request? Just so I hope now to persuade you to let me remain a mere spectator, and not to drag me to the wrestling-ground, old and stiff as I am, but to try a throw with one who is younger and more pliant in limb.

Socrates:: Well, Theodore, if that is what pleases you, it does not displease me, as they say in the proverb. Once more then we must go to our clever friend Theætetus. Come, now, Theætetus, to take first the views we have discussed,—do you not share in our surprise that you will thereby prove all at once not inferior in wisdom to any man, or even any god? For you don't suppose that Protagoras' 'Measure' is said at all less in reference to gods than to men?

Theaetetus:: Indeed I don't. And, to reply to your question, I am very much surprised; for when we were discussing in what way they meant to say 'That which seems to each man, is so to him,' it seemed to me very well said; but now it has suddenly turned out quite otherwise.

Socrates:: Ah! you are young, my friend, and therefore your ears and your mind are readily open to the lecture you have heard. (But don't be alarmed); for in reply to this, Protagoras, or some one in his behalf, will say, 'My fine fellows, men and boys, here you are sitting together and talking fine, and bringing forward the gods, though I expressly exempt them both in speaking and in my writings, and decline to say whether there are or are not such beings. You only say what the mass of mankind would accept if they heard it,—that it is strange if human beings, each and severally, shall have no superiority in respect of wisdom over any animal; but as for proof or cogent argument, you adduce none whatever; you adopt a view that is a mere probability, albeit, if Theodore or any other geometer chose to employ it, he would be worth simply nothing. Consider therefore, both you and Theodore, if you are prepared to accept statements made on such weighty matters by mere probabilities and plausible talk.

Theaetetus:: Why, Socrates, neither you nor we should say that was right.

Socrates:: Then we must view the matter in a different light, as it appears from what you and Theodore say.

Theaetetus:: Differently, by all means.

Socrates:: Then let us proceed thus to the inquiry, whether, in truth, Knowledge and Perception are the same or something different. For it was to this that the whole of our argument was directed, and for this that we mooted all those strange outlandish theories, was it not?

Theaetetus:: It was, without doubt.

Socrates:: Shall we then allow, that when we perceive things by the faculties of seeing or hearing, we at the same time also know every particular about them? For instance, if we have not learned the dialect of foreigners, are we to say that we don't hear them, when they speak, or that we don't hear them with understanding? So again, if we don't know letters, when we look at them are we to say that we don't see them, or to insist that, of course, if we see them, we understand them?

Theaetetus:: Only just this part of them, Socrates, that we actually see and hear, we shall say we understand; that is to say, that we both see and know the shape and color of the letters, and hear and apprehend the shrill or the deep tones of the voices; but such explanations of the meaning of both as writing-masters or interpreters give, we shall allow that we do not know, as we do not realize them by seeing or hearing.

Socrates:: Bravo, Theætetus! To encourage you, I shall not care to raise any objection to your answer. But see, there is another difficulty coming upon us; and it is for you to consider how we can get clear of it.

Theaetetus:: What is that?

Socrates:: A question of this kind, which might be put:—Is it possible, if a man once became acquainted with something, that while he yet has a recollection of it and retains it, he should not know the very fact that he remembers?' But perhaps I am using more words than I need; I merely wish to ask, if a man who has learnt something does not know it when he remembers it?

Theaetetus:: How can that be, Socrates? What you say would be a miracle.

Socrates:: Perhaps the fault is mine for talking nonsense. But consider: you call seeing perceiving, do you not, and sight perception?

Theaetetus:: I do.

Socrates:: It follows then that a man who has seen something has 'become acquainted' with what he saw, according to our late axiom?

Theaetetus:: Yes.

Socrates:: Well! I suppose you allow there is such a faculty as Memory?

Theaetetus:: Yes.

Socrates:: Is it of nothing or of something?

Theaetetus:: Of something, of course.

Socrates:: Therefore of something or other that one learnt and had a perception of?

Theaetetus:: Of course.

Socrates:: Well, now, if a man saw an object, I suppose he remembers it sometimes?

Theaetetus:: He does.

Socrates:: When he shuts his eyes? Or does he forget it when he does that?

Theaetetus:: Why, it would be rather bold to assert that!

Socrates:: But we must assert it, if we are to maintain our axiom as before. Otherwise, it is gone.

Theaetetus:: Upon my word, I suspect as much; but I have not a sufficiently clear apprehension. Say therefore how.

Socrates:: Why, in this way: he who sees, we say, has become acquainted with that which he saw; for sight and sense and knowledge are allowed to be all one.

Theaetetus:: Undoubtedly.

Socrates:: Well, but one who by sight became acquainted with what he saw, if he shuts his eyes remembers it and yet does not see it. Is it not so?

Theaetetus:: Yes.

Socrates:: But this 'does'nt see it' means  does'nt know it', if, as we say, 'he sees' means 'he knows'.

Theaetetus:: True.

Socrates:: It follows then, that, if a man became acquainted with something, though he still remembers it, he does not know it, since he does not actually see it! But we said that would be a miracle, if it really happened.

Theaetetus:: What you say is very true.

Socrates:: It seems then that something which is impossible does occur, if one maintains that Knowledge and Perception are identical.

Theaetetus:: It seems so.

Socrates:: Then we must assert that each of these is distinct.

Theaetetus:: So it appears.

Socrates:: What then can Knowledge be? We must discuss it again, as it seems, from the beginning. Yet what are you going to do, Theætetus?

Theaetetus:: About what?

Socrates:: Like some dunghill cock, we seem to me to have suddenly left the argument and to crow before we gained the victory.

Theaetetus:: How can that be?

Socrates:: It appears to me that we are acting like mere controversialists; we form our premises with regard to the common acceptation of words, and we are content by such means to get the better in the argument. Thus, while we profess to be philosophers and not mere wranglers, we are unconsciously doing the very same as those learned and skillful disputants.

Theaetetus:: At present I don’t see your meaning.

Socrates:: Well, then, I will try to make what I mean to say clear to you on this subject. We asked, you know, if a man who has learnt something, and has it in mind, can be said not to know it. And by taking the case of one who has seen an object, and afterwards, with his eyes shut, remembers it though he does not see it, we said that he did not know it and yet had it in memory; which was impossible. And so this fine story of Protagoras’ came to an end, and with it yours, of the identity of Knowledge and Perception.

Theaetetus:: It seems so.

Socrates:: But it would not, I suspect, my friend, had the author of that other saying been alive, but he would have brought effective aid to it. At present, we are abusing it when it has none to befriend it. Indeed, it seems that even the guardians whom Protagoras left behind him,—our friend Theodore here is one,—don’t care to interfere in its behalf. Well, then, we will make the venture ourselves, and come to its aid for the sake of fair play.

Theodorus:: Nay, Socrates, it is Callias, the son of Hipponicus, who is the guardian, rather than I. Somehow or other, we took to geometry, and got away from the science of bare words. However, we shall feel obliged to you, if you undertake the defense of him.

Socrates:: Very good: then observe, Theodore, the kind of aid I am going to bring. For a man might have to make admissions still more damaging than those we have just made, if he did not carefully attend to the lax use of phrases,—how we are in the habit of saying 'yes' and 'no' in our ordinary answers. Must I tell you how that is, or Theætetus?

Theodorus:: Rather tell us all in common, only let the younger be the respondent; for if he gets a throw he will be in a less awkward plight.

Socrates:: I tell you then what is the most formidable question of all. It is to this effect: Can a man at once know something, and yet not know what he knows?

Theodorus:: What answer now are we to give, Theætetus?

Theaetetus:: That it is impossible, in my opinion.

Socrates:: Not at all,—if you intend to maintain that seeing is knowing. For how will you deal with a question that cannot be evaded,—caught, as the saying is, in a tank,—when some undaunted man asks, as he covers one of your eyes with his hand, 'Whether you see his mantle with that covered one?'

Theaetetus:: I suppose I shall say that I don't with that, but I do with the other.

Socrates:: Then you at once see and don't see the same object?

Theaetetus:: Under those circumstances—yes.

Socrates:: I don't put that reservation (he will reply), nor did I ask you about the how; but simply whether, what you know, you also don't know. It now appears that you see what you don't see; and you have already allowed that seeing is knowing and not seeing is not knowing. Consider then what results from these premises.

Theaetetus:: Well, I see on reflection that it is just the contrary of what I said before.

Socrates:: And perhaps, my estimable friend, more difficulties of the same kind would have occurred to you, if any one put further questions to you; 'Can a man have a keen or a dull knowledge? Can he know close by, but not far off? Can he know the same thing loudly and gently?' There are countless questions of the like kind, by asking which in the course of his argument a light-armed fighting-man serving for hire might entrap you, when you had defined Knowledge to be the same as Perception. Then, making a direct assault on seeing and smelling and senses of that sort, he would show your definition to be wrong, pressing you hard and allowing you no rest, till at last, in your admiration of that much-to-be-coveted wisdom of his, you had allowed yourself to be bound hand and foot by him; and then, having got you fairly in his power, and tied you to a string of other captives, he would at last consent to ransom you for whatever sum you could agree on between you. What defense then, you may perhaps ask, would Protagoras make in aid of his own doctrine? Must we essay to state it?

Theaetetus:: By all means.

Socrates:: Well, then, he will say all that we say in his behalf, and more than that, will make a direct attack on us, expressing his contempt for us in these terms:—'So then this worthy, this Socrates, because a mere lad, when asked by him if it were possible for one and the same man at once to remember and yet not to know the same thing, was timid, and in his timidity said ‘no’, through having no faculty of foresight,—has held up my illustrious self to ridicule in his reasonings! Whereas, in fact, you most heedless of disputants, Socrates, the case stands thus: when you are examining any views of mine, and to this end propose a question about them, if the party questioned gives such a reply as I should give, and is beaten, then I am proved to be in the wrong; but if his answer is of a different sort, then the person himself to whom it was put. For instance,—do you imagine anyone will concede to you that, if the memory abides in anyone of something that he underwent, it is a feeling of the same kind as it was when he underwent it, viz. now that he no longer feels it? Or again, do you suppose he will hesitate to admit that thus it is possible for the same man to know and not to know the same thing? Or, should he fear such an admission as that, do you suppose he will allow you to maintain that a person who is undergoing some change is identical with what he was before he began to undergo it? In other words, that a man is the particular person always, and not several, and that by a process of becoming this or that in endless variety, if a becoming unlike should take place in him?—for I suppose we must be careful not to catch up each other’s words. No! my very fine fellow, he will say, do come to the precise point of my assertion, and prove it wrong if you can. Show that our perceptions are not special and peculiar to each of us, or that, if they are such, not at all the more for that what seems to anyone becomes so to him, and to him only (or say, ‘is so to him’, if we may use the verb ‘to be’) to whom it seems. But in talking of swine and baboons, you not only act swinishly yourself, but you persuade your hearers to do the same towards my writings; which is not fair play. For I insist that the truth is as I have stated in my book; that each of us is a measure of what is and what is not; though I allow that there is an enormous difference between one man and another in this very respect, that to one man this seems to be and therefore is, to another that. In this sense I am far from denying that there is such a thing as wisdom or a wise man. On the contrary, I even affirm that this very man is wise, who, by producing a change in another, to whom certain things seem and are bad, makes them seem and be good. Now don't carp at my statement again, from the way in which I have expressed it, but take this illustration that you may know my meaning still more clearly. Recall to mind what we said before, that if a man is out of health, what he takes both seems and is nauseous to him, albeit it seems and is just the contrary to one in health. Now, it is not for us to make either of these wiser on the subject, for indeed that is not possible; nor are we to find fault with him, and assure him that the sick man is a stupid fellow for thinking so-and-so, but the healthy man is wise for thinking something quite different. No! we must change him so as to take the other view; for this other disposition is a better one. Just so in educating him, we must alter him from the bad mental habit to the better; only, while your physician effects this by drugs, your professor does it by argument. For we cannot say that a person had false opinions once, but somebody made him hold the truth afterwards; he cannot think what to him is not, nor anything else than what he feels; but this must always be true to him. In fact, the case is this: when through a vicious condition of mind, men hold vicious opinions, a right condition causes them to hold right opinions. These views some people through want of practice in reasoning call 'true views'; all I say is, that the one sort of views is letter than the other sort, but not at all truer. And, my dear Socrates, I am very far from calling wise men frogs. As far as they deal with men's bodies, I call them physicians; as far as with plants, husbandmen. For I affirm that even these, if any of their plants are out of health, produce in them good and healthy sensations, and such as are true to it, instead of vicious ones; just as your wise and good speakers cause that what is good instead of what is bad should appear to states to be right. For I lay it down as an axiom, that 'Whatever each state considers just and right, that is so to it, so long as it holds them to be so.' Only your wise man makes what is good to seem and therefore to be good, instead of what is bad being true to them in any particular case. In the same way your professor also, if he can train his pupils after this method, is wise, and deserves large sums of money from those instructed by him. According to this view, then, some persons are wiser than others, and yet no one holds false views. No! whether you like it or not, you must submit to be 'a measure'. For by considerations of the above kind the statement we are discussing is shown to be consistent. If you can call it in question by denying its premises, do so by arguing against it in a discourse, or, if you prefer that method, by questions: for even this is not to be shunned by a man of sense. Act, however, in this way; don't be unfair in your questions; for it is most unreasonable that one who professes to care about uprightness and truth should do nothing but cheat all through his discourse. And I call it cheating, in circumstances like the present, when a man does not observe the just distinction between arguing and conversing,—in the former saying what he does not really mean, and trying to throw his adversary by every means in his power, in the latter speaking always in earnest and setting up the other on his legs again, by pointing out to him only those failures and slips in which he had been led into error by himself or by a course of bad teaching before. For if you act thus towards them, those who converse with you will blame themselves for their own confusion and perplexity, and not you; rather, they will run after you and love you, and dislike themselves. They will find a refuge from their own ignorance in philosophy, in order that they may become what they were not, and be rid of their former selves. If, however, you take the contrary course, as most do, then the contrary will be the result: you will make those who associate with you to hate learning instead of loving it, when they get old. So, if you will take my advice, as I said before, you will not dispute in a surly and captious spirit, but bring yourself down to our level with sentiments of kindness, and consider in good earnest what we mean when we lay it down as a plain truth that 'all things are in motion,' and that 'whatever seems to each, that is so to a state or to an individual alike.' From a right view of these doctrines you will further consider whether Knowledge and Perception are the same or different, and not, as you did just now, from the familiar use of phrases and words, which the many drag and distort to bear any sense they please, and so cause each other every kind of perplexity. Such, Theodor us, is the aid I have rendered by way of taking your friend's part, to the best of my poor abilities,—a small contribution from a small store. Had he been himself alive, he would have defended his own views in more effective language.

Theodorus:: You are joking, Socrates: you have come to the good man's aid with real spirit and courage.

Socrates:: I am glad you think so, my friend. And now tell me; did you notice Protagoras' saying just now, with reproach to us, that by holding our conversation with a boy we made use of a boy's natural timidity to argue against his doctrines; and how, scolding us for what he called our pleasantry, and magnifying his own doctrine of “Measure”, he bade us be serious in dealing with his argument?

Theodorus:: Of course I noticed that, Socrates.

Socrates:: Well then, do you advise us to do as he tells us?

Theodorus:: I do, by all means.

Socrates:: Do you observe then that all the present company except yourself are mere boys? If therefore we are to comply with our friend’s wishes, you and I, by questioning and answering each other, must give our serious attention to his argument, that he may not have this to complain of in us, that we have for the second time discussed the matter in joke by addressing ourselves to striplings.

Theodorus:: Well, is not Theætetus likely to follow an argument through all its mazes better than many who wear long beards?

Socrates:: Yes, but not better than you, Theodore. So don’t suppose that it is my duty to take the part of your friend, now that he is no more, by every means in my power, while you are not bound to help him at all. Come, my friend, go with just me so far,—’tis but a little way,—till we ascertain whether you have a special claim to be an authority about diagrams, or all are as competent as you, for their own purposes, in astronomy and those other sciences in which, you know, you are considered to excel.

Theodorus:: It is not easy, Socrates, when one sits by you, to avoid giving one’s views on any subject. I am afraid my joke was little to the purpose, when I said you would excuse me from stripping to show myself, as they do at Lacedaemon. No, you seem rather to incline to the practice of Seiron. At Lacedaemon they tell you either to strip or to go; but you seem rather to act like Antaeus, for when anyone meets you in company you don’t let him go till you have made him strip and compelled him to try a throw with you in the argument.

Socrates:: You have admirably, Theodore, expressed my weakness by your simile. I, however, am stouter than those you speak of; for ‘ere now many and many a Hercules and a Theseus, on meeting me,—men strong in talk,—have pounded me right well; but I don’t give it up for all that, so strong a desire has taken possession of my soul for exercises of this kind. Do not therefore on your part refuse to anoint yourself for a bout with me, and so to benefit both yourself and me.

Theodorus:: I have not another word to say against it, so take any course you please. Come of it what may, I must endure the fate, whatever it may be, of which you have woven the thread, and submit to be questioned on these subjects,—not, however, further than the limits you propose shall I allow myself to be examined by you.

Socrates:: Well, even so far will do. And I pray you, be very careful about this,—don’t let us inadvertently make our discussion after the puerile fashion, lest some one should again reproach us with it.

Theodorus:: Be quite sure I shall make every effort in my power.

Socrates:: Let us then in the first instance once more get a grip of the same difficulty as before; let us see whether we rightly or wrongly took offence at and found fault with the statement, because it made every man to be wise enough in himself; and whether Protagoras was right or wrong in granting that, in respect of better or worse, some people were superior to others; and that such really were wise. Was it not so?

Theodorus:: It was.

Socrates:: Well, now, if he had been here in person to make that admission, instead of our making it for him as supporters of his cause, there would have been no need to take up the subject again and try to get it settled in this way. As it is, perhaps some one may say that we have no authority to make the admission on his behalf; and therefore it is the more proper course to come to an agreement between ourselves on this very question; for it makes a material difference in the argument whether it is as Protagoras says, or the other way.

Theodorus:: What you say is quite true.

Socrates:: Then let us arrive at this agreement as briefly as possible, and from no other premises than those supplied by his own reasoning.

Theodorus:: How?

Socrates:: In this way. He says, I think, that 'what seems to each man, that is so to him who thinks it so'?

Theodorus:: He does say that.

Socrates:: Then, Protagoras, we also on our parts state the view of a human being, or rather, the views of all human beings, when we affirm that everybody in the world thinks himself wiser than others in some things, and others wiser than himself in other things; nay more, that when people are in danger in military service or in times of pestilence or in a storm at sea, they behave towards those who hold the command in any such cases as they would towards divine powers, expecting to be saved by them, though in fact their only superiority over others consists in their knowledge. In fact, human life is full of such instances; men seek others to teach and to direct both themselves and their domestic animals and even their trades; or they think themselves competent to teach and competent to direct. Now, in all these cases what are we to say, but that the men themselves believe that wisdom or want of information resides with themselves?

Theodorus:: That is the only conclusion we can come to.

Socrates:: They think, then, that wisdom means a true view, and ignorance means a false opinion.

Theodorus:: Of course.

Socrates:: Then how, Protagoras, are we to deal with your proposition? Must we ‘say that these men always think truly, or sometimes truly and sometimes falsely? For, if they do both, it follows of course that they do not always think the truth, but sometimes truth and sometimes falsehood. For consider, Theodore, whether anyone is likely, either of Protagoras’ party or yourself, to contend, that no man thinks another man is ignorant and holds false views?

Theodorus:: Why, that is incredible, Socrates.

Socrates:: And yet that is the strait into which the argument is brought, that affirms man to be the measure of all things.

Theodorus:: How is that?

Socrates:: When you, after making up your own mind on some point, express to me your own opinion upon it; granted that this opinion, according to his statement, is true to you; yet may not we, the rest of the world, become judges of your judgment, or do we conclude that your views are invariably right? Is it not rather the case, that multitudes set their opinion in opposition to yours, believing that your judgment and your opinion are alike wrong?

Theodorus:: Yes, by heaven, Socrates, a mighty host indeed, as Homer says, who are ever causing me a world of trouble.

Socrates:: What then? Shall we say, that in such cases you hold opinions that are true to you, but are false to the vast majority?

Theodorus:: That inference seems inevitable, if we are to follow the argument.

Socrates:: And what must Protagoras himself infer? Surely he must grant either that neither he nor the majority really believe (as we know they do not) man is a measure,—in which case the truth he has written about is truth to no one at all; or that he thinks so, but the majority do not; and then you are aware that, in the first place, the more there are who don't think so, compared with those who do, in the same degree it is truth more than it is not truth.

Theodorus:: That must be so, if the opinion of each is to be the test of truth.

Socrates:: In the second place, his doctrine brings us to this sublime conclusion: in allowing that all hold opinions that are real to them, he of course concedes that the views of those who hold the contrary to his, and by which they consider his views are false, are true to them.

Theodorus:: Undoubtedly.

Socrates:: Then he would be granting that his own opinion was untrue, in allowing that theirs is true, who think him in the wrong.

Theodorus:: It certainly is so.

Socrates:: But the others, I presume, do not allow that they are mistaken.

Theodorus:: Indeed, they do not.

Socrates:: And he allows that such a conviction in them also is true,—to judge from what he has written.

Socrates:: Then by all without exception, and by Protagoras himself among the first, this ‘truth’ of his is called in question,—or rather let us say, by him at all events it will be conceded, when he allows that the person who speaks against his, Protagoras’, views, hold a true opinion,—then, I say, Protagoras himself must admit, that neither a dog nor your ordinary man is a measure of anything about which he is uninformed. Is it not so?

Theodorus:: It is.

Socrates:: Since then his doctrine is called in question by all, Protagoras’ Truth will be true to nobody,—neither to himself nor to anyone else.

Theodorus:: We are running down my friend too hardly, Socrates.

Socrates:: Nay, my good sir, I am not quite sure that we are not outrunning the truth. Certainly, it must be presumed that he, being older, is wiser than we. Suppose now he were at this very moment to raise his head and shoulders up from the floor, he would very likely scold us roundly, me for talking nonsense and you for assenting to it, and then suddenly disappear and be off before we could stop him. As that cannot be, however, I suppose we must make use of ourselves as measures, to find out what we are, and to say always what we think. Thus, we may surely now affirm that anyone will allow this,—that one man is wiser, or is less well-informed, than another.

Theodorus:: I think we may.

Socrates:: Shall we also say that the argument will stand best by the guiding-line we drew when we were advocating Protagoras’ doctrine,—viz. that things generally are as they seem to be to each person,—hot, or dry, or sweet, or of any other quality of the like kind; but that, if anywhere and in any instances he shall grant that one man is superior to another, he must be content to say, that not any woman or boy or even any creature is competent to undertake its own cure, by its knowledge of what is wholesome for it, but that here, if anywhere, one is superior to another.

Theodorus:: That is my opinion.

Socrates:: Then in politics also he must admit that in respect of what is honorable and dishonorable, just and unjust, lawful or not lawful, whatever code of morality a city lays down for itself, believing it to be right, these things are so to it in reality. In these matters one citizen is not wiser than another, nor one state than another state. But in enacting laws that are for or against its own interest, he will allow that the opinion of one state, or of one adviser of the state, is superior in respect of truth to that of another; for he will hardly venture to affirm, that whatever laws a state may have enacted with the full belief that they are to its own advantage, they will also in the end prove to be such. But in the case of which I am speaking,—in matters of justice or injustice, lawful and unlawful, men are prepared to insist that none of these has an inherent quality of its own by nature; they will not allow more, than that what has been accepted! by the state in common becomes true so soon as it shall have been so accepted, and so long as it may remain on the statutes. And even those who do not accept Protagoras' doctrine of 'measure', take the above view of wisdom.—But argument after argument seems coming upon us, Theodore, and a greater after a less.

Theodorus:: Well, Socrates, we have leisure for it, I suppose.

Socrates:: It seems so. Indeed, I have often, my good sir, observed on other occasions not less than now, how very naturally those who have spent much time in philosophic inquiries, when they come into law-courts appear ridiculous as orators.

Theodorus:: In what sense do you say this?

Socrates:: It appears to me that those who have been conversant from their youth with law-courts and assemblies of that kind, compared with those who have been educated in philosophy and kindred pursuits, have been brought up like slaves compared with free men.

Theodorus:: In what respect?

Socrates:: In so far as the latter, just as you remarked, always have leisure, and hold their conversations at their own convenience and in peace. As we are now taking up one subject after another for the third time, so do your philosophers, if the new theme should please them better than the one proposed, as it has done in our case. Nor does it now concern them at all whether they speak in brief or at length, if they do but get hold of the truth. Whereas your lawyers always speak under pressure of time,—for the water as it keeps running does not allow them to loiter,—and it is not in their power to make their addresses on any subject they may please, for the counsel on the other side stands there exercising a constraint over them in the shape of a brief which he reads as they speak, and beyond the limits of which they must not digress. His speeches are always about one who is as much a slave as himself, and are addressed to one seated there as lord and master, who holds justice in his hand; nor do the pleadings ever digress into any other topic, but are confined always strictly to the legal question, albeit it is often a race for dear life. So that from all these causes your lawyers become shrewd and sharp, well knowing how to flatter their master in word as well as how to gratify him in act, yet small and warped in their minds; for their growth in goodness, with their straightforwardness and freedom of character, has been taken from them by their having been slaves from their boyhood, which has constrained them to be always engaged in some crooked business or other, by burdening their yet tender minds with heavy loads of dangers and fears. Now, as they cannot bear such a load supported by justice and truth, they turn in quite early life to falsehood and to wronging each other, and thus in many respects become warped and stunted, and so turn out men from mere striplings without any sound principles in their minds, and very clever and wise they have become,—in their own opinions. So much then for the lawyers, Theodore; and now for those of our set,—do you propose that we should describe them fully, or dismiss them for the present and resume our former subject, that we may not, as we said just now, make too free a use of our independence and our privilege of taking up one topic in place of another?

Theodorus:: Not so, Socrates, on any account; let us rather discuss their character in full. For, as you very well observed, it is not that we, the acting party on these occasions, are the slaves of our subjects, but rather our subjects are, as it were, domestics, and each of them awaits our convenience for being brought to a conclusion, whenever it may seem good to us. For we have not in our company either any juryman, or, as the poets have, any spectator, standing by us to find fault or to call us to order.

Socrates:: Let us proceed then to our description, as it seems we must, and as such is your pleasure, taking the best specimens of the class; for why should one mention such as spend their time in philosophy to little or no purpose? Well, then, your best men, I suppose, in the first place do not so much as know their way into the agora at all, nor the site of any law-court or of the council-hall, or any other meeting-place in the city; and as for laws and decrees of the people, they neither see them written nor hear them read. Much less do they know of the secret intrigues of political parties for securing to themselves state-offices, and treasonable meetings and dinners, and serenades with your dameuses,—they don’t even dream of doing such things. Then whether any citizen is well-born or ill-born, or what harm attaches to anyone by hereditary descent, either from the male or the female line, they know no more than (as the proverb is,) how many quarts there are of sea-water. Nay, he does’nt even know that he does’nt know all this; for ‘tis not to be supposed that he keeps out of the way of such things for the sake of credit, but in real truth his body alone is there in the city and in town’, while his mind and thoughts, regarding all such concernments as trifling and mere nothings, despise them and soar all abroad, ‘measuring,’ as Pindar says, ‘the regions below the earth and those upon it, star-gazing in heaven’s heights,’ and investigating fully the true nature of the phenomena of each and every part of the universe, never bringing themselves down to the level of any of the objects that are near.

Theodorus:: In what sense do you say this, Socrates?

Socrates:: Just as Thales, Theodore, when he was star-gazing and had his eyes on the sky, contrived to tumble into a pit, and so incurred the ridicule of a smart and pretty Thracian slave-girl, for being so eager to know what was in heaven above him, while he failed to notice what lay before him at his very feet,—so the same banter holds good against all who devote their time to philosophy. It is simply true that persons of that profession know nothing about other people, even their own neighbors,—not only as to their occupations, but almost whether they are human beings at all, or some other kind of creature. No! what man is, and what better objects and destinies such a nature has than the lower animals,—that is what he not only inquires, but takes pains thoroughly to understand. You see what I mean, Theodore, don't you?

Theodorus:: I do; what you say is quite true.

Socrates:: And the consequence is, my friend, that your philosopher both in his private dealings and intercourse, and in his public appearance on any occasion,—when he is obliged to talk either in a law-court or elsewhere about matters before his feet and in his sight, makes himself ridiculous, not merely to Thracian slave-girls, but to the people generally, by tumbling into pits and into every sort of puzzle through want of practice; and his awkwardness is something terrible to see, and suggests the notion that he must be a downright fool. For in the attacks on people's characters he has nothing personal to say against any one, as knowing no harm of anybody from the want of practice; and thus from being at a loss he appears ridiculous. So, too, in the praises and high-flown eulogies of others, by letting people see that he laughs not affectedly but in all sincerity, he is regarded as a silly giggler. For when he hears an encomium on a tyrant or a king, he imagines that he hears one of your stock-keepers,—a swineherd, for instance, or a shepherd, or a neat-herd—called happy for draining a great deal of milk; only he thinks that kings feed and suck an animal more discontented and more fond of laying plots than the herdsmen do. He thinks, moreover, that such a potentate must of necessity be quite as churlish and uninformed as the herdsmen are, from his want of leisure, seated as he is in his castle on a hill like a shepherd in the midst of his fold. And when he is told that some one who owns ten thousand or more plethra of land possesses an astonishing quantity, he imagines that what he hears is but a very small amount, accustomed as he is to look at the whole world. And when they speak in praise of men's pedigrees, and tell you that so-and-so is of high birth because he can show seven rich ancestors, he regards such a commendation as coming from people who see dimly and only a few years back, and who from defect of education cannot have their eyes always on the universe, nor consider that every individual has had countless myriads of ancestors, in which rich and poor, kings and slaves, foreign and Greek have been born into the world in millions for every one, be he who he may; but when men pride themselves on a list of five-and twenty forefathers, and carry back a pedigree to Hercules the son of Amphitryon, it does seem to him surprising that they should make these trumpery reckonings; and he laughs at them for not being able to see that the twenty-fifth from Amphitryon still further back was just what fortune happened to make him, and so to get rid of the conceit of a senseless mind. In all such cases then as the above, a character of this kind is ridiculed by the many, partly for being proud, as he is thought, partly for not knowing the most obvious facts and being at a loss on every occasion.

Theodorus:: You describe, Socrates, exactly what happens in the world.

Socrates:: But when, my friend, he the philosopher, has drawn some of these men of law above the level of their courts,—in other words, when some one has consented at his request to exceed the narrow limits of 'What harm do I do to you, or you to me?' and to rise to the contemplation of justice and injustice in its true nature,—what each of them is, and how they differ from each other and from everything else,—and to leave such questions as 'Whether a king is happy because he owns much gold', for inquiries about the nature of sovereignty, and of human happiness and misery in general,—what these two things really are, and in what way it is the duty of one who is by birth human to attain the one and to escape the other,—when it comes to the turn of that small-minded but shrewd man of law to give his views on all these subjects, then he plays the counterpart of the philosopher in the courts; he is giddy from being suspended aloft, and looking upwards from his height he loses heart from being so unused to it. Then he gets perplexed, and by his unintelligible talk he makes himself laughed at, not indeed by Thracian slave-girls, nor by anyone else who is uneducated,—for they are not intelligent enough,—but by all who have had an education of the contrary kind to slaves. Such, Theodore, is the character of each; the one, that of a person brought up in reality with the ideas of a gentleman and with leisure at his disposal,—the philosopher, in fact, as you call him,—who may be excused for seeming a simpleton and a mere nobody when he is suddenly required to do the services of a slave,—for instance, if he does not know how to pack a portmanteau or to flavor a relishing dish, or words of flattery. The other is the character of one who knows how to perform all these services thoroughly and promptly when called upon, but does not know how to throw his mantle over his right shoulder like a freeborn gentleman, much less has acquired the fitting language for rightly praising the true life of the gods and of happy men.

Theodorus:: Ah! Socrates, if you could persuade all men to think so, as you do me, there would be more peace and less evils in this world of ours.

Socrates:: But it is impossible, Theodore, either that evils should be abolished,—for there must ever be some principle antagonistic to good,—or that they should take up their abode among the gods. No! they must range this mortal nature and this, world of ours, and there is no help for it. And this is just the reason why we should try to flee away from this to the other life with all possible speed. Now by this flight I mean the making oneself as like to God as is possible for man; and this likeness consists in becoming just and holy with the highest intelligence. But alas! my friend, His by no means easy to persuade people that, after all, it is not for the sake of that, for which most men tell us we ought to shun vice and to pursue virtue, that we are bound to practice the one and not the other,—that is, merely that one may be thought not bad, or to be positively good,—for all this is what they call old wives' gossip, as it seems to me. No! let us state the truth thus:—God is in no way and in none of his dealings unjust; on the contrary, he is as just as it is possible to conceive, and there is nothing so like to him, as any one of us who on his own part has learnt to be as just as he can be. On this point turns the question whether a man is really clever, or good for nothing and a man only in name. Yes! it is the knowledge of this which is wisdom and true virtue, while ignorance of it shows a want of instruction and a baseness than cannot be mistaken. All the other kinds of cleverness and wisdom, as they are commonly thought to be, in places of political influence are simply vulgar, and in the arts are tradesmanlike. If, therefore, any of these men act unjustly, or say or do what is unholy, far the best course to take with them is not to allow that they can be clever by wrong-doing. For as it is, they glory in their shame, and they flatter themselves they are being told they are no fools, no mere encumbrances of earth, but men, such as those should be who have any hope of coming off safely in the turmoil of politics. We should therefore tell them the plain truth; that they are what they think they are not, all the more because they think they are not. For they do not know the penalty of injustice, which of all things they ought least to be ignorant of. It is not what they suppose, stripes or capital punishment, nothing of which in many cases has to be borne by the unrighteous; no! it is a penalty from which there is no escape.

Theodorus:: Of what then do you speak?

Socrates:: My dear friend, there are two examples set before us in the order of things; that of the godlike, which is most blessed, that of the godless, which is most miserable. Now those who from stupidity and utter want of intelligence do not see that this is so, are unconscious that they get more and more like the one through their unrighteous acts, and more and more unlike the other. And the penalty of this ignorance they pay by living the life, the example of which they are bringing themselves to resemble. And if we tell them, that if they don't cease from that cleverness of theirs, in the other life they will never find entrance into that blessed abode that is free from all evil, but will pass a groveling existence in this lower world, like to their present sojourn upon it, bad in company with bad,—if we tell them this, they will more than ever regard themselves as clever fellows, who are up to anything, being lectured by a parcel of fools.

Theodorus:: That is true indeed, Socrates.

Socrates:: Indeed it is. There is one result, however, from which they cannot escape: if they hold a private conversation, giving and hearing reasons on the course of life they so disparage, and consent like men to stand their ground without running like cowards for some considerable time, then, my good sir, they get strangely out of temper with themselves at the end of the argument, and all that fine eloquence of theirs fades away, so that they seem no better than boys. However, on these subjects, as the discussion of them at present is out of place, let us say no more, or our first argument will be overwhelmed by the flood of ideas that will pour in upon us. Let us then, if you please, return to our former inquiries.

Theodorus:: I confess that to me, Socrates, these extra subjects are fully as pleasant to hear about: for they are easier for one of my age to follow up. However, as you wish it, let us go back again to our former subject.

Socrates:: Well, then, I think we were about that point of the argument where we affirmed that those who take for their axiom that Being is but Movement, and that 'what seems to each is so to him to whom it seems', are ready to insist, that in things in general, and especially in questions of justice, whatever views a city may have adopted as such, as the expression of her opinion on the subject, to her they are just, so long as they are in force. But when the question turns on what is her real interest, we maintained that no man was presumptuous enough in this case to venture on the assertion, that what a state has enacted believing it to be beneficial to itself, that also is so for as long a time as the enactment remains; unless, indeed, we are talking about what is beneficial in name only; which, of course, would be a mere satire on the subject of our conversation.

Theodorus:: It would indeed.

Socrates:: Then don't let him talk of the mere name, but the reality of that which, under the name of 'beneficial,' is the subject of our inquiry.

Theodorus:: Certainly not.

Socrates:: Then whatever she means by the name, that, of course, she aims at in her legislation, and all the laws, to the best of her belief and her power, she enacts with a view to her own interest especially. Is there any other end she has in view in making laws?

Theodorus:: Assuredly not.

Socrates:: Does then a state always succeed in this aim, or does every government make occasional mistakes?

Theodorus:: I think that it is often mistaken.

Socrates:: Perhaps from the following consideration any one might be yet more likely to form the same conclusion; I mean, if he were to put the question respecting the entire class of things which includes the useful: that, of course, is one that in its very nature extends also to the future. For, whenever we legislate, we enact our laws with the hope and belief that they will be beneficial for times yet to come, that is, to speak correctly, 'for the future'.

Theodorus:: Of course.

Socrates:: Come then, let us ask Protagoras, or some of those who maintain his opinions, this question:—'You say, gentlemen, that man is the measure of all things,—of white, heavy, light, all qualities and conditions of that kind whatsoever. For, as he has in himself the criterion of them, whatever he feels, believing it to be such, is so to him, and constitutes a true belief. Now, is this not so?'

Theodorus:: It is so.

Socrates:: But has he also in himself, Protagoras, (we shall say,) a criterion of what will be? Do things happen exactly as one thinks they will happen, when one has formed a certain opinion about them? For instance, in the feeling of heat, when some person ignorant of medicine has conceived the idea that a fever will seize him, and there will be in him a certain feverishness, but another, a physician, forms a contrary opinion, according to the opinion of which are we to say that the result will be? Or will it be according to both opinions,—will the patient not feel hot and feverish to the physician, but feel both to himself?

Theodorus:: That would be absurd, indeed.

Socrates:: Yet, I suppose, on the sweetness or sourness that is yet to be in wine, the opinion of the cultivator alone, and not that of the harp-player, is of authority.

Theodorus:: Of course.

Socrates:: Nor, again, would a trainer in boys' exercises be likely to judge better than a musician whether a piece of music when played will be in good or bad tune, though afterwards, when it is played, the trainer may have ear enough to think it is correct.

Theodorus:: Certainly not.

Socrates:: 'Well, the judgment of one to whom a dinner is to be given,—he being no adept at cookery—while the banquet is in preparation, will be of less weight than that of the cook respecting the pleasure that is in store for him. For observe, we are not at present to insist in our argument on the pleasure that each one now feels, or has felt, but simply on the question, whether, in what will seem and therefore be pleasant to each, every man is the best judge for himself. Would you, Protagoras, be a better judge before-hand than any of the unlearned of what would be likely to carry conviction to each of us if you went into court?

Theodorus:: Why, Socrates, that is just the point in which Protagoras specially professed that he himself surpassed all others.

Socrates:: Of course, my good sir, he did. If he had not, no one would have conversed with him on payment of a large fee,—I mean, if he had not tried to persuade his pupils that no seer, and indeed nobody else in the world, was likely to judge better not only what was, but what would seem and be convincing, than each man for himself.

Theodorus:: Most true.

Socrates:: Then both legislations and their utility are concerned with the future; and all will readily grant that of necessity a state must, in enacting laws often fail in securing its highest and truest interests.

Theodorus:: Certainly.

Socrates:: Then we shall give a fair reply to your master, if we tell him he is bound to allow that one man is wiser than another; and that, although such a person is a measure of truth, yet I, who have no such knowledge, am in no way bound to become a measure;—a conclusion very different from that of the argument lately undertaken in his behalf, which insisted that I was a measure, whether I wished it or not.

Theodorus:: It seems to me, Socrates, that the proposition is best refuted by that consideration (though, indeed, it is also refuted by this), viz. that it makes the opinions of others to be of authority, and those opinions have been shown to regard his statements as altogether untrue.

Socrates:: There are many others ways, Theodore, in which such a proposition as this might be refuted, that 'every opinion of every man must be true.' But it is more difficult to prove that, in such feelings as each one has at the time, which are the sources of our impressions and of the opinions founded on them, such opinions are not true. Perhaps, indeed, it is not enough to say this: they may even be, and perhaps are, irrefragable; and those who affirm that they are plain and clear, and therefore sure grounds of knowledge, may possibly assert what is really the case. And thus our friend Theætetus is not far from the mark in saying that Perception and Knowledge are the same thing. We must therefore look at our work of art a little closer, as the argument in defense of Protagoras told us to do, and we must examine this doctrine of ‘Being is only motion’ by ringing it to hear if it sounds cracked or whole. At all events, no small contest about it has arisen, and that with a numerous school.

Theodorus:: Small! I should say not. Why, in Ionia it is even gaining ground rapidly. The fact is, the followers of Heraclitus support this doctrine very heartily.

Socrates:: And therefore, friend Theodore, the more carefully we must look into it, and from the very beginning, according to the line they themselves take.

Theodorus:: By all means. For indeed, Socrates, apropos of these Heracliteans, or as you say, these followers of Homer or others yet earlier—one can no more converse with the disciples themselves of the school of Ephesus, who profess to be well up in the doctrines, than one could with maniacs. For, just like their own teachings, they are ever in motion; and as for staying on one subject or question, or quietly replying or putting a question in their turn, this is no more in them than anything; or rather, what is not even a naught is greater compared with the utter absence of rest in these men. No! if you ask any of them anything, they drag forth as if from a quiver certain ambiguous wordlets and shoot them off; and if you try to get some account of this, and to know what it really means, you will be hit by another term used in a newfangled sense, and so will never come to any conclusion in conversing with any of them. Indeed, they do not themselves do any better with each other, but they very carefully observe their own law of never letting anything stable remain either in the argument or in their own minds, thinking, I suppose, that ‘stable is ‘stationary’; and with that, you know, they are openly at war, and even, as far as they can, try to get rid of it altogether.

Socrates:: Perhaps, Theodore, you have only seen these men disputing, and have never had an interview with them in their moments of peace; for they are no friends of yours. That kind of language, I suppose, they use to such disciples of theirs as they wish to make like themselves, when they have a little more leisure.

Theodorus:: Disciples, indeed, my good sir! Why, with philosophers of that kind no one is a disciple of another. They spring up like mushrooms, from whatever source any of them may chance to have drawn his inspirations; and each one believes that the other knows nothing. From these men, then, as I was going on to say, you will never get any explanation if they can avoid giving it, or even by a stroke of luck. You must take the men themselves and consider them as a problem.

Socrates:: Indeed, you speak quite reasonably. But have we not received this very problem in two ways and from two sources?—from the ancients, who used poetry to conceal their real meaning from the multitude, and who taught that the creation of all things,—expressed by 'Ocean' and 'Tethys',—is perpetual motion, and that nothing stands; and from the later philosophers, who, as being more advanced, openly explained their doctrines to all, in order that the very cobblers may understand their wise sayings when they hear them, and may leave off stupidly thinking that some things stand and other things move, and, on being told that everything moves, may hold them in due honor.—But I had almost forgot that there are others who openly maintain the very contrary doctrine to these; as for example, that the so-called universe is unmovable; and other propositions which are affirmed by more than one Melissus or Parmenides, in opposition to all these of the Ionian school. Such are, 'that the universe is one,' and that it is 'self-contained and stands still,' because 'it has no place to move in.’ Now, my friend, how are we to deal with all these conflicting doctrines? For in our gradual advance, we have fallen between the two without knowing it, and if we don’t defeat them and get clear off, we shall be punished as boys are in the wrestling-schools when they play at the game of the line, when they are seized by both sides and dragged to the camp of the enemy. It appears to me, therefore, that we ought to examine first the other side, against whom we first made a movement, the ‘fluent’ school. And, if we should think there is something in what they say, we will join them in dragging our own selves to their side, in our efforts to get away from the others: or if, on the other hand, the party who make the universe stand still should seem to speak more truly, we will run off to them and leave these people who would move even the immoveable. And again, should we be of opinion that neither side has anything reasonable to say, we shall be ridiculous in supposing that we second-rate inquirers talk sense, and in expressing disapprobation of very old and very learned men. Consider then, Theodore, if it is worth our while to advance in the face of such a danger.

Theodorus:: I should rather say, Socrates, it is not to be endured that we should not fully consider what each of the contending parties have to say.

Socrates:: Consider then we must, as you show such zeal in the cause. It seems to me that our discussion about universal motion should begin with the inquiry, What do they mean in saying that ‘all things move’? What I intend to express may be put thus: Do they affirm that there is one kind of motion, or, as I rather think, that there are two? However, don’t let this be my opinion alone, but do you share in it, that we may suffer in common, if it must be. And now tell me: Do you call it motion when something changes from one place to another, or even when it turns as on its own axis?

Theodorus:: I do.

Socrates:: Let this then be taken for one kind. But when there is no local movement, but a thing is growing old, or becoming black from being white, or hard from soft, or undergoing any alteration of that kind, are we not justified in describing this as another kind of motion?

Theodorus:: I think so.

Socrates:: Nay, you cannot avoid it. I reckon therefore two kinds of movement: alteration, and motion in space.

Theodorus:: And rightly.

Socrates:: Then, after making this distinction, let us proceed to r argue with those who say that everything has motion; and let us put to them this question: Do you mean that every thing moves in both ways, that is, both by motion and by alteration, or that some things have both kinds of motion, some only one?

Theodorus:: Well, really, I don't know what to reply. I suppose they would say, in both ways.

Socrates:: Why, if they do not, my friend, they will find that things both move and stand still, and the answer that 'all things are in motion' will be just as incorrect as that 'they stand still'.

Theodorus:: That is very true.

Socrates:: Then, since they must be in motion, and non-motion cannot exist in any of them, it follows that all things move always with all the kinds of movement.

Theodorus:: It cannot be otherwise.

Socrates:: Now then mark well this conclusion of theirs. We said, I think, that they explain the origin of heat, or whiteness, or any other manifestation, in this way: each of these is produced from motion simultaneously with the sensation of it, and intermediately between the agent and the patient. The patient thus becomes sensitive, but not sensation, and the agent becomes of a certain quality, but not the quality itself. Perhaps then this word quality seems to you an outlandish term, and you do not understand it in its general sense. Well, then, hear about it in its several departments. The agent in such effect is not heat nor whiteness: it is only that a thing *becomes* hot, or white, and so on. For you remember, of course, that in our former discussion of this subject we stated the case thus:—that there is no self-existent one, nor any agent or patient taken alone, but that from both, united by a mutual relation, and so producing the perceptions and the perceptible effects, the one kind of things become of a certain quality, and the other become sentient of it.

Theodorus:: I remember that, of course.

Socrates:: Then let us dismiss all other considerations, and the inquiries whether things are so or not so, and keep strictly to the point which is the subject of our conversation, and put to them this question: You say, do you not, that all things have motion and flux?

Theodorus:: Just so.

Socrates:: And with both kinds of motion that we have distinguished, viz. motion in space, and alteration?

Theodorus:: Of course,—if they are to have a complete or perfect motion.

Socrates:: Well, now, if some things had only the former kind of motion, but not that of alteration, we should be able to say, I presume, what those things are that have the motion of flux.

Theodorus:: That is so.

Socrates:: But as not even this is permanent, that what has flux should flow white, but it is ever changing, so that there is also a flux of this very quality, the whiteness, and a change to some other color (that it may not be found stationary in this respect), is it possible at any given time to describe anything as of a particular color, so as to give it a right name?

Theodorus:: How can that be, Socrates, or anything else of the like kind, if it is always passing away while one names it, as being in a state of flux?

Socrates:: What then are we to say about perception of any kind, as that of seeing or hearing? Does it ever remain in the precise act of seeing or hearing?

Theodorus:: I suppose it ought not, as every thing is in a state of motion.

Socrates:: Then we must not say that we see a thing any more than that we don't see it; nor that we have any other perception rather than not, if, as we affirm, all things move in all ways.

Theodorus:: No, indeed.

Socrates:: But perception is knowledge, as both I and Theætetus contended.

Theodorus:: It was so.

Socrates:: Then our answer to the question, What is knowledge? amounted to this; that it is non-knowledge just as much as it is knowledge.

Theodorus:: That seems to be the answer you gave.

Socrates:: Then our attempt to improve on the answer will prove not very successful, when we try to demonstrate that all things are in motion, in order that that reply may seem a correct one. For on the contrary it has been shown that, on the theory of all things in motion, every answer, on whatever subject one may give it, is equally right whether it says it is so or it is not so,—or, if you please, becomes so, that we may not make them the advocates of ‘fixedness’ by using the term ‘is.’

Theodorus:: You say rightly.

Socrates:: Except indeed, Theodore, that I said ‘so’ and ‘not so’; for when we apply either term to anything, it ceases to be in motion, since not even  it is not so’ allows of motion. No! we must establish some other kind of language for those who assert this doctrine, since at present they have no phrases in accordance with their own hypothesis, unless indeed ‘not at all’; such a phrase might suit them best, being quite indefinite in its meaning.

Theodorus:: Certainly this sort of talk is most suited to them.

Socrates:: Then now, Theodore, we have got rid of your friend Protagoras, and at present we refuse to concede to him that every man is the measure of every thing, unless he be intelligent. We shall not allow that knowledge is perception, at least on the theory of universal motion; unless Theætetus here has anything to say on the other side.

Theodorus:: You have spoken very well, Socrates; for now that we have come to these conclusions, I also ought to be let off from replying to you, according to the agreements we made when the argument about Protagoras’ doctrine should have come to an end.

Theaetetus:: No, Theodore, no! not till you and Socrates have fully discussed the views of those who maintain on the other hand that the universe stands still. For this, you know, you lately agreed to do.

Theodorus:: What, Theætetus! You, a young man, teach your seniors to be dishonest by breaking their promises!

No; make up your mind to give Socrates your views on the subject that still remains.

Theaetetus:: I will, if he wishes it: but I should have liked best to hear rather than to reply about the subject I speak of.

Theodorus:: You challenge cavalry into the open field, Theætetus, in challenging Socrates to a conversation. Do you therefore put your questions to him and you shall hear him.

Socrates:: But I don't think, Theodore, that I shall do as Theætetus bids me in the matter he proposes to question me about.

Theodorus:: Why shall you not do so?

Socrates:: Because I feel a sort of awe of Melissus and those others who assert that the universe stands still, and a fear lest we should consider their doctrine in an undignified way. And yet I fear them less than I do Parmenides, though they are many and he is one. But to me Parmenides appears (to quote the words of Homer) at once to be respected and feared as an adversary. For I had an interview with that man, you must know, when I was very young and he was far advanced in life; and he appeared to me to display a depth that showed true genius. I am afraid therefore that we may fail to understand his statements, and even yet more fail to perceive his real meaning in making them. Nay more, and what is most important, I fear that the subject which the argument has undertaken to discuss,—the question, what is knowledge,—will never be fully examined if so many topics keep pouring in upon us, and we comply with their demands upon our time. Besides, in addition to other considerations, the subject we are now mooting is endless in its bearings and aspects; and if one is to treat it as of secondary importance, it would hardly meet with its deserts, while, if pursued fully, it must be protracted so as to put the primary question about knowledge quite out of sight. Now neither of these alternatives is right; we must rather try if we can deliver Theætetus, by our obstetric art, of the sentiments he entertains respecting knowledge.

Theodorus:: "Well, if such is your pleasure, we will take that course.

Socrates:: Then give your attention once more, Theætetus, to this point, in the subject we have discussed. You said in your answer that Perception was Knowledge. "Was it not so?

Theaetetus:: Yes.

Socrates:: If then any one should put this question to you: By what does a person see black and white, and by what does he hear sounds of high or low pitch? you would reply, I suppose, By his eyes and his ears.

Theaetetus:: I should.

Socrates:: "Well, this off-hand use of words and phrases, when not put to the test of accuracy, is, in general, rather a mark of good breeding, as the contrary is pedantic. Nevertheless, it is sometimes necessary, just as now we are compelled to take hold of the answer you give, in so far as it is not correct. For consider: which is the more correct answer, that the organ by which we see is the eye, or through which we see? And similarly with the ear,—do we hear by or through it?

Theaetetus:: It seems to me, Socrates, that our senses are rather the means than the instruments of perception.

Socrates:: Why, I should say it would be rather strange, my dear boy, if many distinct senses reside in us, as if we were so many wooden horses, instead of all these sensations centering in some one faculty, whether it be soul, or whatever we are to call it, by which we perceive whatever is perceptible, through these senses as through instruments.

Theaetetus:: Well, I think it is in this way rather than in that other.

Socrates:: Now why do I give you this accurate distinction? It is to inquire whether there be not some one and the same principle in us all by which we realize black or white through the medium of the eyes, and other sensations through other organs; and whether, if asked, you will be able to refer all such impressions to the body alone? And perhaps it is better for you to give your views about them by way of answer, than that I should be so very particular in your behoove. And now tell me: Do you not assign to the body all the several faculties by which you perceive hot, or hard, or light, or sweet things; or do you think they belong to something else?

Theaetetus:: To nothing else.

Socrates:: Will you also be willing to admit, that what you perceive through one faculty it is impossible to perceive through another,—for instance, through seeing you cannot get the impressions you do from hearing, or through hearing, those of seeing?

Theaetetus:: Of course I shall allow that.

Socrates:: Then, if you have any mental conception about both, you would not be said to have a sensible perception of that through either organ, any more than you would have of both through only one.

Theaetetus:: Certainly not.

Socrates:: Well, now, on the subject of voice and color, in the first place you have this idea about both, that they have being.

Theaetetus:: I do.

Socrates:: Also that each is different from each, but the same as itself?

Theaetetus:: Of course.

Socrates:: And that both make two, and each is one?

Theaetetus:: That also is true.

Socrates:: Well, are you not also able to make up your mind whether they are alike or unlike to each other?

Theaetetus:: Perhaps.

Socrates:: Then through what faculty do you entertain all these notions about them? For it is not possible to realize any common property respecting them either by hearing or by sight. And there is this further proof of what we assert: if the question could reasonably be asked about both, Have they any salt in them or not? you are aware that you would be able to state with what faculty you would put this to the test; and that proves to be neither sight nor hearing, but something different.

Theaetetus:: Why, of course it is, being the faculty we have through the tongue.

Socrates:: Well said. But through what comes the faculty that makes known to you the common property of all and the special property of each,—what you call the Being or the non-Being, and the other properties of them that we just now inquired about? What organs or instruments will you assign to all these, as the means by which our sentient faculty has perception of them severally?

Theaetetus:: You mean their Being or non-Being, likeness and unlikeness, their identity or difference, their oneness or any other number they may possess. It is plain, too, that your question refers to oddness or evenness, and other conditions of that kind;—you want to know through which of the bodily faculties we obtain a mental conception of these things.

Socrates:: You follow my meaning admirably, Theætetus; what I ask is precisely this.

Theaetetus:: Upon my word, then, Socrates, I couldn't tell you; but this I can say, that there does not seem to me to be any special organ at all of this nature, as there is to those other sensible impressions. It appears to me that the soul by its own efforts takes into consideration the common properties in all these cases.

Socrates:: Indeed, Theætetus, you are a good looking fellow, and not, as Theodore said of you, plain-featured. For one who says well is well-mannered and well born and bred. And besides your good replies you have done me good by ridding me of a great deal of talk, if you say that the soul examines some points by itself, and others through means of the bodily faculties. That was the very opinion I held myself; but I wanted you to hold it too.

Theaetetus:: Well, that certainly is my idea of the matter.

Socrates:: To which of these faculties then do you refer the Being of the objects of our impressions? For this is the first and chief consideration in them all.

Theaetetus:: For my part, I refer it to those conceptions which the soul by itself tries to attain to.

Socrates:: Do you refer to the same, the likeness or unlikeness, the identity or difference of them?

Theaetetus:: Yes.

Socrates:: What are we say of their fairness or foulness, their goodness or badness?

Theaetetus:: It appears to me that these are matters of which the soul in an especial manner considers the Being in their mutual relations, by drawing analogies in itself between the past, the present, and the future.

Socrates:: Stay, now. Is it not through the touch that the soul must get a perception of the hardness of what is hard, and likewise of the softness of what is soft?

Theaetetus:: It is.

Socrates:: But the existence of such qualities as hardness or softness, their nature, and their antagonism to each other, and again, the existence of such antagonism, the soul endeavors to determine for us without any external aid, by gradually attaining these notions and by comparing the one with the other.

Theaetetus:: Certainly it does.

Socrates:: Some of these effects then, I mean those which reach the soul through the medium of the body, are felt at their very birth, by the instinct of nature, by both man and animals; but the reasonings about them, in respect of their existence and their use, come only by time and through much trouble and instruction, to such as do attain to them at all.

Theaetetus:: That is undoubtedly the case.

Socrates:: Is it possible then for anyone to get to the truth, if he has not realized the fact of existence?

Theaetetus:: It is not.

Socrates:: And if one misses the true view of anything, will he ever have a correct knowledge of it?

Theaetetus:: Of course not, Socrates.

Socrates:: Then it is not in the feelings produced that real knowledge consists, but in the reasoning about them. For in this, as it appears, it is possible to realize Being and Truth, whereas in mere perception it is impossible.

Theaetetus:: It seems so.

Socrates:: Do you then call conception the same as perception, when there are such differences between the two?

Theaetetus:: Not in fairness, at least.

Socrates:: "What name then do you assign to the latter,—I mean the seeing, hearing, smelling, or the feeling of getting warm or cold?

Theaetetus:: I call it the having a sense of such effects: what' other name can I give it?

Socrates:: Then you call it by the general term sensation?

Theaetetus:: I have no better term for it.

Socrates:: But that, we say, is unable to get at truth, since it cannot realize Being?

Theaetetus:: It cannot.

Socrates:: And therefore not knowledge either?

Theaetetus:: No.

Socrates:: Then, Theætetus, perception and exact knowledge never can be the same.

Theaetetus:: It appears not, Socrates; and by this argument more plainly than by any other it has become manifest that knowledge is something different from sensation.

Socrates:: Yes; but surely it was not for this that we began our conversation, that we might discover what knowledge is not, but that we might know what it is. However, we have made so much progress, as no longer to look for it in sensation at all, but in that property of the soul, whatever name it may have, when by its own reasonings it concerns itself with the nature of things that exist.

Theaetetus:: But surely, Socrates, that is called, if I mistake not, ‘forming an opinion.’

Socrates:: You think rightly, my friend; and now consider again from the beginning, after wiping clean from your mind all previous impressions, whether you get any clearer view now that you have advanced to this point. And first tell me again, what knowledge is.

Theaetetus:: To call it opinion generally, Socrates, is impossible, since there is such a thing as false opinion. But it seems likely that true opinion is knowledge; and let that be my answer for the present. For if it should appear not to be so, as we go on, as it now does appear, we will then try to give some other definition.

Socrates:: That is the right way to speak, Theætetus, with a hearty earnestness, rather than with the timidity you showed at first in replying. For if we do this, we shall gain one of two things,—either we shall get hold of what we are going after, or we shall be less disposed to think that we know what we don’t know: and such a return as that for our trouble is not to be thought lightly of. And so now what say you? There being two kinds of opinion, one that is true and the other that is false, do you define knowledge to be true opinion?

Theaetetus:: I do; that is the view I now incline to.

Socrates:: Is it not then worth our while to take up again and discuss the question of opinion?

Theaetetus:: What particular question do you allude to?

Socrates:: One which some how or other gives me anxiety now, as it has done often before; so that I have been in great perplexity in considering it not only with myself, but with others, from not being able to define what this feeling is, and how it is produced in us.

Theaetetus:: What feeling?

Socrates:: One’s having a false opinion. Hence I am even now in doubt whether we should let it pass, or consider it in some other way than we did shortly before.

Theaetetus:: Of course we should, Socrates, if there seems even the smallest need for doing so. Only just now you and Theodore said well about leisure, that in matters of this kind there is nothing to hurry us.

Socrates:: You are right in reminding me. Perhaps it will not be out of place to pursue the question as one would hunt on a track. For, of course, it is better to get through a small matter well than a great subject insufficiently.

Theaetetus:: Certainly.

Socrates:: Well, then, what have we to say about it? Do we affirm that an opinion may sometimes be false, and that some of us hold false, others true views, such being our natures respectively?

Theaetetus:: We do maintain that.

Socrates:: Is there not then this alternative for us in all subjects and severally in each, that we either know or do not know it? For of learning and forgetting, as intermediate between knowing and not knowing, I say nothing at present, since it has nothing to do with the subject now.

Theaetetus:: Well, then, Socrates, there is nothing left for it but either to know or not to know on every subject.

Socrates:: It becomes necessary then that a man who forms an opinion should form it on something which he either does or does not know.

Theaetetus:: It must be so.

Socrates:: But surely it is alike impossible for one who knows something not to know it, and for one who does not know to know it.

Theaetetus:: Of course.

Socrates:: Then, this being granted, does he who holds false opinions think that what he knows is not this, but something else of what he knows, and thus, while he knows both, is he also in ignorance about both?

Theaetetus:: Why, that would be impossible, Socrates.

Socrates:: Then does he imagine what he does not know to be some other of the things he does not know? That would be, for one who does not know either Socrates or Theætetus by sight, to take it into his head that either Socrates is Theætetus, or Theætetus Socrates.

Theaetetus:: How can that possibly be?

Socrates:: Well, surely, a man does not think that what he knows is what he does not know, nor, on the other hand, that what he does not know is what he knows.

Theaetetus:: That would be marvelous, indeed.

Socrates:: Then what way remains in which one can have a false opinion? For beyond the limits I have mentioned it is impossible to have an opinion at all, since there can be nothing that we do not either know or not know; and it has been shown that in none of these is it possible to have false opinions.

Theaetetus:: Very true.

Socrates:: Perhaps then, in considering the question before us, we must not pursue the track of knowledge and non-knowledge, but that of Being and non-Being.

Theaetetus:: How is that?

Socrates:: We must consider whether it be not simply true, that one who thinks that something possesses qualities that it has not, must of necessity have a false opinion, however correct his general views may be.

Theaetetus:: Why, that again appears likely, Socrates.

Socrates:: What then? What are we to say, Theætetus, if some one should put this question: Is what we are speaking of possible to any one,—that is, can any human being ever conceive what is not, either abstractedly or about any existing thing? Well, we, I suppose, shall reply to this, 'Yes, when, in holding an opinion he holds what is not true.' Or how must we state the case?

Theaetetus:: As you have.

Socrates:: Is then such a thing as this possible in other faculties beside thought?

Theaetetus:: As what?

Socrates:: As this, I mean, if a man sees something and yet sees nothing.

Theaetetus:: Of course it is not.

Socrates:: Yet, surely, if he sees some one object, he sees something of things that exist. Or do you think that this 'one' is sometimes among things non-existent?

Theaetetus:: No, I do not.

Socrates:: Then he who sees one object sees a thing that does exist.

Theaetetus:: It appears so.

Socrates:: And so a person who hears must hear some one sound, and therefore an effect that is real.

Theaetetus:: Yes.

Socrates:: And he who touches something touches some one object, and by consequence some object that actually exists.

Theaetetus:: That too may be granted.

Socrates:: But does not he who forms an opinion form it about something?

Theaetetus:: He must do so.

Socrates:: And if about one thing, then about an existing thing?

Theaetetus:: I grant that.

Socrates:: Then a man who thinks that which is not, thinks nothing.

Theaetetus:: It seems so.

Socrates:: But surely one who ‘thinks nothing’ does not think at all!

Theaetetus:: That must be so, as it seems.

Socrates:: It is not possible then to think what is not, either about existing things, or in the abstract.

Theaetetus:: It appears not.

Socrates:: Then holding false opinions is something different from believing what is not.

Theaetetus:: It does seem different.

Socrates:: Then neither according to this view nor according to the line of argument we just before pursued, is there any such thing as false opinion in us.

Theaetetus:: I quite see that there is not.

Socrates:: Then must we call it ‘false opinion’ as taking place in some such way as this?

Theaetetus:: How?

Socrates:: Must we say that false opinion is an ‘allodoxy’; by which I mean, when a man affirms that something of what really exists is something else of what really exists, mistaking in his mind the one for the other? For, according to this view, he does always think what is, only one thing in place of another; and thus, being wrong in the subject of his inquiry, he might properly be said to hold a false opinion.

Theaetetus:: Now you seem to me to have spoken most correctly. For when, for instance, a man thinks something is bad instead of good, or good instead of bad, then he truly thinks what is false.

Socrates:: It is evident, Theætetus, that you have a contempt for me, and hold me in no fear.

Theaetetus:: Why in the world do you say that?

Socrates:: I suppose you think I shall not object to that expression 'truly false,' by asking you if it is possible for quick to take place slowly, or light heavily, or any other contrary not according to its own nature, but according to that of its opposite, and so in a way contrary to itself. This little matter, however, I will not dwell upon, that you may have some real ground for encouragement. But you accept, as you say, the view, that to have a false opinion is to think one thing instead of another?

Theaetetus:: Yes, I do.

Socrates:: In your opinion then it is possible 'to take in one's apprehension one thing for another thing, and not for what the former thing really is.'

Theaetetus:: That is just it.

Socrates:: Then whenever one's mind performs this act, must it not also think about both, or at all events about one?

Theaetetus:: That is necessary.

Socrates:: Either at once, or in turn?

Theaetetus:: Precisely.

Socrates:: Now do you mean what I do by this work thinking?

Theaetetus:: What do you call it?

Socrates:: I call it 'a reasoning-process, which the soul goes through with itself about the subject it may be considering',—to deliver an opinion to you without full knowledge. That is what it seems to me to do in thinking,—

nothing else than to converse, questioning and answering itself, affirming this or denying that; and when at length, after determining it more or less quickly, by taking a survey and applying itself to the task, it says the same about it and no longer doubts, we take this as its opinion. So that I call the forming an opinion a kind of affirming, and an opinion, a discourse spoken, not indeed to another, nor in audible words, but silently to oneself. What say you?

Theaetetus:: I agree.

Socrates:: Whenever then a person thinks one thing is another thing, then he also asserts to himself that this is that.

Theaetetus:: Of course.

Socrates:: Recall to mind now whether you ever said to yourself, as in the form of a maxim, that, beyond a doubt, ‘Fair is foul’, or, ‘Wrong is right’; or, (to sum up every such case under one general head,) consider whether you ever tried to persuade yourself that beyond a doubt one thing is some other thing; or, on the contrary, never even in a dream went so far as to say to yourself that assuredly these odd numbers are even, or anything of that kind.

Theaetetus:: The truth is as you have last put it.

Socrates:: And do you suppose that anyone beside yourself, either in sound health or out of his mind, seriously said to himself, and with the intention of persuading himself, that that ox must be a horse, or these two must be one?

Theaetetus:: I don’t think so, upon my word.

Socrates:: Then, if saying to oneself means forming an opinion, no one, in speaking of or thinking of both of two things, and realizing both in his mind, would be likely to say or think that one was the other; indeed, you will have to give up the very phrase ‘other’, for I put the proposition thus: ‘No man thinks that foul is fair’, or anything of the like contrary nature.

Theaetetus:: Yes, Socrates, I resign ‘other’, as you say, and I agree with you.

Socrates:: Then, in having an opinion about both, he cannot think that one is the other.

Theaetetus:: So it seems.

Socrates:: But surely if he thinks only about one, and not at all about the other, he will never think that the one is the other.

Theaetetus:: That is true; he would then be obliged to realize that which he has no opinion about.

Socrates:: Then one cannot have “allodoxy’ in thinking of both any more than in thinking of one of two things. So that, if one shall define false opinion to mean ‘thinking this is that’, he will hardly say what is much to the purpose, since it has been shown there cannot be such a thing as ‘false opinion’ according to this, any more than according to the former views.

Theaetetus:: It seems not.

Socrates:: But surely, Theætetus, if it shall appear that there really is no such thing, we shall be compelled to make many strange admissions.

Theaetetus:: Of what kind?

Socrates:: I won’t tell you, till I have considered and tried the question in all its bearings. For I should feel ashamed for us if, while our doubts are yet upon us, we should feel ourselves forced to make such concessions as I speak of. No! when we have found the truth and have become free, we shall then be able to speak of those others as having to bear it, while we ourselves stand clear of ridicule. If, however, we find ourselves perplexed after all our efforts, then, I suppose, we must submit to be humbled, and give ourselves up to the argument, like sea-sick voyagers, to trample on us and treat us as it pleases. Hear therefore the one way that I can find for bringing this inquiry to an end.

Theaetetus:: You have only to say it.

Socrates:: I shall say that we were wrong in allowing some time ago that it is impossible for a man to think, that what he knows is something that he does not know, and so to be mistaken about it: on the contrary, I shall contend that in a certain sense it is possible.

Theaetetus:: Do you mean (what I surmised at the time when you said it) that there may be a mistake of this kind: I, on some occasion, knowing Socrates, and seeing at a distance some one else, whom I do not, fancied that this is the Socrates whom I know'? For certainly in such a case what you speak of does occur.

Socrates:: We gave up the question then because it seemed to make us at once to know what we know and not to know it.

Theaetetus:: Certainly.

Socrates:: Then don't let us put it so, but in the following way: and perhaps it will fall in with our present view, or perhaps it will still hold out in opposition. But the fact is, we are caught in such a strait that it has become necessary to turn every argument and put it to the test. Consider, therefore, whether there is anything in what I say. Is it possible for one who did not know something before, to learn it afterwards?

Theaetetus:: It is, of course.

Socrates:: And also another thing afterwards, and again another?

Theaetetus:: Certainly.

Socrates:: Assume then, for the sake of argument, that there is in our souls a waxen tablet for receiving impressions,—in one of us a greater, in another a less; in one, of purer, in another, of unclarified wax; in some harder, in some softer, in others, of medium quality.

Theaetetus:: I assume that.

Socrates:: Let us further say that it was the gift of the mother of the Muses, Memory; and that upon this tablet, whenever we desire to remember something that we have seen or heard or conceived the idea of in our own thoughts, we take off an impression, by holding it under our sensations or thoughts, just as when we take the impression of gems in our rings. Thus, whatever is taken off on the tablet, that we remember and know, so long as the form remains in our minds; but when it has been effaced, or cannot be taken off at all, then we forget and do not know it.

Theaetetus:: That is so.

Socrates:: Observe now whether a person who is considering something of what he sees or hears, and therefore with a knowledge of it, can be said to have a false opinion about it in some such way as this.

Theaetetus:: In what way?

Socrates:: By thinking that what he knows is at one time what he knows, at another time what he does not. For we were wrong in our former argument when we said this was impossible.

Theaetetus:: Then how do you state the case now?

Socrates:: It should be stated thus in the cases in question, and a new distinction must be made between them. First, ‘if a man knows something, and has the remembrance of it in his mind, but not a sensible perception; he cannot possibly think it to be something else of what he knows, while he retains the impression of this latter, but has not at the time a perception of it.' Secondly, it is equally impossible for a man to think that what he knows is something that he does not know and has no impression of at all. Or, that what he does not know is some other thing that he does not know; or, what he does not know is something that he does know; or, to think that what he has a sensible perception of, is some other thing which he also knows by his senses; or, that what he has a sense of is something that he has not a sense of; or, what he has not a sense of is something else that he has not a sense of; or, what he has not a sense of, is something he has a sense of. We may go yet further, and say it is yet more impossible (if that can be) to think that what one both knows and feels, and also has an impression of in accordance with the feeling, is something else that one knows and feels and has an impression of as well as of the other, and according also to one's feeling. It is also impossible, when one knows something and perceives it, and retains a right impression of it, to think it something else that one knows; or, that what one knows and feels also with right impression, is something else that one feels; or, what one neither knows nor feels, is something else of what one neither knows nor feels: or, what one neither knows nor feels, is what one does not know; or, what one neither knows nor feels, is what one does not feel. All these are cases where it is in the highest degree impossible to have a false opinion in any of them. It remains, therefore, that in such cases as the following, if anywhere, false opinion may occur.

Theaetetus:: And what cases are these? Tell me, if perchance I derive some farther knowledge from them; for at present I don't follow you.

Socrates:: In the cases where a man knows certain things or objects, he may think them some other of what he knows and has a present perception of; or, secondly, of what he does not know but yet has a perception of; or, lastly, where he thinks that what he knows and feels is something else that he knows and feels.

Theaetetus:: Now I am left still further behind you than I was before.

Socrates:: Then hear the case put in the reverse way. I, knowing Theodore, and retaining in my mind the impression of what he is like, and Theætetus also in the same way, sometimes have the opportunity of seeing, touching, hearing, or by some other of my senses being aware of your presence, while sometimes I have not; and yet I remember you none the less, and so know you in my own consciousness. Is it not so?

Theaetetus:: Certainly.

Socrates:: Understand this then as the first point in what I wish to explain,—that it is possible either to have or not to have a perception through the senses of what one knows.

Theaetetus:: True.

Socrates:: Is it not also possible that what one does not know one may, if so be, not perceive by sense at all, or one may only so perceive it?

Theaetetus:: That also may happen.

Socrates:: See then if you follow me any better now. Socrates knows at sight both Theodore and Theætetus, but actually sees neither, and has no other perception of either. I say that he is not likely ever to form an opinion in his own thoughts that Theætetus is Theodore. Is there any truth in what I say?

Theaetetus:: Yes, that is certainly true.

Socrates:: This then is the first of the cases I put to you just now.

Theaetetus:: It is.

Socrates:: And the second is, that, knowing one of you and not the other, and having a present sense of neither, again I should hardly think that the one whom I know is the other whom I do not.

Theaetetus:: Rightly said.

Socrates:: The third is, that if I neither know nor perceive either, I am not likely to think that one whom I don't know is another whom I don't know. I need not repeat to you all the cases I mentioned before, in which I affirmed that I can never have a 'false opinion' about you and Theodore; whether I know or do not know you both, or know one and not the other. You must suppose you have heard them all stated again in the same order. And what I say about the senses generally you must understand in the same way, if you follow my meaning.

Theaetetus:: I do.

Socrates:: There remains then only this case in which we can have a false opinion. 'I know you and Theodore; I retain in the waxen tablet I spoke of the impressions of you both, as if they had been stamped on it by seals. Well, at some distance, and so not with sufficient clearness, I see you both together; and I make an effort, in assigning the proper mark of each to the particular sight of him, to put the sense of sight exactly upon its seal-mark, that I may thence obtain a mental recognition. But I fail in my efforts, and, like persons who put a right shoe on the left foot, I take one for the other, and apply my sight of one to my mental impression of the other; or, as happens to objects seen in a mirror, which causes the right sides to pass into the left, have a change taking place in me, and so get wrong as to the identity.’ In this case then occurs the ‘allodoxy’ that we spoke of, and so the having a false opinion.

Theaetetus:: Why, Socrates, what happens to one’s opinion is marvelously like what you describe.

Socrates:: Further than this, there may be mistaken opinion when I know both of two persons, and of one, besides the knowledge, have also the perception, but not the perception of the other, and so have knowledge of him not in the way of actual perception. This is a case which I put before, and you did not then seem to understand me.

Theaetetus:: did not.

Socrates:: Well, I meant this: Knowing the one, and also perceiving him,—that is, having a knowledge of him by perception,—one can never think that he is another of those whom he knows and perceives, i.e. if he has a knowledge of him too by perception. Was it not so?

Theaetetus:: It was.

Socrates:: But we then omitted the particular case we now describe,—that false opinion may occur when a man knows and sees both persons, or has any other kind of perception of them both, but has the mental impression of each not agreeing with the actual perception. For then he is like a bad archer who hits a wrong mark in shooting and so misses; which is what we call deception.

Theaetetus:: That is a likely view of the case.

Socrates:: And further, when there is present perception to one of the impressions, but not to the other, and when a person applies the mental impression of the object of which he has not a present sense to that of which he has, in this way the mind is also quite deceived. To put the matter quite briefly: where a man has no knowledge and never had any perception of an object, he cannot, as it seems, be deceived, and there can be no false opinion,—that is, if there is any truth in the views we are now putting forward. It is on objects that we both know and have perception of that opinion turns, and on these alone that it is engaged. And it becomes either false or true opinion accordingly as it is applied. If it brings the seal-mark and the impressions that belong to it right down upon and exactly opposite to the object seen, then it is a true opinion; if aslant and sideways, then it is a false one.

Theaetetus:: And is not this, Socrates, a very fair account of the matter?

Socrates:: You will say so still more when you hear the following considerations; for the holding of truth is a fair, just as being in error is a foul thing.

Theaetetus:: Of course.

Socrates:: Well, now, they tell us that truth and error result from these causes: when the wax in the mind's tablet is deep, and smooth, and there is plenty of it, and it is sufficiently softened, then the ideas that came upon us through the senses, leaving their marks on this heart's core, (as Homer called it, hinting at the resemblance of κέαρ to κηρὸς,)—then these impressions, being made clear and distinct, and deep enough, are lasting, and persons who are so favored by nature are in the first place apt at learning, secondly, they have good memories, and thirdly, they do not misapply the marks left by the sensations, but form true opinions. For as the marks are clear, and are not crowded, they at once assign each object to its proper place in their memory; and then it is that we say impressions are really true, and men so constituted are wise men. Don't you think so?

Theaetetus:: I do, decidedly.

Socrates:: And when one's heart has hairs in it, (which, you know, that all-wise poet referred to,) or when it is dirty and not of pure wax, or very moist or very hard, then those who have soft tablets learn easily indeed, but are apt to forget, those who have hard, are slow to learn but retentive. Those whose hearts have hairs in, or are rough, or gritty, or full of earth or dirt mixed up with them, have the impressions made on their tablets indistinct, as those also have whose tablets are hard,—for the impressions have no depth—or too soft, for then they become obscure through so soon running one into the other. And if, beside all these faults, the impressions fall upon and interfere with each other through want of space, and a man happens to be small-minded, in this case they are still more indistinct than in the other. All these persons then are likely to have false opinions; for whenever they hear or see or conceive any idea, they are unable at the instant to assign each to each, but being slow and prone to put things in their wrong places, they see wrongly, hear wrongly, think wrongly about almost everything; and such persons we don't call 'wise', but, on the contrary, mistaken as to what really is, and uninformed.

Theaetetus:: No man could possibly give a truer account of the matter, Socrates.

Socrates:: Must we then affirm that there are such things in us as "false opinions?"

Theaetetus:: O, certainly!

Socrates:: And true opinions too?

Theaetetus:: And true.

Socrates:: Do you think then that by this time it has been determined with sufficient certainty that, as a matter of fact, these two kinds of opinion do exist?

Theaetetus:: Most decidedly so.

Socrates:: I am afraid, Theætetus, that a man who is a twaddler runs a good chance of really being a formidable as well as a disagreeable character!

Theaetetus:: Why so? In respect of what do you say this?

Socrates:: From a feeling of vexation at my own dullness and twaddling, in the true sense of the word. For what else can a man call it, when one drags words to and fro, unable, from sheer stupidity, to be convinced, and so finds it hard to get clear away from each subject of discussion?

Theaetetus:: And pray at what do you feel vexed?

Socrates:: I am not only vexed, but even alarmed, when I think what reply I shall give if some one asks me, O Socrates, have you really then discovered that false opinion does not consist in the mutual relations either of the senses or the ideas, but in the right application of the sense to the idea? And I suppose I shall answer, 'Yes,—piquing myself on the conviction that we have really made a clever discovery.

Theaetetus:: I do think, Socrates, that what we have now proved is very creditable to us.

Socrates:: 'You mean, then,' (he will say,) 'that a man, as man,—that is, whom we only conceive, but do not see,—can never be mistaken by us for a horse, which likewise we neither see nor touch, but have only an idea of without any sensible perception of it whatever?—That, I suppose, I shall say is what I mean.

Theaetetus:: And you will rightly reply.

Socrates:: 'What then? he will say. 'Is it not clear, according to your statement, that a man can never imagine the number eleven, which he only thinks of, to be twelve, which again he only thinks of?'—Come, now, do you give an answer.

Theaetetus:: Well, I shall answer, that if one actually saw or touched them, he might possibly think eleven things were twelve; but that, if he only has these figures in his mind, he never can form such opinions about them.

Socrates:: What then? Do you suppose there ever was a man who, after proposing to himself for consideration five and seven,—I do not mean either seven or five men, or any concrete objects of that kind, but the abstract notions of five and seven, which we said were impressed on the waxen tablets of our memories, and that there was no scope for false opinion about them,—I say, was there ever a man who considered these abstract numbers, saying to himself and asking himself, What total do they make? and replied to himself, on conviction, 'They make eleven,' while another, perhaps, said, 'Twelve'? Or do all the world both say and think that 7 + 5 = 12?

Theaetetus:: No, indeed; many fancy they make eleven. And, if one considers the question by taking a larger number, he makes a still greater mistake. For I assume that you are speaking about number generally.

Socrates:: You are right in your surmise. And now consider: does anything else then happen than that you suppose the abstract numbers in your memory, twelve, are eleven?

Theaetetus:: That seems to be so.

Socrates:: Then it comes back to our original statement. When anyone has this happen to him, he thinks that what he knows is something else of what he also knows, which we said was impossible; and, in fact, by this very argument we tried to force the conviction that there could be no false opinion, that the same man might not be compelled at once to know and not to know the very same things.

Theaetetus:: Most true.

Socrates:: Then we are bound to show that the having a false opinion is something else than the wrong application of mental conception to the perception of sense. For, if this were so, we never could be mistaken in our mere conceptions. But as it is, either there is no false opinion, or it is possible not to know what one knows. And which of these paradoxes do you choose?

Theaetetus:: 'Tis a perplexing choice that you set before me, Socrates.

Socrates:: But it certainly seems that the argument will not admit of both. However,—for we are bound to make every venture,—what say you if we try to put a brazen face on the matter?

Theaetetus:: How?

Socrates:: By consenting to state what we mean by 'the knowing a thing.'

Theaetetus:: Why, surely there is nothing impudent in that!

Socrates:: You don't seem to perceive that our whole argument from the very first has been an inquiry about knowledge. We professed not to understand the meaning of the term.

Theaetetus:: Nay, I am aware of that.

Socrates:: Don't you think then that it shows rather a want of modesty, while we don't understand what knowledge is, to undertake to give an opinion as to the nature and meaning of 'to know?' The fact is, Theætetus, we have long been muddled by this unclear kind of talk. We have said a countless number of times 'We know,' and 'We don't know,' 'We are sure,' and 'We are not sure,' as if we could understand a word that passes between us while we remain ignorant what knowledge is! Nay, at this very moment we are using the terms 'ignorant' and ‘understand,’ as if we had any right in the world to use them if, as we say, we are as yet destitute of knowledge.

Theaetetus:: Then in what way do you propose to converse about these subjects, Socrates, if you avoid the use of such terms?

Socrates:: In no way at all, so long as I am what I am; though perhaps I might have done without them if I had been a practiced controversialist. If such an one were now here, he would say, ‘Don’t use the terms at all’; and he would blame us greatly for saying what I say, that we cannot possibly do without them. Well, then, since we are but poor disputants, would you approve of my making a venture, and stating what we mean by ‘to know’? For it seems to me that it will serve our purpose to do so.

Theaetetus:: Make the venture by all means; and if you don’t altogether do without the words, I shall make great allowance for you.

Socrates:: Have you heard then what they now-a-days say is the meaning of ‘to know’?

Theaetetus:: I may have heard, but I don’t at present remember.

Socrates:: If I mistake not, they say it is ‘the state or condition of having knowledge.’

Theaetetus:: True.

Socrates:: Let us then make a trifling change in the definition, and call it the possession of knowledge.

Theaetetus:: In what respect will you maintain that the one differs from the other?

Socrates:: Perhaps it will be found not to differ at all; however, you shall hear, and then join me in seeing if there is any truth in their apparent difference.

Theaetetus:: I will, if I can.

Socrates:: Then, as it seems to me, the possessing a thing is not the same as the having it; just as a man may have bought a mantle, and have it in his possession, though he does not happen to wear it. We should not then say that he had it, but only that he possessed it.

Theaetetus:: And rightly so.

Socrates:: Consider then if it is possible in the same way for a man to possess knowledge without actually having it. Take the case of a person who has caught some wild birds, rock-pigeons or any other kind, and builds a dove-cot for them, and so keeps them at home. In one sense, no doubt, we should say that he has them always, because he has secured the possession of them.

Theaetetus:: Yes.

Socrates:: But in another sense we should say he has not any one of them; only that he has a present power over them, since he has made them his captives and keeps them in a cage of his own. He can take and hold them whenever he wishes, by catching whichever of them he may please at any time, and let them go again. And this he can do as many times as ever he may choose.

Theaetetus:: All this is quite possible.

Socrates:: Now then, as before we constructed in our souls some sort of waxen apparatus, let us again build in each soul a kind of dove-cot for birds of every species, some of them gregarious, and keeping aloof from the rest, others that consort in small numbers, some that fly by themselves through all the others, this way or that as it may happen.

Theaetetus:: Well, supposing our dove-cot made, what next?

Socrates:: We must say that while we are children this receptacle is empty; and instead of birds we must conceive that different kinds of knowledge are meant. Whatever piece of knowledge anyone has acquired and shut up in his enclosure, we must say of it, that he has learnt, or has found out, the fact or subject of which this is the knowledge; and that this is ‘to know.’

Theaetetus:: Let that be granted.

Socrates:: Now consider what terms are required to express the endeavor to catch a second time whatever of these kinds of knowledge he may wish, and the taking and holding, and the letting it go again. Are they the same terms as we used before, when he was acquiring them, or different? But perhaps you will learn more clearly what I mean from the following example. Arithmetic, I suppose, you call a science?

Theaetetus:: I do.

Socrates:: Conceive then this to be ‘the pursuit of certain kinds of knowledge about odd and even numbers generally.’

Theaetetus:: I will suppose that.

Socrates:: It is by this science then, I suppose, that both he himself has the different branches of knowledge of numbers in his service and possession, and in the capacity of teacher communicates them to another?

Theaetetus:: It is so.

Socrates:: As then we call such a person ‘a teacher’, so we say that he who receives his instruction is ‘a learner’; but when he has got it safe and fast in that dove-cot of his, by possession, then we say that ‘he knows it.’

Theaetetus:: Certainly.

Socrates:: Now attend to what follows next. If a man is a perfect master of arithmetic, he knows all numbers, does he not? For he has in his soul the kinds of knowledge that comprise them all.

Theaetetus:: Of course.

Socrates:: May not such a person then sometimes make a computation, either with himself abstractedly, or of some external objects that are capable of being counted?

Theaetetus:: Undoubtedly.

Socrates:: And this  counting up' we shall set down as nothing more than  considering what the sum total is.'

Theaetetus:: Just so.

Socrates:: Then it comes to this: it appears that he is considering what he already knows, as if he did not know it, although we allowed that he did know number generally. I suppose you hear questions of this kind sometimes raised?

Theaetetus:: I do.

Socrates:: Then we, keeping up our simile of the getting our rock-pigeons, and trying to catch them, shall say, that this catching is of two kinds, the one before one possessed them, and with a view to possessing; the other after possessing them, and with a view of taking and holding in the hands what one had some time ago acquired. Just so, after a man has long gained certain branches of sciences by learning, and so has a knowledge of them, he may again learn up the very same subjects by taking up the particular science of each and getting hold of it: for, though he had long ago acquired it, he did not happen to have it at his fingers' ends just when he wanted it.

Theaetetus:: True.

Socrates:: This, then, is the point of my late question, how we are to use our store of terms in speaking of these subjects,—that is, when some one skilled in arithmetic proceeds to count, or one acquainted with letters to read. For it seems that on such an occasion he goes to learn again from himself what he already knows!

Theaetetus:: That sounds odd, Socrates.

Socrates:: Well, are we to say that he is going to read or to count what he does not know, when we have, already granted him the science of all letters and all number?

Theaetetus:: Why, that too would be unreasonable.

Socrates:: Do you prefer then that we should say, that we care nothing about terms, or how any one likes to drag this way or that 'knowledge' and 'learning', but that, as we have distinguished possessing knowledge from having it, we should affirm it is impossible not to possess what one possesses? For thus it can never happen that a man does not know what he knows, though he may conceive a false opinion respecting it. For it is possible for him not to have at hand the particular knowledge of the subject, but some other knowledge instead of it. And this may happen whenever, in chasing some one of the bits of knowledge that keep flying away from him, he gets hold of one by mistake instead of the other; as when he fancied the sum of eleven was twelve, and so got hold of his knowledge of eleven instead of his knowledge of twelve,—his ringdove, as it were, instead of his rock-pigeon.

Theaetetus:: That certainly seems reasonable.

Socrates:: But when he has captured the particular one which he wants to take, then we shall say that he is not mistaken, but has a true opinion. Under these circumstances there may be both true and false opinion, and none of our former difficulties any longer stand in our way. Perhaps now you will agree with me in this: or what course do you propose to take?

Theaetetus:: I agree.

Socrates:: For we have thus got rid of that 'not knowing what people know'; for it no longer comes to this, in any part of our argument, that we don't possess what we do possess, either when we are deceived in something or when we are not.—But there is another still more formidable difficulty looming in the distance, of which I seem to get a glimpse.

Theaetetus:: "What is that?

Socrates:: The possibility that the changing one piece of knowledge for another may sometimes constitute ‘false opinion’.

Theaetetus:: How so?

Socrates:: The difficulty consists first in a man’s having a knowledge of something and yet being ignorant of it, not from want of knowledge, but from the very fact of his own knowledge. Secondly, to think A is B or B is A, is surely something that we can hardly account for. For here we have knowledge present in the soul, and yet the soul knows nothing, but is ignorant of everything! "Why, according to this argument, nothing prevents the very presence of ignorance causing us to know, or blindness making a man see, if, as we say, knowledge can ever make one ignorant.

Theaetetus:: Perhaps, Socrates, we were wrong in making our birds only to represent the various kinds of knowledge. We ought to have assumed that there are also divers kinds of unscientific notions flying about with them in the soul; and thus when one gives chase and catches at one time a knowledge, at another a non-knowledge on the same subject, he has a false opinion by the unscientific, a true one by the scientific conception.

Socrates:: One can hardly abstain from praising you, Theætetus. But consider again what you have just said. We will take your view of the matter: the person, you say, who gets hold of the unscientific notion will have a false opinion. Is it not so?

Theaetetus:: Yes.

Socrates:: Of coarse, he will not also think that he has a false opinion?

Theaetetus:: That is not likely.

Socrates:: But a true one: he will consider himself in the position of one who knows, in the very matter about which he is in error.

Theaetetus:: Of course.

Socrates:: He will think, therefore, that he has caught and holds a knowledge and not a non-knowledge?

Theaetetus:: Evidently.

Socrates:: Then, after this long round-about, here we find ourselves again at our original difficulty. For our captious friend will say, with a smile at our simplicity, 'Tell me, my good friends, do you mean that a man who knows both science and want of science, thinks that one which he knows is some other of what he knows; or, knowing neither of them, does he come to the conclusion that one which he does not know is another of what he does not know; or, knowing one but not the other, does he think the one he knows is the one he does not know, or conversely, the one he does not know is the one he knows? Or will you tell me that even of the sciences and non-sciences, there are again and in turn other sciences, the possessor of which shuts them up in some other absurd dove-cots or houses built of wax, and thus, so long as he possesses them, knows them, even if he has not got them in his soul ready to hand? Will you thus (he will add) be compelled to go round and round a countless number of times, and make no progress at all?' What shall we reply to this, Theætetus?

Theaetetus:: Upon my word, Socrates, I don't know what we are to say.

Socrates:: Does not the argument then justly find fault with us, and warn us that we are wrong in looking for false opinion before we have found knowledge, and in dismissing that? Whereas it is impossible to understand the former, till one has got a sufficiently clear conception of what exact knowledge is.

Theaetetus:: At present, Socrates, we are compelled to think as you say.

Socrates:: Then let us begin again once more, and see what definition of knowledge any of us will give. For I suppose we shall not give it up yet.

Theaetetus:: Certainly not, unless indeed you are getting tired of it.

Socrates:: Say then what we had best call it so as least to contradict ourselves.

Theaetetus:: What we before proposed to call it, Socrates; for I myself have no other name to give it.

Socrates:: What is that?

Theaetetus:: We will say that 'true opinion' constitutes knowledge. Surely there can be no error in holding right opinions, and all the actions proceeding from it must be sound and right.

Socrates:: The result will show, Theætetus, as the man said who was the first to cross the river. Just so, if we keep sounding this question as we advance, perhaps, by presenting some obstacle to our progress, it will of itself show us what we are looking for; whereas if we stand still nothing will become dear to us.

Theaetetus:: You say well: let us proceed and keep a good look out ahead.

Socrates:: Well, this at least will require no long consideration: there is one whole branch of art that shows you that true opinion is not knowledge.

Theaetetus:: How so? What art do you mean?

Socrates:: That of those distinguished professors of wisdom, your orators and your ‘men of law’, as they are called. Surely they, in the exercise of their art, persuade people not so much by teaching and informing, as by making them think whatever they choose to tell them. Supposing some persons were robbed of their money, or violently treated in some other way, and no witnesses were by; do you imagine there are any teachers in the world so clever as to be able to inform the jury, in a limited space of time, of the exact truth of what happened to them?

Theaetetus:: I don’t think they could prove it to them; but still they might convince them.

Socrates:: By ‘convincing’ you mean ‘causing them to think’, I suppose?

Theaetetus:: Of course.

Socrates:: Then when the jury are rightly and truly convinced about circumstances which only he who saw them can know to be facts, and no one else; then, deciding about them on hearsay, and by the right conviction they have got, they may be said to decide without knowledge, but because they have been led to take a correct view of the case,—that is, if their verdict is right.

Theaetetus:: Certainly that is so.

Socrates:: But surely, my friend, if true opinion and knowledge were really identical, no juryman, however shrewd, would form a right conclusion without knowledge. But it now appears that one of these is different from the other.

Theaetetus:: Yes, Socrates, that is just what I once heard some one say, but had forgotten it, though now I think of it. He contended that only the true opinion which was able to give a reason for it, was knowledge, but that which could not give an account of itself was not to be classed with ‘knowledge’ at all. Thus, things of which you can give no account are ‘unknowable’ (so he called them), but if you can, they are ‘knowable.’

Socrates:: Really, you give a very good definition. How then did he distinguish what we can from what we cannot know? Tell me, for I should like to learn if you and I have been taught the same.

Theaetetus:: I am not sure that I can make it out, though perhaps, if another were to say it, I might follow.

Socrates:: Then hear a dream of mine as a set-off to yours. For I, on the other hand, fancy I heard some persons say, that the first principles, or elements as we may call them, from which we and all visible things are composed, have no account that can be given of them; we can only give each of them a name as an abstraction, but we can predicate nothing else about them, not even Being or non-Being. For if so, there is added to it existence or non-existence; whereas we ought to apply no qualities, if one is to speak of a simple element. Nay, we must not add even ‘itself,’ or ‘that,’ nor ‘each,’ nor ‘only,’ nor ‘this,’ nor many other attributes of the like kind. For these terms are applied to all things in a perpetual round, and are in themselves different from the things to which they are applied; but, if a thing can be spoken of per se, and a proper account can be given of it, it ought to be described without any of these accessories. But, as the case really stands, it is impossible that any of the first principles should be described in terms, since it can only be named at the most. But when we come to consider compounds of them, then as they are themselves combined, so the terms used to describe them are combined so as to become an account or definition of them. For the combination of terms is the very essence of a definition. Thus then the primary elements are indefinable and unknowable, and are merely objects of sensation; but the combinations are knowable and definable and comprehensible by a true and correct view. When then a person has got the true conception of anything without being able to give an account of it, we say that his soul holds the truth about it, though he cannot be said to know it. For one who can neither give nor get an account of a thing, is without any scientific knowledge about that particular thing. But when he has got the further power of defining it, he has become able in all these respects, and is perfect in wisdom. Was this the purport of the dream you heard, or was it different?

Theaetetus:: Nay, it was quite as you describe it.

Socrates:: Then do you accept this view, and put it thus: 'Knowledge is right opinion where you can give a reason for it'?

Theaetetus:: Precisely so.

Socrates:: May we not say, then, Theætetus, that we have thus at last, on this very day, got hold of that which in times past many philosophers have been seeking for, but have grown old before they could find it?

Theaetetus:: To me at all events, Socrates, the definition we have now arrived at appears to be a sound one.

Socrates:: Why, probability is in favor of its being just what we have said. For, apart from right opinion and a rational account of it, what have we left that we can fairly call knowledge? There is one point, however, in our definition that I cannot quite accept.

Theaetetus:: Well, what is that!

Socrates:: The proposition that seems to be very neatly and cleverly stated, 'The primaries are unknowable, but all that comes under the head of combinations may be known.'

Theaetetus:: Was not that rightly said?

Socrates:: We will inquire; for we hold as it were hostages for the argument? in the examples which our instructor made use of when he told us all this.

Theaetetus:: What examples do you mean?

Socrates:: The single letters and their combinations in the alphabet. You don't suppose that, in making these remarks, the speaker had anything else in view?

Theaetetus:: No, I think he referred to them.

Socrates:: Then let us take up these examples and put them to a severe test,—or rather, let us apply such a test to ourselves, and see whether we learnt our letters on this principle or otherwise. And let me ask first:—is it not the case, that the combinations have a meaning, while the mere letters are meaningless?

Theaetetus:: Perhaps it is.

Socrates:: I quite think so, too. For instance, take the name Socrates, and suppose some one to put the question in this way, 'Theætetus, what is ΣΩ?' what answer will you give?

Theaetetus:: That it is Σ and Ω.

Socrates:: Then that is the account which you have to give of the syllable?

Theaetetus:: It is.

Socrates:: Now then give me the like account of the Σ.

Theaetetus:: Of course one can't tell the elements that make an element! You know, Socrates, that Σ is one of the consonants,—a mere sound, a sort of hissing, produced by the tongue. But B is a mute, and has no sound of its own at all, like the majority of the letters. So that they are quite rightly called meaningless, when the most distinct of them, the seven vowels, have only vocal sound, but no power of expression whatever.

Socrates:: So far then, my friend, we have set on a right footing the question about knowledge.

Theaetetus:: We seem to have done so.

Socrates:: Well, but wait. Are we sure we have correctly stated our opinion that only the syllable, but not the letter, is the subject of knowledge?

Theaetetus:: There is little doubt of that.

Socrates:: Tell me now; do we mean by this word syllable both letters, (or all of them, if there be more than two,) or some one general form of language produced by the combination of them?

Theaetetus:: All the letters together, I should say.

Socrates:: Consider now in the case of two, Σ and Ω. Together they form the first syllable of my name. Does not one who knows it know both letters?

Theaetetus:: Of course.

Socrates:: Then he does know the Σ and the Ω.

Theaetetus:: Yes.

Socrates:: Do you mean to say then that he is ignorant of each separately, and while he knows neither yet he knows both?

Theaetetus:: Why that, Socrates, would be strange and unreasonable indeed.

Socrates:: But surely, as one must needs know each, if he is to know both, it is quite inevitable that he must know the letters first, if he is ever to know the combination at all. And thus that clever proposition of ours will run off and leave us in the lurch.

Theaetetus:: And very suddenly too.

Socrates:: The fact is, we don’t keep a good guard over it. We ought perhaps to have defined the syllable not to be composed of the letters merely, but as a sort of vocal sound produced from them, having a special character of its own, that of the letters themselves being distinct.

Theaetetus:: I quite think so. Perhaps the matter stands thus rather than as we said before.

Socrates:: We must consider it well, and not give up in such a cowardly way an important and serious discussion.

Theaetetus:: No, indeed.

Socrates:: Then let us take for granted that a syllable is, as we now say, a class of its own peculiar kind resulting from the union of the several composing elements; and let us assume this not only of letters, but of all combinations without any exception.

Theaetetus:: Certainly.

Socrates:: Then there ought not to be parts in it.

Theaetetus:: Why?

Socrates:: Because, if anything has parts, the whole must of necessity be made up of all the parts. Or do you venture to say that a whole made up of parts has a nature of its own different from all the parts?

Theaetetus:: I do.

Socrates:: Do you call then 'all' the same as 'whole', or do you think each is different?

Theaetetus:: I have no clear answer to give, but as you tell me to answer promptly, I say at a venture that it is different.

Socrates:: Your readiness, Theætetus, is right; whether your answer also is, we have to consider.

Theaetetus:: Certainly we have.

Socrates:: Then, according to our present statement, the whole will be something different from all of a thing.

Theaetetus:: Yes.

Socrates:: Well now, do all the ciphers of a sum differ from the sum total? For instance, when we count separately, one, two, three, four, five, six, and when we say twice three, or three times two, or 4 + 2, or 3 + 2 + 1, or 5 + 1, do we in all these forms of expression say the same or something different?

Theaetetus:: The same.

Socrates:: And that is nothing more nor less than six?

Theaetetus:: Nothing else.

Socrates:: In each expression then we mention the whole number six?

Theaetetus:: Yes.

Socrates:: But surely in naming all the ciphers we specify the total amount?

Theaetetus:: That must be so.

Socrates:: That is to say, six?

Theaetetus:: We mean nothing else.

Socrates:: Then, in numeration at least, we mean the very same thing by ‘all’ and ‘all the ciphers together.’

Theaetetus:: It seems so.

Socrates:: Then our expression amounts to this, that the number of square feet in a plethrum is the same as a plethrum? Is it not?

Theaetetus:: Yes.

Socrates:: And so the number of feet in a stadium?

Theaetetus:: Yes.

Socrates:: And, of course, the number of men in a camp, means the same as the camp, and so on with all other things of the like kind. For the whole number is the existing aggregate in each case.

Theaetetus:: That is so.

Socrates:: But the number contained in each thing constitutes its parts, does it not?

Theaetetus:: It does.

Socrates:: And all things which have parts are made up of parts?

Theaetetus:: I should say so.

Socrates:: And it is admitted that all the parts form the total, if the whole number makes the total?

Theaetetus:: It is so.

Socrates:: Then 'the whole' is not made up of parts; for it would be the sum total, if it were all the parts.

Theaetetus:: It seems not.

Socrates:: Now, is 'a part' a part of anything else than of the whole?

Theaetetus:: Yes, of the sum total.

Socrates:: You fight like a man, Theætetus. And is not 'the sum total' that which we call it, when no part is absent?

Theaetetus:: Of course.

Socrates:: And is not 'the whole' the very same thing,—that is to say, from which no part anywhere is removed? For whenever part is wanting, a thing is neither a whole nor 'all there',—if the same result follows at the same time from the same deficiency.

Theaetetus:: It appears to me now that 'all' and whole do not differ.

Socrates:: Well, now, we said, I think, that if a thing has parts, all these parts will constitute the whole and the sum total.

Theaetetus:: Yes, to be sure.

Socrates:: Again then let me ask, in reference to the point I was endeavoring to prove, Is it not a necessary consequence that, if the syllable is not the letters, it does not contain the letters as the parts of it; or, if it is the same as its parts, then it is equally with them a subject of knowledge?

Theaetetus:: It is so.

Socrates:: It was to avoid this conclusion then that we assumed the syllable was different from its parts.

Theaetetus:: Just so.

Socrates:: Well, but if the letters are not parts of the syllable, can you tell us any other things that are parts of a syllable without being letters of it?

Theaetetus:: I cannot: for if, Socrates, I were to grant that a syllable had parts, it would be absurd to give up the letters and go in quest of something else.

Socrates:: Then according to the present argument, Theætetus, a syllable will decidedly prove to be one indivisible nature.

Theaetetus:: So it seems.

Socrates:: Do you remember then, my friend, that a little while ago we accepted the proposition, and thought that it was well put, 'We cannot tell what the primaries are from which compound bodies are made.' For each primary is itself uncompounded, and it would not be correct to predicate of it either 'Being' or any special quality or condition, since these are different from and alien to it; and this is the cause which makes it both beyond reason and incapable of being known.

Theaetetus:: I remember.

Socrates:: Is not then this, and none but this, the cause of its being uniform and indivisible? For myself, I can see no other.

Theaetetus:: No, indeed, I think there is not.

Socrates:: Does not then the syllable we have been speaking of fall into the same class as the other, if it has no parts, and is one nature?

Theaetetus:: Decidedly so.

Socrates:: Then if the syllable is an aggregate of several letters and a whole, and its component parts are letters, the syllables must be equally capable of being known and defined as the letters themselves are, since it has been shown that all the parts are the same as the whole.

Theaetetus:: Certainly.

Socrates:: But if it is one and without parts, then both the syllable and the primary element are alike indescribable and unintelligible, as the same cause will make them so.

Theaetetus:: I cannot state the case in any other way.

Socrates:: Then don't let us listen to anyone who says that a syllable may be known and defined, but a letter is something of a contrary kind.

Theaetetus:: No indeed, if we are to follow our argument.

Socrates:: And now let us ask again,—would you not rather accept the statement to the contrary, from what you know of your own experience in learning letters?

Theaetetus:: What do you mean?

Socrates:: That you went on for a long time learning nothing else but only trying to distinguish at sight and by the ear each and every letter by itself, that you might not be puzzled by the position of them in spoken or written language.

Theaetetus:: That is very true.

Socrates:: Well, did not complete instruction from your music-master consist solely in your being able to follow each tone, and knowing to what note it belonged? Everyone will allow that this is what we meant by ‘the elements of music.’

Theaetetus:: Nothing but that.

Socrates:: If then we are entitled to make inferences from elements and combinations familiar to ourselves in reference to others, we shall contend that the class of primaries in general is capable of being much more clearly known, and the knowledge of them has far greater influence, than the combinations have, in acquiring perfectly each kind of knowledge. So, if anyone says that the combination may be known, but the element by its very nature cannot be known, we shall think that he is joking, either on purpose or without intending it.

Theaetetus:: Quite so.

Socrates:: Well, this is a point on which further proofs may yet appear, as it seems to me. But let us not forget, through attending to it, to see and understand what we mean by the proposition, ‘The most perfect knowledge is Right Opinion where you can also give a reason for it.’

Theaetetus:: Then it is our duty to look into it.

Socrates:: Tell me then, what is the meaning of this phrase, ‘Reason shows us?’ For to me it appears to say one of three things.

Theaetetus:: What are they?

Socrates:: The first perhaps is, the making one’s meaning plain by the means of voice with phrases and words, and so as it were taking an impression of it on the current proceeding from the mouth, as if one were catching a reflection on a mirror or on the surface of water. Does it not appear to you that the word λὀγος is something of this sort?

Theaetetus:: To me it seems so. For instance, we say that he who does this  speaks’.

Socrates:: There is one thing then that any one can do more or less quickly,—I mean the explaining his views on any matter, unless he is deaf or dumb from his birth. And thus all who have a right opinion will be seen to have it together with the power of expressing it; and right opinion will no longer occur apart and distinct from knowledge.

Theaetetus:: True.

Socrates:: Then don’t let us rashly condemn a man for talking nonsense who may have given his opinion that knowledge is that which we are now considering. For perhaps, when some one said so, he did not mean exactly this, but ‘the being able, when one is asked what something is, to give one’s reply to the question by dealing with the primaries.’

Theaetetus:: Give an example of what you mean, Socrates.

Socrates:: We will take what Hesiod says about a wagon, that it contains ‘a hundred pieces of wood.’ Now, I could not specify them, nor, I dare say, could you. We should be quite content, if we were asked ‘What is a wagon?’ to be able to reply, ‘Wheels, axle, body, upper rail, yoke’.

Theaetetus:: Certainly.

Socrates:: But he, perhaps, would think we were making fools of ourselves,—just as if we were asked your name, and gave it in syllables as The-æ-tutus. He might say, ‘You both think and speak rightly in giving this reply, but it is absurd in you to suppose that you are learned in language, and that your account of Theætetus’ name is given as if you grammatically understood it.’ No! he would say it was impossible to define anything scientifically, unless a man goes into each matter thoroughly, not only having a right opinion about it, but taking into account all the component elements, as we said before.

Theaetetus:: That was what we stated.

Socrates:: In the same way, then, he will think that though we had a correct notion about a wagon, yet that one who could describe its real nature by enumerating all the hundred planks, and had gained that further knowledge respecting it, had acquired the power of giving an account of it over and above the right notion of it; and thus had become a man of art and science in place of a man of mere opinion respecting the mechanism of a wagon, since he could describe it as a whole by specifying its component parts.

Theaetetus:: And do you think, Socrates, all this is rightly said?

Socrates:: If you think so, my friend, and if you accept the method of inquiry by primary parts as the true explanation of everything, but that by groups, or general combinations of a still more general kind, as an irrational procedure,—say so, that we may further consider it.

Theaetetus:: Yes, I fully accept it.

Socrates:: And do you think that anyone knows any subject when he fancies the same element belongs at one time to the same, at another to another thing; or when also he imagines that now one, now another, belongs to the same thing?

Theaetetus:: Upon my word, I don't think that can be so.

Socrates:: Have you forgotten then that in the learning of your letters at first both you and your other schoolfellows did this very thing?

Theaetetus:: You mean, don't you, that we thought first one letter, then another, belonged to the same syllable; and that we put the same letter now into the proper syllable, now into some other?

Socrates:: That is what I mean.

Theaetetus:: Then certainly I don't forget that; and I think persons in such a mental condition cannot be said as yet to understand.

Socrates:: What then? When, in such a case, a person wanting to write the name 'Theætetus' thinks he ought to write, and actually does write, Θ and E, or, intending to write 'Theodoras', thinks he ought to use and does use T and E, shall we say that he has any real knowledge of the first syllable of your names?

Theaetetus:: We admitted just now that a person with such notions as that was as yet ignorant.

Socrates:: And is there any reason why the same person should not make similar mistakes about the second, third, and fourth syllables?

Theaetetus:: None at all.

Socrates:: Of course then, as now possessing the way of getting through the word by means of its component parts, he will write 'Theætetus' with a correct opinion about it, when he writes the letters and syllables consecutively.

Theaetetus:: Clearly so.

Socrates:: But at present without a scientific knowledge, but only a correct opinion, as we affirm?

Theaetetus:: Yes.

Socrates:: And yet he has reason for what he does besides his correct opinion. For he knew the way of writing by syllables when he wrote it: and that, you are aware, we called the reasonable account of it.

Theaetetus:: True.

Socrates:: It seems then, my friend, that there is a right opinion with a reasonable account, which we are not yet entitled to call ‘science’.

Theaetetus:: So it seems.

Socrates:: We only dreamed then, I suppose, that we had got rich, when we imagined we were in possession of the truest account of knowledge. Or must we not condemn it as yet? It is just possible that some one will define knowledge not as we have done, but as the remaining notion out of three, one of which, as we said, he who defines knowledge to be ‘Right opinion with a reason for it,’ must consider ‘reason’ to be.

Theaetetus:: You are quite right in reminding me; there is one which yet remains. One account we gave of ‘the reason of an opinion’ was ‘the representing, as it were, of one’s meaning expressed in voice’; the second, which we have just discussed, was ‘the progress towards the Whole through its Parts’. And now what is the third you speak of?

Socrates:: Just that which most people would tell you of,—‘the having some characteristic mark to appeal to, by which the thing you are asked about differs from all others’.

Theaetetus:: What subject will you take as an example, and what account will you thus give me of it?

Socrates:: With respect to the sun, for instance, I suppose it is enough if I prove to you that it is the brightest of all the heavenly bodies that move round the earth.

Theaetetus:: Certainly.

Socrates:: Observe now the point of the remark. It is this, as we said just now: if you realize the difference by which each thing is distinguished from all others, you will realize (according to some) the ‘true account’ of a thing. But if you fix on some property which is common to other things, your definition will comprehend those to which the common property extends.

Theaetetus:: I understand you, and I think it is quite fair to call some such rule as this the 'rational account' of a thing.

Socrates:: And whoever, beside a right opinion about any matter, has also learnt its difference from all others, will have become accurately informed on the particular subject on which before he had only an opinion.

Theaetetus:: We say this, certainly.

Socrates:: For myself, then, Theætetus, I can truly say that on coming close to what I shall call the outline or cartoon of our subject, I don't understand it in the least; although, while I stood some way from it, there did seem to me to be something in what we said.

Theaetetus:: In what sense do you say this?

Socrates:: I will explain, if I can. So long as I have a right opinion about you, I have only an opinion; but if I also get an account of you, then I am said to know you.

Theaetetus:: Yes.

Socrates:: And this 'account of you' was the way I had of expressing your difference.

Theaetetus:: It was so.

Socrates:: When then I only had my opinion, may we not say, that I did not realize in my mind any of the marks by which you differ from the rest?

Theaetetus:: It seems you did not.

Socrates:: Then I only had my thoughts about some of the common properties, which you do not possess in a greater degree than others.

Theaetetus:: That must be so.

Socrates:: Then answer me, in Heaven’s name! How in the world could I, in such a case, have an opinion about you more than about anyone else? Suppose me, for instance, to have an idea that Theætetus means the individual who is human, and has nose, eyes, and mouth’, and so on with each of the other limbs. Is there anything in this conception which will cause me to think of Theætetus rather than of Theodore, or (as the proverb is) the lowest of the low?

Theaetetus:: Why indeed should it?

Socrates:: Well, if I think of you not only as the person who has a nose and eyes, but also as the one who has a turned up nose and prominent eyes, shall I, again, think of you more than of myself, or of others who have the like features?

Theaetetus:: Not at all.

Socrates:: No; Theætetus, I suppose, will not be presented to my thoughts till the peculiar curve of his nose impresses and leaves on my mind and memory some specific difference from all other upturned noses that I have ever seen; and so with the other characteristics by which I shall know you, and which will remind me of you, should I meet you tomorrow, and make me think correctly about you.

Theaetetus:: Very true.

Socrates:: It seems then that correct opinion also will be concerned with the difference in each object.

Theaetetus:: Yes, so it appears.

Socrates:: Then what can be the meaning, after this, of getting an account besides a right opinion?’ For, if it means to ‘get a further opinion how one thing differs from the rest,’ the injunction to do so seems positively absurd.

Theaetetus:: How so?

Socrates:: Why, it bids us get in addition a right opinion about things, of which we already have a right opinion as to their difference from others! And so the moving round and round of a wooden roller, or a pestle, or anything of the sort, would be nothing at all compared to such a command as that! It would be more properly called an order given by a blind man; for to tell us to get in addition what we already have, in order to understand opinions that we form, does seem like the act of one who is very much in the dark indeed.

Theaetetus:: Come, then, tell me what was it you were just now going to say, when you asked the question?

Socrates:: If, my young friend, 'the getting a true account besides' means that we are to know, and not merely to have an opinion about, the difference; then this, the best of all the accounts about knowledge that have been given, will prove rather a sorry affair; for 'to know' is 'to get exact information,' I suppose. Is it not?

Theaetetus:: Yes.

Socrates:: Then when we inquire of our argument, what knowledge is, it seems it will reply, 'Right opinion with knowledge of difference.' For, according to it, this will be the 'getting an account, over and above the mere opinion.'

Theaetetus:: It does appear so.

Socrates:: And surely it is utterly weak and silly, if, when we are inquiring what knowledge is, to give as a reply, 'Right opinion with knowledge,'—be it 'of difference' or of anything you please. And therefore, Theætetus, knowledge cannot be either perception, or true opinion, or the being able to give an account also with true opinion.

Theaetetus:: It seems not.

Socrates:: Have we then any further ideas to be delivered of, my friend, on this subject of knowledge, or have we now given birth to all oar conceptions?

Theaetetus:: For myself, I protest, I have said (thanks to you) even more than I had in me.

Socrates:: Then our obstetric art tells us that all these ideas that have come forth from our brains are the offspring of empty air, and not worth the bringing up.

Theaetetus:: Assuredly so.

Socrates:: Well, Theætetus, if ever hereafter you should try to breed other theories, or find yourself pregnant with some new conception, you will be filled with better matter through our present investigations. Or if nothing should come of it, you will at least give less trouble to your friends, and be more gentle and tractable, for discreetly believing that you don't know what you don't know. For thus far only does the power of my art reach, and not beyond it: nor have I any knowledge whatever on subjects which those are versed in who are or have in past times become great and much looked up to for their learning. No! this midwife's practice my mother and I got by favor of the god; only she attends on women, while I am engaged with well-born youths, and such of my own sex as are good-looking. At present I must attend at the King's Portico to meet the accusation Meletus has brought against me. In the morning, Theodore, let us meet here again.

# The Theaetetus.

Translated by Thomas Taylor.

PERSONS OF THE DIALOGUE.

Euclid, Socrates,
Terpsio, Theodorus,
And Theætetus.

Euclid:: Are you just now come, O Terpsio, or is it some time since you came from the country?

Terpsion:: I have left the country for a considerable time, and have been seeking for you about the forum, and wondered that I could not find you.

Euclid:: I was not in the city.

Terpsion:: Where then was you?

Euclid:: As I was going down to the port, I met with Theætetus, who was carried along from the camp at Corinth to Athens.

Terpsion:: Was he alive or dead?

Euclid:: He was living, but could hardly be said to be so: for he was in a very dangerous condition, through certain wounds: and, what is worse, he was afflicted with a disease while in the camp.

Terpsion:: Was it a dysentery?

Euclid:: It was.

Terpsion:: What a man do you speak of as in a dangerous condition!

Euclid:: A worthy and good man, O Terpsion: for I just now heard certain persons paying him very great encomiums for his military conduct.

Terpsion:: Nor is this wonderful: but it would be much more wonderful if this had not been the case. But why was he not carried to Megara?

Euclid:: He hastened home; for I both entreated and advised him to do so: but it was against his will. And besides this, attending him in his journey, when I again left him, I recollected, and was filled with admiration of Socrates, who often spoke in a prophetic manner about other things, and likewise about this. For a little before his death, if I am not mistaken, meeting with Theætetus, who was then a young man, and discoursing with him, he very much admired his disposition. Besides this, when I came to Athens, he related to me his discourses with Theætetus, which very much deserve to be heard; and observed, that he would necessarily be renowned, if he lived to be a man. And it appears indeed that he spoke the truth.

Terpsion:: But can you relate what those discourses were?

Euclid:: Not verbally, by Jupiter: but as soon as I returned home, I committed the substance of them to writing, and afterwards at my leisure wrote nearly the whole of them, through the assistance of memory. As often too as I came to Athens, I asked Socrates about such particulars as I could not remember, and, on my return hither, made such emendations as were necessary; so that I have nearly written the whole discourse.

Terpsion:: True. For I have heard you assert the same thing before: and in consequence of always desiring to urge you to relate this discourse I am come hither. But what should hinder this from taking place at present? For I am perfectly in need of rest, as coming from the country.

Euclid:: I likewise accompanied Theætetus as far as Erineus; so that rest will not be unpleasant to me. Let us go, therefore, and while we rest a boy shall read to us.

Terpsion:: You speak well.

Euclid:: This then is the book, O Terpsio. But it was not composed by me, as if Socrates related it to me, as in reality he did, but as if he was discoursing with the persons with whom he said he discoursed. But he said that these were, the geometrician Theodorus, and Theætetus. That we may not, therefore, in the course of the writing, be troubled with the frequent repetition of I say, and He said, He assented, or He denied, I have introduced Socrates himself discoursing with them.

Terpsion:: And this is not at all improper, O Euclid.

Euclid:: Here, boy, then, take the book and read.

Socrates:: If, O Theodorus, I was more attentive to those in Cyrene than to any others, I should inquire of you respecting them if any young men there applied themselves to geometry, or any other philosophic study. But now, as I love those less than these, I am more desirous to know which of our young men are likely to become worthy characters. For such as these I explore myself as far as I am able, and inquire after them of others, with whom I see young men associating. But you have by no means a few followers: and this very justly. For you deserve to be followed, both for other things, and for the sake of geometry. If, therefore, you have met with any young man who deserves to be mentioned, it would give me pleasure to hear some particulars respecting him.

Theodorus:: Indeed, Socrates, it is in every respect fit both that I should relate, and that you should hear, what a youth I have met with from among your citizens. And if he were beautiful, I should be very much afraid to mention him, lest I should appear to be enamored with him. But, now, (do not be indignant with me,) he is not handsome. For he resembles you, having a flat nose, and prominent eyes: but he has these in a less degree than you. You see I speak freely to you. Know then, that I have never yet met with any young man (though I have associated with many) who naturally possesses a good disposition in such a wonderful degree. For it is difficult to find one who is docile, remarkably mild, and who besides this may compare with any one for fortitude. Indeed, I do not think there ever were any, nor do I see any with these qualifications. For some are acute indeed, as this one, sagacious, and of a good memory; but they are for the most part prone to anger, and are hurried along precipitately like ships without their ballast, and are rather naturally furious than brave. And again, those whose manners are more sedate are in a certain respect sluggish and full of oblivion, when they apply themselves to disciplines. But the young man I am speaking of applies himself to disciplines and investigations in so easy, blameless, and ready a manner, that it may be compared to the silent flux of oil; so that it is wonderful that such a great genius should accomplish these things in such a manner.

Socrates:: You announce well. But of which of our citizens is he the son?

Theodorus:: I have heard the name, but I do not remember it. But he is in the middle of those who are now approaching to us. For both he, and these who are his companions, were just now anointed beyond the stadium; but now they appear to me, in consequence of having been anointed, to come hither. Consider, however, if you know him.

Socrates:: I do know him. He is the son of Euphronius the Suniensian, who was entirely such a man as you have just related the son to be; and who, besides being a worthy character, left behind him a very large estate.

Theodorus:: His name, O Socrates, is Theætetus. But certain of his guardians appear to me to have dissipated his estate. However, notwithstanding this, he is wonderfully liberal with respect to money, Socrates.

Socrates:: You speak of a generous man: Order him to come to me, and sit with us.

Theodorus:: I will.—Theætetus, come hither to Socrates.

Socrates:: By all means come, Theætetus, that I may behold myself, and see what sort of a face I have. For Theodorus says it resembles yours. But if we had each of us a lyre, and he should say that they were similarly harmonized, ought we immediately to believe him, or should we consider whether he says this as being a musician?

Theaetetus:: We should consider this.

Socrates:: On finding, therefore, this to be the case, should we not be persuaded by him? but, if he was ignorant of music, should we not disbelieve him?

Theaetetus:: True.

Socrates:: Now, therefore, I think, if we are at all careful respecting the similitude of our faces, that we should consider if he speaks as being a painter, or not.

Theaetetus:: So it appears to me.

Socrates:: Is, therefore, Theodorus a painter?

Theaetetus:: Not that I know of.

Socrates:: Nor is he a geometrician?

Theaetetus:: He is perfectly so, Socrates.

Socrates:: Is he also skilled in astronomy, logistic, music, and such other disciplines as follow these?

Theaetetus:: He appears to be so to me.

Socrates:: If, therefore, he says that we resemble each other in a certain part of our body, at the same time praising or blaming this resemblance, it is not altogether worth while to pay much attention to him.

Theaetetus:: Entirely so, Socrates.

Socrates:: Take notice, therefore, O friend Theætetus, it is your business to evince, and mine to consider. For know, that Theodorus having praised in my hearing many strangers and citizens, has not praised any one of them so much as just now he did you.

Theaetetus:: It is well, Socrates; but consider whether he did not speak jocosely.

Socrates:: It is not usual for Theodorus to do so. But do not reject what is granted, in consequence of believing that he spoke this in jest, lest he should be compelled to bear witness. For no one can object to what he said. Persist, therefore, confidently in what is granted.

Theaetetus:: It is proper, indeed, to do so, if it seems fit to you.

Socrates:: Tell me, then,—Do you learn any geometry of Theodorus?

Theaetetus:: I do.

Socrates:: Do you, likewise, learn things pertaining to astronomy, harmony, and computation?

Theaetetus:: I endeavor to do so.

Socrates:: For I also, O boy, both from this man, and from others who appear to me to understand any thing of these particulars, endeavor to learn them; but, at the same time, I am but moderately skilled in them. There is, however, a certain trifling thing of which I am in doubt, and which I wish to consider along with you, and these that are present. Tell me, therefore, whether to learn is not to become wiser in that which any one learns?

Theaetetus:: Undoubtedly.

Socrates:: But I think that the wise are wise by wisdom.

Theaetetus:: Certainly.

Socrates:: But does this in any respect differ from science?

Theaetetus:: What?

Socrates:: Wisdom. Or are not those who have a scientific knowledge of any thing, also wise in this thing?

Theaetetus:: Undoubtedly.

Socrates:: Is, therefore, science the same as wisdom?

Theaetetus:: Yes.

Socrates:: This, therefore, is that which I doubt; and I am not able sufficiently to determine by myself what science is. Have we then any thing to say to this? What do you say it is? And which of us can first give this information? But he who errs, and is perpetually detected in an error, shall sit as an ass, as the boys say when they play at ball. But he who shall be found to speak without error shall be our king, and shall order whatever he wishes us to answer. Why are you silent? Have I, O Theodorus, behaved in a rustic manner, through my love of conversation, and through my desire to make you discourse and become friends with each other?

Theodorus:: A thing of this kind, O Socrates, is by no means rustic But order some one of these young men to answer you. For I am unaccustomed to this mode of discourse; and my age does not permit me to become accustomed to it now. But a thing of this kind is adapted to these young men, and they will be greatly improved by it. For, in reality, youth is adapted to every kind of improvement. But, as you began with, do not dismiss Theætetus, but interrogate him.

Socrates:: Do you hear, Theætetus, what Theodorus says? whom I am of opinion you will not disobey. For you would neither be willing to do so, nor is it lawful for a young man to be unpersuaded by a wise man, when he commands in things of this kind. Tell me, therefore, in a proper and ingenuous manner, what science appears to you to be?

Theaetetus:: It is fit to comply, Socrates, since you command me. And if I in any respect err, do you correct me.

Socrates:: We shall by all means do so, if we are able.

Theaetetus:: It appears to me, then, that sciences are such things as any one may learn of Theodorus, such as geometry, and the other particulars which you just now enumerated. And besides these, the shoe-maker's art, and the arts of other workmen; and that all and each of these are no other than science.

Socrates:: Generously and munificently, O friend, when asked by me concerning one thing, have you given many, and things various, instead of that which is simple.

Theaetetus:: How so? Why do you say this, Socrates?

Socrates:: Perhaps what I say is nothing: but I will tell you what I think. When you speak of the shoe-maker's art, do you speak of any thing else than the science of making shoes?

Theaetetus:: Of nothing else.

Socrates:: But what when you speak of the carpenter's art? Do you speak of any thing else than the science of operations in wood?

Theaetetus:: Of nothing else than this.

Socrates:: In both therefore you define that of which each is the science.

Theaetetus:: I do.

Socrates:: But that which we asked, O Theætetus, was not this, of what thing, there is science, nor how many sciences there are; for we did not inquire, wishing to enumerate them, but in order to know what science itself is Or do I say nothing?

Theaetetus:: You speak with perfect rectitude.

Socrates:: But consider also this. If any one should interrogate us respecting any vile and obvious thing, as, for instance, clay, what it is, if we should answer him, that clay is that from which pans, puppets and tiles are made, or certain other artificial substances, should we not be ridiculous?

Theaetetus:: Perhaps so.

Socrates:: In the first place, indeed, what can we think he who asks this question can understand from our answer, when we say that clay is that from which pans, puppets and tiles, or certain other artificial substances are made? Or do you think that any one can understand the name of a thing, when he does not know what that thing is?

Theaetetus:: By no means.

Socrates:: Neither, therefore, will he understand the science of shoes who does not know what science is.

Theaetetus:: Certainly not.

Socrates:: Nor, again, will he understand the currier's art, nor any other art, who is ignorant of science.

Theaetetus:: It is so.

Socrates:: The answer, therefore, is ridiculous, when any one, being asked what science is, gives for an answer the name of any art. For he answers, that there is a science of a certain thing, when this is not what he was asked.

Theaetetus:: It seems so.

Socrates:: And, in the next place, when he might have given a short and simple answer, he wanders immensely. As in the question concerning clay, a short and simple answer might have been given, that clay is earth mingled with moisture. At the same time, dismissing the consideration of that which is composed of clay.

Theaetetus:: Now, indeed, Socrates, it thus appears to me to be easy. For you seem to ask that which lately came into my mind as I was discoursing with your namesake here, Socrates.

Socrates:: What was that, Theætetus?

Theaetetus:: Theodorus here has written a treatise on powers, concerning magnitudes of three and five feet, evincing that they are not commensurable in length to a magnitude of one foot: and thus proceeding through every number as far as to a magnitude of seventeen feet, in this he stops his investigation. A thing of this kind, therefore, occurred to me, since there appear to be an infinite multitude of powers, we should endeavor to comprehend them in one thing, by which we may denominate all these powers.

Socrates:: Is a thing of this kind discovered?

Theaetetus:: It appears so to me. But do you also consider.

Socrates:: Speak then.

Theaetetus:: We give to the whole of number a two-fold division: one, that which may become equally equal, and which we assimilate among figures to a square, calling it quadrangular and equilateral.

Socrates:: And very properly.

Theaetetus:: But that number which subsists between this, such as three and five, and every number which is incapable of becoming evenly even, but which is either more less, or less more, and always contains a greater and a lesser side, we assimilate to an oblong figure, and call it an oblong number.

Socrates:: Most excellent. But what follows?

Theaetetus:: Such lines as square an equilateral and plane number, we define to be length; but such as square an oblong number, powers; as not being commensurate to them in length, but to planes, which are capable of being commensurable. And about solids there is another thing of this kind.

Socrates:: Best of men, O boys: so that Theodorus cannot, as it appears to me, be accused of giving a false account.

Theaetetus:: But, indeed, Socrates, I am not able to answer you concerning science as I am concerning length and power; though you appear to me to inquire after a thing of this kind. So that again Theodorus appears to be false.

Socrates:: But what? If, praising you for running, he should say that he never met with any youth who ran so swift, and afterwards you should be vanquished in running by some adult who is a very rapid runner, do you think he would have less truly praised you?

Theaetetus:: I do not.

Socrates:: But with respect to science, (as I just now said,) do you think it is a trifling thing to find out what it is, and not in every respect arduous?

Theaetetus:: By Jupiter, I think it is arduous in the extreme.

Socrates:: Confide, therefore, in yourself, and think what Theodorus said. Endeavor, too, by all possible means to obtain a reason both of other things, and likewise of science, so as to know what it is.

Theaetetus:: It appears we should do so, O Socrates, for the sake of alacrity.

Socrates:: Come then: for you explained just now in a beautiful manner. Endeavor, imitating your answer respecting powers, that just as you comprehended these, which are many, in one species, so you may comprehend many sciences in one reason or definition.

Theaetetus:: But know, O Socrates, that I have often endeavored to accomplish this, on hearing the questions which are discussed by you. But I can neither persuade myself that I can say any thing sufficient on this occasion, nor that I can hear any one discoursing as you advise; nor yet am I able to desist from investigation.

Socrates:: You are tormented with the pangs of labor, friend Theætetus, not because you are empty, but because you are full.

Theaetetus:: I do not know, Socrates: but I tell you what I suffer.

Socrates:: O ridiculous youth, have you not heard that I am the son of the generous, and at the same time severe, midwife Phænarete?

Theaetetus:: I have heard this.

Socrates:: And have you also heard that I study the same art?

Theaetetus:: By no means.

Socrates:: Know, however, that it is so: but do not betray me to others. For they are ignorant, my friend, that I possess this art; and in consequence of being ignorant of this, they do not assert this respecting me, but they say that I am a most absurd man, and that I cause men to doubt. Or have you not heard this?

Theaetetus:: I have.

Socrates:: Shall I tell you the reason of this?

Theaetetus:: By all means.

Socrates:: Conceive every thing pertaining to midwives, and you will easily understand what I mean. For you know, that none of them deliver others, while they yet conceive and bring forth themselves, but when they are no longer capable of conceiving.

Theaetetus:: Entirely so.

Socrates:: But they say that Diana is the cause of this; who being herself a virgin takes care of births. She does not, therefore, permit those that are barren to be midwives, because human nature is too imbecile to undertake an art in which it is inexperienced: but she orders those to exercise this profession, who from their age are incapable of bearing children; by this honoring the similitude of herself.

Theaetetus:: It is likely.

Socrates:: And is not this also probable and necessary, that those who are pregnant, or not, should be more known by midwives than by others?

Theaetetus:: Entirely so.

Socrates:: Midwives, likewise, by medicaments and enchantments, are able to excite and alleviate the pangs of parturition, to deliver those that bring forth, with difficulty, and procure a miscarriage when the child appears to be abortive.

Theaetetus:: It is so.

Socrates:: Have you not also heard this concerning them, that they are most skilful bride-maids, as being perfectly wise, with respect to knowing what kind of man and woman ought to be united together, in order to produce the most excellent children?

Theaetetus:: I did not altogether know this.

Socrates:: But you know that they glory in this more than in cutting the navel. For do you think it belongs to the same, or to a different art, to take care of and collect the fruits of the earth, and again, to know in what ground any plant or seed ought to be sown?

Theaetetus:: To the same art.

Socrates:: But in women, my friend, do you think the art pertaining to the care of offspring differs from that of collecting them?

Theaetetus:: It is not likely that it does.

Socrates:: It is not. But through the unjust and absurd conjunction of man and woman, which is called bawdry, midwives as being chaste avoid acting in the capacity of bride-maids, fearing lest by this mean they should be branded with the appellation of bawds, since it alone belongs to legitimate midwives to act as bride-maids with rectitude.

Theaetetus:: It appears so.

Socrates:: Such then is the office of midwives; but it is less arduous than the part which I have to act. For it does not happen to women, that they sometimes bring forth images, and sometimes realities. But this is a thing not easy to discriminate. For, if it did happen, to distinguish what was true from what was false would be to midwives the greatest and the most beautiful of all works. Or do you not think it would?

Theaetetus:: I do.

Socrates:: But to my art other things belong which pertain to delivery; but it differs in this, that it delivers men and not women, and that it considers their souls as parturient, and not their bodies. But this is the greatest thing in our art, that it is able to explore in every possible way, whether the dianoëtic part of a young man brings forth an image, and that which is false, or something prolific and true. For that which happens to midwives happens also to me: for I am barren of wisdom. And that for which I am reproached by many, that I interrogate others, but that I do not give an answer to any thing, is truly objected to me, owing to my possessing nothing of wisdom. But the cause of this is as follows: Divinity compels me to act as a midwife, but forbids me to generate. I am not, therefore, myself in any respect wise; nor is there any invention of mine of such a kind as to be the offspring of my soul. But of those who converse with me, some at first appear to be entirely void of discipline, but all to whom Divinity is propitious, during the course of the conversation, make a wonderful proficiency, as is evident both to themselves and others. This likewise is clear, that they do not learn any thing from me, but that they possess and discover many beautiful things in themselves: Divinity indeed, and I being the cause of the midwife's office. But this is evident from hence: Many, in consequence of not knowing this, but believing themselves to be the cause, and despising me, perhaps through the persuasions of others, have left me sooner than was proper; and after they have left me through associating with depraved characters, have become as to what remains abortive. Likewise, through badly nourishing what they have brought forth through my assistance they have destroyed it, in consequence of preferring things false and images to that which is true. Lastly, they have appeared both to themselves and others to be unlearned. One of these was Aristides the son of Lysimachus, and many others; who when they again came to me, in consequence of wanting my conversation, and being affected in a wonderful manner, some of them my dæmoniacal power restrained me from conversing with, but with others he permitted me to converse, who at length made a considerable proficiency. For those that associate with me suffer this in common with the parturient; they are tormented, and filled with doubt and anxiety, and this in a far greater degree than the parturient. This torment my art is able both to excite and appease. And such is the manner in which they are affected. But sometimes, O Theætetus, I very benignantly unite in marriage with others those who do not appear to me to be pregnant, as I know that they do not require my assistance; and (as I may say in conjunction with Divinity) I very sufficiently conjecture with whom it will be advantageous to them to be united. And many of these indeed I have delivered to Prodicus, and many others to wise and divine men. For the sake of this, O most excellent youth, I have been thus prolix in relating these things to you. For I suspect, as you also think, that you are tormented in consequence of being pregnant with something internally. Commit yourself therefore to me as being the son of a midwife, and as being myself skilled in what pertains to parturition. Endeavor, too, cheerfully to answer me what I shall ask you, and to the best of your ability. And if in consequence of considering what you say, it shall appear to me that you have conceived an image, and not that which is true, do not be angry with me, like women who are delivered of their first child, if I privately remove and throw it away. For many, O wonderful young man, are so affected towards me, that they are actually ready to bite me, when I throw aside any trifle of theirs, not thinking that I do this with a benevolent design; since they are very far from knowing that no divinity is malevolent to men, and that I do not perform any thing of this kind through malevolence. But it is by no means lawful for me to admit that which is false, and destroy that which is true. Again, therefore, from the beginning O Theætetus, endeavor to inform me what science is; but by no means endeavor to speak beyond your ability. For if Divinity is willing and affords you strength, you will be able.

Theaetetus:: Indeed, Socrates, since you thus urge me, it would be base for any one not to offer what he has to say, with the greatest alacrity. It appears then to me that he who has a scientific knowledge of any thing, perceives that which he thus knows; and, as it now seems, science is nothing else than sense.

Socrates:: Well and generously answered, O boy: For it is requisite thus to speak what appears to be the case. But come, let us consider this in common, whether this offspring is any thing solid or vain. Do you say that science is sense?

Theaetetus:: I do.

Socrates:: You appear, indeed, to have given no despicable definition of science, but that which Protagoras has given: though he has said the same thing, in a somewhat different manner. For he says that man is the measure of all things; of beings so far as they have a being, and of non-beings so far as they are not. Have you ever read this?

Theaetetus:: I have read it often.

Socrates:: Does he not, therefore, speak thus: such as particulars appear to me, such are they to me, and such as they appear to you, such are they to you: but you and I are men?

Theaetetus:: He does speak in this manner.

Socrates:: But do you not think it probable that a wise man will not trifle, nor speak like one delirious? Let us, therefore, follow him thus: When the same wind blows, is not sometimes one of us stiff with cold, and another not? And one in a small degree, but another extremely cold?

Theaetetus:: This is very much the case.

Socrates:: Whether, therefore, shall we say, that the wind at that time is in itself cold or not cold? Or shall we be persuaded by Protagoras, that to him who is stiff with cold, the wind is cold; but to him who is not, that it is not cold?

Theaetetus:: It appears so.

Socrates:: Does it, therefore, appear so to each?

Theaetetus:: Yes.

Socrates:: But for a thing to appear, is it the same as to be perceived?

Theaetetus:: It is.

Socrates:: Fantasy, therefore, and sense are the same in things hot, and everything else of this kind. For such as every one perceives things to be, such they are and appear to be to every one.

Theaetetus:: So it seems.

Socrates:: Sense, therefore, is always of that which has a being, and is without falsehood, as being science.

Theaetetus:: It appears so.

Socrates:: Whether or no, therefore, by the Graces, was Protagoras a man perfectly wise; and did he obscurely signify this to us who rank among the vulgar, but speak the truth to his disciples in secret?

Theaetetus:: Why, Socrates, do you say this?

Socrates:: I will tell you, and it is by no means a despicable assertion. There is not any thing which is itself essentially one thing; nor can you properly denominate any thing, as endued with some particular quality. But if you denominate it as great, it will appear to be small; and if heavy, light. And all things subsist in such a manner, as if nothing was one thing, or any thing particular, or endued with a certain quality. But from their lation, motion, and mixture with each other, all things become that which we said they were, and are not rightly denominated by us. For there is not any thing, which at any time *is*, but it is always in generation, or *becoming to be*. And in this all the wise in succession consent, except Parmenides; viz. Protagoras, Heraclitus, and Empedocles: and of the poets, those who rank the highest in each kind of poetry, in comedy, indeed, Epicharmus, and in tragedy, Homer. For when this latter calls Ocean and mother Tethys the origin of the Gods, he asserts that all things are the progeny of flux and motion. Or does he not appear to say this?

Theaetetus:: To me he does.

Socrates:: Who then can contend against such an army, and which has Homer for its leader, without being ridiculous?

Theaetetus:: It is not easy, O Socrates.

Socrates:: It is not indeed, Theætetus. Since this may be a sufficient argument in favor of their assertion, that motion imparts to things the appearance of being, and of becoming to be; but rest of non-being, and perishing. For heat and fire, which generate and govern other things, are themselves generated from lation and friction. But these are motions. Or are not these the origin of fire?

Theaetetus:: They are.

Socrates:: And besides this, the genus of animals originates from the same things.

Theaetetus:: Undoubtedly.

Socrates:: But what? Is not the habit of the body corrupted by rest and indolence, but for the most part preserved by exercise and motion?

Theaetetus:: It is.

Socrates:: But does not habit in the soul possess disciplines through learning and meditation, which are motions; and is it not thus preserved and made better? But through rest, which is negligence and a privation of discipline, it does not learn any thing, or if it does, it forgets it. Is not this the case?

Theaetetus:: Very much so.

Socrates:: Motion, therefore, is good, both with respect to soul and body; but rest is the very contrary.

Theaetetus:: It appears so.

Socrates:: I add further, with respect to times of serenity and tranquility, and all such as these, that rest putrefies and destroys, but that other things preserve. And besides this, I will bring the affair to a conclusion by forcing the golden chain into my service. For Homer intended by this to signify nothing else than the sun; because, as long as the sun and its circulation are moved, all things will be, and will be preserved, both among Gods and men. But if this should stand still, as if it were bound, all things would be dissolved, and that which is proverbially said would take place, viz., all things would be upwards and downwards.

Theaetetus:: But Homer appears to me also, O Socrates, to signify that which you say.

Socrates:: In the first place, therefore, O best of young men, conceive thus respecting the eyes: that which you call a white color is not any thing else external to your eyes, nor yet in your eyes; nor can you assign any place to it. For, if you could, it would now have an orderly position, and would abide, and be no longer in generation.

Theaetetus:: But how?

Socrates:: Let us follow what we just now said, establishing nothing as essentially one thing; and thus black and white, and any other color, will appear to us to be generated from the darting forth of the eyes to a convenient lation. And every thing which we denominate a color, will neither be that which darts forth, nor that which is darted forth, but something between these, which becomes peculiar to every thing. Or do you strenuously contend, that such as every color appears to you, such also it appears to a dog, and every other animal?

Theaetetus:: Not I, by Jupiter.

Socrates:: But what with respect to another man? Will you contend that any thing appears to him in a similar manner as to you? Or rather, that a thing does not appear the same to you, because you are never similar to yourself?

Theaetetus:: This appears to me to be the case rather than that.

Socrates:: If, therefore, that which we measure, or that which we touch, was great, or white, or hot, it would never, by falling upon any thing else, become a different thing, because it would not be in any respect changed. But if that which is measured or touched by us, was either great, or white, or hot, it would not, in consequence of something else approaching to it, or becoming passive, become itself any thing else, as it would not suffer any thing. Since now, my friend, we are in a certain respect easily compelled to assert things wonderful and ridiculous, as Protagoras himself would acknowledge, and every one who assents to his doctrines.

Theaetetus:: How is this, and what things do you speak of?

Socrates:: Take a small example, and you will understand all that I wish. If we compare four to six dice, we say that the six are more than four, and that the two are to earn other in a sesquialter ratio: but if we compare twelve to the six, we say that the six are less than, and are the half of, twelve. Nor is it possible to say otherwise. Or can you endure to say otherwise?

Theaetetus:: Not I, indeed.

Socrates:: What then? If Protagoras, or any other, should say to you, O Theætetus, can any thing become greater or more in any other way than by being increased? What would you answer?

Theaetetus:: If, O Socrates, I should answer to the present question, what appears to me to be the case, I should say that it cannot: but if I should reply to the former question, in older that I might not contradict myself, I should say that it might.

Socrates:: Well and divinely said, by Juno, my friend. But, (as it appears) if you should answer that it is so, that saying of Euripides might be adopted: for the tongue would be irreprehensible for us, but not the mind.

Theaetetus:: True.

Socrates:: If, therefore, I and you were skilful and wise, after we had examined every thing belonging to our minds, we should then make trial of each other from our abundance, and sophistically approaching to this contest, should make our arguments strike against each other. But now, as being rude and unskillful, we wish, in the first place, to contemplate the things themselves in themselves, that we may know what it is which we dianoëtically perceive, and whether we accord with each other, or not.

Theaetetus:: I wish this to be the case by all means.

Socrates:: And so do I. But since we are thus disposed, let us in a quiet manner, as being abundantly at leisure, again consider, not morosely, but examining ourselves in reality, what the nature is of these appearances within us. And, on the first consideration of these, we shall say (as I think) that nothing at any time ever becomes greater or lesser, neither in bulk, nor in number, as long as it is equal to itself. Is it not so?

Theaetetus:: It is.

Socrates:: And, in the second place, that to which nothing is either added or taken away, will neither at any time ever be increased, or corrupted, but will always be equal.

Theaetetus:: And, indeed, very much so.

Socrates:: And shall we not also say, in the third place, that a thing which was not formerly, but subsists afterwards, cannot exist without making and being made?

Theaetetus:: So, indeed, it seems.

Socrates:: These three things, then, which are acknowledged by us, oppose each other in a hostile manner in our soul, when we speak about dice, as above, or when we say that I, who am so old, am neither increased, nor suffer a contrary passion in myself; while you, who are a young man, are now greater, and afterwards less, since nothing is taken away from my bulk, but yours is increased. For, through a length of time, I am what I was not formerly, being no longer in a state of progressive increase: for without making, it is impossible that a thing can be made. But losing nothing of my bulk, I do not at any time become less. And there are ten thousand other things of this kind, which happen to ten thousand other persons, if we admit these things. Speak, Theaetetus: for you appear to me not to be unskilled in things of this kind.

Theaetetus:: By the Gods, Socrates, I wonder in a transcendent manner what these things are: and, truly, sometimes looking at them, I labor under a dark vertigo.

Socrates:: Theodorus, my friend, appears not to have badly conjectured concerning your disposition; since to wonder is very much the passion of a philosopher. For there is no other beginning of philosophy than this. And he who said that Iris is the daughter of Thaumas, did not genealogize badly. But whether do you understand on what account these things, from which we say Protagoras speaks, are such as they are, or not?

Theaetetus:: I do not yet appear to myself to understand.

Socrates:: Will you not, therefore, thank me, if I unfold to you the concealed truth of the conceptions of this man, or rather, of celebrated men?

Theaetetus:: How is it possible I should not? Indeed, I should thank you exceedingly.

Socrates:: Looking, round, therefore, now see that no profane person hears us. But *those are profane who think there is nothing else than that which they are able to grasp with their hands*; *but do not admit that actions, and generations, and every thing which is invisible, are to be considered as belonging to a part of essence.*

Theaetetus:: You speak, Socrates, of hard and refractory men.

Socrates:: They are indeed, O boy, very much destitute of the Muses: but there are many others more elegant than these, whose mysteries I am about to relate to you. But the principle of these men, from which all that we have just now said is suspended, is this:—That this universe is motion, and that besides motion there is nothing. Likewise, that of motion there are two species; each of which is infinite in multitude, but that one species has the power of acting, and the other of suffering. From the congress and mutual friction of these a progeny is produced, infinite in multitude, but two-fold in species: one, indeed, being that which is sensible, but the other sense, which always concurs and subsists together with sensible. And the senses, indeed, are denominated by us as follows, seeing, hearing, smelling, tasting, and the touching things hot and cold. Pleasures and pains, desires and fears, innumerable other passions without a name, and an all-various multitude which are denominated, follow these. But to each of these the sensible genus is allied, viz., all-various colors to all-various sights; and in a similar manner, voices to hearings, and other sensibles are allied to other senses. What then is the intention of this discourse, O Theætetus, with reference to the former? Do you understand what it is?

Theaetetus:: Not very much, Socrates.

Socrates:: But see whether it can in a certain respect be finished. For it wishes to assert that all these things are, as we have said, moved, and that there is swiftness and slowness in their motions. So far, therefore, as their motions are slow, they possess motion in the same, and towards things near, and thus generate. But things thus generated are more slow. And again, so far as their motions are swift, they possess a motion towards things at a distance, and thus generate: but the things thus generated are more swift. For they are borne along, and their motion naturally subsists in lation. When, therefore, the eye and any thing commensurate to this generate by approximation, whiteness, and the sense connate to this, which would never have been produced if each of these had been directed to something else, then, in the interim, sight tending to the eyes, and whiteness to that which together with it generates color, the eye becomes filled with vision, and then sees, and becomes not sight, but an eye seeing. But that which in conjunction with it generates color becomes filled with whiteness, and is made not whiteness, but a thing white; whether it is wood or stone, or any thing else which may happen to be colored with a color of this kind. And in a similar manner with respect to other things, such as the hot and the hard, &c., we must conceive that no one of these is essentially any thing; but, as we have already observed, that all things, and of all-various kinds, are generated in their congress with each other, from motion. Since, as they say, there is no stability in conceiving, that either that which acts, or that which suffers, is any one thing. For neither is that which acts any thing till it meets with that which is passive, nor that which is passive till it meets with that which acts. For that which meets with and produces any thing, when it falls upon another, then renders that which is passive apparent. So that from all this, that which we said in the beginning follows, that there is not any thing which is essentially one thing, but that it is always becoming to be something to some particular thing, but is itself entirely exempt from being. Indeed; just now we frequently used the term being, compelled to this by custom and ignorance; but, according to the assertions of the wise, we ought not to predicate any thing, either of any other, or of myself, or of this, or that, or call it by any other name which signifies permanency, but we should affirm according to nature, that they are generated and made, corrupted and changed. For, if any one asserts that they stand still, he may easily be confuted. But it is requisite thus to speak of things separately, and of many things collected together; in which collection, man, a stone, every animal, and species are placed. Do not these things, O Theætetus, appear to you to be pleasant; and are they not agreeable to your taste?

Theaetetus:: I do not know, Socrates: for I cannot understand respecting yourself, whether you assert these things as appearing to be so to you, or in order to try me.

Socrates:: Do you not remember, my friend, that I neither know any of these particulars, nor make any of them my own, but that I am barren of them? Likewise, that I act: the part of a midwife towards you, and that for the sake of this I enchant you, and place before you the doctrines of each of the wise, that you may taste them, till I lead forth your dogma into light? But when I have led it forth, I then examine whether it appears to be vain and empty, or prolific. But boldly and strenuously, in a becoming and manly manner, answer what appears to you to be the truth respecting the things I shall ask you.

Theaetetus:: Ask then.

Socrates:: Tell me then again, whether it is your opinion that nothing has a being, but that the good, and the beautiful, and every thing which we just now enumerated, always subsist in becoming to be?

Theaetetus:: When I hear you discoursing in this manner, the assertion appears to be wonderful, and it seems that what you discuss should be admitted.

Socrates:: Let us, therefore, not omit what remains. But it remains that we should speak concerning dreams, diseases, and, besides other things, of insanity; likewise, concerning whatever is seen or heard, or in any other way perceived perversely. For you know that in all these the doctrine which we just now related, will appear without any dispute to be confuted; since the senses in these are more deceived than in any thing else and so far is it from being the case that things are such as they appear to every one, that, on the contrary, no one of those things which appear to have a being can in reality be said to be.

Theaetetus:: You speak with the greatest truth, Socrates.

Socrates:: What then, O boy, can remain for him to say, who asserts that sense is science, and that things which appear to every one are to that individual what they appear to be?

Theaetetus:: I am averse to reply, Socrates, since I know not what to say; because just now when I was speaking you terrified me. For, in reality, I cannot hesitate to grant, that those who are in sane, or dreaming, think falsely, since some among the former of these consider themselves as Gods, and those that dream think they fly like birds.

Socrates:: Whether or no, therefore, are you aware of this dubious question concerning these particulars, and especially concerning perceptions in sleep, and when we are awake?

Theaetetus:: What question is this?

Socrates:: That which I think you have often heard, when it is asked, as at present, by what arguments any one can evince, whether we are asleep, and all our thoughts are dreams, or whether we are in a vigilant state, and in reality discourse with each other.

Theaetetus:: And indeed, Socrates, it is dubious by what arguments any one can evince this. For all things follow, as it were, reciprocally the same things. For, with respect to our present discourse, nothing hinders but that our appearing to converse with each other may be in a dream: and when in sleep we appear to relate our dreams, there is a wonderful similitude in this case to our conversation when awake.

Socrates:: You see, then, it is not difficult to doubt, since it is dubious whether things are dreams or vigilant perceptions; and especially since the time which we devote to sleep is equal to that which we devote to vigilance: and in each of these our soul anxiously contends, that the present dogmas are the most true. So that in an equal time we say that these things and those are true; and in a similar manner we strenuously contend for their reality in each.

Theaetetus:: Entirely so.

Socrates:: The same may be said, therefore, respecting disease and insanity, except that in these the time is not equal.

Theaetetus:: Right.

Socrates:: What then? Shall truth be defined by the multitude and paucity of time?

Theaetetus:: But this, indeed, would be very ridiculous.

Socrates:: Have you any thing else by which you can clearly show which of these opinions are true?

Theaetetus:: It does not appear to me that I have.

Socrates:: Hear, therefore, from me, what they will say who define appearances to be always true to those to whom they appear. For I think they will say, interrogating you in this manner; O Theætetus, does that which is in every respect different, possess a certain power which is the same with another thing? And must, we not admit, that a thing in every respect different is not partly the same, and partly different, but that it is wholly different?

Theaetetus:: It is impossible, therefore, that it should possess any thing the same, either in power, or in any thing else, since it is altogether different.

Socrates:: Must we not, therefore, necessarily confess, that a thing of this kind is dissimilar?

Theaetetus:: It appears so to me.

Socrates:: If, therefore, any thing happens to become similar or dissimilar to any thing, whether to itself or to another, so far as it is similar must we not say it becomes same, but, so far as dissimilar, different?

Theaetetus:: It is necessary.

Socrates:: Have we not said before, that there are many, and indeed an infinite number of things which act, and in a similar manner of things which suffer?

Theaetetus:: Yes.

Socrates:: And besides this, that when one thing is mingled with another and another, it does not generate things which are the same, but such as are different?

Theaetetus:: Entirely so.

Socrates:: Shall we speak of me and you, and other things after the same manner? As, for instance, shall we say that Socrates when well is similar to Socrates when ill, or dissimilar?

Theaetetus:: Do you mean to ask whether the whole of Socrates when ill is similar or dissimilar to the whole of Socrates when well?

Socrates:: You understand me perfectly well. This is what I mean.

Theaetetus:: I answer, then, that it is dissimilar and different.

Socrates:: Whether, therefore, is it so, considered as dissimilar?

Theaetetus:: It is necessary.

Socrates:: And would you speak in a similar manner respecting those that are asleep, and all such particulars as we just now discussed?

Theaetetus:: I should.

Socrates:: But does not each of those things which are naturally capable of effecting any thing, when it receives Socrates as well, use me as a different man from what it does when it receives me as ill?

Theaetetus:: Is it possible it should not?

Socrates:: And do we not generate from each things that are different, I being the patient, and that thing the agent?

Theaetetus:: Undoubtedly.

Socrates:: But when I drink wine, being well, it appears to me to be pleasant and sweet.

Theaetetus:: Certainly.

Socrates:: But, from what has been granted, an agent and a patient generate sweetness and sense, both being borne along together. And sense, indeed, existing from the patient, causes the tongue to perceive; but sweetness, from the wine being borne along about it, causes the wine both to be and to appear sweet to a healthy tongue.

Theaetetus:: The former particulars were entirely allowed by us to subsist in this manner.

Socrates:: But when I drink wine, being diseased, my tongue does not in reality receive it the same as before: For it now approaches to that which is dissimilar.

Theaetetus:: It does.

Socrates:: But Socrates thus affected, and the drinking the wine again generate other things; about the tongue a sensation of bitterness; but about the wine, bitterness generated and borne along. And the wine, indeed, is not bitterness, but bitter; and I am not sense, but that which is sentient.

Theaetetus:: Entirely so.

Socrates:: I therefore, thus perceiving, do not ever become any thing else. For of a different thing there is a different sense, which renders the perceiver various and different. Nor does that which thus affects me become a thing of this kind, by concurring with another thing, and generating the same. For, generating another thing from another, it would become itself various.

Theaetetus:: These things are so.

Socrates:: Nor, indeed, am I such to myself, nor is that thing generated such to itself.

Theaetetus:: Certainly not.

Socrates:: But it is necessary that I should become sentient of something, when I become sentient: For it is impossible that I should be sentient, and yet sentient of nothing. And it is likewise necessary that that thing should become something to some one, when it becomes sweet or bitter, or any thing of this kind. For it is impossible that a thing can be sweet, and yet sweet to no one.

Theaetetus:: Entirely so.

Socrates:: It remains then, I think, that we should mutually be, if we are; and if we are becoming to be, that we should be mutually in generation; since necessity binds our essence. But it does not bind it to any other thing, nor yet to ourselves. It remains, therefore, that we are bound to each other. So that, if any one says a certain thing is, or is becoming to be, it must be understood that it is, or is becoming to be something, or of something, or to something. But it must, not be said that it is in itself either that which is, or which is becoming to be. Nor must we suffer this to be said, either by the thing itself, or by any other, as the discourse we have already discussed evinces.

Theaetetus:: Entirely so, Socrates.

Socrates:: Since that which affects me, belongs to me and not to another, do not I also perceive it, and not another?

Theaetetus:: Undoubtedly.

Socrates:: My sense, therefore, is true to me. For it always belongs to my essence. And I, according to Protagoras, am a judge of things which have a being pertaining to myself, that they are, and of non-beings, that they are not.

Theaetetus:: It appears so.

Socrates:: How then is it possible, since I am not deceived, and do not stagger in my dianoëtic part, either about things which are, or things in generation, that I should not possess scientific knowledge of things which I perceive?

Theaetetus:: There is no reason why you should not.

Socrates:: It was beautifully, therefore, said by you, that science is nothing else than sense. And the doctrine of Homer and Heraclitus, and all of this tribe, that all things are moved like streams, accords with that of the most wise Protagoras that man is the measure of all things; and with that of Theætetus, that, things subsisting in this manner, sense is science for do we not, O Theætetus, say, that this is as it were your offspring recently born, but delivered by me by the midwife's art? Or how do you say?

Theaetetus:: It is necessary to say so, Socrates.

Socrates:: But this, as it appears, we have scarcely been able to generate, whatever it may be. Since however it is delivered, celebrating the usual solemnities on the fifth day after the nativity, let us run through a circle of disputations, considering whether it does not deceive us, and is not worthy of being educated, but is vain and false. Or do you think that you ought by all means to nourish your offspring, and not abandon it? Or could you endure to see it reprobated, and not be very much offended if any one should take it away from you, as being your first born?

Theodorus:: Theætetus, Socrates, could endure this. For he is not morose. But by the Gods tell me, if this is not the case.

Socrates:: You are sincerely a philologist, and a good man, Theodorus: for you think I am a sack of discourse, out of which I can easily take words, and say that these things are not so. But you do not understand the truth of the case, that no assertions proceed from me, but always from him who discourses with me. Indeed I know nothing, except a small matter, viz., how to receive a reason from another wise man, and apprehend it sufficiently. And now I endeavor to determine this question, by means of Theætetus, and not from myself.

Theodorus:: You speak well, Socrates; and, therefore, do as you say.

Socrates:: Do you know, Theodorus, what it is I admire in your associate Protagoras?

Theodorus:: What is it?

Socrates:: In other respects his assertion, that a thing is that which it appears to any one, is, I think, a very pleasant one; but I wonder that at the beginning of his discourse, when he speaks of truth, he did not say, that a swine or a cynocephalus, or any other more unusual thing endued with sense, is the measure of all things, that he might begin to speak to us magnificently, and in a manner perfectly contemptuous; evincing that we should admire him for his wisdom as if he were a God, when at the same time with respect to understanding, he is not at all superior to a little frog, much less to any other man. Or how shall we say, Theodorus? For if that of which each person forms an opinion through sense is true to each, and no other *passion* of any one judges better than this, and one person is not better qualified to judge whether an opinion is true or false than another, but, as we have often said, every one is alone able to form an opinion of things pertaining to himself, and all these are right and true,—then why, my friend, is Protagoras so wise, that he is thought to be justly worthy of instructing others, and receiving a mighty reward for so doing, while we are considered as more unlearned, and are advised to become his disciples, though each person is the measure of his own wisdom? Or how is it possible not to say that Protagoras asserts these things in order to seduce the people? I pass over in silence, what laughter both myself and my obstetric art must excite; and besides this, as I think, the whole business of discourse. For will not the consideration and endeavor to confute the fantasies and opinions of others, since each is true, be nothing more than long and mighty trifles, if the truth of Protagoras is true, and he does not in sport speak from the adytum of his book?

Theodorus:: As I am a friend, Socrates, to Protagoras, as you just now said, I cannot suffer, with my consent that he should; be confuted, nor yet am I willing to oppose your opinion. Again, therefore, take to yourself Theætetus; for he appears to have attended to you in a very becoming manner.

Socrates:: If then, Theodorus, you should go to the Palæstræ at Lacedæmon, and should see among those that are naked some of a base form, would you not think it worth while to exhibit your own naked figure?

Theodorus:: But what do you think, if, complying with my request, they should permit me, as I hope you will at present, to be a spectator without being drawn to the Gymnasium, my limbs being now stiff, and engaging in wrestling with one who is younger, and whose joints are more supple than mine?

Socrates:: But, if this be the case, Theodorus, and it is friendly to you, then, according to the proverb, it is not hostile to me. Let us, therefore, again go to the wise Theætetus. But answer me, in the first place, Theætetus, to what we just now discussed, Would you not wonder, if on a sudden you should appear to be not inferior in wisdom, either to any man or God? Or do you think that the Protagorean measure pertains less to Gods than to men?

Theaetetus:: I do not by Jupiter. And I very much wonder at your question. For when we discussed in what manner it might be said, that what appears to any one is true to any one, it appeared to me to be perfectly well said, but now the very contrary has rapidly taken place.

Socrates:: My dear boy, you are as yet a youth, and are therefore easily obedient to and persuaded by conversation. For to these things Protagoras or any one of his sect would say: O generous boys, and aged men, you here sit together, conversing and calling on the Gods, concerning whom, whether they are or are not, I do not think it proper either to speak or write. Likewise hearing the things which the multitude admit, these you assert: and among others, that it would be a dire thing if every man did not far surpass every brute in wisdom; but you do not adduce any demonstration, or necessity, that it should be so, but only employ probability. Which if Theodorus, or any other geometrician, should employ when geometrizing, he would be considered as undeserving of notice. Do you, therefore, and Theodorus consider, whether you should admit persuasion and probable arguments, when discoursing about things of such great consequence.

Theaetetus:: But, Socrates, both you and we should say that this would not be just.

Socrates:: Now, however, as it appears from your discourse, and that of Theodorus, another thing is to be considered.

Theaetetus:: Entirely another thing.

Socrates:: Let us, therefore, consider this, whether science is the same with sense, or different from it? For to this in a certain respect the whole of our discourse tends: and for the sake of this we have agitated these particulars, which are both numerous and wonderful. Is it not so?

Theaetetus:: Entirely so.

Socrates:: Do we then acknowledge that all such things as we perceive by seeing and hearing, we at the same time scientifically know? So that for instance, shall we say, that we do not hear the Barbarians, when they speak, before we have learned their language or, that, without this, we both hear them and at the same time know what they say? And again, whether when ignorant of letters, but looking at them, we do not see them, or shall we strenuously contend that we know, if we see them?

Theaetetus:: We should say this, Socrates, that, if we see and hear things, we know them scientifically; and that in the latter of these instances, on perceiving the figure and color we scientifically know the letters; and that in the former instance, we at the same time both hear and know the sharpness and flatness of the sounds: but that what grammarians and interpreters teach respecting these things, we neither perceive nor scientifically know by seeing or hearing.

Socrates:: Most excellently said, Theætetus. Nor is it worth while to oppose you in these things, that you may thence make a greater proficiency. But consider also this other thing which will take place, and see how it may be repelled.

Theaetetus:: What is that?

Socrates:: It is this: If any one should ask whether it is possible that a person can be ignorant of that which he has a scientific knowledge of, while he yet remembers it, and preserves it, then when he remembers it. But I shall be prolix, as it appears, through desiring to inquire whether any one does not know that which he has learnt and remembers.

Theaetetus:: But how is it possible he should not, Socrates? For, otherwise, what you say would be a prodigy.

Socrates:: Do I, therefore, rave or not? Consider. Do you not then say that to see is to perceive, and that sight is sense?

Theaetetus:: I do.

Socrates:: Has not, therefore, he who sees any thing a scientific knowledge of that which he sees, according to the present discourse?

Theaetetus:: He has.

Socrates:: But what, do you not say that memory is something?

Theaetetus:: Yes.

Socrates:: But whether is it of nothing or something?

Theaetetus:: Of something, doubtless.

Socrates:: Is it not, therefore, of those things which he learns and perceives?

Theaetetus:: It is of such things as these.

Socrates:: But what, does any one ever remember that which he sees?

Theaetetus:: He does remember it.

Socrates:: Does he likewise when he shuts his eyes? or, when he does this, does he forget?

Theaetetus:: But this, Socrates, would be a dire thing to say.

Socrates:: And yet it is necessary to say so, if we would preserve the former discourse: but if not, it must perish.

Theaetetus:: And I indeed by Jupiter suspect so, though I do not sufficiently understand: but tell me in what respect it must be so.

Socrates:: In this. We say that he who sees any thing has a scientific knowledge of that which he sees: For it is confessed by us that sight and sense, and science are the same.

Theaetetus:: Entirely so.

Socrates:: But he who sees, and has a scientific knowledge of that which he sees, if he shuts his eyes, he remembers indeed that thing, but does not see it. Is it not so?

Theaetetus:: It is.

Socrates:: But not to see is not to know scientifically; since to see is to have a scientific knowledge.

Theaetetus:: True.

Socrates:: It happens, therefore, that when any one has a scientific knowledge of any thing, and still remembers it, he does not know it scientifically, since he does not see it; which we say would be monstrous, if it should take place.

Theaetetus:: You speak most true.

Socrates:: But it appears that something impossible would happen, if any one should say that science and sense are the same.

Theaetetus:: It appears so.

Socrates:: Each, therefore, must be confessed to be different.

Theaetetus:: So it seems.

Socrates:: As it appears then, we must again say from the beginning what science is. Though what shall we do, Theætetus?

Theaetetus:: About what?

Socrates:: We appear to me, like dunghill cocks, to leap from our disputation, before we have gained the victory, and begin to crow.

Theaetetus:: How so?

Socrates:: Though we have assented to the established meaning of names, yet we appear to have contradicted this meaning, and to have been delighted in so doing, in our discourse: and though we have confessed ourselves not to be contentious but wise, yet we are ignorant that we do the same as those skilful men.

Theaetetus:: I do not yet understand what you say.

Socrates:: But I will endeavor to explain what I understand about these things. For we inquired whether any one who has learnt and remembers a thing, has not a scientific knowledge of that thing: and we evinced that he who knows a thing, and with his eyes shut remembers it, but does not see it, at the same time is ignorant of and remembers it. But that this is impossible. And so the Protagorean fable is destroyed, and at the same time yours, which asserts that science and sense are the same.

Theaetetus:: It appears so.

Socrates:: But this I think, my friend, would not be the case if the father of the other fable were alive, but he would very much defend it. But now, being an orphan, we reproachfully deride it. For the guardians which Protagoras left, and of which Theodorus is one, are unwilling to assist it. But we, for the sake of justice, should venture to give it assistance.

Theodorus:: Indeed, Socrates, I am not one of the guardians of the doctrine of Protagoras, but this ought rather to be said of Callias the son of Hipponicus. For we very rapidly betook ourselves from mere words to geometry. Nevertheless, we shall thank you if you assist this doctrine.

Socrates:: You speak well, Theodorus. Consider, therefore, the assistance which I shall give. For he who does not attend to the power of words, by which, for the most part, we are accustomed to affirm or deny any thing, must, assent to things more dire than those we have just mentioned. Shall I tell you in what respect, Theætetus?

Theodorus:: Tell us in common, therefore: but let the younger answer. For, if he errs, it will be less disgraceful.

Socrates:: But I speak of a most dire question; and I think it is this. Is it possible that he who knows any thing can be ignorant of this thing which he knows?

Theodorus:: What shall we answer, Theætetus?

Theaetetus:: I think it is not possible.

Socrates:: But this is not the case, if you admit that to see is to know scientifically. For what ought you to reply to that inevitable question, which, as it is said, is shut up in a well, if any one should ask you, O intrepid man, whether, on covering one of your eyes with your hand, you can see your garment with the covered eye?

Theaetetus:: I think I should say, Not with this, but with the other eye.

Socrates:: Would you not, therefore, see, and at the same time not see, the same thing?

Theaetetus:: I should in a certain respect.

Socrates:: But he will say, I neither ordered you to answer thus, nor did I ask in what respect you might be said to see, but whether, if knowing a thing scientifically, you also did not scientifically know it. But now you confess that not seeing, you see: and prior to this you acknowledged, that to see was to have a scientific knowledge, and that not to see, was not to know scientifically. Think what will happen to you from these things.

Theaetetus:: I think the very contrary to what we admitted will take place.

Socrates:: But, perhaps, O wonderful youth, you will suffer many things of this kind, if any one should ask you whether it is possible to know scientifically, in an acute and dull manner, and near, but not at a distance; vehemently and with remission, and in ten thousand other ways. For an insidious man, armed with a shield, and led to discussion by hire, when you admit science and sense to be the same, will drive you to hearing, smelling, and such like senses, and there detaining, will confute you, and will not dismiss you, till having admired his exquisite wisdom you are bound by him. And being thus brought into captivity and bound, you will be obliged to redeem yourself for a sum of money which is agreed upon by him and you. But you will perhaps say, after what manner can Protagoras defend his opinions? Shall we endeavor to say something else?

Theaetetus:: By all means.

Socrates:: But all this which we have said in defense of him, will, I think, be ineffectual. For, despising us, he will say: That good man, Socrates, when he was asked by a boy, whether any one could at the same time remember a thing, and be ignorant of it, was frightened, and in his fear denied that any one could; and, through being unable to look straight forward, made me appear ridiculous in his discourses. But, most sluggish Socrates, the thing is thus;

When by inquiry you consider any one of my assertions, if he whom you interrogate answers in the same manner as I should answer, and is deceived, in this case I am confuted. But if he answers in a different manner, he alone whom you interrogate is deceived. For, in the first place, do you think that any one would grant you, that memory can be present to him who, no longer suffers a passion of such a kind as he once suffered? It is far from being the case. Or do you think he would hesitate to acknowledge, that the same thing may at the same time be both known and not known? Or, if he should fear to assert this, do you think he would admit that any one thing is dissimilar to another, before it is itself made dissimilar to that which has a being? Or rather, that this is something, and not those; and that those will become infinite in dissimilitude has a subsistence; admitting that it is requisite to avoid the mutual hunting of words. But, (he will say) O blessed man, approach in a still more generous manner to what I say, and confute, if you are able, my assertion, that peculiar senses do not belong to each of us; or that, if they are peculiar, that which appears will not any thing the more belong only to one individual. Or, if it is necessary it should exist, it may be denominated by him to whom it appears. But when you speak of swine and cynocephali, you not only grunt yourself, but you persuade those that hear you to do this at my writings; and in this respect do not act well. For I say, that the truth subsists, as I have written: for each of us is the measure both of beings and non-beings. But one thing differs widely from another, because they appear to one person different from what they do to another. I am likewise far from asserting, that there is any such thing as wisdom, or a wise man. But I call him a wise man who, changing the condition of him to whom things appear and are evil, causes them to appear and to be good to such a one. Do not, therefore, pursue my discourse in words only, but still in a clearer manner thus learn what I say. And in order to this, recollect what was said before, that to a sick man the things which he tastes appear and are bitter; but that to him who is well they are and appear to be the contrary. But it is not proper to make either of these the wiser on this account: (for this is impossible) nor must it be asserted, that he who is sick is an ignorant person, because he entertains such opinions, and that he who is well is wise, because he thinks differently; but that he is changed into a different habit. For one habit is better than another. In a similar manner, too, in erudition, there is a mutation from one habit to a better. But the physician effects a mutation by medicines, and the sophist by discourses. For no one can cause him who thinks falsely to think afterwards truly. For it is not possible for any one to have an opinion of things which are not, or of things different from what he suffers. But the things which he suffers are always true. And I think that he, who, through a depraved habit of soul, forms opinions of things allied to himself, may, through a good habit, be made to entertain opinions of different things, which some, through ignorance, denominate true phantasms. But I say that some things are better than others, but that they are by no means more true. Likewise, friend Socrates, I am far from calling the wise frogs. But I call those that are wise in things pertaining to bodies, physicians; and in things pertaining to plants, husbandmen. For I say that these men insert in their plants, when any one of them is diseased, useful, healthy, and true senses, instead of such as are depraved: but that wise men and good rhetoricians cause things that are good to appear just to cities, instead of such as are base. For such things as appear to each city to be just and beautiful, these are to that city such as it thinks them to be. But a wise man, instead of such particulars as are noxious to cities, causes them to become and to appear to be advantageous. After the same manner a sophist, when he is thus able to discipline those that are instructed, is a wise man, and deserves a great reward from those he instructs. And thus some are more wise than others, and yet no one entertains false opinions. And this must, be admitted by you, whether you are willing or not, since you are the measure of things. For this assertion is preserved in these; against which, if you have any thing else which you can urge from the beginning, urge it, by adducing opposing arguments. But if you are willing to do this by interrogations, begin to interrogate. For neither is this to be avoided, but is to be pursued the most of all things, by him who is endued with intellect. Act, therefore, in this manner, lest you should be injurious in interrogating. For it is very absurd, that he, who, by his own confession, applies himself to the study of virtue, should in discourse accomplish nothing else than injustice. But he acts unjustly in a thing of this kind, who does not exercise himself separately in contending, and separately in discoursing: and who in the former jests and deceives as far as he is able, but in the latter acts seriously, and corrects him with whom he discourses; alone pointing out to him those errors by which he was deceived, both by himself and the former discussions. If, therefore, you act in this manner, those who discourse with you will accuse themselves of their own perturbation and perplexity, but not you. They will likewise follow and love you, but hate themselves, and will fly from themselves to philosophy; that, becoming different from what they were, they may liberate themselves from their former habits. But if you act in a manner contrary to this, as is the case with the multitude, the very contrary will happen to you; and you will cause those that associate with you, when they become elderly, to hate this pursuit, instead of being philosophers. If, therefore, you will be persuaded by me, then, as was said before, bringing with you a mind neither morose nor hostile, but propitious and mild, you will truly consider our assertion, that all things are moved, and that whatever appears to any one, whether to an individual or a city, is that very thing which it appears to be. And from hence you will consider, whether science and sense are the same with, or different from, each other; nor will you, as was the case just now, discourse from the established custom of words and names, which drawing the multitude in a casual manner, mutually involve them in all-various doubts. Such, O Theodorus, is the assistance, which to the utmost of my power I have endeavored to give to your associate. These are small things, indeed, from the small. But, if he were alive, he would more magnificently defend his own doctrines.

Theodorus:: You jest, Socrates: for you have very strenuously assisted the man.

Socrates:: You speak well, my friend. But tell me: Do you take notice that Protagoras just now, when he was speaking, reproached us, that when we were discoursing with a boy, we opposed his doctrines with a puerile fear; and besides this, that forbidding us to jest, and venerating moderation in all things, he exhorted us to discuss his doctrines seriously?

Theodorus:: How is it possible, Socrates, I should not take notice of this?

Socrates:: What then? Do you order us to obey him?

Theodorus:: Very much.

Socrates:: Do you see, therefore, that all these, except you, are boys? If then we are persuaded by him, it is requisite that you and I, interrogating and answering each other, should seriously examine his doctrine, that he may not have to accuse us that we have again considered his assertion, jesting, as it were, with young men.

Theodorus:: But what? Will not Theætetus much better follow you in your investigation than many that have long beards?

Socrates:: But not better than you, Theodorus. Do not, therefore, think that I ought by all possible means to assist your deceased associate, but not afford you any assistance. But come, best of men, follow me a little, till we see this, whether you ought to be the measure of diagrams, or whether all men are, like you, sufficient with respect to astronomy, and other things in which you deservedly appear to excel.

Theodorus:: It is not easy for him, O Socrates, who sits with you, to refuse an answer to your questions. But I just now spoke like one delirious, when I said that you would permit me not to divest myself of my garments, and that you would not compel me like the Lacedæmonians. But you appear to me rather to tend to the manners of Sciron. For the Lacedæmonians order us either to strip or depart: but you seem to me rather to act like Antæus, For you do not dismiss him who engages with you, till you have compelled him to wrestle with you in arguments, naked.

Socrates:: You have most excellently, Theodorus, found out a resemblance of my disease. But I am, indeed, more robust than these. For an innumerable multitude of Herculeses and Theseuses, who were very powerful in discourse, have contended with me, and have been very much wearied: but, notwithstanding this, I have not in the least desisted; with so dire a love of this exercise am I seized. Do not, therefore, through envy, refrain from exercising yourself with me, and benefiting at the same time both me and yourself.

Theodorus:: I shall no longer oppose you. Lead me, therefore, wherever you please. For it is perfectly necessary that he who is confuted should endure this fatal destiny which you have knit; yet I shall not attempt to exert myself beyond what I promised you.

Socrates:: This will be sufficient. But diligently observe this with respect to me, that I do not, through forgetfulness, adopt a puerile mode of discourse so as that we may again be exposed to censure.

Theodorus:: I will endeavor to do this, as far as I am able.

Socrates:: Let us, therefore, again resume this in the first place, which we discussed before, and see whether we properly or improperly reprobate the assertion of Protagoras, that every one is sufficient to himself with respect to wisdom. For Protagoras has granted us, that even some among the wise differ with respect to better and worse. Has he not?

Theodorus:: Yes.

Socrates:: If, therefore, he being himself present acknowledges this, and we do not admit it through his assistance, there is no occasion to establish it by resuming the arguments in its favor. But now, since some one may consider us as not sufficient assertors of his doctrine, it will be better, as the case is, to assent to this position in a still clearer manner. For it is of no small consequence whether this takes place or not.

Theodorus:: It is true.

Socrates:: Not from other things, therefore, but from his own assertions, we acquire our mutual assent in the shortest manner possible.

Theodorus:: How so?

Socrates:: Thus. Does he not say that what appears to any one is that very thing to him to whom it appears?

Theodorus:: He does say so.

Socrates:: Therefore, O Protagoras, we speak the opinions of a man, or rather of all men, and we say, that no one can partly think himself wiser than others, and others partly wiser than himself. But in the greatest dangers, when in armies, or in diseases, or in tempests at sea, do not men look to the governors in each of these as Gods, and consider them as their saviors; these governors at the same time being superior in nothing else than in knowledge? And in all human affairs, do not men seek after such teachers and governors, both of themselves and other animals, as are thought to be sufficient to all the purposes of teaching and governing? And in all these, what else shall we say, than that men are of opinion that there is wisdom and ignorance among themselves?

Theodorus:: Nothing else.

Socrates:: Do they not, therefore, think that wisdom is true dianoëtic energy, but ignorance false opinion?

Theodorus:: Undoubtedly.

Socrates:: What then, O Protagoras, shall we assert? Shall we say that men always form true opinions; or that their opinions are sometimes true and sometimes false? For, from both these assertions, it will happen that they do not always form true opinions, but both true and false. For consider, Theodorus, whether any one of the followers of Protagoras, or you yourself, will contend, that there is no one who thinks that there is not some one who is unlearned, and forms false opinions.

Theodorus:: But this is incredible, Socrates.

Socrates:: But the assertion, that man is the measure of all things, necessarily leads to this.

Theodorus:: How so?

Socrates:: When you judge any thing from yourself, and afterwards declare your opinion of that thing to me, then, according to the doctrine of Protagoras, your opinion is true to you; but, with respect to us, may we not become judges of your judgment? Or shall we judge that you always form true opinions? Or shall we not say that an innumerable multitude of men will continually oppose your opinions, and think that you judge and opine falsely?

Theodorus:: By Jupiter, Socrates, there is, as Homer says, a very innumerable multitude who will afford me sufficient employment from human affairs.

Socrates:: But what? Are you willing to admit we should say, that you then, form true opinions to yourself, but such as are false to an innumerable multitude of mankind?

Theodorus:: This appears to be necessary, from the assertion of Protagoras.

Socrates:: But what with respect to Protagoras himself? Is it not necessary, that: if neither he should think that man is the measure of all things, nor the multitude, (as, indeed, they do not think this,) that this truth which he has written should not be possessed by any one? But if he thinks that man is the measure, but the multitude do not accord with him in opinion, do you not know, in the first place, that by how much greater the multitude is to whom this does not appear to be the case, than to whom it does, by so much the more it is not than it is?

Theodorus:: It is necessary; since, according to each opinion, it will be and will not be.

Socrates:: In the next place, this thing will subsist in the most elegant manner. For he, with respect to his own opinion, will admit, that the opinion of those that dissent from him, and by which they think that he is deceived, is in a certain degree true, while he acknowledges that all men form true opinions.

Theodorus:: Entirely so.

Socrates:: Will he not, therefore, admit that his own opinion is false, if he allows that the judgment of those who think he errs is true?

Theodorus:: It is necessary.

Socrates:: But others will never allow themselves to be deceived; or do you think they will?

Theodorus:: They will not.

Socrates:: Protagoras, however, from what he has written, will acknowledge that this opinion is true.

Theodorus:: It appears so.

Socrates:: From all, therefore, that Protagoras has asserted, it may be doubted, or rather will be granted by him, that when he admits that he who contradicts him forms a true opinion, neither a dog, nor any man, is the measure of all things, or of any one thing, which he has not learned. Is it not so?

Theodorus:: It is.

Socrates:: Since, therefore, this is doubted by all men, the truth of Protagoras will not be true to any one, neither to any other, nor to himself.

Theodorus:: We attack my associate, Socrates, in a very violent manner.

Socrates:: But it is immanifest, my friend, whether or not we are carried beyond rectitude. For it is likely that he, as being our elder, is wiser than we are. And if suddenly leaping forth he should seize me by the shoulders, it is probable that he would prove me to be delirious in many things, as likewise you who assent to me, and that afterwards he would immediately vanish. But I think it is necessary that we should make use of ourselves such as we are, and always speak what appears to us to be the truth. And now then shall we say that any one will grant us another thing, that one man is wiser or more ignorant than another?

Theodorus:: It appears so to me.

Socrates:: Shall we say that our discourse ought especially to persist in this to which we have subscribed, in order to assist Protagoras,—I mean, that many things which are apparent are such as they appear to every one, viz., things hot, dry, sweet, and all of this kind? And if in some things it should be granted that one person dissents from another, as about things salubrious and noxious, Protagoras would assert, that not every woman, boy, and brute, is sufficient to cure itself by knowing what is salubrious, but that in this case, if in any, one differs from another.

Theodorus:: So it appears to me.

Socrates:: With respect to political concerns, therefore, such as things beautiful and base, just and unjust, holy and unholy, are such opinions respecting these, as each city legally establishes for itself, true opinions to each? And in these, is neither one individual, nor one city wiser than another! But in the establishment of what is advantageous, or the contrary, to a city, Protagoras would doubtless grant that one counselor is better than another, and that the opinion of one city is more true than that of another. Nor will he by any means dare to say, that what a city establishes in consequence of thinking that it is advantageous to itself, is to be preferred before every thing. But cities, with respect to what is just and unjust, holy and unholy, are willing strenuously to contend, that none of these have naturally any essence of their own, but that what appears to be true in common is then true when it appears, and as long as it appears. And those who do not altogether speak the doctrine of Protagoras, after this manner lead forth their wisdom. But with respect to us, Theodorus, one discourse employs us emerging from another, a greater from a less.

Theodorus:: We are not, therefore, idle, Socrates.

Socrates:: We do not appear to be so. And indeed, O blessed man, I have often as well as now taken notice, that those who have for a long time been conversant with philosophy, when they go to courts of justice deservedly appear to be ridiculous rhetoricians.

Theodorus:: Why do you assert this?

Socrates:: Those who from their youth have been rolled like cylinders in courts of justice, and places of this kind, appear, when compared to those who have been nourished in philosophy and such-like pursuits, as slaves educated among the free-born.

Theodorus:: In what respect?

Socrates:: In this, that these latter, always, as you say, abound in leisure, and at leisure peaceably discourse, just as we at present engage in a digressive conversation for the third time. In like manner, they, if any question occurs more pleasing to them than the proposed subject of discussion, are not at all concerned whether they speak with brevity, or prolixity, if they can but be partakers of reality. But the others when they speak are always busily engaged; (for diffluent water urges) nor is it permitted them to discourse about that which is the object of their desire; but their opponent places before them necessity, and the formula of a book, without which nothing is to be said, which they call an oath respecting calumny, on the part of the plaintiff and defendant. Their discourses too are always concerning a fellow slave, against the master, who sits holding the action in his hand. Their contests likewise never vary, but are always about the same thing: and their course is often respecting life itself. So that, from all these circumstances, they become vehement and sharp, knowing that the master may be flattered by words, and that they shall be rewarded for it in reality; and this because their souls are little and distorted. For slavery from childhood prevents the soul from increasing, and deprives it of rectitude and liberty compelling it to act in a distorted manner, and hurls into tender souls mighty dangers and fears; which not being able to endure with justice and truth, they immediately betake themselves to falsehood and mutual injuries, and become much bent and twisted. So that, their dianoëtic part being in a diseased condition, they pass from youth to manhood, having rendered themselves as they think skilful and wise. And such are men of this description, O Theodorus. But are you willing that I should give you an account of men belonging to our choir, or that, dismissing them, we should again return to our proposed investigation; lest, as we just now said, we should too much digress?

Theodorus:: By no means, Socrates. For you very properly observed, that we, as being in the choir of philosophers, were not subservient to discourse, but discourse to us, and that it should attend our pleasure for its completion. For neither a judge nor a spectator, who reproves and governs, presides over us, as is the case with the poets.

Socrates:: Let us speak then, since it is agreeable to you, about the Coryphæi. For why should any one speak of those that are conversant with philosophy in a depraved manner? In the first: place then, the Coryphæi, from their youth, neither know the way to the forum, nor where the court of justice or senate house is situated, or any other common place of assembly belonging to the city. They likewise neither hear nor see laws nor decrees, whether promulgated or written. And as to the ardent endeavors of their companions to obtain magistracies, the associations of these, their banquets, and wanton feastings accompanied with pipers, these they do not even dream of accomplishing. But whether any thing in the city has happened well or ill, or what evil has befallen any one from his progenitors, whether male or female, these are more concealed from such a one than, as it is said, how many measures called choes the sea contains. And besides this, he is even ignorant that he is ignorant of all these particulars. For he does not abstain from them for the sake of renown, but in reality his body only dwells and is conversant in the city; but his dianoëtic part considering all these as trifling, and of no value, he is borne away, according to Pindar, on all sides, geometrizing about things beneath, and upon the earth, astronomizing above the heavens, and perfectly investigating all the nature of the beings which every whole contains, but by no means applying himself to any thing which is near.

Theodorus:: How is this, Socrates?

Socrates:: Just, O Theodorus, as a certain elegant and graceful Thracian maid-servant, is reported to have said to Thales, when while astronomizing he fell into a well, that he was very desirous of knowing what the heavens contained, but that he was ignorant of what was before him, and close to his feet. In the same manner all such as are conversant in philosophy may be derided. For, in reality, a character of this kind is not only ignorant of what his neighbor does, but he scarcely knows whether he is a man or some other animal. But what man is, and what a nature of this kind ought principally to do or suffer, this he makes the object of his inquiry, and earnestly investigates. Do you understand, Theodorus, or not?

Theodorus:: I do; and you speak the truth.

Socrates:: For in reality, my friend, when a man of this kind is compelled to speak (as I said before) either privately with any one, or publicly in a court of justice, or any where else, about things before his feet, and in his view, he excites laughter not only in Thracian maid-servants, but in the other vulgar, since through his unskillfulness he falls into wells and every kind of ambiguity. Dire deformity, too, causes him to be considered as a rustic. For when he is in the company of slanderers he has nothing to say reproachful, as he does not know any evil of any one, because he has not made individuals the objects of his attention. Hence, not having any thing to say, he appears to be ridiculous. But when he is in company with those that praise and boast of others, as he is not only silent, but openly laughs, he is considered as delirious. For, when he hears encomiums given to a tyrant, or a king, he thinks he hears some swineherd, or shepherd, or herdsman proclaimed as happy, because he milks abundantly; at the same time, he thinks that they feed and milk the animal under their command in a more morose and insidious manner. And that it is necessary a character of this kind should be no less rustic and undisciplined through his occupation, than shepherds; the one being enclosed in walls, and the other by a sheep-cot on a mountain. But when he hears any one proclaiming that he possesses ten thousand acres of land, or a still greater number, as if he possessed things wonderful in multitude, it appears to him that he hears of a very trifling thing, in consequence of being accustomed to survey the whole earth. As often, too, as any one celebrates the nobility of his family, evincing that he has seven wealthy grandfathers, he thinks that this is entirely the praise of a dull mind, and which surveys a thing of a trifling nature; through want of discipline being incapable of always looking to the universe, and of inferring by a reasoning process, that every man has had innumerable myriads of grandfathers and progenitors, among which there has often been an innumerable multitude of rich and poor, kings and slaves, Barbarians and Grecians. But when anyone celebrating his progenitors enumerates five-and-twenty of them, and refers their origin to Hercules the son of Amphitryon, it appears to him a thing unworthy to be mentioned. For, as it is entirely owing to fortune that any one is able to enumerate five-and-twenty progenitors from Hercules, he would laugh even if any one could enumerate fifty from the same origin; considering such as unable to reason, and liberate themselves from the arrogance of an insane soul. But, in every thing of this kind, the coryphæus we are describing will be ridiculed by the vulgar, partly because he will be considered by them as arrogant, and partly because he is ignorant of and dubious about things before his feet.

Theodorus:: You entirely, Socrates, speak of things which take place.

Socrates:: But when any one, my friend, draws him on high, and is willing that he should abandon the consideration of whether I injure you, or you me, for the speculation of just ice and injustice, what each of them is, and in what they differ from all other things, or from each other; or that, dismissing the inquiry whether a king is happy who possesses abundance of gold, he should ascend to the contemplation of a kingdom, and universally of human felicity and misery, of what kind they are to any one, and after what manner it is proper for human nature to acquire this thing and fly from that;—about all these particulars, when that little sharp soul so conversant with law is required to give a reason, then he in his turn is affected worse than the coryphæus. For he becomes giddy, through being suspended from a lofty place of survey, and being unaccustomed to look so high. He is also terrified, filled with uncertainty, and speaks in a barbaric manner; so that he does not, indeed, excite laughter in the Thracian vulgar, nor in any other undisciplined person (for they do not perceive his condition), but in all those whose education has been contrary to that of *slaves*. And such, O Theodorus, is the condition of each; the one whom we call a philosopher, being in reality nourished in liberty and leisure; and who, though he ought not to be blamed, yet appears to be stupid and of no value, when he engages in servile offices, since he neither knows how to bind together bundles of cover-lids, nor to make sauce for banquets, nor compose flattering speeches. But the other of these characters is able to accomplish all these servile offices with celerity and ease, but knows not how to clothe himself dexterously in a liberal manner; nor how in harmonious language properly to celebrate the true life of the Gods and blessed men.

Theodorus:: If, O Socrates, you could persuade all men to assent to what you say, as you have persuaded me, there would be more peace and less evil among men.

Socrates:: But it is impossible, Theodorus, that evils should be destroyed; (foe it is necessary that there should be always something contrary to good) nor yet can they be established in the Gods; but they necessarily revolve about a mortal nature, and this place of our abode. On this account we ought to endeavor to fly from hence thither, with the utmost celerity. But this flight consists in becoming as much as possible similar to divinity. And this similitude is acquired by becoming just and holy, in conjunction with prudence. But, O best of men, it is not altogether easy to procure persuasion, that vice is not to be avoided, and virtue pursued, for the sake of those things which the vulgar adopt, viz., that we may not seem to be vicious, but may seem to be good: for these are, as it is said, the nugacities of old women, as it appears to me. The truth however is as follows: Divinity is never in any respect unjust, but is most just. And there is not any thing more similar to him, than a man when he becomes most just. About this, the true skill of a man, his nothingness and sloth are conversant. For the knowledge of this is wisdom and true virtue; but the ignorance of it, a privation of discipline, and manifest improbity. Every thing else which appears to be skill and wisdom, when it takes place in political dynasties, is troublesome, but when in arts illiberal. It will be by far the best, therefore, not to permit him who acts unjustly, and who speaks or acts impiously, to be skilled in any art, on account of his cunning. For a character of this kind will exult in his disgrace, and will not think that he is a mere trifle, and the burthen of the earth, but he will consider himself to be such a man as ought to be preserved in a city. The truth, therefore, must be spoken, that such men as these are by so much the more that which they think they are not, from their not thinking the truth respecting themselves. For they are ignorant of the punishment of injustice, of which they ought by no means to be ignorant. For this punishment does not consist, as it appears to me, in stripes and death (which those who do not act unjustly sometimes suffer), but in that which if is impossible to avoid.

Theodorus:: What do you mean?

Socrates:: Since, my friend, there are two paradigms in the order of things, one of a divine nature, which is most happy, the other of that which is destitute of divinity, and which is most miserable, these men, not perceiving that this is the case, through folly and extreme insanity, secretly become similar to one of these paradigms, through unjust actions, and dissimilar to the other. But for such conduct they are punished, while they lead a life correspondent to that to which they are assimilated. If, likewise, we should say that these men, unless they are liberated from their dire conduct, will not, when they die, be received into that place which is pure from evil, but that after death they will always retain the similitude of the life they have lived upon earth, the evil associating with the evil,—if we should thus speak, these dire and crafty men would say that they were hearing nothing but jargon and reverie.

Theodorus:: And very much so, Socrates.

Socrates:: I know they would speak in this manner, my friend. But this one thing happens to them, that if at any time it is requisite for them to give a reason privately respecting the things which they blame; and if they are willing to continue disputing in a manly manner for a long time, without cowardly flying from the subject, then at length, O blessed man, this absurdity ensues, that they are not themselves pleased with their own assertions, and their rhetoric so entirely fails them, that they appear to differ in no respect from boys. Respecting men of this kind, therefore, let thus much suffice, since our discourse for some time has been entirely a digression. For, if we do not stop here, in consequence of more matter always flowing in, the subject which we proposed from the first to discuss will be overwhelmed. Let us, therefore, return to our former inquiry, if it is agreeable to you.

Theodorus:: Things of this kind, Socrates, are not unpleasant to me to hear. For, in consequence of my age, I can easily follow you. But let us, if you please, resume our inquiry.

Socrates:: We were, therefore, arrived at that part of our discourse in which we said, that those who considered essence as subsisting in lation, and that a thing which appeared to any one is always what it appears to be, to him to whom it appears, were willing strenuously to assert this in other things, and not less so respecting what is just; as that what any city establishes as appearing just to itself, this more than any thing is just, so far as it continues to be established. But, with respect to good, no one is so bold as to contend, that whatever a city establishes, through an opinion of its being useful to itself, will be useful to it as long as it is established, unless any one should assert this of a mere name. But this would be a scoff with respect to what we are saying. Or would it not?

Theodorus:: Entirely so.

Socrates:: But does not a city consider the thing named, and not merely the name?

Theodorus:: Undoubtedly.

Socrates:: But that which it denominates, that it doubtless regards in the business of legislation, and establishes all the laws, so far as it is able, most useful to itself. Or does it establish laws, looking to any thing else?

Theodorus:: By no means.

Socrates:: Does it, therefore, always accomplish its purpose, or is it often deceived in its opinion?

Theodorus:: I think it is often deceived.

Socrates:: If any one, however, should inquire respecting every species, in what the useful consists, he would still more readily acknowledge this. But the useful in the business of legislation is in a certain respect concerning the future time. For, when we establish laws, we establish them that they may be useful in futurity.

Theodorus:: Entirely so.

Socrates:: Let us, therefore, thus interrogate Protagoras, or any one of his votaries. Man, as you say, O Protagoras, is the measure of all things, of things white, heavy, light, and the like. For, as he contains a criterion in himself, and thinks conformably to the manner in which he is acted upon, he forms an opinion of things true to himself, and which are true in reality. Is it not so?

Theodorus:: It is.

Socrates:: Shall we also say, O Protagoras, that he contains in himself a criterion of things future; and that such things as he thinks will happen, such things do happen to him thinking so? So that, for instance, when any idiot thinks that he shall be attacked with a fever, and that a heat of this kind will take place, but a physician is of a different opinion, which of these opinions shall we say will be verified in futurity? Or shall we say that both will be verified? and that the physician will not be affected either with heat or fever, but that the idiot will suffer both?

Theodorus:: This, indeed, would be ridiculous.

Socrates:: But I think, likewise, that the opinion of the husbandman, and not of the harper, would prevail, respecting the future sweetness or roughness of wine.

Theodorus:: Undoubtedly.

Socrates:: Nor would a master of the Gymnasium think better respecting that consonance, or dissonance, which would in future appear to him to be consonant or dissonant, than a musician.

Theodorus:: By no means.

Socrates:: And when a banquet is to be prepared, will not the opinion of a cook respecting its future agreeableness be preferred to that of any other person who is unskilled in seasoning? For we do not oppose the assertion respecting that which is, or was, agreeable; but, respecting that which in future will appear, and will be agreeable to any one, whether is every one to himself the best judge, or whether are you, O Protagoras, better able to foresee what will probably take place in doubtful affairs than an idiot?

Theodorus:: I think, Socrates, that Protagoras professes in these greatly to excel all men.

Socrates:: O miserable man! no one, by Jupiter, would have followed him, and given him a considerable sum of money, if he had not persuaded his disciples that in future it would happen, and would appear to be the case, that neither any diviner, nor other person, would judge better than himself.

Theodorus:: Most true.

Socrates:: But does not the establishment of laws, and the useful, regard futurity? And does not every one acknowledge, that a city, though governed by laws, often necessarily wanders from that which is most useful?

Theodorus:: Very much so.

Socrates:: We have, therefore, sufficiently urged against your preceptor, that he must necessarily confess, that one man is wiser than another, and that such a one is a measure; but that there is no necessity that I, who am void of science, should become a measure, as his discourse just now compelled me to be, since, whether I am willing or not, I am so.

Theodorus:: From that, Socrates, it appears to me, that his doctrine is particularly convincing, and from this also, that it makes the opinions of others valid. But cities reprobate his assertions, and by no means think them to be true.

Socrates:: In many other things, Theodorus, it may be inferred, that not every opinion of every one is true. But, with respect to the passion present to every one, from which the senses and opinions according to these are produced, it is more difficult to apprehend that they are not true. But, perhaps, I say nothing to the purpose. For, when they occur, they cannot be confuted: and those who say that they are clear and sciences, perhaps say the truth. And Theætetus here did not assert foreign from the purpose, that sense and science are the same. Let us, therefore, approach nearer, as the doctrine of Protagoras orders us, and consider whether this essence, which is thus borne along, emits an entire or a broken sound. For the contention about it is neither mean nor among a few.

Theodorus:: It is very far, indeed, from being mean, but it is very much circulated about Ionia. For the followers of Heraclitus discourse about it very strenuously.

Socrates:: On this account, friend Theodorus, we should rather consider this affair from the beginning, in the same manner as it is discussed by them.

Theodorus:: By all means, therefore. For, with respect to these Heraclitics, Socrates, or as you say Homerics, and such as are still more ancient than these, about Ephesus, and who wish to be considered as skilful persons, it is no more possible to discourse with them than with men raging mad. For their writings are indeed borne along. But as to waiting patiently in discourse and inquiry, and continuing quiet during questioning and answering, this is present with them less than nothing; or rather, these men are so far from possessing any rest, that their privation of it even transcends that which is less than nothing. But if any one asks them a question, they immediately draw, as from a quiver, certain dark enigmatical words, and dart them at you. And if you ask the reason of this, they will again strike you with another dark shower of words, but with the names changed. But you will never bring any thing to a conclusion with them, nor do they ever conclude any thing among themselves. Indeed, they take very good care that there shall not be any thing stable, either in their discourse, or in their souls; thinking, as it appears to me, that this very thing itself is stable. But these are the weapons with which they strenuously fight, and which, as far as they are able, they on all sides hurl forth.

Socrates:: Perhaps, Theodorus, you have seen these men fighting, but have never seen them when peaceably disposed. For they are not your associates. But I think they speak such things as these, when at leisure, to their disciples, whom they wish to render similar to themselves.

Theodorus:: What disciples, blessed man? For, among men of this kind, one is not the disciple of another, but they spring up spontaneously, wherever each of them happens to be seized with a fanatic fury; and at the same time each thinks that the other knows nothing. From these, therefore, as I just now said, neither willingly nor unwillingly will you ever receive a reason. But it is necessary that we should consider the affair as if it was a problem.

Socrates:: You speak to the purpose. But, with respect to the problem, we receive one thing from the ancients, (who concealed in verse their meaning from the multitude,) that Ocean and Tethys are the generation of all other things, that all things are streams, and that nothing abides. But from the moderns, as being more wise, the thing is so clearly demonstrated, that even curriers, on hearing them, are able to learn their wisdom, and lay aside their foolish opinion, that some things stand still, and others are moved. And learning that all things are moved, they venerate the authors of this doctrine. But we have almost forgotten, Theodorus, that others evince the very contrary to this opinion; I mean, that the proper name of the universe is the immovable, and such other assertions as the Melisseans and Parmenideans, opposing all these, strenuously defend—as, that all things are one, and that this one abides in itself, not having a place in which it can be moved. What then shall we say to all these, my friend? For, proceeding by small advances, we have secretly fallen into the midst of both of them. And if we fly, without in any respect resisting, we shall be punished like those in the palæstræ playing in a line, who, when they are caught on both sides, are drawn in contrary directions. It appears therefore to me, that we should first of all consider those with whom we began—I mean the flowing philosophers—and, if they appear to say any thing to the purpose, that we should draw ourselves together with them, and endeavor to fly from the others, but if those who consider the universe as stable shall appear to have more truth on their side, we should fly to them from those who move even things immovable. And if it shall appear that neither of them assert any thing sufficient, we shall become ridiculous, in consequence of thinking that we, who are men of no importance, can say any thing to the purpose, when we only reprobate men very ancient, and perfectly wise. Consider therefore, Theodorus, whether it is expedient to proceed into such a mighty danger.

Theodorus:: Nothing ought to prevent us, Socrates, from considering what each of these men say.

Socrates:: Let us consider their assertions then, since you so earnestly desire it. It appears, therefore, to me, that this speculation should commence from motion,—I mean, what that motion is by which they say all things are moved. But what I wish to say is this: whether they say there is one species of motion, or, as it appears to me, two. Nor do I alone wish to know this myself, but that you also may partake, together with me, of this information, that we may in common be affected in such a manner as is proper. Tell me, therefore, do you say a thing is moved when it changes one place for another, or is turned round in the same place?

Theodorus:: I do.

Socrates:: Let this, therefore, be one species. But when any thing abiding in the same place becomes old, or, from being white, becomes black, or, from being soft, hard, or is changed by any other internal change, may not this be deservedly called another species of motion?

Theodorus:: It appears so to me.

Socrates:: It is necessary, therefore, that there should be these two species of motion, viz., alliation, or internal change, and lation.

Theodorus:: Rightly said.

Socrates:: Having, therefore, made this division, let us now discourse with those who assert that all things are moved, and thus interrogate them: Whether do you say that every thing is moved both ways, viz., according to lation and alliation, or that one thing is moved both ways, and another only in one way?

Theodorus:: By Jupiter, I know not what to say, but I think they would reply, that every thing is moved both ways.

Socrates:: Otherwise, my friend, things would appear to them to be both moved and stand still, and it would not be in any respect more proper to assert that all things are moved, than that they stand still.

Theodorus:: Most true.

Socrates:: Since, therefore, it is necessary they should be moved, and that no one thing should not be moved, all things will always be moved with every kind of motion.

Theodorus:: It is necessary.

Socrates:: Consider, likewise, this respecting their assertions,—I mean concerning the generation of heat, or whiteness, or any thing else. Do we not say that they assert, that each of these is borne along, together with sense, between the agent and the patient? And that the patient, indeed, is sensible, but not yet become sense: but that the agent is that which effects something, but is not quality? Perhaps, therefore, quality may appear to you to be an unusual name, and you do not understand me thus speaking collectively. Hear me, then, according to parts. For the agent is neither heat nor whiteness, but becomes hot and white; and so with respect to other things. For do you not recollect that we have observed before, that nothing is any one thing essentially, neither that which is an agent, nor that which is a patient, but that from the concourse of both with each other, sense, and things sensible, being generated, some things became certain qualities, but others sentient?

Theodorus:: I recollect. For how is it possible I should not?

Socrates:: As to other things, therefore, we shall omit the consideration, whether they speak in this manner concerning them, or not. But let us alone attend to this thing, for the sake of which we are now discoursing; and let us ask them, are all things moved, and do they flow as you say? For Is not this what they say?

Theodorus:: Yes.

Socrates:: Are they not, therefore, moved with both those motions which we enumerated, viz., lation and alliation?

Theodorus:: Undoubtedly; since it is necessary that they should be perfectly moved.

Socrates:: If, therefore, they were only borne along, but were not internally changed, we might be able to say what kind of things flow that are borne along. Or how shall we say?

Theodorus:: Thus.

Socrates:: But since neither a flowing white thing permanently continues to flow, but is changed, so that there is even a flux of its whiteness, and a transition into another color, and we are not able to discover that it abides in this, can we with rectitude pronounce it to be any particular color?

Theodorus:: But how is it possible, Socrates, that we can pronounce this of a thing white, or of any thing else of a similar kind, since, while we speak about it, it is always privately departing, because continually flowing?

Socrates:: But what shall we say of any one of the senses, as of seeing or hearing? Does any thing in seeing or hearing ever abide?

Theodorus:: This ought not to be the case, since all things are moved.

Socrates:: We must say, therefore, that neither does any one see more than not see, or use any other of the senses more than not use them, since all things are in every respect moved.

Theodorus:: We must say so.

Socrates:: But sense is science, as we say, I and Theætetus.

Theodorus:: You do say so.

Socrates:: On being asked, therefore, what science is, we must answer, that it is not more science than not science.

Theodorus:: So it appears.

Socrates:: An emendation, therefore, of the answer will very opportunely present itself to us, when we desire to evince that all things are moved, in order that the answer may appear to be right. But this it seems will appear, that if all things are moved, every answer to every question will be similarly right which says, that a thing subsists and yet does not subsist in a certain particular manner, or, if you will, that it is in generation, that we may not stop them by our discourse.

Theodorus:: Right.

Socrates:: Except in this, Theodorus, that we should say it is so, and yet is not so. But it is requisite not even to speak in this manner, (for neither will it be any longer moved thus, nor yet not thus,) but another word must be employed by those that speak in this manner, because they have no words by which they can denominate things according to their hypothesis, unless, perhaps, they use the expression not in any particular manner. But this will be particularly adapted to them, when spoken an infinite number of times.

Theodorus:: It will thus, indeed, be accommodated to them in the highest degree.

Socrates:: We have therefore, Theodorus, done with your friend, nor can we grant him, that every man is the measure of all things, or any man, unless he is endued with wisdom. Nor must we admit that science is sense, according to the doctrine that all things are moved; unless Theætetus here says otherwise.

Theodorus:: You speak most excellently, Socrates. For, these things being brought to a conclusion, it is proper that I also should have done with Protagoras, according to our compact.

Theaetetus:: But not so, Theodorus, till you and Socrates have discussed the doctrine of those who assert that the universe is immovable, as you just now mentioned.

Theodorus:: As you are a young man, Theætetus, you teach those that are advanced in years to act unjustly, by transgressing compacts. But prepare yourself to answer Socrates in the remaining part of this inquiry.

Theaetetus:: Doubtless I shall, if he wishes it: yet it would give me great pleasure to hear what I mentioned.

Theodorus:: You incite horses to the plain when you incite Socrates to discourse. Ask, therefore, and hear.

Socrates:: But, O Theodorus, I appear to myself as if I should not comply with Theætetus in his request.

Theodorus:: But why should you not comply?

Socrates:: Though I should be ashamed to speak concerning Melissus and others, who assert that the universe is one and immovable, lest I should appear to revile them in an insolent manner, yet I should be less ashamed with respect to them than with respect to Parmenides. For, that I may use the words of Homer, Parmenides appears to me to be both venerable and skilful. For I was acquainted with him when I was very young and he was very much advanced in years, and he appeared to me to possess a certain profundity perfectly generous. I am afraid, therefore, lest we should neither understand the meaning of his words, and much more, lest we should be deficient in apprehending the conceptions contained in his writings: and what is greatest of all, left with respect to the subject of our present inquiry, what science is, we should leave the consideration of it unfinished, through employing contumelious language. Besides, the question which we have now excited, and which contains in itself an ineffable multitude of particulars, would be unworthily treated, if discussed in a careless manner; and on the other hand, if it is extended to too great a length, it will prevent the discovery of science. But it is proper that neither of these should take place, but that we should endeavor, by the obstetric art, to free from confinement the fetus of Theætetus respecting science.

Theaetetus:: It is proper indeed to do so, if it seems requisite to you.

Socrates:: Again, therefore, Theætetus, in addition to what has been said above, consider this. Do you say that science is sense or not?

Theaetetus:: I do.

Socrates:: If then any one should ask you, by what it is that a man sees things white and black, and hears sounds flat and sharp, you would answer, I think, that it is by the eyes and ears.

Theaetetus:: I should.

Socrates:: But to use nouns and verbs with facility, without entering into an accurate investigation of them, is for the most part a thing not ignoble; but rather the contrary to this is servile. Sometimes, however, this is necessary: as in the present case we are compelled to examine whether your answer is right or not. For, consider whether the answer is more right, that we see by, or that we see through, the eyes; and that we hear by, or that we hear through, the ears?

Theaetetus:: It appears to me, Socrates, that it is more proper to consider the eyes and ears as things through which, rather than as things by which, we perceive.

Socrates:: For it would be a dire thing, O boy, if many senses were seated in us, as in wooden horses, and did not all of them tend to one certain idea, whether this is soul, or whatever else it may be proper to call it; and by which, through the senses as organs, we perceive sensible objects.

Theaetetus:: This appears to me to be the case, rather than that.

Socrates:: On this account I diligently investigate these things with you, that we may discover whether by one certain thing belonging to us we perceive things black and white, through the eyes, but certain other particulars through the other organs of sense; and whether, when interrogated, you are able to refer all such things as these to the body. But perhaps it will be better that you should answer to these inquiries, than that I should be entangled with a multiplicity of questions from you. Tell me, therefore: Do you admit that the things through which you perceive the hot and the dry, the light and the sweet, belong each of them to the body, or to any thing else?

Theaetetus:: To nothing else.

Socrates:: Are you also willing to acknowledge that such things as you perceive through one power it is impossible to perceive through another? As, that what you perceive through hearing you cannot perceive through seeing, and that what you perceive through seeing you cannot perceive through hearing?

Theaetetus:: How is it possible I should not be willing?

Socrates:: If, therefore, you dianoëtically perceive any thing about both these, you do not accomplish this through any other organ, nor yet through any other do you perceive respecting both of them.

Theaetetus:: Undoubtedly not.

Socrates:: But, with respect to sound and color, do you not, in the first place, dianoëtically conceive this concerning both of them, that both have a subsistence?

Theaetetus:: I do.

Socrates:: And, therefore that the one is different from the other, and the same with itself?

Theaetetus:: Undoubtedly.

Socrates:: And again that both are two, and each one?

Theaetetus:: And this also.

Socrates:: Are you also able to consider whether they are similar or dissimilar to each other?

Theaetetus:: Perhaps so.

Socrates:: But through what is it that you dianoëtically conceive all these things about them? For you can neither apprehend any thing common respecting them through the hearing, nor the sight. Further still, this also is an instance of what we say. For, if it were possible to consider this of both, whether or not they are salt, you know you would be able to assign that by which you considered this; and this would appear to be neither sight nor hearing, but something else.

Theaetetus:: But what should hinder this power from operating through the tongue?

Socrates:: You speak well. But with respect to that power which through a certain thing shows you that which is common to all things, and that which is common to these, and through which you denominate a thing to be, or not to be, through what instruments does it perceive the several particulars about which we were just now inquiring?

Theaetetus:: You speak of essence and non-being, similitude and dissimilitude, same and different, and the two species of numbers. For it is evident that you inquire through what instrument of the body we perceive by the soul, the even and the odd, and such other things as are consequent to these.

Socrates:: You follow, Theætetus, surpassingly well for these are the very things about which I interrogate.

Theaetetus:: But by Jupiter, Socrates, I know not what to say, except that which appeared to me at first, that there is not any peculiar organ to these as there is to sensible particulars, but it appears to me that the soul itself considers by itself such things as are common in all things.

Socrates:: You are beautiful, Theætetus, and not, as Theodorus said, deformed. For he who speaks beautifully is beautiful and good. But, besides being beautiful, you have done well with respect to me. For you have liberated me from a very copious discourse, since it appears to you that the soul considers some things by itself, and others through the powers of the body. For this was what appeared to me to be the case, and which I wished might likewise appear so to you.

Theaetetus:: It certainly does appear so to me.

Socrates:: Among what things, therefore, do you place essence? For this especially follows in all things.

Theaetetus:: I place it among those things which the soul itself by itself aspires after.

Socrates:: Do you say the same of the similar and the dissimilar, of same and different?

Theaetetus:: I do.

Socrates:: But what of the beautiful and the base, good and evil?

Theaetetus:: It appears to me that the soul principally considers the essence of these in mutually comparing them with each other, and considering in itself things past and present with reference to such as are future.

Socrates:: Take notice also of this: the soul perceives the hardness of a thing hard, through the touch, and in a similar manner the softness of a thing soft; or does it not?

Theaetetus:: It does.

Socrates:: But the essence of these, what they are, their mutual contrariety, and the essence of this contrariety, the soul endeavors to discriminate by retiring into herself, and comparing them with each other.

Theaetetus:: Entirely so.

Socrates:: But is not a power of perceiving such passions as extend to the soul through the body naturally present both with men and brutes, as soon as they are born? And is not reasoning about the essence and utility of these, generated in those in whom it is generated, with difficulty, in a long course of time, through a variety of particulars, and through discipline?

Theaetetus:: Entirely so.

Socrates:: Can we, therefore, apprehend the truth by that by which we cannot apprehend essence?

Theaetetus:: Impossible.

Socrates:: But can any one possess science of a thing, when at the same time he does not apprehend the truth of that thing?

Theaetetus:: But how can he, Socrates?

Socrates:: Science, therefore, is not inherent in passions, but is inherent in a reasoning process about them. For by this, as it appears, we may be able to touch upon essence and truth? But this cannot be effected by passions.

Theaetetus:: It appears so.

Socrates:: Can you, therefore, call passion and science the same thing, when there is such a great difference between them?

Theaetetus:: It would not be just to do so.

Socrates:: But what name do you give to seeing, hearing, smelling, tasting, becoming hot, and becoming cold?

Theaetetus:: I should give to all these the name of perception. For what other name can be given to them?

Socrates:: Do you, therefore, call the whole of this sense?

Theaetetus:: Necessarily so.

Socrates:: But we said that this was not capable of touching upon truth, because it could not apprehend the essence of a thing.

Theaetetus:: It certainly cannot.

Socrates:: Neither, therefore, can it touch upon science.

Theaetetus:: It cannot.

Socrates:: Science, therefore, and sense, Theætetus, can never be the same.

Theaetetus:: It appears, Socrates, they cannot.

Socrates:: And now it becomes most eminently apparent, that science is something different from sense. But we did not begin this conversation for the sake of finding out what science is not, but that we might discover what it is. At the same time, we have advanced thus far, as to be convinced that we must not at all seek for it in sense, but in that name which the soul then possesses when it is conversant with beings, itself by itself.

Theaetetus:: But this, Socrates, is I think called to opine.

Socrates:: You suspect rightly, my friend. And now again consider from the beginning, obliterating all that has been already said, whether you can see more clearly, since we have proceeded thus far. And again tell me what science is.

Theaetetus:: It is impossible, Socrates, to say that every opinion is science, because there are false opinions. But it appears that true opinion is science. And this is my answer. But if in the course of the inquiry it shall not appear to be so, as it does at present, I shall endeavor to say something else.

Socrates:: In this manner, Theætetus, it is proper to act—I mean, to speak with alacrity, and not, as you were at first, be averse to answer. For, if we thus conduct ourselves, we shall either find that which is the object of our search, or we may in a less degree think that we know that which we do not by any means know. Nor will a thing of this kind be a despicable gain. And now then what do you say? Since there are two species of opinion, one true, and the other false, do you define science to be true opinion?

Theaetetus:: I do. For this now appears to me to be the case.

Socrates:: Is it, therefore, worth while again to resume the discourse about opinion?

Theaetetus:: What do you mean?

Socrates:: I am now disturbed, and often have been, so that I am involved in much doubt, both with respect to myself and others, as I am not able to say what this passion in us is, and after what manner it is generated in the soul.

Theaetetus:: How is this?

Socrates:: I am now speaking of false opinion; and am considering whether we shall omit the discussion of it, or speculate about it in a different manner from what we did a little before.

Theaetetus:: But why should you be dubious in this affair, Socrates, if you see the manner in which it is proper to act? For you and Theodorus said just now not badly, respecting leisure, that nothing urges in inquiries of this kind.

Socrates:: You very properly remind me. For perhaps it will not be foreign from the purpose again to tread in the same steps. For it is better to finish a little well, than much inefficiently.

Theaetetus:: Undoubtedly.

Socrates:: What then shall we say? Shall we say that every opinion is false? or that some of us entertain false opinions, and others true—as if this was naturally the case with respect to opinions?

Theaetetus:: We should doubtless speak in this manner.

Socrates:: Does not this happen to u, as well about all things, as about each thing, that we either know or do not know? For at present I omit to speak of learning and forgetting, as subsisting between these, because it contributes nothing to our design.

Theaetetus:: But, Socrates, nothing else remains respecting every particular, except knowing or not knowing it.

Socrates:: Is it not therefore necessary, that he who forms an opinion should either form an opinion of things of which he knows something, or of things of which he knows nothing?

Theaetetus:: It is necessary.

Socrates:: Is it not likewise impossible, that he who knows a thing should not know it, or that he who does not know it should know it?

Theaetetus:: Undoubtedly.

Socrates:: Does, therefore, he who opines falsely respecting the things which he knows, opine that these are not the things which he knows, but different from them, but of which he has at the same time a knowledge? And though he knows both, is he ignorant of both?

Theaetetus:: But this, Socrates, is impossible.

Socrates:: Does he, therefore, think that the things of which he is ignorant are certain other things of which likewise he is ignorant? And can he who neither knows Theætetus nor Socrates ever be induced to think that Socrates is Theætetus, or Theætetus Socrates?

Theaetetus:: How is it possible he can?

Socrates:: Nor, again, can any one think that the things which he knows are the same as those of which he is ignorant; or that the things of which he is ignorant are the same as those which he knows.

Theaetetus:: For this would be monstrous.

Socrates:: How then can any one entertain false opinions? For it is impossible to opine in ways different from these; since we either know or do not know all things. But in these it by no means appears possible to opine falsely.

Theaetetus:: Most true.

Socrates:: Whether, therefore, ought we to consider the object of our inquiry, not by proceeding according to knowing and not knowing, but according to being and non-being?

Theaetetus:: How do you say?

Socrates:: It is not a simple thing; because he who, with respect to any thing, opines things which are not, must unavoidably opine falsely, in whatever manner the particulars pertaining to his dianoëtic part may subsist.

Theaetetus:: It is proper it should be so, Socrates.

Socrates:: How then shall we answer, Theætetus, if any one should ask us (but it is possible that what I say may take place), What man can opine that which is not, whether respecting beings themselves, or whether considered itself by itself? To this, as it appears, we should reply, that he can then opine about that which is not, when opining he does not opine the truth. Or how shall we say?

Theaetetus:: In this manner.

Socrates:: Does a thing of this kind, therefore, take place elsewhere?

Theaetetus:: Of what kind?

Socrates:: That some one sees something, and yet sees nothing.

Theaetetus:: But how can he?

Socrates:: But if he sees one certain thing, he sees something which ranks among beings. Or do you think that the one does not rank among beings?

Theaetetus:: I do not.

Socrates:: He, therefore, who sees one certain thing sees a certain being.

Theaetetus:: It appears so.

Socrates:: And, therefore, he who hears a certain thing hears one certain thing, and a certain being.

Theaetetus:: He does so.

Socrates:: And does not he also who touches a certain thing touch one certain thing, and that which has a being, since it is one thing?

Theaetetus:: And this also.

Socrates:: And does not he who opines opine one certain thing?

Theaetetus:: I grant it.

Socrates:: He, therefore, who opines that which has no being opines nothing.

Theaetetus:: So it appears.

Socrates:: But he who opines nothing does not opine in any respect.

Theaetetus:: It is evident, as it appears.

Socrates:: It is impossible, therefore, to opine that which is not, either about beings, or itself by itself.

Theaetetus:: So it appears.

Socrates:: To opine falsely, therefore, differs from opining things which are not.

Theaetetus:: It appears that it differs.

Socrates:: For neither is false opinion inherent in us in this manner, nor in the manner which we considered a little before.

Theaetetus:: It is not.

Socrates:: Perhaps, therefore, we may denominate this as follows.

Theaetetus:: How?

Socrates:: We say that a certain foreign opinion is a false opinion, when some one, by an alteration in his dianoëtic energy, says that a certain thing is a different thing. For thus he always opines that which has a being, but he opines one thing instead of another; and, in consequence of erring in that which he considers, he may be justly said to opine falsely.

Theaetetus:: You now appear to me to have spoken with the greatest rectitude, For, when any one opines that which is deformed instead of that which is beautiful, or that which is beautiful instead of that which is deformed, then he truly opines falsely.

Socrates:: It is evident, Theætetus, that you despise, and do not reverence me.

Theaetetus:: In what respect?

Socrates:: I do not think I appear to you to have apprehended that which is truly false, when asked whether the swift and the slow, the light and the heavy, or any other contraries, do not become contrary to themselves, according to their own nature, but according to the nature of things which are contrary to them. This, therefore, I dismiss, lest you should be confident in vain. But is it agreeable to you, as you say, that to opine falsely is the same as to opine foreign to the purpose?

Theaetetus:: It is.

Socrates:: It is possible, therefore, according to your opinion, to establish by the dianoëtic power one thing as another, and not as that thing which it is.

Theaetetus:: It is possible.

Socrates:: When, therefore, the dianoëtic power does this, is it not necessary that it should either cogitate about both these, or about one of them?

Theaetetus:: It is necessary.

Socrates:: And, therefore, it must either cogitate about them both together, or separately.

Theaetetus:: Most excellent.

Socrates:: But do you call dianoëtic energy the same as I do?

Theaetetus:: What do you call it?

Socrates:: The discourse which the soul itself evolves in itself about the objects of its consideration. I explain the thing to you like an unskillful person. For the soul, when it energizes dianoëtically, appears to me to do nothing else than discourse with itself, by interrogating and answering, affirming and denying. But when, having defined, it asserts without opposition, whether more slowly or more rapidly, then I call this opinion. So that I denominate to opine, to speak, and opinion, a discourse not directed to any other, nor accompanied with voice, but directed to itself. But what do you call it?

Theaetetus:: The same.

Socrates:: When any one, therefore, opines that one thing is another, he says to himself, as it appears, that one thing is another.

Theaetetus:: Undoubtedly.

Socrates:: Recollect, whether if at any time you say to yourself, that the beautiful is more than any thing base, or that the unjust is just, or, which is the summit of all, whether you ever attempt to persuade yourself, that that which is one thing is more than any thing another thing. Or, on the contrary, have you never dared even in sleep to say to yourself, that things even are entirely odd, or any thing else of this kind?

Theaetetus:: Certainly never.

Socrates:: Do you think, then, that any other person, whether he is in a sane or an insane condition, will seriously dare to say to himself, and this accompanied with persuasion, that a horse is necessarily an ox, or two things one thing?

Theaetetus:: By Jupiter, I do not.

Socrates:: If, therefore, to opine is for a man to speak to himself, no one, while he says and opines both these, and touches upon both with his soul, will say and opine that one of those is the other. But we will dismiss, if you please, this word *the other*. For my meaning is this: that no one will opine that the base is the beautiful, or any thing else of this kind.

Theaetetus:: You have my permission, Socrates, to dismiss this word; and the case appears to me to be as you say.

Socrates:: He, therefore, who opines both these cannot opine that one of them is the other.

Theaetetus:: So it appears.

Socrates:: And again, he who only opines one of these, but by no means the other, can never opine that one of them is the other.

Theaetetus:: True. For he would be compelled to touch upon that about which he does not opine.

Socrates:: Neither, therefore, can he who opines both, nor he who only opines, one of them, opine foreign to the purpose So that he will say nothing, who defines false opinion to be heterodoxy. For neither will false opinion appear to reside in us in this manner, nor in that which we have already mentioned.

Theaetetus:: It does not appear that it will.

Socrates:: But, Theætetus, if this should not appear to be the case, we should be compelled to confess many things, and of an absurd nature.

Theaetetus:: What are these?

Socrates:: I will not tell you, till I have endeavored to consider the affair in every possible way. For I should be ashamed, with respect to that of which we are in doubt, if we were compelled to confess what I now say. But if we shall discover the object of our search, and become free, then we may speak concerning others, as suffering these things, while we shall be railed beyond the reach of ridicule. But if we should be involved in inextricable doubts, and thus become abject, and filled with nausea, then, I think, we should permit our discourse to trample on us, and use us as it pleases. Hear, then, whether I have found out any passage to the object of our inquiry.

Theaetetus:: Only speak.

Socrates:: I shall not say that we rightly consented, when we acknowledged that it was impossible any one could opine that the things which he knows are things which he does not know, and thus be deceived: but I say that this is in a certain respect possible.

Theaetetus:: Do you say that which I suspected might be the case when we made this assertion, as that I knowing Socrates, and seeing another person at a distance whom I do not know, might think it was Socrates, whom I do know? For that which you say takes place in a thing of this kind.

Socrates:: Are we not, therefore, driven from the hypothesis which caused us to acknowledge, that, with respect to things which we know, we are ignorant of them, at the same time that we know them?

Theaetetus:: Entirely so.

Socrates:: We must not, therefore, establish this hypothesis, but the following: and perhaps some one will in a certain respect assent to us, or perhaps will oppose us. But we are now in that situation in which it is necessary to examine the discourse which perverts all things. Consider, therefore, whether I say any thing to the purpose. Is it then possible for any one who formerly was ignorant of something, afterwards to learn that thing?

Theaetetus:: It certainly is possible.

Socrates:: And can he not also learn another and another thing?

Theaetetus:: Why should he not?

Socrates:: Place for me, for the sake of an example, one waxen image in our souls: in this soul a greater image, and in that a lesser: and in this of purer, but in that of impurer and harder wax: and in some again of a moister kind, but in others sufficiently tempered.

Theaetetus:: I place it.

Socrates:: We must say, then, that this is a gift of Mnemosyne the mother of the Muses; and that in this, whatever we wish to remember of things which we have seen, or heard, or understood, is impressed like images made by a seal, by insinuating itself into our senses and conceptions. And further, that we remember and know that which is impressed in this waxen image, as long as the impressed figure remains; but when it is destroyed, or can be no longer impressed, we forget and cease to know.

Theaetetus:: Be it so.

Socrates:: Consider, therefore, whether he who knows these impressions, and attends to what he either sees or hears, can after this manner opine falsely?

Theaetetus:: After what manner?

Socrates:: With respect to what he knows, at one time opining that he knows, and at another time that he does not know. For we improperly granted above, that it was impossible for this to happen.

Theaetetus:: But how do you now say?

Socrates:: It is requisite thus to speak about these things, defining them from the beginning: That it is impossible that he who knows any thing, and has a monument of it in his soul, but does not perceive it, can opine that it is something else which he knows, and the image of which he possesses, but does not perceive. And again, it is impossible that any one can opine that what he knows is that which he does not know, and of which he does not possess the image: or that what he does not know is that which he knows. It is likewise impossible for any one to opine that what he perceives is some other sensible object different from what he perceives: or that what he perceives is something which he does not perceive: or that what he does not perceive is something else which he does not perceive: or that what he does not perceive is something which he does perceive. Nor, again, can any one opine that what he knows and perceives, and of which he has a sensible image, is something else which he knows and perceives, and of which he in like manner possesses a sensible image: or that what he knows and perceives, and of which he possesses an image in a proper manner, is the same as that which he simply knows: or that what he knows and perceives, and similarly retains, is that which he perceives: or again, that what he neither knows nor perceives is the same as that which he simply does not know: or that what he neither knows nor perceives is the same as that which he does not perceive. For in all these it is impossible to opine falsely. It remains, therefore, that false opinion must take place in some things of this kind, if it has any subsistence.

Theaetetus:: In what things, therefore? that I may see whether I can learn better from these. For at present I do not follow you.

Socrates:: In those things which any one knowing, opines that they are certain other things which he knows and perceives; or which he does not know, but perceives; or which both knowing and perceiving, he opines that he knows and perceives.

Theaetetus:: I now leave you behind, at a greater distance than before.

Socrates:: Hear then again as follows: I knowing Theodorus, and remembering in myself what kind of man he is, and in like manner Theætetus, sometimes I see them, and sometimes I do not: and sometimes I touch them, and sometimes not; and hear or perceive them with some other sense: but sometimes I do not apprehend any thing respecting you by any sense, yet nevertheless I remember you, and know you in myself.

Theaetetus:: Entirely so.

Socrates:: Learn this, therefore, the first of the things which I wish to evince to you, that it is possible for a man not to perceive that which he knows, and that it is likewise possible for him to perceive it.

Theaetetus:: True.

Socrates:: Does it not often happen that a man does not perceive that which, he does not know, and likewise often happen that he perceives it only?

Theaetetus:: This also is true.

Socrates:: See, then, if you can now follow me better. Socrates knows Theodorus and Theætetus, but sees neither of them, nor is any other sense present with him respecting them. Can he ever in this case opine in himself, that Theætetus is Theodorus? Do I say any thing, or nothing?

Theaetetus:: You speak pertinently; for he cannot thus opine.

Socrates:: This then was the first of those things which I said.

Theaetetus:: It was.

Socrates:: But the second was this, that while I know one of you, but do not know the other, and perceive neither of you, I can never opine that he whom I know is the man whom I do not know.

Theaetetus:: Right.

Socrates:: But the third was this, that while I neither know nor perceive either of them, I can never opine that he whom I do not know is some other person whom I do not know: and in a similar manner think that you again hear all that was said above, in which I can never opine falsely respecting you and Theodorus, neither while knowing nor while ignorant of both; nor while knowing one, and not knowing other. And the same may be said respecting the senses, if you apprehend me.

Theaetetus:: I do apprehend you.

Socrates:: It remains, therefore, that I must then opine falsely, when knowing you and Theodorus, and preserving in that waxen image, as in a seal ring, the impression of both of you for a long time, and not sufficiently seeing both of you, I endeavor, by attributing the proper impression of each to my particular sight, so to harmonize this impression to the vestige of sight, that a recognizance may take place: but afterwards failing in the attempt, and changing like those that change their shoes, I transfer the vision of each to a foreign impression, and err by being similarly affected to the passions of light in mirrors, where things on the right hand flow back to those on the left hand. For then heterodoxy takes place, and I opine falsely.

Theaetetus:: It appears, Socrates, that the passion of opinion is such as in a wonderful manner you have represented it to be.

Socrates:: Still further, when knowing both of you, I besides this perceive one of you, and not the other, then I have a knowledge of him whom I do not perceive, but not according to sense; which is what I said before, but you did not then understand me.

Theaetetus:: I did not.

Socrates:: This however I said, that he who knows and perceives one of you, and has a knowledge of you according to sense, will never opine that this object of his knowledge and perception is some other person whom he knows and perceives, and of whom he has a knowledge according to sense. Was not this what I said?

Theaetetus:: It was.

Socrates:: But in a certain respect that which I just now said is omitted,—I mean, that false opinion then takes place, when any one knowing and seeing both of you, or possessing any other sense of both of you, and likewise retaining your images in his soul, has not a proper perception of either of you, but, like an unskillful archer, wanders from and misses the mark, which is therefore denominated a falsehood.

Theaetetus:: And very properly so.

Socrates:: When, therefore, sense is present to one of the impressions, and not to the other, and that which belongs to the absent sense is adapted to the sense then present, in this case the dianoëtic part is entirely deceived. And, in one word, it is not possible, as it appears, either to be deceived, or to have a false opinion, respecting things which a man has neither ever known or perceived, if we now say any thing to the purpose. But respecting things which we know and perceive, in these opinion is rolled about and evolved, becoming both true and false. And when it collects and marks its proper resemblances in an opposite and straight forward direction, then it is true, but when in a transverse and oblique direction, false.

Theaetetus:: These things, therefore, Socrates, are beautifully said.

Socrates:: And you will much more say so, when you hear what follows. For to opine the truth is beautiful, but to lie is base.

Theaetetus:: Undoubtedly.

Socrates:: They say, therefore, that hence the following particulars take place. When that waxen image in the soul is profound, abundant, smooth, and sufficiently perfect, then the several particulars which proceed through the senses, being impressed in this heart of the soul, (as Homer calls it, obscurely signifying its similitude to wax,) so as to become pure signatures, and of sufficient profundity,—in this case they become lasting. And, in the first place, men with such impressions as these are docile: in the next place, they are endued with a good memory: and, in the third place, they do not change the impressions of the senses, but opine the truth. For, as these impressions are clear, and situated in an ample region, they swiftly distribute sensible particulars to their proper resemblances, which are called beings; and such men are denominated wise. Or does it not appear so to you?

Theaetetus:: It does in a transcendent degree.

Socrates:: When, therefore, any one's heart is hairy (which the perfectly wise poet has celebrated), or when it is of a muddy nature, and not of pure wax, or when it is very moist, or hard, then it is in a bad condition. For those in whom it is moist are indeed docile, but become oblivious; and those in whom it is hard are affected in a contrary manner. But men in whom it is hairy and rough, in consequence of its possessing something of a stony nature, mingled with earth or clay, these contain obscure resemblances. The resemblances too are obscure in those in whom this heart is hard: for in this case it has no profundity. This likewise happens to those in whom it is moist: for, in consequence of the impressions being confounded, they swiftly become obscure. But if, besides all this, they fall on each other, through the narrowness of their receptacle, since it belongs to a little soul, then the resemblances become still more obscure. All such as these, therefore, opine falsely. For when they see, or hear, or think about any thing, as they are unable swiftly to attribute things to their resemblances, they judge erroneously; because they see, hear, and understand for the most part perversely. And such as these are called deceivers, and are said to be ignorant of things.

Theaetetus:: You speak with the greatest rectitude of all men, Socrates.

Socrates:: Shall we say, then, that false opinions reside in us?

Theaetetus:: Very much so.

Socrates:: And true opinions likewise?

Theaetetus:: And true opinions.

Socrates:: I think, therefore, it has been sufficiently acknowledged by us, that these two opinions have a subsistence more than any thing.

Theaetetus:: It has in a transcendent degree.

Socrates:: A loquacious man, Theætetus, appears in reality to be a dire and unpleasant man.

Theaetetus:: With reference to what do you speak in this manner?

Socrates:: With reference to my own indocility, and real loquacity, at which I am indignant. For what else than a loquacious man can he be called, who through his stupidity draws discourse upwards and downwards, not being able to procure persuasion, and who with difficulty abandons an assertion?

Theaetetus:: But why are you indignant?

Socrates:: I am not only indignant, but I am fearful what I should answer, if any one should ask me, O Socrates, have you found that false opinion is neither in the mutual energies of the senses, nor in dianoëtic energies, but in the conjunction of sense with the dianoëtic energy? But I think I should say, boasting, as if we had discovered something beautiful, that we had found it to be so.

Theaetetus:: What has been just now evinced appears to me, Socrates, to be no despicable thing.

Socrates:: Do you, therefore, he will say, assert that we can never opine, that a man whom we alone dianoëtically conceive, but do not see is a horse, which we neither at present see, nor touch, nor perceive by any other sense, but only dianoëtically conceive? I think I should say that I do assert these things.

Theaetetus:: And very properly.

Socrates:: Will it not, therefore, follow, he will say, according to this reason, that no one will ever think eleven, which he only dianoëtically perceives, to be twelve, which he only dianoëtically perceives? What answer would you give?

Theaetetus:: I should answer, that some one seeing or touching eleven things, might opine them to be twelve; but that he would never opine in this manner respecting the numbers which he possesses in his dianoëtic part.

Socrates:: But what, he will say, do you think that any one can speculate about five and seven—I do not mean five and seven men, or any thing else of this kind, but five and seven themselves, which we said were in his soul like impressions in wax—so as never to opine falsely respecting them? Or will not some men, when they consider these things by themselves, and inquire about their amount, opine that they are eleven, and others that they are twelve? Or will all men say and opine that they are twelve?

Theaetetus:: By Jupiter they will not; but the greater part will opine that they are eleven. And if any one should ask them the amount of more numbers, their answer would be still more erroneous. For I think that you rather speak about every number.

Socrates:: You think rightly. Consider, therefore, whether this ever happens, that any one opines that the twelve which are impressed in his soul are eleven?

Theaetetus:: It seems this does happen.

Socrates:: Does not this then revolve to the former assertions? For he who suffers that which he knows, opines that it is some other thing which he also knows, which we said was impossible: and from this very circumstance we are compelled to confess, that there is no such thing as false opinion, lest the same person should be forced to know and at the same time not to know the same things.

Theaetetus:: Most true.

Socrates:: Hence it appears that false opinion must be otherwise defined than a mutation of the dianoëtic energy with respect to sense. For, if this was a true definition, we should never be deceived in dianoëtic conceptions themselves. But now there is either no such thing as false opinion, or, if there is, a man may be ignorant of that which at the same time he knows, And: which of these will you choose?

Theaetetus:: You have proposed an ambiguous choice, Socrates.

Socrates:: But it appears that reason will not permit both these to take place. At the same time, however (for all things must be attempted), what if we should endeavor to divert ourselves of shame?

Theaetetus:: How?

Socrates:: By being willing to say what it is to have a scientific knowledge of a thing.

Theaetetus:: But why would this be impudent?

Socrates:: You do not appear to understand that the whole of our discourse from the beginning is an investigation of science, as if we did not know what it is.

Theaetetus:: I understand you.

Socrates:: But does it not appear to be the part of impudent persons, to show what it is to have a scientific knowledge, at the same time that they are ignorant what science is? But, Theætetus, it is now some time since we have not spoken with purity. For we have ten thousand times employed the terms, We know, and We do not know, We have a scientific knowledge, and We have not a scientific knowledge, as if we mutually understood something, in which at the same time we are ignorant what science is But at present, if you are willing, we will use the terms, to be ignorant, and to understand, in such a manner as it is proper to use them, since we are destitute of science.

Theaetetus:: But how in this case, Socrates, shall we be able to discourse?

Socrates:: Not at all while I remain as I am. But I might be able, if I was contentious: and now, if any contentious person was present, he would say that he abstained from such terms, and would very much deter us from what I say. But, as we are bad, man, are you willing I should dare to say what it is to know scientifically? For it appears to me to be worth while.

Theaetetus:: Dare then, by Jupiter. For you will greatly deserve to be pardoned for the attempt.

Socrates:: Have you heard what at present they say it is to know scientifically?

Theaetetus:: Perhaps so; but at present I do not remember.

Socrates:: They say that it is the habit of science.

Theaetetus:: True.

Socrates:: We, therefore, shall make a trifling alteration, and say that it is the possession of science.

Theaetetus:: But in what do you say this differs from that?

Socrates:: Perhaps in nothing. But when you have heard that which appears to me to be the case, examine it together with me.

Theaetetus:: I will, if I can.

Socrates:: To *possess*, therefore, does not appear to me to be the same as to have a thing. Thus, if any one buys a garment, and, having the power of using it when he pleases, does not wear it, we should not say that he *has* the garment, but that he *possesses* it.

Theaetetus:: And very properly.

Socrates:: See then whether it is possible to possess science in this manner, without having it: just as if some one having caught certain wild doves, or other wild birds, and having constructed an aviary for them at home, should feed and nourish them. For in a certain respect we should say that he always has, because he possess them. Should we not?

Theaetetus:: We should.

Socrates:: But in another respect we should say that he by no means has them, but that he has a power, since he has shut them up for his own use, in an enclosure of his own, of taking and having them when he pleases, and of again dismissing them: and that he can do this as often as it is agreeable to him.

Theaetetus:: Exactly so.

Socrates:: Again, as before we devised I know not what waxen figment in the soul, so now let us place a certain aviary containing all sorts of birds in the soul; some of which fly in flocks, apart from others; but others again fly in small companies; and some fly alone, wherever they may happen to find a passage.

Theaetetus:: Let it be so: but what follows?

Socrates:: It is requisite to say, that this receptacle is empty in children: but in the place of birds we must understand sciences, and say, that he who possesses science, and confines it in this enclosure, learns or discovers that thing of which he possesses the science; and that this is to have a scientific knowledge.

Theaetetus:: Be it so.

Socrates:: But again, consider, when any one is willing to investigate sciences, and receiving to have them, and afterwards dismiss them, by what names all these particulars ought to be expressed. Shall we say by the same names as at first, when sciences were *possessed*, or by other names? But from what follows you will more clearly understand what I say. Do you not call arithmetic an art?

Theaetetus:: I do.

Socrates:: Suppose this to be the hunting of the sciences of all the even and the odd.

Theaetetus:: I suppose it.

Socrates:: But I think by this art the arithmetician has the sciences of numbers in his power, and delivers them to others.

Theaetetus:: He does so.

Socrates:: And we say that he who delivers these sciences teaches, but that he who receives them learns; and that he who *has* them, in consequence of possessing them in that enclosure which we mentioned, knows scientifically.

Theaetetus:: Entirely so.

Socrates:: But attend to what follows. Does not he who is a perfect arithmetician know scientifically all numbers? For the sciences of all numbers are in his soul.

Theaetetus:: Undoubtedly.

Socrates:: Does not a man of this kind sometimes enumerate with himself internally, and sometimes externally, such things as have number?

Theaetetus:: Certainly.

Socrates:: But to number is considered by us as nothing else than the speculation of the quantity of any number.

Theaetetus:: It is so.

Socrates:: He, therefore, who has a scientific knowledge, by thus speculating, appears not to know, though we have confessed that he knows every number. Do you hear these ambiguities?

Theaetetus:: I do.

Socrates:: When, therefore, we assimilated sciences to the possession and fowling of doves, we said that fowling was two-fold; one kind being prior to acquisition, and subsisting for the sake of possession; but the other being posterior to acquisition and possession, and subsisting for the sake of receiving and having in the hands things which were formerly possessed. So these sciences, which any one had formerly been endued with by learning, and which he had known before, may again be learnt, by resuming and retaining the science of every particular which he formerly possessed, but which he has not at hand in his dianoëtic part.

Theaetetus:: True.

Socrates:: On this account, I just now inquired how names respecting these things were to be used, as when an arithmetician numbers, or a grammarian reads. For, in either case, he who knows again applies himself to know by himself what he already knows.

Theaetetus:: But this is absurd, Socrates.

Socrates:: Shall we therefore say, that the grammarian reads, or the arithmetician numbers, things of which he is ignorant, though we have granted that the one knows all letters, and the other every number?

Theaetetus:: But this also is irrational.

Socrates:: Are you, therefore, willing we should say, that we are not at all concerned how any one may employ the names of knowing and learning? But since we have determined that it is one thing to possess, and another to have, science, we must say that it is impossible for any one not to possess that which he does possess. So that it will never happen that any one does not know that which he does know; though about this very thing false opinion may be received. For it may happen that we may take the science of one thing for the science of another, when, hunting after some one of our inward sciences, we erroneously receive instead of it some other that flies away. As when any one opines that eleven things are twelve: for then, receiving the science of eleven things instead of twelve, he takes out of his aviary a pigeon instead of a dove.

Theaetetus:: It is reasonable to suppose so.

Socrates:: But when he receives that which he endeavors to receive, then he is free from falsehood, and opines things which are. And after this manner false and true opinion subsist and thus none of the particulars which disturbed us before will be any longer an impediment to us. Perhaps, therefore, you assent to me: or how will you do?

Theaetetus:: Assent to you.

Socrates:: We are then now freed from the dilemma respecting a man knowing and at the same time not knowing a thing. For it will no longer happen that we shall not possess that which we do possess, whether we judge falsely or not. However, a more dire passion than this appears to me to present itself to the view.

Theaetetus:: What is that?

Socrates:: If the permutation of sciences should ever become false opinion.

Theaetetus:: But how?

Socrates:: In the first place, is it not absurd, that he who has the science of any thing should be ignorant of that thing, not through ignorance, but through the science of the thing? And in the next place, that he should opine this thing to be that, and that thing this? And is it not very irrational to suppose, that when science is present the soul should know nothing, but should be ignorant of all things? For, from this assertion, nothing hinders but that ignorance when present may enable a man to know something, and cause blindness to see, if science ever makes a man to be ignorant of any thing.

Theaetetus:: Perhaps, Socrates, we have not properly introduced birds, as we alone placed sciences in the soul, but we ought at the same time to have placed the various kinds of ignorance flying in companies; and a man employed in fowling, at one time receiving science, and at another time ignorance, about the same thing: through ignorance opining what is false, but through science the truth.

Socrates:: It is by no means easy, Theætetus, not to praise you. However, again consider what you have said. For let it be as you say. But he who receives ignorance, you will say, opines things false. Is it not so?

Theaetetus:: It is.

Socrates:: But yet he will not think that he opines falsely.

Theaetetus:: He will not.

Socrates:: But that he opines truly. And he will be affected with respect to those things in which he errs, like one endued with knowledge.

Theaetetus:: Undoubtedly.

Socrates:: He will therefore opine that he has by fowling obtained science, and not ignorance.

Theaetetus:: It is evident.

Socrates:: Hence, after having made a long circuit, we have again fallen into the first doubt. For that reprover whom we mentioned before will laughing say to us, O best of men, whether can he who knows both science and ignorance opine that what he knows is some other thing which he also knows? or, knowing neither of these, can he opine that a thing which he does not know is some other thing which he does not know? or, knowing one of these, and not the other, can he opine that what he knows is that which he does not know? or that what he does not know is that which he does know? Or, again, tell me whether there are sciences of sciences, and of the various kinds of ignorance, which he who possesses, and encloses in other certain ridiculous aviaries, or waxen figments, knows so far as he possesses them, though he has them not at hand in his soul? And thus you will be compelled to revolve infinitely about the same thing, without making any proficiency. What shall we reply to these things, Theætetus?

Theaetetus:: By Jupiter, Socrates, I do not know what ought to be said.

Socrates:: Does not, therefore, O boy, the discourse of this man very properly reprove us, and evince that we have not done right in investigating false opinion prior to science, and leaving science undiscussed? But it is impossible to know this till we have sufficiently determined what science is.

Theaetetus:: It is necessary, Socrates, to suspect at present, as you say.

Socrates:: What then can any one again say from the beginning respecting science? For we are not yet weary of speaking.

Theaetetus:: Not in the least, if you do not forbid it.

Socrates:: Tell me, then, in what manner we can so speak concerning science as not to contradict ourselves.

Theaetetus:: In the same manner as we attempted before, Socrates; for I have not any thing else to offer.

Socrates:: In what manner do you mean?

Theaetetus:: That true opinion is science. For to opine truly is without error; and every thing that proceeds from it is beautiful and good.

Socrates:: He who in fording a river, Theætetus, is the leader of others, if interrogated respecting the depth of the water, will answer that the water will show its own depth.

In like manner, if, entering into the present subject, we inquire, the impediment to our passage will, perhaps, present to us the object of our search: but, if we remain where we are, nothing will become manifest.

Theaetetus:: You speak well: but let us proceed and consider.

Socrates:: Is not this, therefore, a thing of brief consideration? For the whole of art, and its professors, evince that art is not science.

Theaetetus:: How so? And who are these professors?

Socrates:: Those that excel all others in wisdom, and who are called orators and lawyers. For these persuade, but do not teach by their art, and cause their hearers to opine whatever they please. Or do you think there are any teachers so skilful, as to be able in cases of robbery? and other violence, to evince sufficiently the truth of the transactions by means of a little water?

Theaetetus:: I by no means think there are: but these men persuade.

Socrates:: But do you not say that to effect persuasion is the same thing as to produce opinion?

Theaetetus:: Undoubtedly.

Socrates:: When, therefore, judges are justly persuaded respecting things which he who sees can alone know, but by no means otherwise, is it possible that thus judging by report, and receiving true opinion without science, they can judge rightly respecting things of which they are persuaded, if we admit that they judge well?

Theaetetus:: I entirely think they can.

Socrates:: But, my friend, if true opinion, judgment, and science are the same, that consummate judge can never opine with rectitude without science: but now each appears to be something different.

Theaetetus:: I had forgotten, Socrates, what I heard a certain person say concerning science, but I now remember. But he said that true opinion in conjunction with reason is science, but that without reason it is void of science; and that things cannot be known scientifically of which there is no reason, but that things may be thus known which have a reason.

Socrates:: How well you speak! But tell me how he divided things which may be scientifically known, and which cannot be so known, that we may see whether you and I similarly understand them.

Theaetetus:: I do not know that I can discover how he divided these; but I can follow another person discoursing.

Socrates:: Hear, then, a dream for a dream. For I also appear to have heard from certain persons that the first elements, as it were, from which we and other things are composed cannot be rationally described. For they say that each of these can alone be denominated by itself, but cannot be called any thing else, neither as that which is nor as that which is not; because essence, or non-essence, would thus be assigned to it. But it is requisite to add nothing, if any one speaks of a thing itself alone. For neither the term this, nor that, nor each, nor alone, nor any other such appellations, should be employed, because these are applied to things in a circular progression, and are different from the things to which they are added. But it is necessary, if possible, to speak of the thing itself, and, if it has a proper definition, to assert something respecting it, without the addition of any thing else. Now, however, no one of things first can be made the subject of discourse; for it does not admit of any thing else than a denomination.

But the things composed from these, as they are themselves woven together, so from the weaving together of their names discourse is produced. For the connection of names is the essence of discourse. Hence, the elements themselves are ineffable and unknown, but at the same time are objects of sense: but syllables are known and effable, and may be apprehended by true opinion. When, therefore, any one receives a true opinion of any thing, without reason, then his soul perceives the truth respecting it, but he does not know the thing; because he who is incapable of giving and receiving a reason concerning a thing must be destitute of science respecting it. But when he receives a reason, then he may be able to know all these, and acquire science in perfection. Have you not, therefore, heard a dream, or is it any thing else?

Theaetetus:: It is nothing else.

Socrates:: Is it, therefore, agreeable to you that we should establish science to be true opinion in conjunction with reason?

Theaetetus:: Very much so.

Socrates:: Have we, therefore, Theætetus, this very day detected that which formerly many wise men investigating grew old before they discovered?

Theaetetus:: To me, Socrates, what was just now said appears to be well said.

Socrates:: And it is very fit it should: for what science can there be without reason and right opinion? But one of the assertions does not please me.

Theaetetus:: What is that?

Socrates:: That which appears to be very elegantly said; that the elements of speech are unknown, but the genus of syllables known.

Theaetetus:: Is not this right?

Socrates:: Take notice. For we have as hostages of discourse those very paradigms, which he employing said all that I have related.

Theaetetus:: What are these paradigms?

Socrates:: The things pertaining to letters, viz., elements and syllables. Or do you think that he who said what we have related spoke in this manner looking to any thing else than these?

Theaetetus:: To nothing else than these.

Socrates:: Let us, therefore, receiving these, examine them, or rather ourselves, whether we learn letters in this manner, or not. In the first place, then, have syllables a definition, but not the elements?

Theaetetus:: Perhaps so.

Socrates:: To me, also, it very much appears to be so. If, therefore, any one should thus ask respecting the first syllable of the word Socrates, O Theætetus, viz., what is *So*? what would you answer?

Theaetetus:: That it is *S* and *o*.

Socrates:: You have, therefore, this definition of the syllable.

Theaetetus:: I have.

Socrates:: But come, in a similar manner give me a definition of the letter *S*.

Theaetetus:: But how can any one speak of the elements of an element? For *S*, Socrates, is only a certain sound of mute letters, the tongue, as it were, hissing: but of the letter *B* there is neither voice nor sound, nor of most of the elements. So that it is very well said that they are ineffable, among which the well-known seven vowels are alone vocal, but have not any reason or definition.

Socrates:: This therefore, my friend, we have rightly asserted respecting science.

Theaetetus:: So it appears.

Socrates:: But have we rightly shown that a syllable is known, but not an element?

Theaetetus:: It is likely.

Socrates:: But with respect to this syllable, whether shall we say that it is both the elements; and, if there are more than two, that it is all those elements? Or shall we say that it is one certain idea produced from the composition of the elements?

Theaetetus:: It appears to me that we should say it is all the elements.

Socrates:: See, then, with respect to the two letters *S* and *o*, which form the first syllable of my name, whether he who knows this syllable knows both these letters?

Theaetetus:: Undoubtedly.

Socrates:: He knows, therefore, *S* and *o*.

Theaetetus:: Yes.

Socrates:: But what, if he knows each, and, knowing neither, knows both?

Theaetetus:: But this would be dire and absurd, Socrates.

Socrates:: But if it is necessary to know each, if any one knows both, it is necessary that he who in any future time knows a syllable should previously know all the elements: and so that beautiful assertion escaping from us will disappear.

Theaetetus:: And very suddenly too.

Socrates:: For we did not well secure it. For, perhaps, a syllable ought to have been adopted, and not the elements;

but one certain species produced from them, and which is different from the elements.

Theaetetus:: Entirely so: and perhaps the thing takes place in this manner rather than in that.

Socrates:: We should consider, therefore, and not in so effeminate a manner betray a great and venerable assertion.

Theaetetus:: We ought not, indeed.

Socrates:: Let a syllable then, as we just now said, be one idea produced from several according elements, as well in letters as in all other things.

Theaetetus:: Entirely so.

Socrates:: It ought not, therefore, to have any parts.

Theaetetus:: Why not?

Socrates:: Because the whole of that which has parts must: necessarily be all the parts. Or do you say that a whole which is produced from parts is one certain species different from all the parts?

Theaetetus:: I do.

Socrates:: But with respect to the all, and the whole, whether do you call each of these the same, or different?

Theaetetus:: I have not any thing clear to say; yet since you order me to answer with alacrity, I will venture to say that each of these is different.

Socrates:: Your alacrity, Theætetus, is right; but whether your answer is so, we must consider.

Theaetetus:: It is necessary.

Socrates:: Does not the whole, therefore, differ from the all, according to your present assertion?

Theaetetus:: It does.

Socrates:: But do all things and the all differ in any respect? As when we say one, two, three, four, five, six: or twice three, or thrice two, or four and two, or three and two and one, or five and one;—whether in all these do we say the same thing, or that which is different?

Theaetetus:: The same thing.

Socrates:: Do we say any thing else than six?

Theaetetus:: Nothing else.

Socrates:: According to each mode of speaking, therefore, we find that all are six.

Theaetetus:: We do.

Socrates:: Again, therefore, we do not say any one thing when we say all things.

Theaetetus:: It is necessary.

Socrates:: Do we say any thing else than six things?

Theaetetus:: Nothing else.

Socrates:: In things, therefore, which consist from number, we say that the all is the same with all things.

Theaetetus:: So it appears.

Socrates:: Should we not, therefore, say respecting them, that the number of an acre is the same as an acre?

Theaetetus:: We should.

Socrates:: And in a similar manner that the number of a stadium is a stadium?

Theaetetus:: Yes.

Socrates:: And so respecting the number of an army, and an army itself, and all other such like particulars? For every number, being an all, is each of these particulars.

Theaetetus:: It is.

Socrates:: But is the number of each of these any thing else than parts?

Theaetetus:: Nothing else.

Socrates:: Such things, therefore, as have parts consist of parts.

Theaetetus:: It appears so.

Socrates:: But it is acknowledged that all the parts are the all, since every number is the all.

Theaetetus:: It is so.

Socrates:: The whole, therefore, is not from parts: For it would be the all, in consequence of being all the parts.

Theaetetus:: It does not appear that it is.

Socrates:: But does a part belong to any thing else than to a whole?

Theaetetus:: It belongs to the all.

Socrates:: You fight strenuously, Theætetus. But is not the all, then this very thing the all, when nothing is wanting to it?

Theaetetus:: It is necessary.

Socrates:: And is not, after the same manner, the whole that which it is, when nothing is wanting to it? And is it not true, that that which is in want of any thing, in consequence of this deficiency, is neither the whole, nor the all?

Theaetetus:: It now appears to me, that the whole and the all in no respect differ from each other.

Socrates:: Do we not say that the whole and the all are all the parts of that of which they are the parts?

Theaetetus:: Entirely so.

Socrates:: Again, therefore, that we may resume what we attempted before, if a syllable is not elements, must it not necessarily follow that it has not elements as parts of itself? or that, if it is the same with them, it must with them be similarly known?

Theaetetus:: It must.

Socrates:: Lest, therefore, this should take place, We must establish the one to be different from the other.

Theaetetus:: We must.

Socrates:: But if elements are not parts of a syllable, can you assign any other things which are parts of a syllable, and yet are not the elements of it?

Theaetetus:: I should by no means grant, Socrates, that things which are not the elements can be the parts of a syllable. For it is ridiculous, neglecting the elements, to proceed in search of other things.

Socrates:: According to the present reasoning, therefore, Theætetus, a syllable will be in every respect one particular impartible idea.

Theaetetus:: It appears so.

Socrates:: Do you remember, therefore, my friend, that we admitted a little before, and thought it was well said, that there could be no reason or definition of things first, from which other things are composed, because each thing considered itself by itself is not a composite; and that neither the term ‘to be’ can with propriety be accommodated to it, nor the term ‘this,’ because these are asserted as things different and foreign; and that this very circumstance causes a thing to be ineffable and unknown?

Theaetetus:: I do remember.

Socrates:: Is any thing else, therefore, than this the cause of any thing being uniform and impartible? For I see no other cause.

Theaetetus:: It does not appear that there is any other.

Socrates:: Will not a syllable, therefore, be a species of this kind, since it has no parts, and is one idea?

Theaetetus:: Entirely so.

Socrates:: If, therefore, a syllable is many elements, and a certain whole, and these elements are its parts, syllables and elements may be similarly known, and are similarly effable, since all the parts appear to be the same with the whole.

Theaetetus:: And very much so.

Socrates:: But if a syllable is one impartible thing, a syllable and an element are equally ineffable and unknown. For the same cause renders them such.

Theaetetus:: I cannot say otherwise.

Socrates:: We must not, therefore, admit the assertion, that a syllable is a thing known and effable, but an element the contrary.

Theaetetus:: We must not, if we are persuaded by this reasoning.

Socrates:: But what again, if any one should assert the contrary, would you not rather admit it from those things of which you were conscious when you learnt your letters?

Theaetetus:: What things are those?

Socrates:: As that you endeavored to learn nothing else than how to know the elements by your eyes and ears, each itself by itself, that the position of them, when they were pronounced or written, might not disturb you.

Theaetetus:: You speak most true.

Socrates:: But is the learning to play on the harp in perfection any thing else than the ability of knowing what sound belongs to every chord? For this every one agrees should be called the elements of music.

Theaetetus:: It is nothing else.

Socrates:: As, therefore, we are skilled in elements and syllables, if it was requisite to conjecture from these respecting other things, we should say that the genus of the elements possessed a much clearer and more principal knowledge than that of syllables, with respect to receiving each discipline in perfection. And if any one should say that a syllable is a thing known, but that an element is naturally unknown, we should think that he jested either voluntarily or involuntarily.

Theaetetus:: And very much so.

Socrates:: But, as it appears to me, there are yet other demonstrations of this thing. We must not, however, on account of these particulars, forget the thing proposed by us, viz., to investigate the assertion, that reason united with true opinion becomes most perfect science.

Theaetetus:: It is proper, therefore, to consider this.

Socrates:: Come then, inform me what is the signification of the word logos: For it appears to me to signify one of three things.

Theaetetus:: What are they?

Socrates:: The first will be to make its own dianoëtic conception apparent, through voice, in conjunction with verbs and nouns; thus impressing opinion in the flux through the mouth, as in a mirror, or in water. Or does not logos appear to you to be a thing of this kind?

Theaetetus:: It does: and we say that he who does this speaks.

Socrates:: Cannot, therefore, every one do this—I mean, point out with more or less swiftness what appears to him respecting particulars—unless he is either naturally deaf or dumb? And thus it will follow, that whoever opines any thing rightly will appear to opine in conjunction with logos; and true opinion will never subsist without science.

Theaetetus:: True.

Socrates:: We must not, therefore, easily condemn him who asserts science to be that which we just now mentioned, as if he said nothing. For perhaps this was not his meaning; but, being asked what each particular is, he might be able to answer the interrogator, through the elements.

Theaetetus:: How do you mean, Socrates?

Socrates:: The same as Hesiod, when he speaks of a chariot as composed of a hundred pieces of wood; which I am not able to say, nor do I think you are. But we should be contented, if, when asked what a chariot is, we were able to say that it is wheels, an axis, plankings, arches, and a yoke.

Theaetetus:: Entirely so.

Socrates:: But he perhaps would think we are ridiculous, just as if we were asked concerning your name, and should answer by a syllable; considering us indeed in what we say as thinking and speaking properly, but that we are grammarians, and that we possessed and spoke grammatically the definition of the name of Theætetus. He would likewise say, that no one can speak scientifically about any thing, till he has brought it to a conclusion through the elements, in conjunction with true opinion, as we observed before.

Theaetetus:: We did so.

Socrates:: After this manner, therefore, he would think we may possess true opinion respecting the chariot; but that he who is able to pervade its essence through those hundred pieces of wood, can also comprehend its logos or definition, in conjunction with true opinion; and, instead of being one that opines, will thus possess art and science, respecting the essence of the chariot, determining the whole of it, through its elements.

Theaetetus:: Does not this appear to you, Socrates, to be well said?

Socrates:: If it appears so to you, my friend, and if you admit that this discursive process through an element respecting every thing is logos, or reason, and that this is the case with the process through syllables, or that it is something still greater, void of reason. Tell me what you think, that we may consider it.

Theaetetus:: But I very much admit this.

Socrates:: But do you admit it in such a manner as to think that any one has a scientific knowledge of any thing, when the same thing appears to him at different times to belong to different things; or when he opines different things at different times of the same thing?

Theaetetus:: Not I, by Jupiter.

Socrates:: Have you forgotten that both you and others thought in this manner, when you first learnt your letters?

Theaetetus:: Do you mean to say, that we thought that at one time one letter, and at another time another, belonged to the same syllable; and that the same letter was at one time to be referred to its proper syllable, and at another time to a different syllable?

Socrates:: This is what I mean.

Theaetetus:: By Jupiter, I do not forget; nor do I think that those who are thus affected possess a scientific knowledge.

Socrates:: What then, when any one at that time writing the word Theætetus, opines that he ought to write *Th* and *e*, and accordingly writes these letters; and again attempting to write Theodorus, opines that he ought to write *Th* and *e*, and writes these letters, shall we say that he knows scientifically the first syllable of your names?

Theaetetus:: But we just now acknowledged, that he who is affected in this manner does not yet know.

Socrates:: Does any thing, therefore, hinder the same person from being affected in the same manner respecting the second, third, and fourth syllable?

Theaetetus:: Nothing hinders.

Socrates:: Will not such a one, therefore, in consequence of his discursive process through an element, write Theætetus with true opinion when he write, it in its proper order?

Theaetetus:: It is evident he will.

Socrates:: Will he not, therefore, be still void of science, but opine rightly, as we said?

Theaetetus:: Yes.

Socrates:: And will he not possess reason in conjunction with right opinion? For he wrote making a discursive process through an element, which we acknowledge is logos or reason.

Theaetetus:: True.

Socrates:: There is, therefore, my friend, such a thing as right opinion in conjunction with reason, which it is not yet proper to call science.

Theaetetus:: It appears so.

Socrates:: We are enriched then, as it appears, with a dream, while we opine that we possess a most true definition of science.

Theaetetus:: Or we ought not yet to blame. For perhaps some one may not define *logos* in this manner, but may choose the remaining species of the three, one of which we said would be adopted by him who defined science to be right opinion in conjunction with reason.

Socrates:: You have very properly reminded me: for one species still remains. For the first species was an image as it were of dianoëtic conception in voice; and the second, that which we just now mentioned, a procession to the whole through an element.

Theaetetus:: But what do you say the third is?

Socrates:: That which the multitude would say it is, to be able to assign a certain mark by which the object of inquiry differs from all other things.

Theaetetus:: Can you give me as an instance a certain logos of this kind respecting any thing?

Socrates:: If you are willing, I think it will be sufficient for you to admit respecting the sun, that it is the most splendid of all the natures that revolve in the heavens round the earth.

Theaetetus:: Entirely so.

Socrates:: Take then that for the sake of which this was said. But it is that which we just now mentioned: that when, you receive the difference of any thing, by which it differs from other things, you will receive, as some say, the logos or definition: but as long as you touch upon any thing common, you will have the definition of those things to which this something common belong?

Theaetetus:: I understand you: and it appears to me very proper to call a thing of this kind logos.

Socrates:: But he who, in conjunction with right opinion, receives the difference by which any thing whatever is distinguished from other things, will be endued with science respecting that of which he formerly possessed opinion.

Theaetetus:: We say it is so.

Socrates:: Now therefore, Theætetus, in consequence of approaching nearer to what is said, as to a certain adumbration, I find I do not in the least understand it; but, while I beheld it at a distance, it appeared to me that something was spoken to the purpose.

Theaetetus:: But how is this?

Socrates:: I will tell you, if I can. When I have a right opinion respecting you, if I likewise receive your definition, then I know you; but if not, then I only opine. Is it not so?

Theaetetus:: It is.

Socrates:: But logos, or definition, was an interpretation of your difference.

Theaetetus:: It was.

Socrates:: When, therefore, I only opine, I do not perceive by the dianoëtic energy any one of those things by which you differ from others.

Theaetetus:: You do not, as it appears.

Socrates:: I, therefore, only dianoëtically perceive something common, which you possess no less than another.

Theaetetus:: It is necessary.

Socrates:: By Jupiter, then, inform me how, in a thing of this kind, I rather opine you than any other? For, suppose me thus dianoëtically considering.: This is Theætetus, who is a man, and has nostrils, eyes, and a mouth, and in like manner each of the other members. Does this dianoëtic conception cause me to perceive Theætetus more than Theodorus? or, as it is said, more than the last of the Mysians?

Theaetetus:: How should it?

Socrates:: But if I not only dianoëtically consider that he has nostrils and eyes, but likewise that he has a flat nose and prominent eyes, shall I opine you more than myself, or any other such person?

Theaetetus:: You will not.

Socrates:: But I think I shall not opine in myself, Theætetus, till a certain monument of his flat nose, exhibiting its difference from other flat noses which I perceive, is impressed in me, and in like manner other particulars from which you are composed; which, if I had met with you yesterday, would remind me, and cause me to form a right opinion respecting you.

Theaetetus:: Most true.

Socrates:: Right opinion, therefore, respecting every thing will be conversant with difference.

Theaetetus:: It appears so.

Socrates:: What then will be the consequence if reason is assumed together with right opinion? For it would be ridiculous if any one should order us to opine in what it is that any thing differs from other things.

Theaetetus:: How so?

Socrates:: For, respecting things of which we have a right opinion, so far as they differ from others, he would order us to assume a right opinion of them, so far as they differ from others. And thus, like the circumvolution of a whip, or a pestle, or the like, from this mandate nothing would be said. For it might more justly be called the mandate of one blind; since it would order us to receive things which we possess, that we might learn things which we opine; and thus would be perfectly similar to the mandate of one deprived of sight.

Theaetetus:: Tell me what it is you just now asked.

Socrates:: If some one, O boy, ordering us to receive reason, should at the same time order us to know, but not opine difference, reason would be a pleasant thing, and the most beautiful of all things pertaining to science. For to know is in a certain respect to receive science. Is it not?

Theaetetus:: It is.

Socrates:: When asked, therefore, as it appears, what science is, he would answer, that it is right opinion with the science of difference. For, according to him, this will be the assumption of reason.

Theaetetus:: It appears so.

Socrates:: But it is in every respect foolish for us, who are investigating science, to say that it is right opinion with science, either of difference or of any thing else. Neither sense therefore, Theætetus, nor true opinion, nor reason in conjunction with true opinion, will be science.

Theaetetus:: It does not appear that they will.

Socrates:: Are we, therefore, pregnant and parturient, my friend, with any thing further respecting science, or have we brought forth every thing?

Theaetetus:: By Jupiter, through you I have already said more than I had in myself.

Socrates:: Does not, therefore, all this show that the obstetric art has brought for us that which is vain, and which does not deserve to be nourished?

Theaetetus:: Entirely so.

Socrates:: If, therefore, after this you should endeavor to become pregnant with other things, and your endeavor should be successful, you will, through the present discussion, be full of better things. But if you should be empty, you will be less troublesome to your companions, and more moderate and mild; in consequence of not thinking that you know things which you do not know. For thus much my art is able to accomplish, but nothing more.

Nor do I know any thing of those particulars which are and have been known to great and wonderful men. But this obstetric art I and my mother are allotted from divinity; she about women, and I about ingenuous and beautiful youths. Now, therefore, I must go to the porch of the king, to answer to the accusation of Melitus. But tomorrow, Theodorus, we will again return hither.

THE END OF THE THEÆTETUS.

# **Euthyphron.**

or

On Holiness.

Translated by Henry Cary.

Euthyphron. Socrates.

---

Euthyphro:: What new thing has happened, Socrates, that you have left your haunts in the Lyceum, and are now waiting about the king's porch! You surely have not a trial before the king as I have.

Socrates:: The Athenians, Euthyphron, do not call it a trial, but an indictment.

Euthyphro:: What say you! Some one, it seems, has preferred an indictment against you, for I cannot believe that you have indicted any one else.

Socrates:: Surely not.

Euthyphro:: Has some one else, then, indicted you?

Socrates:: Certainly.

Euthyphro:: Who is he?

Socrates:: I do not myself very well know the man, Euthyphron; for he appears to me to be young and unknown; however they call him Melitus, I think; and he is of the borough of Pithos, if you know any Melitus of Pithos, who has lank hair, a thin beard, and a hook nose.

Euthyphro:: I don't know him, Socrates, but what indictment has he preferred against you?

Socrates:: What? One not unworthy of a high-minded man, as it appears to me; for it is no contemptible matter for one who is so young, to be versed in so weighty a business. For he knows, as he says, how the youth are corrupted, and who they are that corrupt them. And he appears to be a shrewd man, and, observing my ignorance, he comes before the city, as before a mother, to accuse me of corrupting those of the same age with himself. And he appears to me to be the only one of our statesmen who knows how to govern rightly; for it is right first of all to pay attention to the young, that they may become as virtuous as possible, just as it is proper for a good husbandman first of all to pay attention to the young plants, and afterwards the others: so Melitus probably first purges us who corrupt the blossoms of youth, as he says; then after this it is clear that by paying attention to the older men, he will be the cause of very many and great blessings to the city, as may be expected to happen from one who makes such a beginning.

Euthyphro:: I wish it were so, Socrates; but I dread lest the contrary should happen. For, in reality, he appears to me, in attempting to injure you, to begin by assailing the city from the hearth. But tell me, by doing what does he say that you corrupt the youth?

Socrates:: Absurd even to hear mentioned, my admirable friend: for he says that I am a maker of gods, and, as if I made new gods and did not believe in the ancient ones, he has indicted me on their account, as he says.

Euthyphro:: I understand, Socrates, it is because you say that a demon constantly attends you. As if, then, you introduced innovations in religion he has preferred this indictment against you, and he comes to accuse you before the court, knowing that such charges are readily entertained by the multitude. And me too, when I say any thing in the public assembly concerning divine things, and predict to them what is going to happen, they ridicule as mad; and although nothing that I have predicted has not turned out to be true, yet they envy all such men as we are.

However we ought not to heed them, but pursue our own course.

Socrates:: But, my dear Euthyphron, to be laughed at is perhaps of no consequence. For the Athenians, as it appears to me, do not care very much whether they think a man is clever, so long as he does not communicate his wisdom; but when they think a man makes others so, they are angry, either through envy, as you say, or from some other cause.

Euthyphro:: With respect to that matter, how they are affected towards me I am not very anxious to try.

Socrates:: For perhaps you seem to show yourself but rarely, and to be unwilling to impart your wisdom; but I am afraid that, from my love of mankind, I appear to them to tell every man too freely whatever I know, not only without pay, but even gladly offering myself, if any one is willing to listen to me. If then, as I just now said, they were going to laugh at me, as you say they do at you, there would be nothing unpleasant in passing some time in a court of justice, jesting and laughing; but if they are in earnest, how this affair may terminate is unknown, except to you prophets.

Euthyphro:: Perhaps, however, it will be of no consequence, Socrates, but you will conduct your cause to your mind, as I think I shall mine.

Socrates:: Have you too a cause, Euthyphron? Do you defend it, or prosecute?

Euthyphro:: I prosecute.

Socrates:: Whom?

Euthyphro:: One, in prosecuting whom, I seem to be mad.

Socrates:: What then? do you prosecute some one that can fly?

Euthyphro:: He is very far from being able to fly, for he happens to be very old.

Socrates:: Who is he?

Euthyphro:: My father.

Socrates:: Your father, my excellent friend?

Euthyphro:: Certainly.

Socrates:: But what is the charge, and what is the trial about?

Euthyphro:: Murder, Socrates.

Socrates:: By Hercules! Surely, Euthyphron, the generality of men are ignorant how this can ever be right. For I do not think any common person could do this properly, but he must be very far advanced in wisdom.

Euthyphro:: Far indeed, by Jupiter, Socrates.

Socrates:: Is it any one of your relations who has been killed by your father? It must be so; for surely you would not prosecute him for the murder of a stranger.

Euthyphro:: Ridiculous, Socrates, to think that it makes any difference whether the person killed is a stranger or a relation, and that we ought not to consider this only, whether he killed him justly or not, and, if justly, let him go, but if not, prosecute him, even though the murderer should live at the same hearth and the same table with you. For the pollution is equal, if you knowingly associate with such a one, and do not purify both yourself and him by bringing him to justice. However, the deceased was a dependant of ours, and when we were farming at Naxos, he worked there for us, for hire. This man, then, having drunk too much wine and being in a passion with one of our slaves, slew him. My father, therefore, having bound his hands and feet, and thrown him into a pit, sends a man here to enquire of the interpreter of religious matters, what he ought to do with him; and in the mean time he neglected the prisoner, and took no care of him as being a murderer, and as if it was of no consequence if he died; which did happen. For he died from hunger, cold, and the chains, before the messenger returned from the interpreter. For this reason my father and all my relatives are angry with me, because I, for the sake of a murderer, accuse my father of murder, who, as they say, did not kill him, and even if he had killed him, as the deceased was a murderer, they say that I ought not to concern myself about such a man; for that it is impious for a son to prosecute his father for murder; little knowing, Socrates, what the divine rule is with respect to holiness and impiety.

Socrates:: But, by Jupiter, Euthyphron, do you think you have such an accurate knowledge of divine things, how they are circumstanced, with respect both to things holy and impious, that those things having been done as you say, you are not afraid, in bringing your father to trial, lest you should commit an impious action?

Euthyphro:: I should be a sorry person, Socrates, nor would Euthyphron in any respect excel the generality of men, if I did not know all such things accurately.

Socrates:: Admirable Euthyphron, it will be a most excellent thing for me to become your disciple, and, before Melitus’s indictment comes on for hearing, to object this very thing to him, saying, that I hitherto deemed it of the utmost consequence to be acquainted with divine things, and that now, since he says I am guilty of acting rashly, and introducing innovations with respect to divine things, I have become your disciple. If then, I should say, Melitus, you admit that Euthyphron is wise in such matters and thinks rightly, suppose that I do so too, and do not bring me to trial; but if otherwise, call him, the teacher, to account before you do me, as one who corrupts the elders, both me and his father, me by teaching me, and him by admonishing and punishing him: and if he is not persuaded by me and does not let me off the trial, or indict you instead of me, it will be necessary to say these very things in the court, which I have already objected to him.

Euthyphro:: By Jupiter, Socrates, if he should attempt to indict me, I should find, I think, his weak side, and we should much sooner have a discussion in the court about him than about me.

Socrates:: And I, my dear friend, knowing this, am anxious to become your disciple, being persuaded that some others and this Melitus do not appear even to see you, though he has so very keenly and easily seen through me, as to indict me for impiety. Now therefore, by Jupiter, tell me what you just now asserted you know so well; what do you say is piety and impiety, both with respect to murder and other things? Is not holiness itself the same with itself in every action, and again, is not impiety, which is contrary to all holiness, in every case similar to itself, and has not every thing that is impious some one character with respect to impiety?

Euthyphro:: Most assuredly, Socrates.

Socrates:: Tell me, then, what you say holiness is, and what impiety?

Euthyphro:: I say, then, that that is holy which I am now doing, to prosecute any one who acts unjustly either with respect to murder or sacrilege, or who commits any similar offence, whether he be one’s father or mother, or whoever else he may be, but not to prosecute him is impious. For observe, Socrates, what a great proof I will give you that the law is so, as I have also said to others, showing that it is rightly done, when one does not spare one who acts impiously, whoever he may be. For all men believe that Jupiter is the best and most just of the gods, and yet they admit that he put his own father in chains, because he unjustly swallowed his children, and again, that he mutilated his father for other similar reasons, but they are indignant with me, because I prosecute my father for having acted unjustly, and thus these men contradict themselves with respect to the gods and me.

Socrates:: Is this the reason then, Euthyphron, for which I am defendant in this indictment, because when any one says things of this kind respecting the gods, I admit them with difficulty? on which account, as it seems, some one will say that I am guilty. Now, therefore, if these things appear so to you likewise, who are well versed in such matters, we must of necessity, as it seems, agree with you. For what else can we say, who acknowledge that we know nothing about these things? But tell me, by Jupiter, who presides over friendship, do you think that these things did really happen so?

Euthyphro:: And things still more wonderful than these, Socrates, which the multitude are unacquainted with.

Socrates:: Do you then think that there is in reality war among the gods one with another, and fierce enmities and battles, and many other things of the kind such as are related by the poets, and with representations of which by good painters both other sacred places have been decorated, and moreover in the great Panathenaic festival a veil full of such representations is carried into the Acropolis. Must we say that these things are true, Euthyphron?

Euthyphro:: Not these only, Socrates; but, as I just now said, I can, if you please, relate to you many other things respecting divine affairs, which I am sure you will be astonished to hear.

Socrates:: I should not wonder; but you shall relate these things to me hereafter, at our leisure. Now, however, endeavor to explain to me more clearly what I just now asked you. For you have not yet, my friend, sufficiently answered my question as to holiness what it is, but you have told me that what you are now doing is holy, prosecuting your father for murder.

Euthyphro:: And I said the truth, Socrates.

Socrates:: Perhaps so. But, Euthyphron, you may also say that many other things are holy.

Euthyphro:: For such is the case.

Socrates:: Do you remember, then, that I did not beg this of you, to teach me some one or two from among many holy things, but the particular character itself by which all holy things are holy? For you surely said that unholy things are unholy, and holy things holy, from one character: do you not remember?

Euthyphro:: I do.

Socrates:: Teach me, then, this very character, what it is, in order that looking to it, and using it as a model, I may say that such a thing of all that you or any one else does is holy.

Euthyphro:: But if you wish it, Socrates, I will also tell you this.

Socrates:: I do indeed wish it.

Euthyphro:: That, then, which is pleasing to the gods is holy, and that which is not pleasing to them is impious?

Socrates:: Admirably, Euthyphron, you have answered just as I begged you to answer. Whether truly, however, I do not yet know, but you will doubtless convince me that what you say is true.

Euthyphro:: Certainly.

Socrates:: Come then, let us consider what we say. A thing that is pleasing to the gods, and a man who is pleasing to the gods, are holy; but a thing that is hateful to the gods, and a man that is hateful to the gods, are impious; but the holy is not the same with the unholy, but most contrary to it: is it not so?

Euthyphro:: Assuredly.

Socrates:: And this appears to have been well said.

Euthyphro:: I think so, Socrates; for it has been said.

Socrates:: And that the gods quarrel, Euthyphron, and are at variance with each other, and that there are enmities amongst them one towards another: has not this also been said?

Euthyphro:: It has.

Socrates:: But, my excellent friend, variance about what occasions enmity and anger? Let us consider it thus. If you and I differed about numbers, which of two was the greater, would a difference on this point make us enemies and angry with each other, or having recourse to computation, should we soon be freed from such dissension?

Euthyphro:: Certainly.

Socrates:: And if we differed about the greater and the less, by having recourse to measuring should we not soon put an end to our difference?

Euthyphro:: Such is the case.

Socrates:: And by having recourse to weighing, as I think, we should be able to decide respecting the heavier and the lighter?

Euthyphro:: How not?

Socrates:: About what then disagreeing and in what being unable to come to a decision, do we become enemies to, and angry with, each other? Perhaps you cannot readily answer, but consider when I say whether they are these, the just and the unjust, the beautiful and the base, the good and the evil.

Are not these the things about which disagreeing, and not being able to arrive at a satisfactory decision respecting them, we become enemies to each other when we do become so, both you and I, and all other men?

Euthyphro:: This, indeed, is difference itself, Socrates, and it is about these things.

Socrates:: But what? If the gods, Euthyphron, differ at all, must they not differ about these very things?

Euthyphro:: Most necessarily.

Socrates:: According to your account, then, noble Euthyphron, different gods think different things just, and beautiful and base, and good and evil. For surely they could not quarrel with each other if they did not differ about these things; is it not so?

Euthyphro:: You say rightly.

Socrates:: Do they not severally, then, love the things which they consider beautiful and good and just, and hate their contraries?

Euthyphro:: Certainly.

Socrates:: And these same things, as you admit, some consider to be just, and others unjust; disputing about which they quarrel and make war on each other; is it not so?

Euthyphro:: Just so.

Socrates:: The same things, therefore, as it seems, are both hated and loved by the gods, and these are both hateful to the gods and pleasing to the gods.

Euthyphro:: It seems so.

Socrates:: From this reasoning also the same things must be holy and unholy, Euthyphron?

Euthyphro:: It appears so.

Socrates:: You have not, therefore, answered my question, my admirable friend: for I did not ask you this, what is at the same time both holy and impious; but what is pleasing to the gods is also hateful to the gods, as it seems. So that, Euthyphron, in punishing your father, as you are now doing, it is not at all wonderful if in doing this you do what is pleasing to Jupiter, but odious to Saturn and Heaven, and what is pleasing to Vulcan, but odious to Juno; and if any other of the gods differs from another on this point, to them also in like manner.

Euthyphro:: But I think, Socrates, that no one of the gods will differ from another about this, and say that he ought not to be punished who has slain any one unjustly.

Socrates:: But what? Have you ever heard any man doubting, Euthyphron, whether he who has slain another unjustly, or has committed any other injustice, ought to be punished?

Euthyphro:: They never cease doubting about these things, both elsewhere and in courts of justice. For they who commit very many acts of injustice say and do every thing in their power to escape punishment.

Socrates:: Do they also confess, Euthyphron, that they have acted unjustly, and confessing, do they nevertheless say that they ought not to be punished?

Euthyphro:: They by no means say this.

Socrates:: They do not, therefore, do and say every thing in their power. For I think they dare not say nor doubt this, that if they act unjustly they ought to suffer punishment; but, I think, they deny that they have acted unjustly: is it not so?

Euthyphro:: You say truly.

Socrates:: They do not, therefore, doubt this, whether he who acts unjustly ought to be punished; but this, perhaps, they doubt, who has acted unjustly, and by doing what, and when.

Euthyphro:: You say truly.

Socrates:: Do not, then, the very same things happen to the gods if they quarrel about things just and unjust, according to your statement, and do not some say that they act unjustly towards each other, and others again deny it? For surely, my admirable friend, no one, either of gods or men, dare maintain this, that he who acts unjustly ought not to suffer punishment.

Euthyphro:: Yes, and what you say is true, Socrates, at least in general.

Socrates:: But they who doubt, Euthyphron, doubt, I think, about each particular that has been done, both men and gods, if the gods do doubt: and when they differ about any action, some say that it has been done justly, and others unjustly: is it not so?

Euthyphro:: Certainly.

Socrates:: Come then, my dear Euthyphron, teach me too, that I may become wiser, what proof you have that all the gods think he died unjustly, who serving for wages and having committed homicide, and being put in chains by the master of the deceased, died in his fetters before he that put him in chains received an answer respecting him from the interpreters, as to what he ought to do; and that for such a cause it is right for a son to prosecute and demand judgment against his father. Come, endeavor to make it clear to me, with respect to this, that all the gods without exception consider this action to be right. And if you make this sufficiently clear, I will never cease extolling you for your wisdom.

Euthyphro:: But perhaps this is no trifling matter, Socrates; though I could prove it to you very plainly.

Socrates:: I understand you; I appear to you to be more dull of apprehension than the judges; for it is evident that you will prove to them that it was unjust, and that all the gods hate such actions.

Euthyphro:: Very plainly, Socrates, if only they will hear what I have to say.

Socrates:: But they will hear you, if only you shall appear to speak well. However, while you were speaking, I made this reflection, and considered within myself: if Euthyphron should certainly convince me that all the gods think such a death to be unjust, what more shall I have learnt from Euthyphron as to what is holy, and what impious? For this action, as it seems, would be hateful to the gods. Yet what was lately defined has not appeared from this, namely what is holy, and what not: for that which is hateful to some gods appeared also to be pleasing to others. So that I grant you this, Euthyphron, and if you please let all the gods think it unjust, and let them all hate it. Shall we, then, make this correction in the definition, and say, that what all the gods hate is impious, and what they love is holy; but that what some love, and others hate, is neither, or both? Are you willing that we should give this definition of the holy and the impious?

Euthyphro:: What hinders, Socrates?

Socrates:: Nothing hinders me, Euthyphron; but do you, for your part, consider whether, assuming this, you can thus easily teach me what you promised?

Euthyphro:: But I should say that the holy is that which all the gods love, and the contrary, the impious, that which all the gods hate.

Socrates:: Shall we examine this, then, Euthyphron, whether it is well said? or shall we let it pass, and thus concede both to ourselves and others, that if any one only says that any thing is so, we shall allow that it is? or must we examine what the speaker says?

Euthyphro:: We must examine it: for my part, however, I think that this is now well said.

Socrates:: We shall soon, my good friend, know this more clearly. For consider it in this way: Is the holy loved by the gods because it is holy; or is it holy, because it is loved?

Euthyphro:: I don’t understand what you mean, Socrates.

Socrates:: I will endeavor, then, to express myself more clearly. We say that a thing is carried, and carries; that it is led, and leads; that it is seen, and sees: and you understand that all things of this kind are different from each other, and in what they differ?

Euthyphro:: For my part, I seem to understand it.

Socrates:: Is not, then, that which is beloved one thing, and that which loves different from it?

Euthyphro:: How not?

Socrates:: Tell me, then, is that which is carried, carried because one carries it, or for some other reason?

Euthyphro:: No, but for this.

Socrates:: And that which is led, because one leads it, and that which is seen, because one sees it?

Euthyphro:: Certainly.

Socrates:: One does not therefore see a thing because it is seen, but on the contrary it is seen because one sees it: nor does one lead a thing because it is led, but it is led because one leads it: nor does one carry a thing because it is carried, but it is carried because one carries it. Is my meaning clear, then, Euthyphron? I mean this, that if one does any thing, or suffers any thing, one does it not because it is done; but it is done because one does it; nor does one suffer any thing because it is suffered, but it is suffered because one suffers: do you not admit this to be the case?

Euthyphro:: I do.

Socrates:: Is not, then, the being loved, something either done or suffered by some one?

Euthyphro:: Certainly.

Socrates:: And is not the case the same with this as with all the former instances; those who love it do not love it because it is loved, but it is loved, because they love it?

Euthyphro:: Necessarily so.

Socrates:: What then do we say respecting holiness, Euthyphron? Do not all the gods love it according to your statement?

Euthyphro:: Yes.

Socrates:: Is it for this reason, because it is holy, or for some other reason?

Euthyphro:: No, but for this.

Socrates:: They love it then because it is holy, but it is not holy because they love it.

Euthyphro:: It seems so.

Socrates:: Therefore because the gods love it, it is beloved, and that which is pleasing to the gods is pleasing to them.

Euthyphro:: How not?

Socrates:: That which is pleasing to the gods, therefore, is not holy, Euthyphron, nor is that holy which is pleasing to the gods, as you say, but one is different from the other.

Euthyphro:: How so, Socrates?

Socrates:: Because we agree that what is holy is therefore loved because it is holy, and that it is not holy because they love it is it not so?

Euthyphro:: Yes.

Socrates:: But that which is pleasing to the gods because the gods love it, is from the very circumstance of their loving it pleasing to them; but they do not love it because it is pleasing to them.

Euthyphro:: You say truly.

Socrates:: But, my dear Euthyphron, if the being pleasing to the gods and being holy were the same thing, since that which is holy is loved because it is holy, that which is pleasing to the gods would also be loved because it is pleasing to them; and if that which is pleasing to the gods were pleasing to them because they love it, that which is holy would also be holy because they love it. Now, however, you see that they are contrary, as being altogether different from each other. For the one is such as is loved because they love it, but the other is loved because it is of such a character that it ought to be loved. And you appear, Euthyphron, when asked what holiness is, not to have been willing to make known to me its essence, but to have mentioned an affection to which this same holiness is subject, namely the being loved by all the gods; but what it is, you have not yet told me. If therefore it is agreeable to you, do not conceal it from me, but again say from the beginning what holiness is, whether it is loved by the gods, or is subject to any other affection: for we shall not differ about this. But tell me frankly what the holy is and what the impious.

Euthyphro:: But, Socrates, I know not how to tell you what I think. For whatever we put forward some how constantly moves from its position, and will not remain where we have placed it.

Socrates:: What you have advanced, Euthyphron, appears to resemble the statues of my ancestor Dædalus. And if I had said and laid down these things, you would probably have joked me, for that owing to my relationship to him, my works, by way of discussion, escape, and will not remain where one places them. But now, for the hypotheses are yours, there is need of some other raillery. For they will not remain with you, as you too perceive yourself.

Euthyphro:: But it appears to me, Socrates, that what has been said needs pretty much the same raillery. For I am not the person who causes them to shift about in this way and not remain in the same place, but you appear to me to be the Dædalus. For as far as I am concerned, they would have remained as they were.

Socrates:: I appear, then, my friend, to have become much more skilful than him in my art, in that he only made his own works moveable, but I besides my own, as it seems, make those of others so. And this, moreover, is the most wonderful thing in my art, that I am skilful against any will. For I should wish that my reasonings should remain and be immovably fixed, rather than have the riches of Tantalus, in addition to the skill of Dædalus. But enough of this. Since, however, you appear to be too nice, I will assist you to show how you may teach me respecting holiness, and not be tired before you have done. For see, whether it does not appear to you to be necessary that every thing that is holy should be just.

Euthyphro:: To me it does.

Socrates:: Is, then, every thing that is just also holy, or is every thing that is holy just, but not every thing that is just holy, but partly holy, and partly something else?

Euthyphro:: I do not follow your questions, Socrates.

Socrates:: And yet you are younger no less than wiser than I am; but, as I said, you are too delicate through abundance of wisdom. However, my blessed friend, exert yourself; for it is not difficult to understand what I mean. For I mean the contrary to what the poet said, who wrote, "You are unwilling to mention Jove the creator who made this universe: for where fear is there is also shame." I, however, differ from this poet. Shall I tell you in what respect?

Euthyphro:: By all means.

Socrates:: It does not appear to me, that where fear is there is also shame. For there appear to me to be many who fearing diseases, poverty, and many other things of the kind, fear indeed but are by no means ashamed of what they fear. Does it not appear so to you?

Euthyphro:: Certainly.

Socrates:: But wherever shame is, there is also fear: for is there any one who is ashamed of and blushes at any thing, that is not afraid of and does not fear the reputation of baseness?

Euthyphro:: Assuredly he does fear it.

Socrates:: It is not right, therefore, to say, that where fear is, there also is shame, but where shame is, there also is fear; not however, wherever there is fear, there is also shame. For I think that fear is more extensive than shame;

for shame is a part of fear, as the odd is a part of number, so that it does not follow that wherever number is, there also is the odd, but wherever the odd is, there also is number. Do you follow me now?

Euthyphro:: Perfectly.

Socrates:: I asked you, then, about a thing of this kind above, whether where the just is, there also is the holy, or where the holy is, there also is the just, but wherever the just is, there is not always the holy: for the holy is a part of the just. Shall we say thus, or does it seem to you otherwise?

Euthyphro:: No, but thus. For you appear to me to speak correctly.

Socrates:: Observe then what follows. If the holy is a part of the just, it is necessary, as it seems, that we should find out what part of the just the holy is. If then you were to ask me about some of the things before mentioned, for instance, what part of number the even is, and what number it is, I should say that it is not scalene, but isosceles. Does it not appear so to you?

Euthyphro:: It does.

Socrates:: Do you, then, also endeavor in like manner to teach me what part of the just the holy is, that I may tell Melitus no longer to treat me unjustly nor indict me for impiety, since I have now sufficiently learnt from you what things are pious and holy, and what not.

Euthyphro:: That part of justice then, Socrates, appears to me to be pious and holy, which is concerned about our care for the gods; but that which is concerned about our care for mankind is the remaining part of justice.

Socrates:: You appear to me, Euthyphron, to speak well; but I still require a trifle further. For I do not yet understand what care you mean. For you surely do not mean such care is to be had for the gods as is employed about other things. For we say, for instance, not every one knows how to take care of horses, but a groom; do we not?

Euthyphro:: Certainly.

Socrates:: For surely the groom's business is the taking care of horses.

Euthyphro:: Yes.

Socrates:: Nor does every one know how to take care of dogs, but a huntsman.

Euthyphro:: Just so.

Socrates:: For the huntsman's business is the taking care of dogs.

Euthyphro:: Yes.

Socrates:: And the herdsman's of cattle.

Euthyphro:: Certainly.

Socrates:: But holiness and piety of the gods, Euthyphron; do you say so?

Euthyphro:: I do.

Socrates:: All care, therefore, aims at the same thing, that is to say, it is for some good and advantage of that which is taken care of, as you see that horses, taken care of by one skilled in the groom's business, are benefited and become better: do they not seem so to you?

Euthyphro:: They do.

Socrates:: Dogs also are benefited by one skilled in the huntsman's business, and oxen by that of the herdsman, and all other things in like manner: do you think that the care is employed for the injury of that which is taken care of?

Euthyphro:: Not I, by Jupiter.

Socrates:: But for its advantage?

Euthyphro:: How should it not?

Socrates:: Is holiness, therefore, since it is a care for the gods, an advantage to the gods, and does it make the gods better? And would you admit this, that when you do any thing holy, you make some one of the gods better?

Euthyphro:: Not I, by Jupiter.

Socrates:: Nor do I think, Euthyphron, that you mean this; I am far from doing so: but for this reason I asked you what care for the gods you mean, not thinking that you mean such as this.

Euthyphro:: And rightly, Socrates; for I do not mean such as this.

Socrates:: Be it so: but what care for the gods will holiness be?

Euthyphro:: That, Socrates, which slaves take of their masters.

Socrates:: I understand: it will be a kind of service, as it seems, paid to the gods.

Euthyphro:: Certainly.

Socrates:: Can you then tell me, to the performance of what the service of physicians is subservient? Do you not think it is to health?

Euthyphro:: I do.

Socrates:: But what? to the performance of what work is the service of shipwrights subservient?

Euthyphro:: Clearly, Socrates, to that of a ship.

Socrates:: And that of architects, to houses?

Euthyphro:: Yes.

Socrates:: Tell me, then, my excellent friend; to the performance of what work will the service of the gods be subservient? For it is clear that you know, since you say that you have a knowledge of divine things beyond that of other men.

Euthyphro:: And I say truly, Socrates.

Socrates:: Tell me then, by Jupiter, what is that very beautiful work which the gods effect, by employing us as servants.

Euthyphro:: They are many and beautiful, Socrates.

Socrates:: So do generals, my friend; though you could easily tell the principal of them, that they effect victory in war; is it not so?

Euthyphro:: How should I not?

Socrates:: Husbandmen too, I think, effect many and beautiful things; but the principal thing they effect is the production of food from the earth.

Euthyphro:: Certainly.

Socrates:: What then? of the many and beautiful things which the gods effect, what is the principal?

Euthyphro:: I told you just now, Socrates, that it is a difficult matter to learn all these things accurately; this however I tell you simply, that if any one knows how to speak and do things grateful to the gods, by praying and sacrificing, these things are holy, and such things preserve both private houses and the general weal of cities; but the contraries to things acceptable to them are impious, which also subvert and ruin all things.

Socrates:: You might, if you had pleased, Euthyphron, have told me the principal of what I asked in fewer words. But it is clear that you are not willing to teach me. For now when you were just upon the point of doing so, you turned aside; whereas if you had answered, I should by this time have sufficiently learnt from you what holiness is. But now for it is necessary that he who asks questions should follow the person questioned wherever he may lead what again do you say is the holy, and holiness? Do you not say it is a knowledge of sacrificing and praying?

Euthyphro:: I do.

Socrates:: Is not to sacrifice to offer gifts to the gods, and to pray to beg something of the gods?

Euthyphro:: Assuredly, Socrates.

Socrates:: From this statement it follows that holiness must be a knowledge of begging from and giving to the gods.

Euthyphro:: You quite understand what I mean, Socrates.

Socrates:: For I am very anxious, my friend, to obtain your wisdom, and I apply my mind to it: so that what you say will not fall to the ground. But tell me what this service of the gods is? Do you say it is to beg of them and to give to them?

Euthyphro:: I do.

Socrates:: Must we not then, therefore, to beg rightly, beg those things of them which we need from them?

Euthyphro:: What else?

Socrates:: And again to give rightly must we give them in return such things as they stand in need of from us? For surely it would not be suitable to offer those gifts to any one which he does not need.

Euthyphro:: You say truly, Socrates.

Socrates:: Holiness, therefore, Euthyphron, will be a kind of traffic between gods and men.

Euthyphro:: A kind of traffic, if it pleases you to call it so.

Socrates:: But it is not at all pleasing to me, unless it happens to be true. Tell me therefore, what advantage the gods derive from the gifts which they receive from us? For the advantage arising from what they give is clear to every one; for we have no good at all which they do not impart? but how are they benefited by what they receive from us? Do we get so much the advantage over them in this traffic, that we receive all good things from them, but they nothing from us?

Euthyphro:: But do you think, Socrates, that the gods are benefited by what they receive from us?

Socrates:: What is the use then, Euthyphron, of all our gifts to the gods?

Euthyphro:: What else do you think except honor and reverence, and, as I just now mentioned, gratitude?

Socrates:: Holiness then, Euthyphron, is that which is grateful, but not profitable or dear to the gods.

Euthyphro:: I for my part think it is of all things most dear to them.

Socrates:: This then again is, as it seems, holiness, that which is dear to the gods.

Euthyphro:: Most certainly.

Socrates:: Can you wonder then, when you say this, that your statements do not remain fixed, but move about, and can you accuse me as being the Dædalus that makes them move about, when you yourself are far more skilful than Dædalus, and make them go round in a circle? Do you not perceive that our discussion, turning round, comes to the same point? For you surely remember that in a former part of our discussion that which is holy and that which is acceptable to the gods appeared to us not to be the same, but different from each other: do you not remember?

Euthyphro:: I do.

Socrates:: Now, then, do you not perceive that you say that holiness is that which is dear to the gods? But is this any thing else than that which is acceptable to the gods? is it not so?

Euthyphro:: Certainly.

Socrates:: Either, therefore, we did not then admit that properly, or, if we did, our present statement is not correct?

Euthyphro:: It seems so.

Socrates:: From the beginning, therefore, we must consider again what holiness is; for I shall not willingly run away like a coward, until I have learnt it. Do not then despise me, but by all means apply your mind earnestly to it and tell me the truth. For you know it, if any man does; and I cannot let you go like Proteus, until you have told me. For if you had not known clearly both what is holy and what is impious, it is not possible that you could ever have attempted, for the sake of a hireling, to prosecute your aged father for murder; but you would have feared both to incur the anger of the gods, in case you should not act rightly in this matter, and would have been ashamed in the sight of men. But now I am sure that you think you clearly know both what is holy and what is not. Tell me, therefore, most excellent Euthyphron, and do not conceal from me what you believe it to be?

Euthyphro:: At some other opportunity then, Socrates: for now I am in haste to go somewhere, and it is time for me to depart.

Socrates:: What are you about, my friend? By going away you deprive me of the great hope I entertained that by learning from you what things are holy and what not, I might get rid of Melitus's indictment, by showing him that I had now become skilled in divine things by the aid of Euthyphron, and that I no longer through ignorance speak rashly, or introduce innovations respecting them, and that therefore I should lead a better life for the future.

# Euthyphron

Translated by Church, F. J.

CHARACTERS OF THE DIALOGUE.

Socrates. Euthyphron.

SCENE. The porch of the King Archon.

Euthyphro:: What in the world are you doing here at the archons porch, Socrates? Why have you left your haunts in the Lyceum? You surely cannot have an action before him, as I have.

Socrates:: Nay, the Athenians, Euthyphron, call it a prosecution, not an action.

Euthyphro:: What? Do you mean that some one is prosecuting you? I cannot believe that you are prosecuting any one yourself.

Socrates:: Certainly I am not.

Euthyphro:: Then is some one prosecuting you?

Socrates:: Yes.

Euthyphro:: Who is he?

Socrates:: I scarcely know him myself, Euthyphron; I think he must be some unknown young man. His name, however, is Meletus, and his deme Pitthis, if you can call to mind any Meletus of that deme, a hook-nosed man with long hair, and rather a scanty beard.

Euthyphro:: I don’t know him, Socrates. But, tell me, what is he prosecuting you for?

Socrates:: What for? Not on trivial grounds, I think. It is no small thing for so young a man to have formed an opinion on such an important matter. For he, he says, knows how the young are corrupted, and who are their corruptors. He must be a wise man, who, observing my ignorance, is going to accuse me to the city, as his mother, of corrupting his friends. I think that he is the only man who begins at the right point in his political reforms: I mean whose first care is to make the young men as perfect as possible, just as a good farmer will take care of his young plants first, and, after he has done that, of the others. And so Meletus, I suppose, is first clearing us off, who, as he says, corrupt the young men as they grow up; and then, when he has done that, of course he will turn his attention to the older men, and so become a very great public benefactor. Indeed, that is only what you would expect, when he goes to work in this way.

Euthyphro:: I hope it may be so, Socrates, but I have very grave doubts about it. It seems to me that in trying to injure you, he is really setting to work by striking a blow at the heart of the state. But how, tell me, does he say that you corrupt the youth?

Socrates:: In a way which sounds strange at first, my friend. He says that I am a maker of gods; and so he is prosecuting me, he says, for inventing new gods, and for not believing in the old ones.

Euthyphro:: I understand, Socrates. It is because you say that you always have a divine sign. So he is prosecuting you for introducing novelties into religion; and he is going into court knowing that such matters are easily misrepresented to the multitude, and consequently meaning to slander you there. Why, they laugh even me to scorn, as if I were out of my mind, when I talk about divine things in the assembly, and tell them what is going to happen: and yet I have never foretold anything which has not come true. But they are jealous of all people like us. We must not think about them: we must meet them boldly.

Socrates:: My dear Euthyphron, their ridicule is not a very serious matter. The Athenians, it seems to me, may think a man to be clever without paying him much attention, so long as they do not think that he teaches his wisdom to others. But as soon as they think that he makes other people clever, they get angry whether it be from jealousy, as you say, or for some other reason.

Euthyphro:: I am not very anxious to try their disposition towards me in this matter.

Socrates:: No, perhaps they think that you seldom show yourself, and that you are not anxious to teach your wisdom to others; but I fear that they may think that I am; for my love of men makes me talk to every one whom I meet quite freely and unreservedly, and without payment: indeed, if I could, I would gladly pay people myself to listen to me. If then, as I said just now, they were only going to laugh at me, as you say they do at you, it would not be at all an unpleasant way of spending the day, to spend it in court, jesting and laughing. But if they are going to be in earnest, then only prophets like you can tell where the matter will end.

Euthyphro:: Well, Socrates, I dare say that nothing will come of it. Very likely you will be successful in your trial, and I think that I shall be in mine.

Socrates:: And what is this suit of yours, Euthyphron? Are you suing, or being sued?

Euthyphro:: I am suing.

Socrates:: Whom?

Euthyphro:: A man whom I am thought a maniac to be suing.

Socrates:: What? Has he wings to fly away with?

Euthyphro:: He is far enough from flying; he is a very old man.

Socrates:: Who is he?

Euthyphro:: He is my father.

Socrates:: Your father, my good sir?

Euthyphro:: He is indeed.

Socrates:: What are you prosecuting him for? What is the charge?

Euthyphro:: It is a charge of murder, Socrates.

Socrates:: Good heavens, Euthyphron! Surely the multitude are ignorant of what makes right. I take it that it is not every one who could rightly do what you are doing; only a man who was already well advanced in wisdom.

Euthyphro:: That is quite true, Socrates.

Socrates:: Was the man whom your father killed a relative of yours? Nay, of course he was: you would never have prosecuted your father for the murder of a stranger?

Euthyphro:: You amuse me, Socrates. What difference does it make whether the murdered man was a relative or a stranger? The only question that you have to ask is, did the slayer slay justly or not? If justly, you must let him alone; if unjustly, you must indict him for murder, even though he share your hearth and sit at your table. The pollution is the same, if you associate with such a man, knowing what he has done, without purifying yourself, and him too, by bringing him to justice. In the present case the murdered man was a poor dependant of mine, who worked for us on our farm in Naxos. In a fit of drunkenness he got in a rage with one of our slaves, and killed him. My father therefore bound the man hand and foot and threw him into a ditch, while he sent to Athens to ask the seer what he should do. While the messenger was gone, he entirely neglected the man, thinking that he was a murderer, and that it would be no great matter, even if he were to die. And that was exactly what happened; hunger and cold and his bonds killed him before the messenger returned. And now my father and the rest of my family are indignant with me because I am prosecuting my father for the murder of this murderer. They assert that he did not kill the man at all; and they say that, even if he had killed him over and over again, the man himself was a murderer, and that I ought not to concern myself about such a person, because it is unholy for a son to prosecute his father for murder. So little, Socrates, do they know the divine law of holiness and unholiness.

Socrates:: And do you mean to say, Euthyphron, that you think that you understand divine things, and holiness and unholiness, so accurately that, in such a case as you have stated, you can bring your father to justice without fear that you yourself may be doing an unholy deed?

Euthyphro:: If I did not understand all these matters accurately, Socrates, I should be of no use, and Euthyphron would not be any better than other men.

Socrates:: Then, my excellent Euthyphron, I cannot do better than become your pupil, and challenge Meletus on this very point before the trial begins. I should say that I had always thought it very important to have knowledge about divine things; and that now, when he says that I offend by speaking lightly about them, and by introducing novelties in them, I have become your pupil; and I should say, Meletus, if you acknowledge Euthyphron to be wise in these matters, and to hold the true belief, then think the same of me, and do not put me on my trial; but if you do not, then bring a suit, not against me, but against my master for corrupting his elders; namely, me whom he corrupts by his doctrine, and his own father whom he corrupts by admonishing and chastising him. And if I did not succeed in persuading him to release me from the suit, or to indict you in my place, then I could repeat my challenge in court.

Euthyphro:: Yes, by Zeus, Socrates, I think I should find out his weak points, if he were to try to indict me. I should have a good deal to say about him in court long before I spoke about myself.

Socrates:: Yes, my dear friend, and knowing this, I am anxious to become your pupil. I see that Meletus here, and others too, seem not to notice you at all; but he sees through me without difficulty and at once, and prosecutes me for impiety forthwith. Now, therefore, please explain to me what you were so confident just now that you knew. Tell me what are piety and impiety with reference to murder and everything else. I suppose that holiness is the same in all actions; and that unholiness is always the opposite of holiness, and like itself, and that, as unholiness, it always has the same essential nature, which will be found in whatever is unholy.

Euthyphro:: Certainly, Socrates, I suppose so.

Socrates:: Tell me, then; what is holiness, and what is unholiness?

Euthyphro:: Well, then, I say that holiness means prosecuting the wrong doer who has committed murder or sacrilege, or any other such crime, as I am doing now, whether he be your father or your mother or whoever he be; and I say that unholiness means not prosecuting him. And observe, Socrates, I will give you a clear proof, which I have already given to others, that it is so, and that doing right means not suffering the sacrilegious man, whosoever he may be. Men hold Zeus to be the best and the justest of the gods; and they admit that Zeus bound his own father, Cronos, for devouring his children wickedly; and that Cronos in his turn castrated his father for similar reasons.

And yet these same men are angry with me because I proceed against my father for doing wrong. So, you see, they say one thing in the case of the gods and quite another in mine.

Socrates:: Is not that why I am being prosecuted, Euthyphron? I mean, because I am displeased when I hear people say such things about the gods? I expect that I shall be called a sinner, because I doubt those stories. Now if you, who understand all these matters so well, agree in holding all those tales true, then I suppose that I must needs give way. What could I say when I admit myself that I know nothing about them? But tell me, in the name of friendship, do you really believe that these things have actually happened.

Euthyphro:: Yes, and stranger ones too, Socrates, which the multitude do not know of.

Socrates:: Then you really believe that there is war among the gods, and bitter hatreds, and battles, such as the poets tell of, and which the great painters have depicted in our temples, especially in the pictures which cover the robe that is carried up to the Acropolis at the great Panathenaic festival. Are we to say that these things are true, Euthyphron?

Euthyphro:: Yes, Socrates, and more besides. As I was saying, I will relate to you many other stories about divine matters, if you like, which I am sure will astonish you when you hear them.

Socrates:: I dare say. You shall relate them to me at your leisure another time. At present please try to give a more definite answer to the question which I asked you just now. What I asked you, my friend, was, What is holiness? and you have not explained it to me, to my satisfaction. You only tell me that what you are doing now, namely prosecuting your father for murder, is a holy act.

Euthyphro:: Well, that is true, Socrates.

Socrates:: Very likely. But many other actions are holy, are they not, Euthyphron?

Euthyphro:: Certainly.

Socrates:: Remember, then, I did not ask you to tell me one or two of all the many holy actions that there are; I want to know what is the essential form of holiness which makes all holy actions holy. You said, I think, that there is one form which makes all holy actions holy, and another form which makes all unholy actions unholy. Do you not remember?

Euthyphro:: I do.

Socrates:: Well, then, explain to me what is this form, that I may have it to turn to, and to use as a standard whereby to judge your actions, and those of other men, and be able to say that whatever action resembles it is holy, and whatever does not, is not holy.

Euthyphro:: Yes, I will tell you that, if you wish it, Socrates.

Socrates:: Certainly I wish it.

Euthyphro:: Well then, what is pleasing to the gods is holy; and what is not pleasing to them is unholy.

Socrates:: Beautiful, Euthyphron. Now you have given me the answer that I wanted. Whether what you say is true, I do not know yet. But of course you will go on to prove the truth of it.

Euthyphro:: Certainly.

Socrates:: Come then, let us examine our words. The things and the men that are pleasing to the gods are holy; and the things and the men that are displeasing to the gods are unholy. But holiness and unholiness are not the same: they are as opposite as possible; was not that said?

Euthyphro:: Certainly.

Socrates:: And I think that that was very well said.

Euthyphro:: Yes, Socrates, that was certainly said.

Socrates:: Have we not also said, Euthyphron, that there are factions, and disagreements, and hatreds among the gods?

Euthyphro:: We have.

Socrates:: But what kind of disagreement, my friend, causes hatred and wrath? Let us look at the matter thus. If you and I were to disagree as to whether one number were more than another, would that provoke us to anger, and make us enemies? Should we not settle such dispute at once by counting?

Euthyphro:: Of course.

Socrates:: And if we were to disagree as to the relative size of two things, we should measure them, and put an end to the disagreement at once, should we not?

Euthyphro:: Yes.

Socrates:: And should we not settle a question about the relative weight of two things, by weighing them?

Euthyphro:: Of course.

Socrates:: Then what is the question which would provoke us to anger, and make us enemies, if we disagreed about it, and could not come to a settlement? Perhaps you have not an answer ready: but listen to me. Is it not the question of right and wrong, of the honorable and the base, of the good and the bad? Is it not questions about these matters which make you and me, and every one else quarrel, when we do quarrel, if we differ about them, and can reach no satisfactory settlement?

Euthyphro:: Yes, Socrates; it is disagreements about these matters.

Socrates:: Well, Euthyphron, the gods will quarrel over these things, if they quarrel at all, will they not?

Euthyphro:: Necessarily.

Socrates:: Then, my excellent Euthyphron, you say that some of the gods think one thing right, and others another: and that what some of them hold to be honorable or good, others hold to be base or evil. For there would not have been factions among them if they had not disagreed on these points, would there?

Euthyphro:: You are right.

Socrates:: And each of them loves what he thinks honorable, and good, and right, and hates the opposite, does he not?

Euthyphro:: Certainly.

Socrates:: But you say that the same action is held by some of them to be right, and by others to be wrong; and that then they dispute about it, and so quarrel and fight among themselves. Is it not so?

Euthyphro:: Yes.

Socrates:: Then the same thing is hated by the gods and loved by them; and the same thing will be displeasing and pleasing to them.

Euthyphro:: Apparently.

Socrates:: Then, according to your account, the same thing will be holy and unholy.

Euthyphro:: So it seems.

Socrates:: Then, my good friend, you have not answered my question. I did not ask you to tell me what action is both holy and unholy; but it seems that whatever is pleasing to the gods is also displeasing to them. And so, Euthyphron, I should not wonder if what you are doing now in chastising your father is a deed well-pleasing to Zeus, but hateful to Cronos and Ouranos, and acceptable to Hephaestus, but hateful to Hêrê; and if any of the other gods disagree about it, pleasing to some of them and displeasing to others.

Euthyphro:: But on this point, Socrates, I think that there is no difference of opinion among the gods: they all hold that if one man kills another wrongfully, he must be punished.

Socrates:: What, Euthyphron? Among mankind, have you never heard disputes whether a man ought to be punished for killing another man wrongfully, or for doing some other wrong deed?

Euthyphro:: Indeed, they never cease from these disputes, especially in courts of justice. They do all manner of wrong things; and then there is nothing which they will not do and say to avoid punishment.

Socrates:: Do they admit that they have done wrong, and at the same time deny that they ought to be punished, Euthyphron?

Euthyphro:: No, indeed; that they do not.

Socrates:: Then it is not everything that they will do and say. I take it, they do not venture to assert or argue that if they do, do wrong they must not be punished. What they say is that they have not done wrong, is it not?

Euthyphro:: That is true.

Socrates:: Then they do not dispute the proposition, that the wrong doer must be punished. They dispute about the question, who is a wrong doer, and when, and what is a wrong deed, do they not?

Euthyphro:: That is true.

Socrates:: Well, is not exactly the same thing true of the gods, if they quarrel about right and wrong, as you say they do? Do not some of them assert that the others are doing wrong, while the others deny it? No one, I suppose, my dear friend, whether god or man, ventures to say that a person who has done wrong must not be punished.

Euthyphro:: No, Socrates, that is true, in the main.

Socrates:: I take it, Euthyphron, that the disputants, whether men or gods, if the gods do dispute, dispute about each separate act. When they quarrel about any act, some of them say that it was done rightly, and others that it was done wrongly. Is it not so?

Euthyphro:: Yes.

Socrates:: Come then, my dear Euthyphron, please enlighten me on this point. What proof have you that all the gods think that a laborer who has been imprisoned for murder by the master of the man whom he has murdered, and who dies from his imprisonment before the master has had time to learn from the seers what he should do, dies by injustice? How do you know that it is right for a son to indict his father, and to prosecute him for the murder of such a man? Come, see if you can make it clear to me that the gods necessarily agree in thinking that this action of yours is right; and if you satisfy me, I will never cease singing your praises for wisdom.

Euthyphro:: I could make that clear enough to you, Socrates; but I am afraid that it would be a long business.

Socrates:: I see you think that I am duller than the judges. To them of course you will make it clear that your father has done wrong, and that all the gods agree in hating such deeds.

Euthyphro:: I will indeed, Socrates, if they will only listen to me.

Socrates:: They will listen, if only they think that you speak well. But while you were speaking, it occurred to me to ask myself this question: suppose that Euthyphron were to prove to me as clearly as possible that all the gods think such a death unjust; how has he brought me any nearer to understanding what holiness and unholiness are? This particular act, perhaps, may be displeasing to the gods, but then we have just seen that holiness and unholiness cannot be defined in that way: for we have seen that what is displeasing to the gods is also pleasing to them. So I will let you off on this point, Euthyphron; and all the gods shall agree in thinking your fathers deed wrong, and in hating it, if you like. But shall we correct our definition and say that whatever all the gods hate is unholy, and whatever they all love is holy: while whatever some of them love, and others hate, is either both or neither? Do you wish us now to define holiness and unholiness in this manner?

Euthyphro:: Why not, Socrates?

Socrates:: There is no reason why I should not, Euthyphron. It is for you to consider whether that definition will help you to instruct me as you promised.

Euthyphro:: Well, I should say that holiness is what all the gods love, and that unholiness is what they all hate.

Socrates:: Are we to examine this definition, Euthyphron, and see if it is a good one? or are we to be content to accept the bare assertions of other men, or of ourselves, without asking any questions? Or must we examine the assertions?

Euthyphro:: We must examine them. But for my part I think that the definition is right this time.

Socrates:: We shall know that better in a little while, my good friend. Now consider this question. Do the gods love holiness because it is holy, or is it holy because they love it?

Euthyphro:: I do not understand you, Socrates.

Socrates:: I will try to explain myself: we speak of a thing being carried and carrying, and being led and leading, and being seen and seeing; and you understand that all such expressions mean different things, and what the difference is.

Euthyphro:: Yes, I think I understand.

Socrates:: And we talk of a thing being loved, and, which is different, of a thing loving?

Euthyphro:: Of course.

Socrates:: Now tell me: is a thing which is being carried in a state of being carried, because it is carried, or for some other reason?

Euthyphro:: No, because it is carried.

Socrates:: And a thing is in a state of being led, because it is led, and of being seen, because it is seen?

Euthyphro:: Certainly.

Socrates:: Then a thing is not seen because it is in a state of being seen; it is in a state of being seen because it is seen: and a thing is not led because it is in a state of being led; it is in a state of being led because it is led: and a thing is not carried because it is in a state of being carried; it is in a state of being carried because it is carried. Is my meaning clear now, Euthyphron? I mean this: if anything becomes, or is affected, it does not become because it is in a state of becoming; it is in a state of becoming because it becomes; and it is not affected because it is in a state of being affected: it is in a state of being affected because it is affected. Do you not agree?

Euthyphro:: I do.

Socrates:: Is not that which is being loved in a state, either of becoming, or of being affected in some way by something?

Euthyphro:: Certainly.

Socrates:: Then the same is true here as in the former cases. A thing is not loved by those who love it because it is in a state of being loved. It is in a state of being loved because they love it.

Euthyphro:: Necessarily.

Socrates:: Well, then, Euthyphron, what do we say about holiness? Is it not loved by all the gods, according to your definition?

Euthyphro:: Yes.

Socrates:: Because it is holy, or for some other reason?

Euthyphro:: No, because it is holy.

Socrates:: Then it is loved by the gods because it is holy: it is not holy because it is loved by them?

Euthyphro:: It seems so.

Socrates:: But then what is pleasing to the gods is pleasing to them, and is in a state of being loved by them, because they love it?

Euthyphro:: Of course.

Socrates:: Then holiness is not what is pleasing to the gods, and what is pleasing to the gods is not holy, as you say, Euthyphron. They are different things.

Euthyphro:: And why, Socrates?

Socrates:: Because we are agreed that the gods love holiness because it is holy: and that it is not holy because they love it. Is not this so?

Euthyphro:: Yes.

Socrates:: And that what is pleasing to the gods because they love it, is pleasing to them by reason of this same love: and that they do not love it because it is pleasing to them.

Euthyphro:: True.

Socrates:: Then, my dear Euthyphron, holiness, and what is pleasing to the gods, are different things. If the gods had loved holiness because it is holy, they would also have loved what is pleasing to them because it is pleasing to them; but if what is pleasing to them had been pleasing to them because they loved it, then holiness too would have been holiness, because they loved it. But now you see that they are opposite things, and wholly different from each other. For the one is of a sort to be loved because it is loved: while the other is loved, because it is of a sort to be loved. My question, Euthyphron, was, What is holiness? But it turns out that you have not explained to me the essence of holiness; you have been content to mention an attribute which belongs to it, namely, that all the gods love it. You have not yet told me what is its essence. Do not, if you please, keep from me what holiness is; begin again and tell me that. Never mind whether the gods love it, or whether it has other attributes: we shall not differ on that point. Do your best to make clear to me what is holiness and what is unholiness.

Euthyphro:: But, Socrates, I really don't know how to explain to you what is in my mind. Whatever we put forward always somehow moves round in a circle, and will not stay where we place it.

Socrates:: I think that your definitions, Euthyphron, are worthy of my ancestor Daedalus. If they had been mine and I had laid them down, I dare say you would have made fun of me, and said that it was the consequence of my descent from Daedalus that the definitions which I construct run away, as his statues used to, and will not stay where they are placed. But, as it is, the definitions are yours, and the jest would have no point. You yourself see that they will not stay still.

Euthyphro:: Nay, Socrates, I think that the jest is very much in point. It is not my fault that the definition moves round in a circle and will not stay still. But you are the Daedalus, I think: as far as I am concerned, my definitions would have stayed quiet enough.

Socrates:: Then, my friend, I must be a more skilful artist than Daedalus; he only used to make his own works move; whereas I, you see, can make other peoples works move too. And the beauty of it is that I am wise against my will. I would rather that our definitions had remained firm and immovable than have all the wisdom of Daedalus and all the riches of Tantalus to boot. But enough of this. I will do my best to help you to explain to me what holiness is: for I think that you are indolent. Don't give in yet. Tell me; do you not think that all holiness must be just?

Euthyphro:: I do.

Socrates:: Well, then, is all justice holy too? Or, while all holiness is just, is a part only of justice holy, and the rest of it something else?

Euthyphro:: I do not follow you, Socrates.

Socrates:: Yet you have the advantage over me in your youth no less in your wisdom. But, as I say, the wealth of your wisdom makes you indolent. Exert yourself, my good friend: I am not asking you a difficult question. I mean the opposite of what the poet said, when he wrote:

Thou wilt not name Zeus the creator, who made all things: for where there is fear there also is reverence.

Now I disagree with the poet. Shall I tell you why?

Euthyphro:: Yes.

Socrates:: I do not think it true to say that where there is fear, there also is reverence. Many people who fear sickness and poverty and other such evils, seem to me to have fear, but no reverence for what they fear. Do you not think so?

Euthyphro:: I do.

Socrates:: But I think that where there is reverence, there also is fear. Does any man feel reverence and a sense of shame about anything, without at the same time dreading and fearing the character of baseness?

Euthyphro:: No, certainly not.

Socrates:: Then, though there is fear wherever there is reverence, it is not correct to say that where there is fear there also is reverence. Reverence does not always accompany fear; for fear, I take it, is wider than reverence. It is a part of fear, just as the odd is a part of number, so that where you have the odd, you must also have number, though where you have number, you do not necessarily have the odd. Now I think you follow me?

Euthyphro:: I do.

Socrates:: Well, then, this is what I meant by the question which I asked you: is there always holiness where there is justice? or, though there is always justice where there is holiness, yet there is not always holiness where there is justice, because holiness is only a part of justice? Shall we say this, or do you differ?

Euthyphro:: No: I agree. I think that you are right.

Socrates:: Now observe the next point. If holiness is a part of justice, we must find out, I suppose, what part of justice it is? Now, if you had asked me just now, for instance, what part of number is the odd, and what number is an odd number, I should have said that whatever number is not even, is an odd number. Is it not so?

Euthyphro:: Yes.

Socrates:: Then see if you can explain to me what part of justice is holiness, that I may tell Meletus that now that I have learnt perfectly from you what actions are pious and holy, and what are not, he must give up prosecuting me unjustly for impiety.

Euthyphro:: Well then, Socrates, I should say that piety and holiness are that part of justice which has to do with the attention which is due to the gods: and that what has to do with the attention which is due to men, is the remaining part of justice.

Socrates:: And I think that your answer is a good one, Euthyphron. But there is one little point, of which I still want to hear more. I do not yet understand what the attention or care which you are speaking of is. I suppose you do not mean that the care which we show to the gods is like the care which we show to other things. We say, for instance, do we not, that not every one knows how to take care of horses, but only the trainer of horses?

Euthyphro:: Certainly.

Socrates:: For I suppose that the art that relates to horses means the care of horses.

Euthyphro:: Yes.

Socrates:: And not every one understands the care of dogs, but only the huntsman.

Euthyphro:: True.

Socrates:: For I suppose that the huntsman's art means the care of dogs.

Euthyphro:: Yes.

Socrates:: And the herdsman’s art means the care of cattle.

Euthyphro:: Certainly.

Socrates:: And you say that holiness and piety mean the care of the gods, Euthyphron?

Euthyphro:: I do.

Socrates:: Well, then, has not all care the same object? Is it not for the good and benefit of that on which it is bestowed? for instance, you see that horses are benefited and improved when they are cared for by the art which is concerned with them. Is it not so?

Euthyphro:: Yes; I think so.

Socrates:: And dogs are benefited and improved by the huntsman’s art, and cattle by the herdsman’s, are they not? And the same is always true. Or do you think the care is ever meant to hurt that on which it is bestowed?

Euthyphro:: No indeed; certainly not.

Socrates:: But to benefit it?

Euthyphro:: Of course.

Socrates:: Then is holiness, which is the care which we bestow on the gods, intended to benefit the gods, or to improve them? Should you allow that you make any of the gods better, when you do an holy action?

Euthyphro:: No indeed; certainly not.

Socrates:: No: I am quite sure that that is not your meaning, Euthyphron: it was for that reason that I asked you what you meant by the attention due to the gods. I thought that you did not mean that.

Euthyphro:: You were right, Socrates. I do not mean that.

Socrates:: Good. Then what sort of attention to the gods will holiness be?

Euthyphro:: The attention, Socrates, of slaves to their masters.

Socrates:: I understand: then it is a kind of service to the gods?

Euthyphro:: Certainly.

Socrates:: Can you tell me what result the art which serves a doctor serves to produce? Is it not health?

Euthyphro:: Yes.

Socrates:: And what result does the art which serves a shipwright serve to produce?

Euthyphro:: A ship, of course, Socrates.

Socrates:: The result of the art which serves a builder is a house, is it not?

Euthyphro:: Yes.

Socrates:: Then tell me, my excellent friend: What result will the art which serves the gods serve to produce? You must know, seeing that you say that you know more about divine things than any other man.

Euthyphro:: Well, that is true, Socrates.

Socrates:: Then tell me, I beseech you, what is that grand result which the gods use our services to produce?

Euthyphro:: The results are many and noble, Socrates.

Socrates:: So are those, my dear sir, which a general produces. Yet it is easy to see that the crowning result of them all is victory in war, is it not?

Euthyphro:: Of course.

Socrates:: And, I take it, the husbandman produces many fine results; yet the crowning result of them all is that he makes the earth produce food.

Euthyphro:: Certainly.

Socrates:: Well, then, what is the crowning one of the many and noble results which the gods produce?

Euthyphro:: I told you just now, Socrates, that it is not so easy to learn the exact truth in all these matters. However, broadly I say this: if any man knows that his words and deeds in prayer and sacrifice are acceptable to the gods, that is what is holy: that preserves the common weal, as it does private households, from evil; but the opposite of what is acceptable to the gods is impious, and this it is that brings ruin and destruction on all things.

Socrates:: Certainly, Euthyphron, if you had wished, you could have answered my main question in far fewer words. But you are evidently not anxious to instruct me: just now, when you were just on the point of telling me what I want to know, you stopped short. If you had gone on then, I should have learnt from you clearly enough by this time what is holiness. But now I am asking you questions, and must follow wherever you lead me; so tell me, what is it that you mean by the holy and holiness? Do you not mean a science of prayer and sacrifice?

Euthyphro:: I do.

Socrates:: To sacrifice is to give to the gods, and to pray is to ask of them, is it not?

Euthyphro:: It is, Socrates.

Socrates:: Then you say that holiness is the science of asking of the gods, and giving to them?

Euthyphro:: You understand my meaning exactly, Socrates.

Socrates:: Yes, for I am eager to share your wisdom, Euthyphron, and so I am all attention: nothing that you say will fall to the ground. But tell me, what is this service of the gods? You say it is to ask of them, and to give to them?

Euthyphro:: I do.

Socrates:: Then, to ask rightly will be to ask of them what we stand in need of from them, will it not?

Euthyphro:: Naturally.

Socrates:: And to give rightly will be to give back to them what they stand in need of from us? It would not be very clever to make a present to a man of something that he has no need of.

Euthyphro:: True, Socrates.

Socrates:: Then, holiness, Euthyphron, will be an art of traffic between gods and men?

Euthyphro:: Yes, if you like to call it so.

Socrates:: Nay, I like nothing but what is true. But tell me, how are the gods benefited by the gifts which they receive from us? What they give us is plain enough. Every good thing that we have is their gift. But how are they benefited by what we give them? Have we the advantage over them in this traffic so much that we receive from them all the good things we possess and give them nothing in return?

Euthyphro:: But do you suppose, Socrates, that the gods are benefited by the gifts which they receive from us?

Socrates:: But what are these gifts, Euthyphron, that we give the gods?

Euthyphro:: What do you think but honor, and homage, and, as I have said, what is acceptable to them.

Socrates:: Then holiness, Euthyphron, is acceptable to the gods, but it is not profitable, nor dear to them?

Euthyphro:: I think that nothing is dearer to them.

Socrates:: Then I see that holiness means that which is dear to the gods.

Euthyphro:: Most certainly.

Socrates:: After that, shall you be surprised to find that your definitions move about, instead of staying where you place them? Shall you charge me with being the Daedalus that makes them move, when you yourself are far more skilful than Daedalus was, and make them go round in a circle? Do you not see that our definition has come round to where it was before? Surely you remember that we have already seen that holiness, and what is pleasing to the gods, are quite different things. Do you not remember?

Euthyphro:: I do.

Socrates:: And now do you not see that you say that what the gods love is holy? But does not what the gods love come to the same thing as what is pleasing to the gods?

Euthyphro:: Certainly.

Socrates:: Then either our former conclusion was wrong, or, if that was right, we are wrong now.

Euthyphro:: So it seems.

Socrates:: Then we must begin again, and inquire what is holiness. I do not mean to give in until I have found out. Do not deem me unworthy; give your whole mind to the question, and this time tell me the truth. For if any one knows it, it is you; and you are a Proteus whom I must not let go until you have told me. It cannot be that you would ever have undertaken to prosecute your aged father for the murder of a laboring man unless you had known exactly what is holiness and unholiness. You would have feared to risk the anger of the gods, in case you should be doing wrong, and you would have been afraid of what men would say. But now I am sure that you think that you know exactly what is holiness and what is not: so tell me, my excellent Euthyphron, and do not conceal from me what you hold it to be.

Euthyphro:: Another time, then, Socrates. I am in a hurry now, and it is time for me to be off.

Socrates:: What are you doing, my friend! Will you go away and destroy all my hopes of learning from you what is holy and what is not, and so of escaping Meletus? I meant to explain to him that now Euthyphron has made me wise about divine things, and that I no longer in my ignorance speak rashly about them or introduce novelties in them; and then I was going to promise him to live a better life for the future.

# Euthyphro

Translated by Lane Cooper.

CHARACTERS OF THE DIALOGUE.

Socrates. Euthyphron.

---

Euthyphro:: This, Socrates, is something new? What has taken you from your haunts in the Lyceum, and makes you spend your time at the royal porch? You surely cannot have a case at law, as I have, before the Archon-King.

Socrates:: My business, Euthyphro, is not what is known at Athens as a case at law; it is a criminal prosecution.

Euthyphro:: How is that? You mean that somebody is prosecuting you? I never would believe that you were prosecuting anybody else.

Socrates:: No indeed.

Euthyphro:: Then somebody is prosecuting you?

Socrates:: Most certainly.

Euthyphro:: Who is it?

Socrates:: I am not too clear about the man myself, Euthyphro. He appears to me to be a young man, and unknown. I think, however, that they call him Meletus, and his deme is Pitthos, if you happen to know anyone named Meletus of that deme—a hook-nosed man with long straight hair, and not much beard.

Euthyphro:: I don't recall him, Socrates. But tell me, of what does he accuse you?

Socrates:: His accusation? It is no mean charge. For a man of his age it is no small thing to have settled a question of so much importance. He says, in fact, that he knows the method by which young people are corrupted, and knows who the persons are that do it. He is, quite possibly, a wise man, and, observing that my ignorance has led me to corrupt his generation, comes like a child to his mother to accuse me to the city. And to me he appears to be the only one who begins his political activity aright, for the right way to begin is to pay attention to the young, and make them just as good as possible—precisely as the able farmer will give his attention to the young plants first, and afterward care for the rest. And so Meletus no doubt begins by clearing us away, the ones who ruin, as he says, the tender shoots of the young. That done, he obviously will care for the older generation, and will thus become the cause, in the highest and widest measure, of benefit to the state. With such a notable beginning, his chances of success look good.

Euthyphro:: I hope so, Socrates, but I'm very much afraid it will go the other way. When he starts to injure you, it simply looks to me like beginning at the hearth to hurt the state. But tell me what he says you do to corrupt the young.

Socrates:: It sounds very queer, my friend, when first you hear it. He says I am a maker of gods; he charges me with making new gods, and not believing in the old ones. These are his grounds for prosecuting me, he says.

Euthyphro:: I see it, Socrates. It is because you say that ever and anon you have the spiritual sign! So he charges you in this indictment with introducing novelties in religion, and that is the reason why he comes to court with this slanderous complaint, well knowing how easily such matters can be misrepresented to the crowd. For my own part, when I speak in the Assembly about matters of religion, and tell them in advance what will occur, they laugh at me as if I were a madman, and yet I never have made a prediction that did not come true. But the truth is, they are jealous of all such people as ourselves. No, we must not worry over them, but go to meet them.

Socrates:: Dear Euthyphro, if we were only laughed at, it would be no serious matter. The Athenians, as it seems to me, are not very much disturbed if they think that so-and-so is clever, so long as he does not impart his knowledge to anybody else. But the moment they suspect that he is giving his ability to others, they get angry, whether out of jealousy, as you say, or, it may be, for some other reason.

Euthyphro:: With regard to that, I am not very eager to test their attitude to me.

Socrates:: Quite possibly you strike them as a man who is chary of himself, and is unwilling to impart his wisdom; as for me, I fear I am so kindly they will think that I pour out all I have to everyone, and not merely without pay—nay, rather, glad to offer something if it would induce someone to hear me. Well then, as I said just now, if they were going to laugh at me, as you say they do at you, it wouldn't be at all unpleasant to spend the time laughing and joking in court. But if they take the matter seriously, then there is no knowing how it will turn out. Only you prophets can tell!

Euthyphro:: Well, Socrates, perhaps no harm will come of it at all, but you will carry your case as you desire, and I think that I shall carry mine.

Socrates:: Your case, Euthyphro? What is it? Are you prosecuting, or defending?

Euthyphro:: Prosecuting.

Socrates:: Whom?

Euthyphro:: One whom I am thought a maniac to be attacking.

Socrates:: How so? Is it someone who has wings to fly away with?

Euthyphro:: He is far from being able to do that; he happens to be old, a very old man.

Socrates:: Who is it, then?

Euthyphro:: It is my father.

Socrates:: Your father, my good friend?

Euthyphro:: Just so.

Socrates:: What is the complaint? Of what do you accuse him?

Euthyphro:: Of murder, Socrates.

Socrates:: Good heavens, Euthyphro! Surely the crowd is ignorant of the way things ought to go. I fancy it is not correct for any ordinary person to do that [to prosecute his father on this charge], but only for a man already far advanced in point of wisdom.

Euthyphro:: Yes, Socrates, by heaven! Far advanced!

Socrates:: And the man your father killed, was he a relative of yours? Of course he was? You never would prosecute your father, would you, for the death of anybody who was not related to you?

Euthyphro:: You amuse me, Socrates. You think it makes a difference whether the victim was a member of the family, or not related, when the only thing to watch is whether it was right or not for the man who did the deed to kill him. If he was justified, then let him go; if not, you have to prosecute him, no matter if the man who killed him shares your hearth, and sits at table with you. The pollution is the same if, knowingly, you associate with such a man, and do not cleanse yourself, and him as well, by bringing him to justice. The victim in this case was a laborer of mine, and when we were cultivating land in Naxos, we employed him on our farm. One day he had been drinking, and became enraged at one of our domestics, and cut his throat; whereupon my father bound him hand and foot, and threw him into a ditch. Then he sent a man to Athens to find out from the seer what ought to be done—meanwhile paying no attention to the man who had been bound, neglecting him because he was a murderer and it would be no great matter even if he died. And that was just what happened. Hunger, cold, and the shackles finished him before the messenger got back from visiting the seer. That is why my father and my other kin are bitter at me when I prosecute my father as a murderer. They say he did not kill the man, and had he actually done it, the victim was himself a murderer, and for such a man one need have no consideration. They say that for a son to prosecute his father as a murderer is unholy. How ill they know divinity in its relation, Socrates, to what is holy or unholy!

Socrates:: But you, by heaven! Euthyphro, you think that you have such an accurate knowledge of things divine, and what is holy and unholy, that, in circumstances such as you describe, you can accuse your father? You are not afraid that you yourself are doing an unholy deed?

Euthyphro:: Why, Socrates, if I did not have an accurate knowledge of all that, I should be good for nothing, and Euthyphro would be no different from the general run of men.

Socrates:: Well then, admirable Euthyphro, the best thing I can do is to become your pupil, and challenge Meletus before the trial comes on. Let me tell him that in the past I have considered it of great importance to know about things divine, and that now, when he asserts that I erroneously put forward my own notions and inventions on this head, I have become your pupil. I could say, Come, Meletus, if you agree that Euthyphro has wisdom in such matters, you must admit as well that I hold the true belief, and must not prosecute. If you do not, you must lodge your complaint, not against me, but against my aforesaid master; accuse him of corrupting the elder generation, me and his own father—me by his instruction, his father by correcting and chastising him.

And if he would not yield, would neither quit the suit nor yet indict you rather than myself, then I would say the same in court as when I challenged him!

Euthyphro:: Yes, Socrates, by heaven! If he undertook to bring me into court, I guess I would find out his rotten spot, and our talk there would concern him sooner by a long shot than ever it would me!

Socrates:: Yes, my dear friend, that I know, and so I wish to be your pupil. This Meletus, I perceive, along presumably with everybody else, appears to overlook you, but sees into me so easily and keenly that he has attacked me for impiety. So, in the name of heaven, tell me now about the matter you just felt sure you knew quite thoroughly. State what you take piety and impiety to be with reference to murder and all other cases. Is not the holy always one and the same thing in every action, and, again, is not the unholy always opposite to the holy, and like itself? And as unholiness does it not always have its one essential form, which will be found in everything that is unholy?

Euthyphro:: Yes, surely, Socrates.

Socrates:: Then tell me. How do you define the holy and the unholy?

Euthyphro:: Well then, I say that the holy is what I am now doing, prosecuting the wrongdoer who commits a murder or a sacrilegious robbery, or sins in any point like that, whether it be your father, or your mother, or whoever it may be. And not to prosecute would be unholy. And, Socrates, observe what a decisive proof I will give you that such is the law. It is one I have already given to others; I tell them that the right procedure must be not to tolerate the impious man, no matter who. Does not mankind believe that Zeus is the most excellent and just among the gods? And these same men admit that Zeus shackled his own father [Cronus] for swallowing his [other] sons unjustly, and that Cronus in turn had gelded his father [Uranus] for like reasons. But now they are enraged at me when I proceed against my father for wrongdoing, and so they contradict themselves in what they say about the gods and what they say of me.

Socrates:: There, Euthyphro, you have the reason why the charge is brought against me. It is because, whenever people tell such stories about the gods, I am prone to take it ill, and, so it seems, that is why they will maintain that I am sinful. Well, now, if you who are so well versed in matters of the sort entertain the same beliefs, then necessarily, it would seem, I must give in, for what could we urge who admit that, for our own part, we are quite ignorant about these matters? But, in the name of friendship, tell me! Do you actually believe that these things happened so?

Euthyphro:: Yes, Socrates, and things even more amazing, of which the multitude does not know.

Socrates:: And you actually believe that war occurred among the gods, and there were dreadful hatreds, battles, and all sorts of fearful things like that? Such things as the poets tell of, and good artists represent in sacred places; yes, and at the great Panathenaic festival the robe that is carried up to the Acropolis is all inwrought with such embellishments? What is our position, Euthyphro? Do we say that these things are true?

Euthyphro:: Not these things only, Socrates, but, as I just now said, I will, if you wish, relate to you many other stories about the gods, which I am certain will astonish you when you hear them.

Socrates:: I shouldn't wonder. You shall tell me all about them when we have the leisure at some other time. At present try to tell me more clearly what I asked you a little while ago, for, my friend, you were not explicit enough before when I put the question. What is holiness? You merely said that what you are now doing is a holy deed — namely, prosecuting your father on a charge of murder.

Euthyphro:: And, Socrates, I told the truth.

Socrates:: Possibly. But, Euthyphro, there are many other things that you will say are holy.

Euthyphro:: Because they are.

Socrates:: Well, bear in mind that what I asked of you was not to tell me one or two out of all the numerous actions that are holy; I wanted you to tell me what is the essential form of holiness which makes all holy actions holy. I believe you held that there is one ideal form by which unholy things are all unholy, and by which all holy things are holy. Do you remember that?

Euthyphro:: I do.

Socrates:: Well then, show me what, precisely, this ideal is, so that, with my eye on it, and using it as a standard, I can say that any action done by you or anybody else is holy if it resembles this ideal, or, if it does not, can deny that it is holy.

Euthyphro:: Well, Socrates, if that is what you want, I certainly can tell you.

Socrates:: It is precisely what I want.

Euthyphro:: Well then, what is pleasing to the gods is holy, and what is not pleasing to them is unholy.

Socrates:: Perfect, Euthyphro! Now you give me just the answer that I asked for. Meanwhile, whether it is right I do not know, but obviously you will go on to prove your statement true.

Euthyphro:: Indeed I will.

Socrates:: Come now, let us scrutinize what we are saying. What is pleasing to the gods, and the man that pleases them, are holy; what is hateful to the gods, and the man they hate, unholy. But the holy and unholy are not the same; the holy is directly opposite to the unholy. Isn't it so?

Euthyphro:: It is.

Socrates:: And the matter clearly was well stated.

Euthyphro:: I accept it, Socrates; that was stated.

Socrates:: Was it not also stated, Euthyphro, that the gods revolt and differ with each other, and that hatreds come between them?

Euthyphro:: That was stated.

Socrates:: Hatred and wrath, my friend—what kind of disagreement will produce them? Look at the matter thus. If you and I were to differ about numbers, on the question which of two was the greater, would a disagreement about that make us angry at each other, and make enemies of us? Should we not settle things by calculation, and so come to an agreement quickly on any point like that?

Euthyphro:: Yes, certainly.

Socrates:: And similarly if we differed on a question of greater length or less, we would take a measurement, and quickly put an end to the dispute?

Euthyphro:: Just that.

Socrates:: And so, I fancy, we should have recourse to scales, and settle any question about a heavier or lighter weight?

Euthyphro:: Of course.

Socrates:: What sort of thing, then, is it about which we differ, till, unable to arrive at a decision, we might get angry and be enemies to one another? Perhaps you have no answer ready, but listen to me. See if it is not the following—right and wrong, the noble and the base, and good and bad. Are not these the things about which we differ, till, unable to arrive at a decision, we grow hostile, when we do grow hostile, to each other, you and I and everybody else?

Euthyphro:: Yes, Socrates, that is where we differ, on these subjects.

Socrates:: What about the gods, then, Euthyphro? If, indeed, they have dissensions, must it not be on these subjects?

Euthyphro:: Quite necessarily.

Socrates:: Accordingly, my noble Euthyphro, by your account some gods take one thing to be right, and others take another, and similarly with the honorable and the base, and good and bad. They would hardly be at variance with each other, if they did not differ on these questions. Would they?

Euthyphro:: You are right.

Socrates:: And what each one of them thinks noble, good, and just, is what he loves, and the opposite is what he hates?

Euthyphro:: Yes, certainly.

Socrates:: But it is the same things, so you say, that some of them think right, and others wrong, and through disputing about these they are at variance, and make war on one another. Isn't it so?

Euthyphro:: It is.

Socrates:: Accordingly, so it would seem, the same things will be hated by the gods and loved by them; the same things would alike displease and please them.

Euthyphro:: It would seem so.

Socrates:: And so, according to this argument, the same things, Euthyphro, will be holy and unholy.

Euthyphro:: That may be.

Socrates:: In that case, admirable friend, you have not answered what I asked you. I did not ask you to tell me what at once is holy and unholy, but it seems that what is pleasing to the gods is also hateful to them. Thus, Euthyphro, it would not be strange at all if what you now are doing in punishing your father were pleasing to Zeus, but hateful to Cronus and Uranus, and welcome to Hephaestus, but odious to Hera, and if any other of the gods disagree about the matter, satisfactory to some of them, and odious to others.

Euthyphro:: But, Socrates, my notion is that, on this point, there is no difference of opinion among the gods—not one of them but thinks that if a person kills another wrongfully, he ought to pay for it.

Socrates:: And what of men? Have you never heard a man contending that someone who has killed a person wrongfully, or done some other unjust deed, ought not to pay the penalty?

Euthyphro:: Why! There is never any end to their disputes about these matters; it goes on everywhere, above all in the courts. People do all kinds of wrong, and then there is nothing they will not do or say in order to escape the penalty.

Socrates:: Do they admit wrongdoing, Euthyphro, and, while admitting it, deny that they ought to pay the penalty?

Euthyphro:: No, not that, by any means.

Socrates:: Then they will not do and say quite everything. Unless I am mistaken, they dare not say or argue that if they do wrong they should not pay the penalty. No, I think that they deny wrongdoing. How about it?

Euthyphro:: It is true.

Socrates:: Therefore they do not dispute that anybody who does wrong should pay the penalty. No, the thing that they dispute about is likely to be who is the wrongdoer, what he did, and when.

Euthyphro:: That is true.

Socrates:: Well then, isn't that precisely what goes on among the gods, if they really do have quarrels about right and wrong, as you say they do? One set will hold that some others do wrong, and the other set deny it? For that other thing, my friend, I take it no one, whether god or man, will dare to say—that the wrongdoer should not pay the penalty!

Euthyphro:: Yes, Socrates, what you say is true—in the main.

Socrates:: It is the individual act, I fancy, Euthyphro, that the disputants dispute about, both men and gods, if gods ever do dispute. They differ on a certain act; some hold that it was rightly done, the others that it was wrong. Isn't it so?

Euthyphro:: Yes, certainly.

Socrates:: Then come, dear Euthyphro, teach me as well, and let me grow more wise. What proof have you that all the gods think that your servant died unjustly, your hireling, who, when he had killed a man, was shackled by the master of the victim, and perished, dying because of his shackles before the man who shackled him could learn from the seers what ought to be done with him? What proof have you that for a man like him it is right for a son to prosecute his father, and indict him on a charge of murder? Come on. Try to make it clear to me beyond all doubt that under these conditions the gods must all consider this action to be right. If you can adequately prove it to me, I will never cease from praising you for your wisdom.

Euthyphro:: But, Socrates, that, very likely, would be no small task, although I could indeed make it very clear to you.

Socrates:: I understand. You think that I am duller than the judges; obviously you will demonstrate to them that what your father did was wrong, and that the gods all hate such deeds.

Euthyphro:: I shall prove it absolutely, Socrates, if they will listen to me.

Socrates:: They are sure to listen if they think that you speak well. But while you were talking, a notion came into my head, and I asked myself, Suppose that Euthyphro proved to me quite clearly that all the gods consider such a death unjust; would I have come one whit the nearer for him to knowing what the holy is, and what is the unholy? The act in question, seemingly, might be displeasing to the gods, but then we have just seen that you cannot define the holy and unholy in that way, for we have seen that a given thing may be displeasing, and also pleasing, to gods. So on this point, Euthyphro, I will let you off; if you like, the gods shall all consider the act unjust, and they all shall hate it. But suppose that we now correct our definition, and say what the gods all hate is unholy, and what they love is holy, whereas what some of them love, and others hate, is either both or neither. Are you willing that we now define the holy and unholy in this way?

Euthyphro:: What is there to prevent us, Socrates?

Socrates:: Nothing to prevent me, Euthyphro. As for you, see whether when you take this definition you can quite readily instruct me, as you promised.

Euthyphro:: Yes, I would indeed affirm that holiness is what the gods all love, and its opposite is what the gods all hate, unholiness.

Socrates:: Are we to examine this position also, Euthyphro, to see if it is sound? Or shall we let it through, and thus accept our own and others' statement, and agree to an assertion simply when somebody says that a thing is so? Must we not look into what the speaker says?

Euthyphro:: We must. And yet, for my part, I regard the present statement as correct.

Socrates:: We shall soon know better about that, my friend. Now think of this. Is what is holy holy because the gods approve it, or do they approve it because it is holy?

Euthyphro:: I do not get your meaning.

Socrates:: Well, I will try to make it clearer. We speak of what is carried and the carrier, do we not, of led and leader, of the seen and that which sees? And you understand that in all such cases the things are different, and how they differ?

Euthyphro:: Yes, I think I understand.

Socrates:: In the same way what is loved is one thing, and what loves is another?

Euthyphro:: Of course.

Socrates:: Tell me now, is what is carried ‘carried' because something carries it, or is it for some other reason?

Euthyphro:: No, but for that reason.

Socrates:: And what is led, because something leads it? And what is seen, because something sees it?

Euthyphro:: Yes, certainly.

Socrates:: Then it is not because a thing is seen that something sees it, but just the opposite—because something sees it, therefore it is seen. Nor because it is led, that something leads it, but because something leads it, therefore it is led. Nor because it is carried, that something carries it, but because something carries it, therefore it is carried. Do you see what I wish to say, Euthyphro? It is this. Whenever an effect occurs, or something is effected, it is not the thing effected that gives rise to the effect; no, there is a cause, and then comes this effect. Nor is it because a thing is acted on that there is this effect; no, there is a cause for what it undergoes, and then comes this effect. Don't you agree?

Euthyphro:: I do.

Socrates:: Well then, when a thing is loved, is it not in process of becoming something, or of undergoing something, by some other thing?

Euthyphro:: Yes, certainly.

Socrates:: Then the same is true here as in the previous cases. It is not because a thing is loved that they who love it love it, but it is loved because they love it.

Euthyphro:: Necessarily.

Socrates:: Then what are we to say about the holy, Euthyphro? According to your argument, is it not loved by all the gods?

Euthyphro:: Yes.

Socrates:: Because it is holy, or for some other reason?

Euthyphro:: No, it is for that reason.

Socrates:: And so it is because it is holy that it is loved; it is not holy because it is loved.

Euthyphro:: So it seems.

Socrates:: On the other hand, it is beloved and pleasing to the gods just because they love it?

Euthyphro:: No doubt of that.

Socrates:: So what is pleasing to the gods is not the same as what is holy, Euthyphro, nor, according to your statement, is the holy the same as what is pleasing to the gods. They are two different things.

Euthyphro:: How may that be, Socrates?

Socrates:: Because we are agreed that the holy is loved because it is holy, and is not holy because it is loved. Isn't it so?

Euthyphro:: Yes.

Socrates:: Whereas what is pleasing to the gods is pleasing to them just because they love it, such being its nature and its cause. Its being loved of the gods is not the reason of its being loved.

Euthyphro:: You are right.

Socrates:: But suppose, dear Euthyphro, that what is pleasing to the gods and what is holy were not two separate things. In that case if holiness were loved because it was holy, then also what was pleasing to the gods would be loved because it pleased them. And, on the other hand, if what was pleasing to them pleased because they loved it, then also the holy would be holy because they loved it. But now you see that it is just the opposite, because the two are absolutely different from each other, for the one [what is pleasing to the gods] is of a sort to be loved because it is loved, whereas the other [what is holy] is loved because it is of a sort to be loved. Consequently, Euthyphro, it looks as if you had not given me my answer—as if when you were asked to tell the nature of the holy, you did not wish to explain the essence of it. You merely tell an attribute of it, namely, that it appertains to holiness to be loved by all the gods. What it is, as yet you have not said. So, if you please, do not conceal this from me. No, begin again. Say what the holy is, and never mind if gods do love it, nor if it has some other attribute; on that we shall not split. Come, speak out. Explain the nature of the holy and unholy.

Euthyphro:: Now, Socrates, I simply don't know how to tell you what I think. Somehow everything that we put forward keeps moving about us in a circle, and nothing will stay where we put it.

Socrates:: Your statements, Euthyphro, look like the work of Daedalus, founder of my line. If I had made them, and they were my positions, no doubt you would poke fun at me, and say that, being in his line, the figures I construct in words run off, as did his statues, and will not stay where they are put. Meanwhile, since they are your definitions, we need some other jest, for in fact, as you see yourself, they will not stand still.

Euthyphro:: But, Socrates, it seems to me that the jest is quite to the point. This tendency in our statements to go in a circle, and not to stay in one place, it is not I who put it there. To my mind, it is you who are the Daedalus; so far as I am concerned, they would have held their place.

Socrates:: If so, my friend, I must be more expert in his art than he, in that he merely made his own works capable of moving, whereas I give this power not merely to my own, but, seemingly, to the works of other men as well. And the rarest thing about my talent is that I am an unwilling artist, since I would rather see our arguments stand fast and hold their ground than have the art of Daedalus plus all the wealth of Tantalus to boot. But enough of this. And since, to my mind, you are languid, I will myself make bold with you to show how you might teach me about holiness. Do not weaken. See if you do not think that of necessity all that is holy is just.

Euthyphro:: Yes, I do.

Socrates:: Well then, is all justice holy too? Or, granted that all holiness is just, is justice not all holy, but some part of it is holy, and some part of it is not?

Euthyphro:: I do not follow, Socrates.

Socrates:: And yet you surpass me in your wisdom not less than by your youth. I repeat, you are languid through your affluence in wisdom. Come, lucky friend, exert yourself! What I have to say is not so hard to grasp. I mean the very opposite of what the poet wrote.

> Zeus, who brought that all to pass, and made it all to grow,
> You will not name, for where fear is, there too is reverence.

On that I differ from the poet. Shall I tell you why?

Euthyphro:: By all means.

Socrates:: I do not think that 'where fear is, there too is reverence.' For it seems to me that there are many who fear sickness, poverty, and all the like, and so are afraid, but have no reverence whatever for the things they are afraid of. Does it not seem so to you?

Euthyphro:: Yes, certainly.

Socrates:: Where, however, you have reverence, there you have fear as well. Is there anybody who has reverence and a sense of shame about an act, and does not at the same time dread and fear an evil reputation?

Euthyphro:: Yes, he will be afraid of it.

Socrates:: So it is not right to say that 'where fear is, there too is reverence.' No, you may say that where reverence is, there too is fear—not, however, that where fear is, there always you have reverence. Fear, I think, is wider in extent than reverence. Reverence is a part of fear, as the uneven is a part of number; thus you do not have the odd wherever you have number, but where you have the odd you must have number. I take it you are following me now?

Euthyphro:: Yes, indeed.

Socrates:: Well then, what I asked you was like that. I asked you if wherever justice is, there is holiness as well; or, granted that wherever there is holiness, there is justice too, if where justice is, the holy is not always to be found. Thus holiness would be a part of justice. Shall we say so, or have you a different view?

Euthyphro:: No, that is my opinion. I think that you are clearly right.

Socrates:: Then see what follows. If holiness is a part of justice, it seems to me that we must find out what part of justice it is. Suppose, for instance, in our case just now, you had asked me what part of number is the even, and which the even number is. I would have said it is the one that corresponds to the isosceles, and not to the scalene. Does it not seem so to you?

Euthyphro:: It does.

Socrates:: Then try to show me in this way what part of the just is holiness, so that we may tell Meletus to cease from wronging me, and to give up prosecuting me for irreligion, because we have adequately learned from you of piety and holiness, and the reverse.

Euthyphro:: Well then, Socrates, I think that the part of justice which is religious and is holy is the part that has to do with the service of the gods; the remainder is the part of justice that has to do with the service of mankind.

Socrates:: And what you say there, Euthyphro, to me seems excellent. There is one little point, however, on which I need more light. I am not yet quite clear about the thing which you call ‘service.' I suppose you do not mean the sort of care we give to other things. The ‘service' of the gods is not like that—the sort of thing we have in mind when we assert that it is not everybody who knows how to care for horses. It is the horseman that knows, is it not?

Euthyphro:: Yes, certainly.

Socrates:: I suppose it is the special care that appertains to horses?

Euthyphro:: Yes.

Socrates:: In the same way, it is not everyone who knows about the care of dogs; it is the huntsman.

Euthyphro:: True.

Socrates:: The art of the huntsman is the care of dogs.

Euthyphro:: Yes.

Socrates:: And that of the herdsman is the care of cattle.

Euthyphro:: Yes, certainly.

Socrates:: And in the same way, Euthyphro, holiness and piety mean caring for the gods? Do you say so?

Euthyphro:: I do.

Socrates:: And so the aim of all this care and service is the same? I mean it thus. The care is given for the good and welfare of the object that is served. You see, for instance, how the horses that are cared for by the horseman's art are benefited and made better. Don't you think so?

Euthyphro:: Yes, I do.

Socrates:: And so no doubt the dogs by the art of the huntsman, the cattle by that of the herdsman, and in like manner all the rest. Unless, perhaps, you think that the care may tend to injure the object that is cared for?

Euthyphro:: By heaven, not I!

Socrates:: The care aims at its benefit?

Euthyphro:: Most certainly.

Socrates:: Then holiness, which is the service of the gods, must likewise aim to benefit the gods and make them better? Are you prepared to say that when you do a holy thing you make some deity better?

Euthyphro:: By heaven, not I!

Socrates:: Nor do I fancy, Euthyphro, that you mean it so—far from it. No, it was on this account that I asked just what you meant by service of the gods, supposing that, in fact, you did not mean that sort of care.

Euthyphro:: And, Socrates, you were right. I do not mean it so.

Socrates:: Good. And now what kind of service of the gods will holiness be?

Euthyphro:: Socrates, it is the kind that slaves give to their masters.

Socrates:: I understand. It seems to be a kind of waiting on the gods.

Euthyphro:: Just that.

Socrates:: See if you can tell me this. The art which serves physicians, what result does it serve to produce? Don't you think that it is health?

Euthyphro:: I do.

Socrates:: Further, what about the art that serves the ship-wrights? What result does it serve to produce?

Euthyphro:: Obviously, Socrates, the making of a ship.

Socrates:: And that which serves the builders serves the building of a house?

Euthyphro:: Yes.

Socrates:: Now tell me, best of friends, about the service of the gods. What result will this art serve to produce? You obviously know, since you profess to be the best informed among mankind on things divine!

Euthyphro:: Yes, Socrates, I say so, and I tell the truth.

Socrates:: Then tell me, I adjure you, what is that supreme result which the gods produce when they employ our services?

Euthyphro:: They do many things and noble, Socrates.

Socrates:: Just as the generals do, my friend. All the same you would have no trouble in summing up what they produce, by saying it is victory in war. Isn't it so?

Euthyphro:: Of course.

Socrates:: And the farmers too, I take it, produce many fine results, but the net result of their production is the food they get from the earth.

Euthyphro:: Yes, surely.

Socrates:: Well now, of the many fine and noble things which the gods produce, what is the sum of their production?

Euthyphro:: Just a little while ago I told you, Socrates, that the task is not a light one to learn precisely how all these matters stand. I will, however, simply tell you this. If anyone knows how to say and do things pleasing to the gods in prayer and sacrifice, that is holiness, and such behavior saves the family in private life together with the common interests of the state. To do the opposite of things pleasing to the gods is impious, and this it is that upsets all and ruins everything.

Socrates:: Surely, Euthyphro, if you had wished, you could have summed up what I asked for much more briefly. But the fact is that you are not eager to instruct me. That is clear. But a moment since, you were on the very point of telling me—and you slipped away. Had you given the answer. I would now have learned from you what holiness is, and would be content. As it is—for perforce the lover must follow the loved one wherever he leads the way—once more, how do you define the holy, and what is holiness? Don't you say that it is a science of sacrifice and prayer?

Euthyphro:: I do.

Socrates:: Well, and is not sacrifice a giving to the gods, and prayer an asking them to give?

Euthyphro:: Precisely, Socrates.

Socrates:: By this reasoning, holiness would be the science of asking from the gods and giving to them.

Euthyphro:: Quite right, Socrates; you have caught my meaning perfectly.

Socrates:: Yes, my friend, for I have my heart set on your wisdom, and give my mind to it, so that nothing you say shall be lost. No, tell me, what is this service to the gods? You say it is to ask of them and give to them?

Euthyphro:: I do.

Socrates:: And hence to ask aright will be to ask them for those things of which we stand in need from them?

Euthyphro:: What else?

Socrates:: And, on the other hand, to give aright will be to give them in return those things which they may need to receive from us? I take it there would be no art in offering anyone a gift of something that he did not need.

Euthyphro:: True, Socrates.

Socrates:: And therefore, Euthyphro, holiness will be a mutual art of commerce between gods and men.

Euthyphro:: An art of commerce, if you like to call it so.

Socrates:: Well, I do not like it if it is not so. But tell me, what advantage could come to the gods from the gifts which they receive from us? Everybody sees what they give us. No good that we possess but is given by them. What advantage can they gain by what they get from us? Have we so much the better of them in this commerce that we get all good things from them, and they get nothing from us?

Euthyphro:: What! Socrates. Do you suppose that the gods gain anything by what they get from us?

Socrates:: If not, then what would be the meaning, Euthyphro, of these gifts to the gods from us?

Euthyphro:: What do you think they ought to mean but worship, honor, and, as I just now said, good will?

Socrates:: So, Euthyphro, the holy is what pleases them, not what is useful to them, nor yet what the gods love?

Euthyphro:: I believe that what gives them pleasure is precisely what they love.

Socrates:: And so once more, apparently the holy is that which the gods love.

Euthyphro:: Most certainly.

Socrates:: After that, will you be amazed to find your statements walking off, and not staying where you put them? And will you accuse me as the Daedalus who makes them move, when you are yourself far more expert than Daedalus, and make them go round in a circle? Don't you see that our argument has come full circle to the point where it began? Surely you have not forgotten how in what was said before we found that holiness and what is pleasing to the gods were not the same, but different from each other. Do you not remember?

Euthyphro:: I do.

Socrates:: And are you not aware now that you say that what the gods love is holy? But is not what the gods love just the same as what is pleasing to the gods?

Euthyphro:: Yes, certainly.

Socrates:: Well then, either we were wrong in our recent conclusion, or if that was right, our position now is wrong.

Euthyphro:: So it seems.

Socrates:: And so we must go back again, and start from the beginning to find out what the holy is. As for me, I never will give up until I know. Ah! Do not spurn me, but give your mind with all your might now at length to tell me the absolute truth, for if anybody knows, of all mankind, it is you, and one must not let go of you, you Proteus, until you tell. If you did not know precisely what is holy and unholy, it is unthinkable that for a simple hireling you ever would have moved to prosecute your aged sire on a charge of murder. No, you would have feared to risk the wrath of the gods on the chance that you were not doing right, and would have been afraid of the talk of men. But now I am sure that you think you know exactly what is holy and what is not. So tell me, peerless Euthyphro, and do not hide from me what you judge it to be.

Euthyphro:: Another time, then, Socrates, for I am in a hurry, and must be off this minute.

Socrates:: What are you doing, my friend? Will you leave, and dash me down from the mighty expectation I had of learning from you what is holy and what is not, and so escaping from Meletus' indictment? I counted upon showing him that now I had gained wisdom about things divine from Euthyphro, and no longer out of ignorance made rash assertions and forged innovations with regard to them, but would lead a better life in future.

# Euthyphro.

Translated by Fowler, Harold North.

[OR ON HOLINESS, A TENTATIVE DIALOGUE]

CHARACTERS Euthyphro, Socrates.

---

Euthyphro:: What strange thing has happened, Socrates, that you have left your accustomed haunts in the Lyceum and are now haunting the portico where the king archon sits? For it cannot be that you have an action before the king, as I have.

Socrates:: Our Athenians, Euthyphro, do not call it an action, but an indictment.

Euthyphro:: What? Somebody has, it seems, brought an indictment against you; for I don't accuse you of having brought one against anyone else.

Socrates:: Certainly not.

Euthyphro:: But someone else against you?

Socrates:: Quite so.

Euthyphro:: Who is he?

Socrates:: I don't know the man very well myself, Euthyphro, for he seems to be a young and unknown person. His name, however, is Meletus, I believe. And he is of the deme of Pitthus, if you remember any Pitthian Meletus, with long hair and only a little beard, but with a hooked nose.

Euthyphro:: I don't remember him, Socrates. But what sort of an indictment has he brought against you?

Socrates:: What sort? No mean one, it seems to me; for the fact that, young as he is, he has apprehended so important a matter reflects no small credit upon him. For he says he knows how the youth are corrupted and who those are who corrupt them. He must be a wise man; who, seeing my lack of wisdom and that I am corrupting his fellows, comes to the State, as a boy runs to his mother, to accuse me. And he seems to me to be the only one of the public men who begins in the right way; for the right way is to take care of the young men first, to make them as good as possible, just as a good husbandman will naturally take care of the young plants first and afterwards of the rest. And so Meletus, perhaps, is first clearing away us who corrupt the young plants, as he says; then after this, when he has turned his attention to the older men, he will bring countless most precious blessings upon the State, at least, that is the natural outcome of the beginning he has made.

Euthyphro:: I hope it may be so, Socrates; but I fear the opposite may result. For it seems to me that he begins by injuring the State at its very heart, when he undertakes to harm you. Now tell me, what does he say you do that corrupts the young?

Socrates:: Absurd things, my friend, at first hearing. For he says I am a maker of gods; and because I make new gods and do not believe in the old ones, he indicted me for the sake of these old ones, as he says.

Euthyphro:: I understand, Socrates; it is because you say the divine monitor keeps coming to you. So he has brought the indictment against you for making innovations in religion, and he is going into court to slander you, knowing that slanders on such subjects are readily accepted by the people. Why, they even laugh at me and say I am crazy when I say anything in the assembly about divine things and foretell the future to them. And yet there is not one of the things I have foretold that is not true; but they are jealous of all such men as you and I are. However, we must not be disturbed, but must come to close quarters with them.

Socrates:: My dear Euthyphro, their ridicule is perhaps of no consequence. For the Athenians, I fancy, are not much concerned, if they think a man is clever, provided he does not impart his clever notions to others; but when they think he makes others to be like himself, they are angry with him, either through jealousy, as you say, or for some other reason.

Euthyphro:: I don't much desire to test their sentiments toward me in this matter.

Socrates:: No, for perhaps they think that you are reserved and unwilling to impart your wisdom. But I fear that because of my love of men they think that I not only pour myself out copiously to anyone and everyone without payment, but that I would even pay something myself, if anyone would listen to me. Now if, as I was saying just now, they were to laugh at me, as you say they do at you, it would not be at all unpleasant to pass the time in the court with jests and laughter; but if they are in earnest, then only soothsayers like you can tell how this will end.

Euthyphro:: Well, Socrates, perhaps it wont amount to much, and you will bring your case to a satisfactory ending, as I think I shall mine.

Socrates:: What is your case, Euthyphro? Are you defending or prosecuting?

Euthyphro:: Prosecuting.

Socrates:: Whom?

Euthyphro:: Such a man that they think I am insane because I am prosecuting him.

Socrates:: Why? Are you prosecuting one who has wings to fly away with?

Euthyphro:: No flying for him at his ripe old age.

Socrates:: Who is he?

Euthyphro:: My father.

Socrates:: Your father, my dear man?

Euthyphro:: Certainly.

Socrates:: But what is the charge, and what is the suit about?

Euthyphro:: Murder, Socrates.

Socrates:: Heracles! Surely, Euthyphro, most people do not know where the right lies; for I fancy it is not everyone who can rightly do what you are doing, but only one who is already very far advanced in wisdom.

Euthyphro:: Very far, indeed, Socrates, by Zeus.

Socrates:: Is the one who was killed by your father a relative? But of course he was; for you would not bring a charge of murder against him on a strangers account.

Euthyphro:: It is ridiculous, Socrates, that you think it matters whether the man who was killed was a stranger or a relative, and do not see that the only thing to consider is whether the action of the slayer was justified or not, and that if it was justified one ought to let him alone, and if not, one ought to proceed against him, even if he share ones hearth and eat at ones table. For the pollution is the same if you associate knowingly with such a man and do not purify yourself and him by proceeding against him. In this case, the man who was killed was a hired workman of mine, and when we were farming at Naxos, he was working there on our land. Now he got drunk, got angry with one of our house slaves, and butchered him. So my father bound him hand and foot, threw him into a ditch, and sent a man here to Athens to ask the religious adviser what he ought to do. In the meantime he paid no attention to the man as he lay there bound, and neglected him, thinking that he was a murderer and it did not matter if he were to die. And that is just what happened to him. For he died of hunger and cold and his bonds before the messenger came back from the adviser. Now my father and the rest of my relatives are angry with me, because for the sake of this murderer I am prosecuting my father for murder. For they say he did not kill him, and if he had killed him never so much, yet since the dead man was a murderer, I ought not to trouble myself about such a fellow, because it is unholy for a son to prosecute his father for murder. Which shows how little they know what the divine law is in regard to holiness and unholiness.

Socrates:: But, in the name of Zeus, Euthyphro, do you think your knowledge about divine laws and holiness and unholiness is so exact that, when the facts are as you say, you are not afraid of doing something unholy yourself in prosecuting your father for murder?

Euthyphro:: I should be of no use, Socrates, and Euthyphro would be in no way different from other men, if I did not have exact knowledge about all such things.

Socrates:: Then the best thing for me, my admirable Euthyphro, is to become your pupil and, before the suit with Meletus comes on, to challenge him and say that I always thought it very important before to know about divine matters and that now, since he says I am doing wrong by acting carelessly and making innovations in matters of religion, I have become your pupil. And Meletus, I should say, if you acknowledge that Euthyphro is wise in such matters, then believe that I also hold correct opinions, and do not bring me to trial; and if you do not acknowledge that, then bring a suit against him, my teacher, rather than against me, and charge him with corrupting the old, namely, his father and me, which he does by teaching me and by correcting and punishing his father. And if he does not do as I ask and does not release me from the indictment or bring it against you in my stead, I could say in the court the same things I said in my challenge to him, could I not?

Euthyphro:: By Zeus, Socrates, if he should undertake to indict me, I fancy I should find his weak spot, and it would be much more a question about him in court than about me.

Socrates:: And I, my dear friend, perceiving this, wish to become your pupil; for I know that neither this fellow Meletus, nor anyone else, seems to notice you at all, but he has seen through me so sharply and so easily that he has indicted me for impiety. Now in the name of Zeus, tell me what you just now asserted that you knew so well. What do you say is the nature of piety and impiety, both in relation to murder and to other things? Is not holiness always the same with itself in every action, and, on the other hand, is not unholiness the opposite of all holiness, always the same with itself and whatever is to be unholy possessing some one characteristic quality?

Euthyphro:: Certainly, Socrates.

Socrates:: Tell me then, what do you say holiness is, and what unholiness?

Euthyphro:: Well then, I say that holiness is doing what I am doing now, prosecuting the wrongdoer who commits murder or steals from the temples or does any such thing, whether he be your father or your mother or anyone else, and not prosecuting him is unholy. And, Socrates, see what a sure proof I offer you,—a proof I have already given to others,—that this is established and right and that we ought not to let him who acts impiously go unpunished, no matter who he may be. Men believe that Zeus is the best and most just of the gods, and they acknowledge that he put his father in bonds because he wickedly devoured his children, and he in turn had mutilated his father for similar reasons; but they are incensed against me because I proceed against my father when he has done wrong, and so they are inconsistent in what they say about the gods and about me.

Socrates:: Is not this, Euthyphro, the reason why I am being prosecuted, because when people tell such stories about the gods I find it hard to accept them? And therefore, probably, people will say I am wrong. Now if you, who know so much about such things, accept these tales, I suppose I too must give way. For what am I to say, who confess frankly that I know nothing about them? But tell me, in the name of Zeus, the god of friendship, do you really believe these things happened?

Euthyphro:: Yes, and still more wonderful things than these, Socrates, which most people do not know.

Socrates:: And so you believe that there was really war between the gods, and fearful enmities and battles and other things of the sort, such as are told of by the poets and represented in varied designs by the great artists in our sacred places and especially on the robe which is carried up to the Acropolis at the great Panathenaea? for this is covered with such representations. Shall we agree that these things are true, Euthyphro?

Euthyphro:: Not only these things, Socrates; but, as I said just now, I will, if you like, tell you many other things about the gods, which I am sure will amaze you when you hear them.

Socrates:: I dare say. But you can tell me those things at your leisure some other time. At present try to tell more clearly what I asked you just now. For, my friend, you did not give me sufficient information before, when I asked what holiness was, but you told me that this was holy which you are now doing, prosecuting your father for murder.

Euthyphro:: Well, what I said was true, Socrates.

Socrates:: Perhaps. But, Euthyphro, you say that many other things are holy, do you not?

Euthyphro:: Why, so they are.

Socrates:: Now call to mind that this is not what I asked you, to tell me one or two of the many holy acts, but to tell the essential aspect, by which all holy acts are holy; for you said that all unholy acts were unholy and all holy ones holy by one aspect. Or don’t you remember?

Euthyphro:: I remember.

Socrates:: Tell me then what this aspect is, that I may keep my eye fixed upon it and employ it as a model and, if anything you or anyone else does agrees with it, may say that the act is holy, and if not, that it is unholy.

Euthyphro:: If you wish me to explain in that way, I will do so.

Socrates:: I do wish it.

Euthyphro:: Well then, what is dear to the gods is holy, and what is not dear to them is unholy.

Socrates:: Excellent, Euthyphro; now you have answered as I asked you to answer. However, whether it is true, I am not yet sure; but you will, of course, show that what you say is true.

Euthyphro:: Certainly.

Socrates:: Come then, let us examine our words. The thing and the person that are dear to the gods are holy, and the thing and the person that are hateful to the gods are unholy; and the two are not the same, but the holy and the unholy are the exact opposites of each other. Is not this what we have said?

Euthyphro:: Yes, just this.

Socrates:: And it seems to be correct?

Euthyphro:: I think so, Socrates.

Socrates:: Well then, have we said this also, that the gods, Euthyphro, quarrel and disagree with each other, and that there is enmity between them?

Euthyphro:: Yes, we have said that.

Socrates:: But what things is the disagreement about, which causes enmity and anger? Let us look at it in this way. If you and I were to disagree about number, for instance, which of two numbers were the greater, would the disagreement about these matters make us enemies and make us angry with each other, or should we not quickly settle it by resorting to arithmetic?

Euthyphro:: Of course we should.

Socrates:: Then, too, if we were to disagree about the relative size of things, we should quickly put an end to the disagreement by measuring?

Euthyphro:: Yes.

Socrates:: And we should, I suppose, come to terms about relative weights by weighing?

Euthyphro:: Of Course.

Socrates:: But about what would a disagreement be, which we could not settle and which would cause us to be enemies and be angry with each other? Perhaps you cannot give an answer offhand; but let me suggest it. Is it not about right and wrong, and noble and disgraceful, and good and bad? Are not these the questions about which you and I and other people become enemies, when we do become enemies, because we differ about them and cannot reach any satisfactory agreement?

Euthyphro:: Yes, Socrates, these are the questions about which we should become enemies.

Socrates:: And how about the gods, Euthyphro? If they disagree, would they not disagree about these questions?

Euthyphro:: Necessarily.

Socrates:: Then, my noble Euthyphro, according to what you say, some of the gods too think some things are right or wrong and noble or disgraceful, and good or bad, and others disagree; for they would not quarrel with each other if they did not disagree about these matters. Is that the case?

Euthyphro:: You are right.

Socrates:: Then the gods in each group love the things which they consider good and right and hate the opposites of these things?

Euthyphro:: Certainly.

Socrates:: But you say that the same things are considered right by some of them and wrong by others; and it is because they disagree about these things that they quarrel and wage war with each other. Is not this what you said?

Euthyphro:: It IS.

Socrates:: Then, as it seems, the same things are hated and loved by the gods, and the same things would be dear and hateful to the gods.

Euthyphro:: So it seems.

Socrates:: And then the same things would be both holy and unholy, Euthyphro, according to this statement.

Euthyphro:: I suppose so.

Socrates:: Then you did not answer my question, my friend. For I did not ask you what is at once holy and unholy; but, judging from your reply, what is dear to the gods is also hateful to the gods. And so, Euthyphro, it would not be surprising if, in punishing your father as you are doing, you were performing an act that is pleasing to Zeus, but hateful to Cronus and Uranus, and pleasing to Hephaestus, but hateful to Hera, and so forth in respect to the other gods, if any disagree with any other about it.

Euthyphro:: But I think, Socrates, that none of the gods disagrees with any other about this, or holds that he who kills anyone wrongfully ought not to pay the penalty.

Socrates:: Well, Euthyphro, to return to men, did you ever hear anybody arguing that he who had killed anyone wrongfully, or had done anything else whatever wrongfully, ought not to pay the penalty?

Euthyphro:: Why, they are always arguing these points, especially in the law courts. For they do very many wrong things; and then there is nothing they will not do or say, in defending themselves, to avoid the penalty.

Socrates:: Yes, but do they acknowledge, Euthyphro, that they have done wrong and, although they acknowledge it, nevertheless say that they ought not to pay the penalty?

Euthyphro:: Oh, no, they don’t do that.

Socrates:: Then there is something they do not do and say. For they do not, I fancy, dare to say and argue that, if they have really done wrong, they ought not to pay the penalty; but, I think, they say they have not done wrong; do they not?

Euthyphro:: You are right.

Socrates:: Then they do not argue this point, that the wrongdoer must not pay the penalty; but perhaps they argue about this, who is a wrongdoer, and what he did, and when.

Euthyphro:: That is true.

Socrates:: Then is not the same thing true of the gods, if they quarrel about right and wrong, as you say, and some say others have done wrong, and some say they have not? For surely, my friend, no one, either of gods or men, has the face to say that he who does wrong ought not to pay the penalty.

Euthyphro:: Yes, you are right about this, Socrates, in the main.

Socrates:: But I think, Euthyphro, those who dispute, both men and gods, if the gods do dispute, dispute about each separate act. When they differ with one another about any act, some say it was right and others that it was wrong. Is it not so?

Euthyphro:: Certainly.

Socrates:: Come now, my dear Euthyphro, inform me, that I may be made wiser, what proof you have that all the gods think that the man lost his life wrongfully, who, when he was a servant, committed a murder, was bound by the master of the man he killed, and died as a result of his bonds before the master who had bound him found out from the advisers what he ought to do with him, and that it is right on account of such a man for a son to proceed against his father and accuse him of murder. Come, try to show me clearly about this, that the gods surely believe that this conduct is right; and if you show it to my satisfaction, I will glorify your wisdom as long as I live.

Euthyphro:: But perhaps this is no small task, Socrates; though I could show you quite clearly.

Socrates:: I understand; it is because you think I am slower to understand than the judges; since it is plain that you will show them that such acts are wrong and that all the gods hate them.

Euthyphro:: Quite clearly, Socrates; that is, if they listen to me.

Socrates:: They will listen, if they find that you are a good speaker. But this occurred to me while you were talking, and I said to myself; If Euthyphro should prove to me no matter how clearly that all the gods think such a death is wrongful, what have I learned from Euthyphro about the question, what is holiness and what is unholiness? For this act would, as it seems, be hateful to the gods; but we saw just now that holiness and its opposite are not defined in this way; for we saw that what is hateful to the gods is also dear to them; and so I let you off any discussion of this point, Euthyphro. If you like, all the gods may think it wrong and may hate it. But shall we now emend our definition and say that whatever all the gods hate is unholy and whatever they all love is holy, and what some love and others hate is neither or both? Do you wish this now to be our definition of holiness and unholiness?

Euthyphro:: What is to hinder, Socrates?

Socrates:: Nothing, so far as I am concerned, Euthyphro, but consider your own position, whether by adopting this definition you will most easily teach me what you promised.

Euthyphro:: Well, I should say that what all the gods love is holy and, on the other hand, what they all hate is unholy.

Socrates:: Then shall we examine this again, Euthyphro, to see if it is correct, or shall we let it go and accept our own statement, and those of others, agreeing that it is so, if anyone merely says that it is? Or ought we to inquire into the correctness of the statement?

Euthyphro:: We ought to inquire. However, I think this is now correct.

Socrates:: We shall soon know more about this, my friend. Just consider this question;—Is that which is holy loved by the gods because it is holy, or is it holy because it is loved by the gods?

Euthyphro:: I don’t know what you mean, Socrates.

Socrates:: Then I will try to speak more clearly. We speak of being carried and of carrying, of being led and of leading, of being seen and of seeing; and you understand—do you not?—that in all such expressions the two parts differ one from the other in meaning, and how they differ.

Euthyphro:: I think I understand.

Socrates:: Then, too, we conceive of a thing being loved and of a thing loving, and the two are different?

Euthyphro:: Of course.

Socrates:: Now tell me, is a thing which is carried a carried thing because one carries it, or for some other reason?

Euthyphro:: No, for that reason.

Socrates:: And a thing which is led is led because one leads it, and a thing which is seen is so because one sees it?

Euthyphro:: Certainly.

Socrates:: Then one does not see it because it is a seen thing, but, on the contrary, it is a seen thing because one sees it; and one does not lead it because it is a led thing, but it is a led thing because one leads it; and one does not carry it because it is a carried thing, but it is a carried thing because one carries it. Is it clear, Euthyphro, what I am trying to say? I am trying to say this, that if anything becomes or undergoes, it does not become because it is in a state of becoming, but it is in a state of becoming because it becomes, and it does not undergo-because it is a thing which undergoes, but because it undergoes it is a thing which undergoes; or do you not agree to this?

Euthyphro:: I agree.

Socrates:: Is not that which is beloved a thing which is either becoming or undergoing something?

Euthyphro:: Certainly.

Socrates:: And is this case like the former ones; those who love it do not love it because it is a beloved thing, but it is a beloved thing because they love it?

Euthyphro:: Obviously.

Socrates:: Now what do you say about that which is holy, Euthyphro? It is loved by all the gods, is it not, according to what you said?

Euthyphro:: Yes.

Socrates:: For this reason, because it is holy, or for some other reason?

Euthyphro:: No, for this reason.

Socrates:: It is loved because it is holy, not holy because it is loved?

Euthyphro:: I think so.

Socrates:: But that which is dear to the gods is dear to them and beloved by them because they love it.

Euthyphro:: Of course.

Socrates:: Then that which is dear to the gods and that which is holy are not identical, but differ one from the other.

Euthyphro:: How so, Socrates?

Socrates:: Because we are agreed that the holy is loved because it is holy and that it is not holy because it is loved; are we not?

Euthyphro:: Yes.

Socrates:: But we are agreed that what is dear to the gods is dear to them because they love it, that is, by reason of this love, not that they love it because it is dear.

Euthyphro:: Very true.

Socrates:: But if that which is dear to the gods and that which is holy were identical, my dear Euthyphro, then if the holy were loved because it is holy, that which is dear to the gods would be loved because it is dear, and if that which is dear to the gods is dear because it is loved, then that which is holy would be holy because it is loved; but now you see that the opposite is the case, showing that the two are entirely different from each other. For the one becomes lovable from the fact that it is loved, whereas the other is loved because it is in itself lovable. And, Euthyphro, it seems that when you were asked what holiness is you were unwilling to make plain its essence, but you mentioned something that has happened to this holiness, namely, that it is loved by the gods. But you did not tell as yet what it really is. So, if you please, do not hide it from me, but begin over again and tell me what holiness is, no matter whether it is loved by the gods or anything else happens to it; for we shall not quarrel about that. But tell me frankly, What is holiness, and what is unholiness?

Euthyphro:: But, Socrates, I do not know how to say what I mean. For whatever statement we advance, somehow or other it moves about and wont stay where we put it.

Socrates:: Your statements, Euthyphro, are like works of my ancestor Daedalus, and if I were the one who made or advanced them, you might laugh at me and say that on account of my relationship to him my works in words run away and wont stay where they are put. But now—well, the statements are yours; so some other jest is demanded; for they wont stay fixed, as you yourself see.

Euthyphro:: I think the jest does very well as it is; for I am not the one who makes these statements move about and not stay in the same place, but you are the Daedalus; for they would have stayed, so far as I am concerned.

Socrates:: Apparently then, my friend, I am a more clever artist than Daedalus, inasmuch as he made only his own works move, whereas I, as it seems, give motion to the works of others as well as to my own. And the most exquisite thing about my art is that I am clever against my will; for I would rather have my words stay fixed and stable than possess the wisdom of Daedalus and the wealth of Tantalus besides. But enough of this. Since you seem to be indolent, I will aid you myself, so that you may instruct me about holiness. And do not give it up beforehand. Just see whether you do not think that everything that is holy is right.

Euthyphro:: I do.

Socrates:: But is everything that is right also holy? Or is all which is holy right, and not all which is right holy, but part of it holy and part something else?

Euthyphro:: I cant follow you, Socrates.

Socrates:: And yet you are as much younger than I as you are wiser; but, as I said, you are indolent on account of your wealth of wisdom. But exert yourself, my friend; for it is not hard to understand what I mean. What I mean is the opposite of what the poet said, who wrote; Zeus the creator, him who made all things, thou wilt not name; for where fear is, there also is reverence. Now I disagree with the poet. Shall I tell you how?

Euthyphro:: By all means.

Socrates:: It does not seem to me true that where fear is, there also is reverence; for many who fear diseases and poverty and other such things seem to me to fear, but not to reverence at all these things which they fear. Don't you think so, too?

Euthyphro:: Certainly.

Socrates:: But I think that where reverence is, there also is fear; for does not everyone who has a feeling of reverence and shame about any act also dread and fear the reputation for wickedness?

Euthyphro:: Yes, he does fear.

Socrates:: Then it is not correct to say where fear is, there also is reverence. On the contrary, where reverence is, there also is fear; but reverence is not everywhere where fear is, since, as I think, fear is more comprehensive than reverence; for reverence is a part of fear, just as the odd is a part of number, so that it is not true that where number is, there also is the odd, but that where the odd is, there also is number. Perhaps you follow me now?

Euthyphro:: Perfectly.

Socrates:: It was something of this sort that I meant before, when I asked whether where the right is, there also is holiness, or where holiness is, there also is the right; but holiness is not everywhere where the right is, for holiness is a part of the right. Do we agree to this, or do you dissent?

Euthyphro:: No, I agree; for I think the statement is correct.

Socrates:: Now observe the next point. If holiness is a part of the right, we must, apparently, find out what part of the right holiness is. Now if you asked me about one of the things I just mentioned, as, for example, what part of number the even was, and what kind of a number it was I should say, that which is not indivisible by two, but divisible by two; or don't you agree?

Euthyphro:: I agree.

Socrates:: Now try in your turn to teach me what part of the right holiness is, that I may tell Meletus not to wrong me any more or bring suits against me for impiety, since I have now been duly instructed by you about what is, and what is not, pious and holy.

Euthyphro:: This then is my opinion, Socrates, that the part of the right which has to do with attention to the gods constitutes piety and holiness, and that the remaining part of the right is that which has to do with the service of men.

Socrates:: I think you are correct, Euthyphro; but there is one little point about which I still want information, for I do not yet understand what you mean by attention. I don't suppose you mean the same kind of attention to the gods which is paid to other things. We say, for example, that not everyone knows how to attend to horses, but only he who is skilled in horsemanship, do we not?

Euthyphro:: Certainly.

Socrates:: Then horsemanship is the art of attending to horses?

Euthyphro:: Yes.

Socrates:: And not everyone knows how to attend to dogs, but only the huntsman?

Euthyphro:: That is so.

Socrates:: Then the huntsman's art is the art of attending to dogs?

Euthyphro:: Yes.

Socrates:: And the ox-herds art is that of attending to oxen?

Euthyphro:: Certainly.

Socrates:: And holiness and piety is the art of attending to the gods? Is that what you mean, Euthyphro?

Euthyphro:: Yes.

Socrates:: Now does attention always aim to accomplish the same end? I mean something like this; It aims at some good or benefit to the one to whom it is given, as you see that horses, when attended to by the horseman’s art are benefited and made better; or don’t you think so?

Euthyphro:: Yes, I do.

Socrates:: And dogs are benefited by the huntsman’s art and oxen by the ox-herds and everything else in the same way? Or do you think care and attention are ever meant for the injury of that which is cared for?

Euthyphro:: No, by Zeus, I do not.

Socrates:: But for its benefit?

Euthyphro:: Of course.

Socrates:: Then holiness, since it is the art of attending to the gods, is a benefit to the gods, and makes them better? And you would agree that when you do a holy or pious act you are making one of the gods better?

Euthyphro:: No, by Zeus, not I.

Socrates:: Nor do I, Euthyphro, think that is what you meant. Far from it. But I asked what you meant by attention to the gods just because I did not think you meant anything like that.

Euthyphro:: You are right, Socrates; that is not what I mean.

Socrates:: Well, what kind of attention to the gods is holiness?

Euthyphro:: The kind, Socrates, that servants pay to their masters.

Socrates:: I understand. It is, you mean, a kind of service to the gods?

Euthyphro:: Exactly.

Socrates:: Now can you tell me what result the art that serves the physician serves to produce? Is it not health?

Euthyphro:: Yes.

Socrates:: Well then; what is it which the art that serves shipbuilders serves to produce?

Euthyphro:: Evidently, Socrates, a ship.

Socrates:: And that which serves house-builders serves to build a house?

Euthyphro:: Yes.

Socrates:: Then tell me, my friend; what would the art which serves the gods serve to accomplish? For it is evident that you know, since you say you know more than any other man about matters which have to do with the gods.

Euthyphro:: And what I say is true, Socrates.

Socrates:: Then, in the name of Zeus, tell me, what is that glorious result which the gods accomplish by using us as servants?

Euthyphro:: They accomplish many fine results, Socrates.

Socrates:: Yes, and so do generals, my friend; but nevertheless, you could easily tell the chief of them, namely, that they bring about victory in war. Is that not the case?

Euthyphro:: Of course.

Socrates:: And farmers also, I think, accomplish many fine results; but still the chief result of their work is food from the land?

Euthyphro:: Certainly.

Socrates:: But how about the many fine results the gods accomplish? What is the chief result of their work?

Euthyphro:: I told you a while ago, Socrates, that it is a long task to learn accurately all about these things. However, I say simply that when one knows how to say and do what is gratifying to the gods, in praying and sacrificing, that is holiness, and such things bring salvation to individual families and to states; and the opposite of what is gratifying to the gods is impious, and that overturns and destroys everything.

Socrates:: You might, if you wished, Euthyphro have answered much more briefly the chief part of my question. But it is plain that you do not care to instruct me. For now, when you were close upon it you turned aside; and if you had answered it, I should already have obtained from you all the instruction I need about holiness. But, as things are, the questioner must follow the one questioned wherever he leads. What do you say the holy, or holiness, is? Do you not say that it is a kind of science of sacrificing and praying?

Euthyphro:: Yes.

Socrates:: And sacrificing is making gifts to the gods and praying is asking from them?

Euthyphro:: Exactly, Socrates.

Socrates:: Then holiness, according to this definition, would be a science of giving and asking.

Euthyphro:: You understand perfectly what I said, Socrates.

Socrates:: Yes, my friend, for I am eager for your wisdom, and give my mind to it, so that nothing you say shall fall to the ground. But tell me, what is this service of the gods? Do you say that it consists in asking from them and giving to them?

Euthyphro:: Yes.

Socrates:: Would not the right way of asking be to ask of them what we need from them?

Euthyphro:: What else?

Socrates:: And the right way of giving, to present them with what they need from us? For it would not be scientific giving to give anyone what he does not need.

Euthyphro:: You are right, Socrates.

Socrates:: Then holiness would be an art of barter between gods and men?

Euthyphro:: Yes, of barter, if you like to call it so.

Socrates:: I don't like to call it so, if it is not true. But tell me, what advantage accrues to the gods from the gifts they get from us? For everybody knows what they give, since we have nothing good which they do not give. But what advantage do they derive from what they get from us? Or have we so much the better of them in our bartering that we get all good things from them and they nothing from us?

Euthyphro:: Why you don't suppose, Socrates, that the gods gain any advantage from what they get from us, do you?

Socrates:: Well then, what would those gifts of ours to the gods be?

Euthyphro:: What else than honor and praise, and, as I said before, gratitude?

Socrates:: Then, Euthyphro, holiness is grateful to the gods, but not advantageous or precious to the gods?

Euthyphro:: I think it is precious, above all things.

Socrates:: Then again, it seems, holiness is that which is precious to the gods.

Euthyphro:: Certainly.

Socrates:: Then will you be surprised, since you say this, if your words do not remain fixed but walk about, and will you accuse me of being the Daedalus who makes them walk, when you are yourself much more skilful than Daedalus and make them go round in a circle? Or do you not see that our definition has come round to the point from which it started? For you remember, I suppose, that a while ago we found that holiness and what is dear to the gods were not the same, but different from each other; or do you not remember?

Euthyphro:: Yes, I remember.

Socrates:: Then don’t you see that now you say that what is precious to the gods is holy? And is not this what is dear to the gods?

Euthyphro:: Certainly.

Socrates:: Then either our agreement a while ago was wrong, or if that was right, we are wrong now.

Euthyphro:: So it seems.

Socrates:: Then we must begin again at the beginning and ask what holiness is. Since I shall not willingly give up until I learn. And do not scorn me, but by all means apply your mind now to the utmost and tell me the truth; for you know, if any one does, and like Proteus, you must be held until you speak. For if you had not clear knowledge of holiness and unholiness, you would surely not have undertaken to prosecute your aged father for murder for the sake of a servant. You would have been afraid to risk the anger of the gods, in case your conduct should be wrong, and would have been ashamed in the sight of men. But now I am sure you think you know what is holy and what is not. So tell me, most excellent Euthyphro, and do not conceal your thought.

Euthyphro:: Some other time, Socrates. Now I am in a hurry and it is time for me to go.

Socrates:: Oh my friend, what are you doing? You go away and leave me cast down from the high hope I had that I should learn from you what is holy, and what is not, and should get rid of Meletus's indictment by showing him that I have been made wise by Euthyphro about divine matters and am no longer through ignorance acting carelessly and making innovations in respect to them, and that I shall live a better life henceforth.

# Euthyphro

Translated by G.M.A. Grube.

CHARACTERS OF THE DIALOGUE.

Socrates. Euthyphron.

---

Euthyphro:: What's new, Socrates, to make you leave your usual haunts in the Lyceum and spend your time here by the king-archon's court? Surely you are not prosecuting anyone before the king-archon as I am?

Socrates:: The Athenians do not call this a prosecution but an indictment, Euthyphro.

Euthyphro:: What is this you say? Someone must have indicted you, for you are not going to tell me that you have indicted someone else.

Socrates:: No indeed.

Euthyphro:: But someone else has indicted you?

Socrates:: Quite so.

Euthyphro:: Who is he?

Socrates:: I do not really know him myself, Euthyphro. He is apparently young and unknown. They call him Meletus, I believe. He belongs to the Pitthean deme, if you know anyone from that deme called Meletus, with long hair, not much of a beard, and a rather aquiline nose.

Euthyphro:: I don't know him, Socrates. What charge does he bring against you?

Socrates:: What charge? A not ignoble one I think, for it is no small thing for a young man to have knowledge of such an important subject. He says he knows how our young men are corrupted and who corrupts them. He is likely to be wise, and when he sees my ignorance corrupting his contemporaries, he proceeds to accuse me to the city as to their mother. I think he is the only one of our public men to start out the right way, for it is right to care first that the young should be as good as possible, just as a good farmer is likely to take care of the young plants first, and of the others later. So, too, Meletus first gets rid of us who corrupt the young shoots, as he says, and then afterwards he will obviously take care of the older ones and become a source of great blessings for the city, as seems likely to happen to one who started out this way.

Euthyphro:: I could wish this were true, Socrates, but I fear the opposite may happen. He seems to me to start out by harming the very heart of the city by attempting to wrong you. Tell me, what does he say you do to corrupt the young?

Socrates:: Strange things, to hear him tell it, for he says that I am a maker of gods, and on the ground that I create new gods while not believing in the old gods, he has indicted me for their sake, as he puts it.

Euthyphro:: I understand, Socrates. This is because you say that the divine sign keeps coming to you. So he has written this indictment against you as one who makes innovations in religious matters, and he comes to court to slander you, knowing that such things are easily misrepresented to the crowd. The same is true in my case. Whenever I speak of divine matters in the assembly and foretell the future, they laugh me down as if I were crazy; and yet I have foretold nothing that did not happen. Nevertheless, they envy all of us who do this. One need not worry about them, but meet them head-on.

Socrates:: My dear Euthyphro, to be laughed at does not matter perhaps, for the Athenians do not mind anyone they think clever, as long as he does not teach his own wisdom, but if they think that he makes others to be like himself they get angry, whether through envy, as you say, or for some other reason.

Euthyphro:: I have certainly no desire to test their feelings towards me in this matter.

Socrates:: Perhaps you seem to make yourself but rarely available, and not be willing to teach your own wisdom, but I’m afraid that my liking for people makes them think that I pour out to anybody anything I have to say, not only without charging a fee but even glad to reward anyone who is willing to listen. If then they were intending to laugh at me, as you say they laugh at you, there would be nothing unpleasant in their spending their time in court laughing and jesting, but if they are going to be serious, the outcome is not clear except to you prophets.

Euthyphro:: Perhaps it will come to nothing, Socrates, and you will fight your case as you think best, as I think I will mine.

Socrates:: What is your case, Euthyphro? Are you the defendant or the prosecutor?

Euthyphro:: The prosecutor.

Socrates:: Whom do you prosecute?

Euthyphro:: One whom I am thought crazy to prosecute.

Socrates:: Are you pursuing someone who will easily escape you?

Euthyphro:: Far from it, for he is quite old.

Socrates:: Who is it?

Euthyphro:: My father.

Socrates:: My dear sir! Your own father?

Euthyphro:: Certainly.

Socrates:: What is the charge? What is the case about?

Euthyphro:: Murder, Socrates.

Socrates:: Good heavens! Certainly, Euthyphro, most men would not know how they could do this and be right. It is not the part of anyone to do this, but of one who is far advanced in wisdom.

Euthyphro:: Yes, by Zeus, Socrates, that is so.

Socrates:: Is then the man your father killed one of your relatives? Or is that obvious, for you would not prosecute your father for the murder of a stranger.

Euthyphro:: It is ridiculous, Socrates, for you to think that it makes any difference whether the victim is a stranger or a relative. One should only watch whether the killer acted justly or not; if he acted justly, let him go, but if not, one should prosecute, if, that is to say, the killer shares your hearth and table. The pollution is the same if you knowingly keep company with such a man and do not cleanse yourself and him by bringing him to justice. The victim was a dependent of mine, and when we were farming in Naxos he was a servant of ours. He killed one of our household slaves in drunken anger, so my father bound him hand and foot and threw him in a ditch, then sent a man here to inquire from the priest what should be done. During that time he gave no thought or care to the bound man, as being a killer, and it was no matter if he died, which he did. Hunger and cold and his bonds caused his death before the messenger came back from the seer. Both my father and my other relatives are angry that I am prosecuting my father for murder on behalf of a murderer when he hadn’t even killed him, they say, and even if he had, the dead man does not deserve a thought, since he was a killer. For, they say, it is impious for a son to prosecute his father for murder. But their ideas of the divine attitude to piety and impiety are wrong, Socrates.

Socrates:: Whereas, by Zeus, Euthyphro, you think that your knowledge of the divine, and of piety and impiety, is so accurate that, when those things happened as you say, you have no fear of having acted impiously in bringing your father to trial?

Euthyphro:: I should be of no use, Socrates, and Euthyphro would not be superior to the majority of men, if I did not have accurate knowledge of all such things.

Socrates:: It is indeed most important, my admirable Euthyphro, that I should become your pupil, and as regards this indictment challenge Meletus about these very things and say to him: that in the past too I considered knowledge about the divine to be most important, and that now that he says that I am guilty of improvising and innovating about the gods I have become your pupil. I would say to him: “If, Meletus, you agree that Euthyphro is wise in these matters, consider me, too, to have the right beliefs and do not bring me to trial. If you do not think so, then prosecute that teacher of mine, not me, for corrupting the older men, me and his own father, by teaching me and by exhorting and punishing him.” If he is not convinced, and does not discharge me or indict you instead of me, I shall repeat the same challenge in court.

Euthyphro:: Yes, by Zeus, Socrates, and, if he should try to indict me, I think I would find his weak spots and the talk in court would be about him rather than about me.

Socrates:: It is because I realize this that I am eager to become your pupil, my dear friend. I know that other people as well as this Meletus do not even seem to notice you, whereas he sees me so sharply and clearly that he indicts me for ungodliness. So tell me now, by Zeus, what you just now maintained you clearly knew: what kind of thing do you say that godliness and ungodliness are, both as regards murder and other things; or is the pious not the same and alike in every action, and the impious the opposite of all that is pious and like itself, and everything that is to be impious presents us with one form or appearance in so far as it is impious?

Euthyphro:: Most certainly, Socrates.

Socrates:: Tell me then, what is the pious, and what the impious, do you say?

Euthyphro:: I say that the pious is to do what I am doing now, to prosecute the wrongdoer, be it about murder or temple robbery or anything else, whether the wrongdoer is your father or your mother or anyone else; not to prosecute is impious. And observe, Socrates, that I can cite powerful evidence that the law is so. I have already said to others that such actions are right, not to favor the ungodly, whoever they are. These people themselves believe that Zeus is the best and most just of the gods, yet they agree that he bound his father because he unjustly swallowed his sons, and that he in turn castrated his father for similar reasons. But they are angry with me because I am prosecuting my father for his wrongdoing. They contradict themselves in what they say about the gods and about me.

Socrates:: Indeed, Euthyphro, this is the reason why I am a defendant in the case, because I find it hard to accept things like that being said about the gods, and it is likely to be the reason why I shall be told I do wrong. Now, however, if you, who have full knowledge of such things, share their opinions, then we must agree with them, too, it would seem. For what are we to say, we who agree that we ourselves have no knowledge of them? Tell me, by the god of friendship, do you really believe these things are true?

Euthyphro:: Yes, Socrates, and so are even more surprising things, of which the majority has no knowledge.

Socrates:: And do you believe that there really is war among the gods, and terrible enmities and battles, and other such things as are told by the poets, and other sacred stories such as are embroidered by good writers and by representations of which the robe of the goddess is adorned when it is carried up to the Acropolis? Are we to say these things are true, Euthyphro?

Euthyphro:: Not only these, Socrates, but, as I was saying just now, I will, if you wish, relate many other things about the gods which I know will amaze you.

Socrates:: I should not be surprised, but you will tell me these at leisure some other time. For now, try to tell me more clearly what I was asking just now, for, my friend, you did not teach me adequately when I asked you what the pious was, but you told me that what you are doing now, in prosecuting your father for murder, is pious.

Euthyphro:: And I told the truth, Socrates.

Socrates:: Perhaps. You agree, however, that there are many other pious actions.

Euthyphro:: There are.

Socrates:: Bear in mind then that I did not bid you tell me one or two of the many pious actions but that form itself that makes all pious actions pious, for you agreed that all impious actions are impious and all pious actions pious through one form, or don’t you remember?

Euthyphro:: I do.

Socrates:: Tell me then what this form itself is, so that I may look upon it, and using it as a model, say that any action of yours or another’s that is of that kind is pious, and if it is not that it is not.

Euthyphro:: If that is how you want it, Socrates, that is how I will tell you.

Socrates:: That is what I want.

Euthyphro:: Well then, what is dear to the gods is pious, what is not is impious.

Socrates:: Splendid, Euthyphro! You have now answered in the way I wanted. Whether your answer is true I do not know yet, but you will obviously show me that what you say is true.

Euthyphro:: Certainly.

Socrates:: Come then, let us examine what we mean. An action or a man dear to the gods is pious, but an action or a man hated by the gods is impious. They are not the same, but quite opposite, the pious and the impious. Is that not so?

Euthyphro:: It is indeed.

Socrates:: And that seems to be a good statement?

Euthyphro:: I think so, Socrates.

Socrates:: We have also stated that the gods are in a state of discord, that they are at odds with each other, Euthyphro, and that they are at enmity with each other. Has that, too, been said?

Euthyphro:: It has.

Socrates:: What are the subjects of difference that cause hatred and anger? Let us look at it this way. If you and I were to differ about numbers as to which is the greater, would this difference make us enemies and angry with each other, or would we proceed to count and soon resolve our difference about this?

Euthyphro:: We would certainly do so.

Socrates:: Again, if we differed about the larger and the smaller, we would turn to measurement and soon cease to differ.

Euthyphro:: That is so.

Socrates:: And about the heavier and the lighter, we would resort to weighing and be reconciled.

Euthyphro:: Of course.

Socrates:: What subject of difference would make us angry and hostile to each other if we were unable to come to a decision? Perhaps you do not have an answer ready, but examine as I tell you whether these subjects are the just and the unjust, the beautiful and the ugly, the good and the bad. Are these not the subjects of difference about which, when we are unable to come to a satisfactory decision, you and I and other men become hostile to each other whenever we do?

Euthyphro:: That is the difference, Socrates, about those subjects.

Socrates:: What about the gods, Euthyphro? If indeed they have differences, will it not be about these same subjects?

Euthyphro:: It certainly must be so.

Socrates:: Then according to your argument, my good Euthyphro, different gods consider different things to be just, beautiful, ugly, good, and bad, for they would not be at odds with one another unless they differed about these subjects, would they?

Euthyphro:: You are right.

Socrates:: And they like what each of them considers beautiful, good, and just, and hate the opposites of these?

Euthyphro:: Certainly.

Socrates:: But you say that the same things are considered just by some gods and unjust by others, and as they dispute about these things they are at odds and at war with each other. Is that not so?

Euthyphro:: It is.

Socrates:: The same things then are loved by the gods and hated by the gods, and would be both god-loved and god-hated.

Euthyphro:: It seems likely.

Socrates:: And the same things would be both pious and impious, according to this argument?

Euthyphro:: I'm afraid so.

Socrates:: So you did not answer my question, you surprising man. I did not ask you what same thing is both pious and impious, and it appears that what is loved by the gods is also hated by them. So it is in no way surprising if your present action, namely punishing your father, may be pleasing to Zeus but displeasing to Cronus and Uranus, pleasing to Hephaestus but displeasing to Hera, and so with any other gods who differ from each other on this subject.

Euthyphro:: I think, Socrates, that on this subject no gods would differ from one another, that whoever has killed anyone unjustly should pay the penalty.

Socrates:: Well now, Euthyphro, have you ever heard any man maintaining that one who has killed or done anything else unjustly should not pay the penalty?

Euthyphro:: They never cease to dispute on this subject, both elsewhere and in the courts, for when they have committed many wrongs they do and say anything to avoid the penalty.

Socrates:: Do they agree they have done wrong, Euthyphro, and in spite of so agreeing do they nevertheless say they should not be punished?

Euthyphro:: No, they do not agree on that point.

Socrates:: So they do not say or do just anything. For they do not venture to say this, or dispute that they must not pay the penalty if they have done wrong, but I think they deny doing wrong. Is that not so?

Euthyphro:: That is true.

Socrates:: Then they do not dispute that the wrongdoer must be punished, but they may disagree as to who the wrongdoer is, what he did and when.

Euthyphro:: You are right.

Socrates:: Do not the gods have the same experience, if indeed they are at odds with each other about the just and the unjust, as your argument maintains? Some assert that they wrong one another, while others deny it, but no one among gods or men ventures to say that the wrongdoer must not be punished.

Euthyphro:: Yes, that is true, Socrates, as to the main point.

Socrates:: And those who disagree, whether men or gods, dispute about each action, if indeed the gods disagree. Some say it is done justly, others unjustly. Is that not so?

Euthyphro:: Yes, indeed.

Socrates:: Come now, my dear Euthyphro, tell me, too, that I may become wiser, what proof you have that all the gods consider that man to have been killed unjustly who became a murderer while in your service, was bound by the master of his victim, and died in his bonds before the one who bound him found out from the seers what was to be done with him, and that it is right for a son to denounce and to prosecute his father on behalf of such a man. Come, try to show me a clear sign that all the gods definitely believe this action to be right. If you can give me adequate proof of this, I shall never cease to extol your wisdom.

Euthyphro:: This is perhaps no light task, Socrates, though I could show you very clearly.

Socrates:: I understand that you think me more dull-witted than the jury, as you will obviously show them that these actions were unjust and that all the gods hate such actions.

Euthyphro:: I will show it to them clearly, Socrates, if only they will listen to me.

Socrates:: They will listen if they think you show them well. But this thought came to me as you were speaking, and I am examining it, saying to myself: “If Euthyphro shows me conclusively that all the gods consider such a death unjust, to what greater extent have I learned from him the nature of piety and impiety? This action would then, it seems, be hated by the gods, but the pious and the impious were not thereby now defined, for what is hated by the gods has also been shown to be loved by them.” So I will not insist on this point; let us assume, if you wish, that all the gods consider this unjust and that they all hate it. However, is this the correction we are making in our discussion, that what all the gods hate is impious, and what they all love is pious, and that what some gods love and others hate is neither or both? Is that how you now wish us to define piety and impiety?

Euthyphro:: What prevents us from doing so, Socrates?

Socrates:: For my part nothing, Euthyphro, but you look whether on your part this proposal will enable you to teach me most easily what you promised.

Euthyphro:: I would certainly say that the pious is what all the gods love, and the opposite, what all the gods hate, is the impious.

Socrates:: Then let us again examine whether that is a sound statement, or do we let it pass, and if one of us, or someone else, merely says that something is so, do we accept that it is so? Or should we examine what the speaker means?

Euthyphro:: We must examine it, but I certainly think that this is now a fine statement.

Socrates:: We shall soon know better whether it is. Consider this: Is the pious being loved by the gods because it is pious, or is it pious because it is being loved by the gods?

Euthyphro:: I don't know what you mean, Socrates.

Socrates:: I shall try to explain more clearly: we speak of something carried and something carrying, of something led and something leading, of something seen and something seeing, and you understand that these things are all different from one another and how they differ?

Euthyphro:: I think I do.

Socrates:: So there is also something loved and—a different thing—something loving.

Euthyphro:: Of course.

Socrates:: Tell me then whether the thing carried is a carried thing because it is being carried, or for some other reason?

Euthyphro:: No, that is the reason.

Socrates:: And the thing led is so because it is being led, and the thing seen because it is being seen?

Euthyphro:: Certainly.

Socrates:: It is not being seen because it is a thing seen but on the contrary it is a thing seen because it is being seen; nor is it because it is something led that it is being led but because it is being led that it is something led; nor is something being carried because it is something carried, but it is something carried because it is being carried. Is what I want to say clear, Euthyphro? I want to say this, namely, that if anything is being changed or is being affected in any way, it is not being changed because it is something changed, but rather it is something changed because it is being changed; nor is it being affected because it is something affected, but it is something affected because it is being affected. Or do you not agree?

Euthyphro:: I do.

Socrates:: Is something loved either something changed or something affected by something?

Euthyphro:: Certainly.

Socrates:: So it is in the same case as the things just mentioned; it is not being loved by those who love it because it is something loved, but it is something loved because it is being loved by them?

Euthyphro:: Necessarily.

Socrates:: What then do we say about the pious, Euthyphro? Surely that it is being loved by all the gods, according to what you say?

Euthyphro:: Yes.

Socrates:: Is it being loved because it is pious, or for some other reason?

Euthyphro:: For no other reason.

Socrates:: It is being loved then because it is pious, but it is not pious because it is being loved?

Euthyphro:: Apparently.

Socrates:: And yet it is something loved and god-loved because it is being loved by the gods?

Euthyphro:: Of course.

Socrates:: Then the god-loved is not the same as the pious, Euthyphro, nor the pious the same as the god-loved, as you say it is, but one differs from the other.

Euthyphro:: How so, Socrates?

Socrates:: Because we agree that the pious is being loved for this reason, that it is pious, but it is not pious because it is being loved. Is that not so?

Euthyphro:: Yes.

Socrates:: And that the god-loved, on the other hand, is so because it is being loved by the gods, by the very fact of being loved, but it is not being loved because it is god-loved.

Euthyphro:: True.

Socrates:: But if the god-loved and the pious were the same, my dear Euthyphro, then if the pious was being loved because it was pious, the god-loved would also be being loved because it was god-loved; and if the god-loved was god-loved because it was being loved by the gods, then the pious would also be pious because it was being loved by the gods. But now you see that they are in opposite cases as being altogether different from each other: the one is such as to be loved because it is being loved, the other is being loved because it is such as to be loved. I'm afraid, Euthyphro, that when you were asked what piety is, you did not wish to make its nature clear to me, but you told me an affect or quality of it, that the pious has the quality of being loved by all the gods, but you have not yet told me what the pious is. Now, if you will, do not hide things from me but tell me again from the beginning what piety is, whether being loved by the gods or having some other quality—we shall not quarrel about that—but be keen to tell me what the pious and the impious are.

Euthyphro:: But Socrates, I have no way of telling you what I have in mind, for whatever proposition we put forward goes around and refuses to stay put where we establish it.

Socrates:: Your statements, Euthyphro, seem to belong to my ancestor, Daedalus. If I were stating them and putting them forward, you would perhaps be making fun of me and say that because of my kinship with him my conclusions in discussion run away and will not stay where one puts them. As these propositions are yours, however, we need some other jest, for they will not stay put for you, as you say yourself.

Euthyphro:: I think the same jest will do for our discussion, Socrates, for I am not the one who makes them go round and not remain in the same place; it is you who are the Daedalus; for as far as I am concerned they would remain as they were.

Socrates:: It looks as if I was cleverer than Daedalus in using my skill, my friend, in so far as he could only cause to move the things he made himself, but I can make other people's move as well as my own. And the smartest part of my skill is that I am clever without wanting to be, for I would rather have your statements to me remain unmoved than possess the wealth of Tantalus as well as the cleverness of Daedalus. But enough of this. Since I think you are making unnecessary difficulties, I am as eager as you are to find a way to teach me about piety, and do not give up before you do. See whether you think all that is pious is of necessity just.

Euthyphro:: I think so.

Socrates:: And is then all that is just pious? Or is all that is pious just, but not all that is just pious, but some of it is and some is not?

Euthyphro:: I do not follow what you are saying, Socrates.

Socrates:: Yet you are younger than I by as much as you are wiser. As I say, you are making difficulties because of your wealth of wisdom. Pull yourself together, my dear sir, what I am saying is not difficult to grasp. I am saying the opposite of what the poet said who wrote:

You do not wish to name Zeus, who had done it, and who made all things grow, for where there is fear there is also shame.

I disagree with the poet. Shall I tell you why?

Euthyphro:: Please do.

Socrates:: I do not think that “where there is fear there is also shame,” for I think that many people who fear disease and poverty and many other such things feel fear, but are not ashamed of the things they fear. Do you not think so?

Euthyphro:: I do indeed.

Socrates:: But where there is shame there is also fear. For is there anyone who, in feeling shame and embarrassment at anything, does not also at the same time fear and dread a reputation for wickedness?

Euthyphro:: He is certainly afraid.

Socrates:: It is then not right to say “where there is fear there is also shame,” but that where there is shame there is also fear, for fear covers a larger area than shame. Shame is a part of fear just as odd is a part of number, with the result that it is not true that where there is number there is also oddness, but that where there is oddness there is also number. Do you follow me now?

Euthyphro:: Surely.

Socrates:: This is the kind of thing I was asking before, whether where there is piety there is also justice, but where there is justice there is not always piety, for the pious is a part of justice. Shall we say that, or do you think otherwise?

Euthyphro:: No, but like that, for what you say appears to be right.

Socrates:: See what comes next: if the pious is a part of the just, we must, it seems, find out what part of the just it is. Now if you asked me something of what we mentioned just now, such as what part of number is the even, and what number that is, I would say it is the number that is divisible into two equal, not unequal, parts. Or do you not think so?

Euthyphro:: I do.

Socrates:: Try in this way to tell me what part of the just the pious is, in order to tell Meletus not to wrong us any more and not to indict me for ungodliness, since I have learned from you sufficiently what is godly and pious and what is not.

Euthyphro:: I think, Socrates, that the godly and pious is the part of the just that is concerned with the care of the gods, while that concerned with the care of men is the remaining part of justice.

Socrates:: You seem to me to put that very well, but I still need a bit of information. I do not know yet what you mean by care, for you do not mean the care of the gods in the same sense as the care of other things, as, for example, we say, don't we, that not everyone knows how to care for horses, but the horse breeder does.

Euthyphro:: Yes, I do mean it that way.

Socrates:: So horse breeding is the care of horses.

Euthyphro:: Yes.

Socrates:: Nor does everyone know how to care for dogs, but the hunter does.

Socrates:: So hunting is the care of dogs.

Euthyphro:: Yes.

Socrates:: And cattle raising is the care of cattle.

Euthyphro:: Quite so.

Socrates:: While piety and godliness is the care of the gods, Euthyphro. Is that what you mean?

Euthyphro:: It is.

Socrates:: Now care in each case has the same effect; it aims at the good and the benefit of the object cared for, as you can see that horses cared for by horse breeders are benefited and become better. Or do you not think so?

Euthyphro:: I do.

Socrates:: So dogs are benefited by dog breeding, cattle by cattle raising, and so with all the others. Or do you think that care aims to harm the object of its care?

Euthyphro:: By Zeus, no.

Socrates:: It aims to benefit the object of its care?

Euthyphro:: Of course.

Socrates:: Is piety then, which is the care of the gods, also to benefit the gods and make them better? Would you agree that when you do something pious you make some one of the gods better?

Euthyphro:: By Zeus, no.

Socrates:: Nor do I think that this is what you mean—far from it—but that is why I asked you what you meant by the care of gods, because I did not believe you meant this kind of care.

Euthyphro:: Quite right, Socrates, that is not the kind of care I mean.

Socrates:: Very well, but what kind of care of the gods would piety be?

Euthyphro:: The kind of care, Socrates, that slaves take of their masters.

Socrates:: I understand. It is likely to be a kind of service of the gods.

Euthyphro:: Quite so.

Socrates:: Could you tell me to the achievement of what goal service to doctors tends? Is it not, do you think, to achieving health?

Euthyphro:: I think so.

Socrates:: What about service to shipbuilders? To what achievement is it directed?

Euthyphro:: Clearly, Socrates, to the building of a ship.

Socrates:: And service to house-builders to the building of a house?

Euthyphro:: Yes.

Socrates:: Tell me then, my good sir, to the achievement of what aim does service to the gods tend? You obviously know since you say that you, of all men, have the best knowledge of the divine.

Euthyphro:: And I am telling the truth, Socrates.

Socrates:: Tell me then, by Zeus, what is that excellent aim that the gods achieve, using us as their servants?

Euthyphro:: Many fine things, Socrates.

Socrates:: So do generals, my friend. Nevertheless you could easily tell me their main concern, which is to achieve victory in war, is it not?

Euthyphro:: Of course.

Socrates:: The farmers too, I think, achieve many fine things, but the main point of their efforts is to produce food from the earth.

Euthyphro:: Quite so.

Socrates:: Well then, how would you sum up the many fine things that the gods achieve?

Euthyphro:: I told you a short while ago, Socrates, that it is a considerable task to acquire any precise knowledge of these things, but, to put it simply, I say that if a man knows how to say and do what is pleasing to the gods at prayer and sacrifice, those are pious actions such as preserve both private houses and public affairs of state. The opposite of these pleasing actions are impious and overturn and destroy everything.

Socrates:: You could tell me in far fewer words, if you were willing, the sum of what I asked, Euthyphro, but you are not keen to teach me, that is clear. You were on the point of doing so, but you turned away. If you had given that answer, I should now have acquired from you sufficient knowledge of the nature of piety. As it is, the lover of inquiry must follow his beloved wherever it may lead him. Once more then, what do you say that piety and the pious are? Are they a knowledge of how to sacrifice and pray?

Euthyphro:: They are.

Socrates:: To sacrifice is to make a gift to the gods, whereas to pray is to beg from the gods?

Euthyphro:: Definitely, Socrates.

Socrates:: It would follow from this statement that piety would be a knowledge of how to give to, and beg from, the gods.

Euthyphro:: You understood what I said very well, Socrates.

Socrates:: That is because I am so desirous of your wisdom, and I concentrate my mind on it, so that no word of yours may fall to the ground. But tell me, what is this service to the gods? You say it is to beg from them and to give to them?

Euthyphro:: I do.

Socrates:: And to beg correctly would be to ask from them things that we need?

Euthyphro:: What else?

Socrates:: And to give correctly is to give them what they need from us, for it would not be skillful to bring gifts to anyone that are in no way needed.

Euthyphro:: True, Socrates.

Socrates:: Piety would then be a sort of trading skill between gods and men?

Euthyphro:: Trading yes, if you prefer to call it that.

Socrates:: I prefer nothing, unless it is true. But tell me, what benefit do the gods derive from the gifts they receive from us? What they give us is obvious to all. There is for us no good that we do not receive from them, but how are they benefited by what they receive from us? Or do we have such an advantage over them in the trade that we receive all our blessings from them and they receive nothing from us?

Euthyphro:: Do you suppose, Socrates, that the gods are benefited by what they receive from us?

Socrates:: What could those gifts from us to the gods be, Euthyphro?

Euthyphro:: What else, do you think, than honor, reverence, and what I mentioned just now, gratitude?

Socrates:: The pious is then, Euthyphro, pleasing to the gods, but not beneficial or dear to them?

Euthyphro:: I think it is of all things most dear to them.

Socrates:: So the pious is once again what is dear to the gods.

Euthyphro:: Most certainly.

Socrates:: When you say this, will you be surprised if your arguments seem to move about instead of staying put? And will you accuse me of being Daedalus who makes them move, though you are yourself much more skillful than Daedalus and make them go round in a circle? Or do you not realize that our argument has moved around and come again to the same place? You surely remember that earlier the pious and the god-loved were shown not to be the same but different from each other. Or do you not remember?

Euthyphro:: I do.

Socrates:: Do you then not realize now that you are saying that what is dear to the gods is the pious? Is this not the same as the god-loved? Or is it not?

Euthyphro:: It certainly is.

Socrates:: Either we were wrong when we agreed before, or, if we were right then, we are wrong now.

Euthyphro:: That seems to be so.

Socrates:: So we must investigate again from the beginning what piety is, as I shall not willingly give up before I learn this. Do not think me unworthy, but concentrate your attention and tell the truth. For you know it, if any man does, and I must not let you go, like Proteus, before you tell me. If you had no clear knowledge of piety and impiety you would never have ventured to prosecute your old father for murder on behalf of a servant. For fear of the gods you would have been afraid to take the risk lest you should not be acting rightly, and would have been ashamed before men, but now I know well that you believe you have clear knowledge of piety and impiety. So tell me, my good Euthyphro, and do not hide what you think it is.

Euthyphro:: Some other time, Socrates, for I am in a hurry now, and it is time for me to go.

Socrates:: What a thing to do, my friend! By going you have cast me down from a great hope I had, that I would learn from you the nature of the pious and the impious and so escape Meletus' indictment by showing him that I had acquired wisdom in divine matters from Euthyphro, and my ignorance would no longer cause me to be careless and inventive about such things, and that I would be better for the rest of my life.

# **Euthyphro.**

Translated by Jowett 3rd ed.

*PERSONS OF THE DIALOGUE.*

Socrates. Euthyphro.

Scene:—The Porch of the King Archon.

---

Euthyphro:: Why have you left the Lyceum, Socrates? and what are you doing in the Porch of the King Archon? Surely you cannot be concerned in a suit before the King, like myself?

Socrates:: Not in a suit, Euthyphro; impeachment is the word which the Athenians use.

Euthyphro:: What! I suppose that some one has been prosecuting you, for I cannot believe that you are the prosecutor of another.

Socrates:: Certainly not.

Euthyphro:: Then some one else has been prosecuting you?

Socrates:: Yes.

Euthyphro:: And who is he?

Socrates:: A young man who is little known, Euthyphro; and I hardly know him: his name is Meletus, and he is of the deme of Pitthis. Perhaps you may remember his appearance; he has a beak, and long straight hair, and a beard which is ill grown.

Euthyphro:: No, I do not remember him, Socrates. But what is the charge which he brings against you?

Socrates:: What is the charge? Well, a very serious charge, which shows a good deal of character in the young man, and for which he is certainly not to be despised. He says he knows how the youth are corrupted and who are their corruptors. I fancy that he must be a wise man, and seeing that I am the reverse of a wise man, he has found me out, and is going to accuse me of corrupting his young friends. And of this our mother the state is to be the judge. Of all our political men he is the only one who seems to me to begin in the right way, with the cultivation of virtue in youth; like a good husbandman, he makes the young shoots his first care, and clears away us who are the destroyers of them. This is only the first step; he will afterwards attend to the elder branches; and if he goes on as he has begun, he will be a very great public benefactor.

Euthyphro:: I hope that he may; but I rather fear, Socrates, that the opposite will turn out to be the truth. My opinion is that in attacking you he is simply aiming a blow at the foundation of the state. But in what way does he say that you corrupt the young?

Socrates:: He brings a wonderful accusation against me, which at first hearing excites surprise: he says that I am a poet or maker of gods, and that I invent new gods and deny the existence of old ones; this is the ground of his indictment.

Euthyphro:: I understand, Socrates; he means to attack you about the familiar sign which occasionally, as you say, comes to you. He thinks that you are a neologian, and he is going to have you up before the court for this. He knows that such a charge is readily received by the world, as I myself know too well; for when I speak in the assembly about divine things, and foretell the future to them, they laugh at me and think me a madman. Yet every word that I say is true. But they are jealous of us all; and we must be brave and go at them.

Socrates:: Their laughter, friend Euthyphro, is not a matter of much consequence. For a man may be thought wise; but the Athenians, I suspect, do not much trouble themselves about him until he begins to impart his wisdom to others; and then for some reason or other, perhaps, as you say, from jealousy, they are angry.

Euthyphro:: I am never likely to try their temper in this way.

Socrates:: I dare say not, for you are reserved in your behavior, and seldom impart your wisdom. But I have a benevolent habit of pouring out myself to everybody, and would even pay for a listener, and I am afraid that the Athenians may think me too talkative. Now if, as I was saying, they would only laugh at me, as you say that they laugh at you, the time might pass gaily enough in the court; but perhaps they may be in earnest, and then what the end will be you soothsayers only can predict.

Euthyphro:: I dare say that the affair will end in nothing, Socrates, and that you will win your cause; and I think that I shall win my own.

Socrates:: And what is your suit, Euthyphro? are you the pursuer or the defendant?

Euthyphro:: I am the pursuer.

Socrates:: Of whom?

Euthyphro:: You will think me mad when I tell you.

Socrates:: Why, has the fugitive wings?

Euthyphro:: Nay, he is not very volatile at his time of life.

Socrates:: Who is he?

Euthyphro:: My father.

Socrates:: Your father! my good man?

Euthyphro:: Yes.

Socrates:: And of what is he accused?

Euthyphro:: Of murder, Socrates.

Socrates:: By the powers, Euthyphro! how little does the common herd know of the nature of right and truth. A man must be an extraordinary man, and have made great strides in wisdom, before he could have seen his way to bring such an action.

Euthyphro:: Indeed, Socrates, he must.

Socrates:: I suppose that the man whom your father murdered was one of your relatives—clearly he was; for if he had been a stranger you would never have thought of prosecuting him.

Euthyphro:: I am amused, Socrates, at your making a distinction between one who is a relation and one who is not a relation; for surely the pollution is the same in either case, if you knowingly associate with the murderer when you ought to clear yourself and him by proceeding against him. The real question is whether the murdered man has been justly slain. If justly, then your duty is to let the matter alone; but if unjustly, then even if the murderer lives under the same roof with you and eats at the same table, proceed against him. Now the man who is dead was a poor dependant of mine who worked for us as a field laborer on our farm in Naxos, and one day in a fit of drunken passion he got into a quarrel with one of our domestic servants and slew him. My father bound him hand and foot and threw him into a ditch, and then sent to Athens to ask of a diviner what he should do with him. Meanwhile he never attended to him and took no care about him, for he regarded him as a murderer; and thought that no great harm would be done even if he did die. Now this was just what happened. For such was the effect of cold and hunger and chains upon him, that before the messenger returned from the diviner, he was dead. And my father and family are angry with me for taking the part of the murderer and prosecuting my father. They say that he did not kill him, and that if he did, the dead man was but a murderer, and I ought not to take any notice, for that a son is impious who prosecutes a father. Which shows, Socrates, how little they know what the gods think about piety and impiety.

Socrates:: Good heavens, Euthyphro! and is your knowledge of religion and of things pious and impious so very exact, that, supposing the circumstances to be as you state them, you are not afraid lest you too may be doing an impious thing in bringing an action against your father?

Euthyphro:: The best of Euthyphro, and that which distinguishes him, Socrates, from other men, is his exact knowledge of all such matters. What should I be good for without it?

Socrates:: Rare friend! I think that I cannot do better than be your disciple. Then before the trial with Meletus comes on I shall challenge him, and say that I have always had a great interest in religious questions, and now, as he charges me with rash imaginations and innovations in religion, I have become your disciple. You, Meletus, as I shall say to him, acknowledge Euthyphro to be a great theologian, and sound in his opinions; and if you approve of him you ought to approve of me, and not have me into court; but if you disapprove, you should begin by indicting him who is my teacher, and who will be the ruin, not of the young, but of the old; that is to say, of myself whom he instructs, and of his old father whom he admonishes and chastises. And if Meletus refuses to listen to me, but will go on, and will not shift the indictment from me to you, I cannot do better than repeat this challenge in the court.

Euthyphro:: Yes, indeed, Socrates; and if he attempts to indict me I am mistaken if I do not find a flaw in him; the court shall have a great deal more to say to him than to me.

Socrates:: And I, my dear friend, knowing this, am desirous of becoming your disciple. For I observe that no one appears to notice you—not even this Meletus; but his sharp eyes have found me out at once, and he has indicted me for impiety. And therefore, I adjure you to tell me the nature of piety and impiety, which you said that you knew so well, and of murder, and of other offences against the gods. What are they? Is not piety in every action always the same? and impiety, again—is it not always the opposite of piety, and also the same with itself, having, as impiety, one notion which includes whatever is impious?

Euthyphro:: To be sure, Socrates.

Socrates:: And what is piety, and what is impiety?

Euthyphro:: Piety is doing as I am doing; that is to say, prosecuting any one who is guilty of murder, sacrilege, or of any similar crime—whether he be your father or mother, or whoever he may be—that makes no difference; and not to prosecute them is impiety. And please to consider, Socrates, what a notable proof I will give you of the truth of my words, a proof which I have already given to others:—of the principle, I mean, that the impious, whoever he may be, ought not to go unpunished. For do not men regard Zeus as the best and most righteous of the gods?—and yet they admit that he bound his father (Cronos) because he wickedly devoured his sons, and that he too had punished his own father (Uranus) for a similar reason, in a nameless manner. And yet when I proceed against my father, they are angry with me. So inconsistent are they in their way of talking when the gods are concerned, and when I am concerned.

Socrates:: May not this be the reason, Euthyphro, why I am charged with impiety—that I cannot away with these stories about the gods? and therefore I suppose that people think me wrong. But, as you who are well informed about them approve of them, I cannot do better than assent to your superior wisdom. What else can I say, confessing as I do, that I know nothing about them? Tell me, for the love of Zeus, whether you really believe that they are true.

Euthyphro:: Yes, Socrates; and things more wonderful still, of which the world is in ignorance.

Socrates:: And do you really believe that the gods fought with one another, and had dire quarrels, battles, and the like, as the poets say, and as you may see represented in the works of great artists? The temples are full of them; and notably the robe of Athene, which is carried up to the Acropolis at the great Panathenaea, is embroidered with them. Are all these tales of the gods true, Euthyphro?

Euthyphro:: Yes, Socrates; and, as I was saying, I can tell you, if you would like to hear them, many other things about the gods which would quite amaze you.

Socrates:: I dare say; and you shall tell me them at some other time when I have leisure. But just at present I would rather hear from you a more precise answer, which you have not as yet given, my friend, to the question, What is 'piety'? When asked, you only replied, Doing as you do, charging your father with murder.

Euthyphro:: And what I said was true, Socrates.

Socrates:: No doubt, Euthyphro; but you would admit that there are many other pious acts?

Euthyphro:: There are.

Socrates:: Remember that I did not ask you to give me two or three examples of piety, but to explain the general idea which makes all pious things to be pious. Do you not recollect that there was one idea which made the impious impious, and the pious pious?

Euthyphro:: I remember.

Socrates:: Tell me what is the nature of this idea, and then I shall have a standard to which I may look, and by which I may measure actions, whether yours or those of any one else, and then I shall be able to say that such and such an action is pious, such another impious.

Euthyphro:: I will tell you, if you like.

Socrates:: I should very much like.

Euthyphro:: Piety, then, is that which is dear to the gods, and impiety is that which is not dear to them.

Socrates:: Very good, Euthyphro; you have now given me the sort of answer which I wanted. But whether what you say is true or not I cannot as yet tell, although I make no doubt that you will prove the truth of your words.

Euthyphro:: Of course.

Socrates:: Come, then, and let us examine what we are saying. That thing or person which is dear to the gods is pious, and that thing or person which is hateful to the gods is impious, these two being the extreme opposites of one another. Was not that said?

Euthyphro:: It was.

Socrates:: And well said?

Euthyphro:: Yes, Socrates, I thought so; it was certainly said.

Socrates:: And further, Euthyphro, the gods were admitted to have enmities and hatreds and differences?

Euthyphro:: Yes, that was also said.

Socrates:: And what sort of difference creates enmity and anger? Suppose for example that you and I, my good friend, differ about a number; do differences of this sort make us enemies and set us at variance with one another? Do we not go at once to arithmetic, and put an end to them by a sum?

Euthyphro:: True.

Socrates:: Or suppose that we differ about magnitudes, do we not quickly end the difference by measuring?

Euthyphro:: Very true.

Socrates:: And we end a controversy about heavy and light by resorting to a weighing machine?

Euthyphro:: To be sure.

Socrates:: But what differences are there which cannot be thus decided, and which therefore make us angry and set us at enmity with one another? I dare say the answer does not occur to you at the moment, and therefore I will suggest that these enmities arise when the matters of difference are the just and unjust, good and evil, honorable and dishonorable. Are not these the points about which men differ, and about which when we are unable satisfactorily to decide our differences, you and I and all of us quarrel, when we do quarrel?

Euthyphro:: Yes, Socrates, the nature of the differences about which we quarrel is such as you describe.

Socrates:: And the quarrels of the gods, noble Euthyphro, when they occur, are of a like nature?

Euthyphro:: Certainly they are.

Socrates:: They have differences of opinion, as you say, about good and evil, just and unjust, honorable and dishonorable: there would have been no quarrels among them, if there had been no such differences—would there now?

Euthyphro:: You are quite right.

Socrates:: Does not every man love that which he deems noble and just and good, and hate the opposite of them?

Euthyphro:: Very true.

Socrates:: But, as you say, people regard the same things, some as just and others as unjust,—about these they dispute; and so there arise wars and fighting among them.

Euthyphro:: Very true.

Socrates:: Then the same things are hated by the gods and loved by the gods, and are both hateful and dear to them?

Euthyphro:: True.

Socrates:: And upon this view the same things, Euthyphro, will be pious and also impious?

Euthyphro:: So I should suppose.

Socrates:: Then, my friend, I remark with surprise that you have not answered the question which I asked. For I certainly did not ask you to tell me what action is both pious and impious: but now it would seem that what is loved by the gods is also hated by them. And therefore, Euthyphro, in thus chastising your father you may very likely be doing what is agreeable to Zeus but disagreeable to Cronos or Uranus, and what is acceptable to Hephaestus but unacceptable to Herè, and there may be other gods who have similar differences of opinion.

Euthyphro:: But I believe, Socrates, that all the gods would be agreed as to the propriety of punishing a murderer: there would be no difference of opinion about that.

Socrates:: Well, but speaking of men, Euthyphro, did you ever hear any one arguing that a murderer or any sort of evil-doer ought to be let off?

Euthyphro:: I should rather say that these are the questions which they are always arguing, especially in courts of law: they commit all sorts of crimes, and there is nothing which they will not do or say in their own defense.

Socrates:: But do they admit their guilt, Euthyphro, and yet say that they ought not to be punished?

Euthyphro:: No; they do not.

Socrates:: Then there are some things which they do not venture to say and do: for they do not venture to argue that the guilty are to be unpunished, but they deny their guilt, do they not?

Euthyphro:: Yes.

Socrates:: Then they do not argue that the evil-doer should not be punished, but they argue about the fact of who the evil-doer is, and what he did and when?

Euthyphro:: True.

Socrates:: And the gods are in the same case, if as you assert they quarrel about just and unjust, and some of them say while others deny that injustice is done among them. For surely neither God nor man will ever venture to say that the doer of injustice is not to be punished?

Euthyphro:: That is true, Socrates, in the main.

Socrates:: But they join issue about the particulars—gods and men alike; and, if they dispute at all, they dispute about some act which is called in question, and which by some is affirmed to be just, by others to be unjust. Is not that true?

Euthyphro:: Quite true.

Socrates:: Well then, my dear friend Euthyphro, do tell me, for my better instruction and information, what proof have you that in the opinion of all the gods a servant who is guilty of murder, and is put in chains by the master of the dead man, and dies because he is put in chains before he who bound him can learn from the interpreters of the gods what he ought to do with him, dies unjustly; and that on behalf of such an one a son ought to proceed against his father and accuse him of murder. How would you show that all the gods absolutely agree in approving of his act? Prove to me that they do, and I will applaud your wisdom as long as I live.

Euthyphro:: It will be a difficult task; but I could make the matter very clear indeed to you.

Socrates:: I understand; you mean to say that I am not so quick of apprehension as the judges: for to them you will be sure to prove that the act is unjust, and hateful to the gods.

Euthyphro:: Yes indeed, Socrates; at least if they will listen to me.

Socrates:: But they will be sure to listen if they find that you are a good speaker. There was a notion that came into my mind while you were speaking; I said to myself: 'Well, and what if Euthyphro does prove to me that all the gods regarded the death of the serf as unjust, how do I know anything more of the nature of piety and impiety? for granting that this action may be hateful to the gods, still piety and impiety are not adequately defined by these distinctions, for that which is hateful to the gods has been shown to be also pleasing and dear to them.' And therefore, Euthyphro, I do not ask you to prove this; I will suppose, if you like, that all the gods condemn and abominate such an action. But I will amend the definition so far as to say that what all the gods hate is impious, and what they love pious or holy; and what some of them love and others hate is both or neither. Shall this be our definition of piety and impiety?

Euthyphro:: Why not, Socrates?

Socrates:: Why not! certainly, as far as I am concerned, Euthyphro, there is no reason why not. But whether this admission will greatly assist you in the task of instructing me as you promised, is a matter for you to consider.

Euthyphro:: Yes, I should say that what all the gods love is pious and holy, and the opposite which they all hate, impious.

Socrates:: Ought we to enquire into the truth of this, Euthyphro, or simply to accept the mere statement on our own authority and that of others? What do you say?

Euthyphro:: We should enquire; and I believe that the statement will stand the test of enquiry.

Socrates:: We shall know better, my good friend, in a little while. The point which I should first wish to understand is whether the pious or holy is beloved by the gods because it is holy, or holy because it is beloved of the gods.

Euthyphro:: I do not understand your meaning, Socrates.

Socrates:: I will endeavor to explain: we speak of carrying and we speak of being carried, of leading and being led, seeing and being seen. You know that in all such cases there is a difference, and you know also in what the difference lies?

Euthyphro:: I think that I understand.

Socrates:: And is not that which is beloved distinct from that which loves?

Euthyphro:: Certainly.

Socrates:: Well; and now tell me, is that which is carried in this state of carrying because it is carried, or for some other reason?

Euthyphro:: No; that is the reason.

Socrates:: And the same is true of what is led and of what is seen?

Euthyphro:: True.

Socrates:: And a thing is not seen because it is visible, but conversely, visible because it is seen; nor is a thing led because it is in the state of being led, or carried because it is in the state of being carried, but the converse of this. And now I think, Euthyphro, that my meaning will be intelligible; and my meaning is, that any state of action or passion implies previous action or passion. It does not become because it is becoming, but it is in a state of becoming because it becomes; neither does it suffer because it is in a state of suffering, but it is in a state of suffering because it suffers. Do you not agree?

Euthyphro:: Yes.

Socrates:: Is not that which is loved in some state either of becoming or suffering?

Euthyphro:: Yes.

Socrates:: And the same holds as in the previous instances; the state of being loved follows the act of being loved, and not the act the state.

Euthyphro:: Certainly.

Socrates:: And what do you say of piety, Euthyphro: is not piety, according to your definition, loved by all the gods?

Euthyphro:: Yes.

Socrates:: Because it is pious or holy, or for some other reason?

Euthyphro:: No, that is the reason.

Socrates:: It is loved because it is holy, not holy because it is loved?

Euthyphro:: Yes.

Socrates:: And that which is dear to the gods is loved by them, and is in a state to be loved of them because it is loved of them?

Euthyphro:: Certainly.

Socrates:: Then that which is dear to the gods, Euthyphro, is not holy, nor is that which is holy loved of God, as you affirm; but they are two different things.

Euthyphro:: How do you mean, Socrates?

Socrates:: I mean to say that the holy has been acknowledged by us to be loved of God because it is holy, not to be holy because it is loved.

Euthyphro:: Yes.

Socrates:: But that which is dear to the gods is dear to them because it is loved by them, not loved by them because it is dear to them.

Euthyphro:: True.

Socrates:: But, friend Euthyphro, if that which is holy is the same with that which is dear to God, and is loved because it is holy, then that which is dear to God would have been loved as being dear to God; but if that which is dear to God is dear to him because loved by him, then that which is holy would have been holy because loved by him. But now you see that the reverse is the case, and that they are quite different from one another. For one (θεοφιλὲς) is of a kind to be loved because it is loved, and the other (ὅσιον) is loved because it is of a kind to be loved. Thus you appear to me, Euthyphro, when I ask you what is the essence of holiness, to offer an attribute only, and not the essence—the attribute of being loved by all the gods. But you still refuse to explain to me the nature of holiness. And therefore, if you please, I will ask you not to hide your treasure, but to tell me once more what holiness or piety really is, whether dear to the gods or not (for that is a matter about which we will not quarrel); and what is impiety?

Euthyphro:: I really do not know, Socrates, how to express what I mean. For somehow or other our arguments, on whatever ground we rest them, seem to turn round and walk away from us.

Socrates:: Your words, Euthyphro, are like the handiwork of my ancestor Daedalus; and if I were the sayer or propounder of them, you might say that my arguments walk away and will not remain fixed where they are placed because I am a descendant of his. But now, since these notions are your own, you must find some other gibe, for they certainly, as you yourself allow, show an inclination to be on the move.

Euthyphro:: Nay, Socrates, I shall still say that you are the Daedalus who sets arguments in motion; not I, certainly, but you make them move or go round, for they would never have stirred, as far as I am concerned.

Socrates:: Then I must be a greater than Daedalus: for whereas he only made his own inventions to move, I move those of other people as well. And the beauty of it is, that I would rather not. For I would give the wisdom of Daedalus, and the wealth of Tantalus, to be able to detain them and keep them fixed. But enough of this. As I perceive that you are lazy, I will myself endeavor to show you how you might instruct me in the nature of piety; and I hope that you will not grudge your labor. Tell me, then,—Is not that which is pious necessarily just?

Euthyphro:: Yes.

Socrates:: And is, then, all which is just pious? or, is that which is pious all just, but that which is just, only in part and not all, pious?

Euthyphro:: I do not understand you, Socrates.

Socrates:: And yet I know that you are as much wiser than I am, as you are younger. But, as I was saying, revered friend, the abundance of your wisdom makes you lazy. Please to exert yourself, for there is no real difficulty in understanding me. What I mean I may explain by an illustration of what I do not mean. The poet (Stasinus) sings—

> ‘Of Zeus, the author and creator of all these things,
> You will not tell: for where there is fear there is also reverence.’

Now I disagree with this poet. Shall I tell you in what respect?

Euthyphro:: By all means.

Socrates:: I should not say that where there is fear there is also reverence; for I am sure that many persons fear poverty and disease, and the like evils, but I do not perceive that they reverence the objects of their fear.

Euthyphro:: Very true.

Socrates:: But where reverence is, there is fear; for he who has a feeling of reverence and shame about the commission of any action, fears and is afraid of an ill reputation.

Euthyphro:: No doubt.

Socrates:: Then we are wrong in saying that where there is fear there is also reverence; and we should say, where there is reverence there is also fear. But there is not always reverence where there is fear; for fear is a more extended notion, and reverence is a part of fear, just as the odd is a part of number, and number is a more extended notion than the odd. I suppose that you follow me now?

Euthyphro:: Quite well.

Socrates:: That was the sort of question which I meant to raise when I asked whether the just is always the pious, or the pious always the just; and whether there may not be justice where there is not piety; for justice is the more extended notion of which piety is only a part. Do you dissent?

Euthyphro:: No, I think that you are quite right.

Socrates:: Then, if piety is a part of justice, I suppose that we should enquire what part? If you had pursued the enquiry in the previous cases; for instance, if you had asked me what is an even number, and what part of number the even is, I should have had no difficulty in replying, a number which represents a figure having two equal sides. Do you not agree?

Euthyphro:: Yes, I quite agree.

Socrates:: In like manner, I want you to tell me what part of justice is piety or holiness, that I may be able to tell Meletus not to do me injustice, or indict me for impiety, as I am now adequately instructed by you in the nature of piety or holiness, and their opposites.

Euthyphro:: Piety or holiness, Socrates, appears to me to be that part of justice which attends to the gods, as there, is the other part of justice which attends to men.

Socrates:: That is good, Euthyphro; yet still there is a little point about which I should like to have further information, What is the meaning of ‘attention’? For attention can hardly be used in the same sense when applied to the gods as when applied to other things. For instance, horses are said to require attention, and not every person is able to attend to them, but only a person skilled in horsemanship. Is it not so?

Euthyphro:: Certainly.

Socrates:: I should suppose that the art of horsemanship is the art of attending to horses?

Euthyphro:: Yes.

Socrates:: Nor is every one qualified to attend to dogs, but only the huntsman?

Euthyphro:: True.

Socrates:: And I should also conceive that the art of the huntsman is the art of attending to dogs?

Euthyphro:: Yes.

Socrates:: As the art of the ox-herd is the art of attending to oxen?

Euthyphro:: Very true.

Socrates:: In like manner holiness or piety is the art of attending to the gods?—that would be your meaning, Euthyphro?

Euthyphro:: Yes.

Socrates:: And is not attention always designed for the good or benefit of that to which the attention is given? As in the case of horses, you may observe that when attended to by the horseman's art they are benefited and improved, are they not?

Euthyphro:: True.

Socrates:: As the dogs are benefited by the huntsman's art, and the oxen by the art of the ox-herd, and all other things are tended or attended for their good and not for their hurt?

Euthyphro:: Certainly, not for their hurt.

Socrates:: But for their good?

Euthyphro:: Of course.

Socrates:: And does piety or holiness, which has been defined to be the art of attending to the gods, benefit or improve them? Would you say that when you do a holy act you make any of the gods better?

Euthyphro:: No, no; that was certainly not what I meant.

Socrates:: And I, Euthyphro, never supposed that you did. I asked you the question about the nature of the attention, because I thought that you did not.

Euthyphro:: You do me justice, Socrates; that is not the sort of attention which I mean.

Socrates:: Good: but I must still ask what is this attention to the gods which is called piety?

Euthyphro:: It is such, Socrates, as servants show to their masters.

Socrates:: I understand—a sort of ministration to the gods.

Euthyphro:: Exactly.

Socrates:: Medicine is also a sort of ministration or service, having in view the attainment of some object—would you not say of health?

Euthyphro:: I should.

Socrates:: Again, there is an art which ministers to the ship-builder with a view to the attainment of some result?

Euthyphro:: Yes, Socrates, with a view to the building of a ship.

Socrates:: As there is an art which ministers to the house-builder with a view to the building of a house?

Euthyphro:: Yes.

Socrates:: And now tell me, my good friend, about the art which ministers to the gods: what work does that help to accomplish? For you must surely know if, as you say, you are of all men living the one who is best instructed in religion.

Euthyphro:: And I speak the truth, Socrates.

Socrates:: Tell me then, oh tell me—what is that fair work which the gods do by the help of our ministrations?

Euthyphro:: Many and fair, Socrates, are the works which they do.

Socrates:: Why, my friend, and so are those of a general. But the chief of them is easily told. Would you not say that victory in war is the chief of them?

Euthyphro:: Certainly.

Socrates:: Many and fair, too, are the works of the husbandman, if I am not mistaken; but his chief work is the production of food from the earth?

Euthyphro:: Exactly.

Socrates:: And of the many and fair things done by the gods, which is the chief or principal one?

Euthyphro:: I have told you already, Socrates, that to learn all these things accurately will be very tiresome. Let me simply say that piety or holiness is learning how to please the gods in word and deed, by prayers and sacrifices. Such piety is the salvation of families and states, just as the impious, which is unpleasing to the gods, is their ruin and destruction.

Socrates:: I think that you could have answered in much fewer words the chief question which I asked, Euthyphro, if you had chosen. But I see plainly that you are not disposed to instruct me—clearly not: else why, when we reached the point, did you turn aside? Had you only answered me I should have truly learned of you by this time the nature of piety. Now, as the asker of a question is necessarily dependent on the answerer, whither he leads I must follow; and can only ask again, what is the pious, and what is piety? Do you mean that they are a sort of science of praying and sacrificing?

Euthyphro:: Yes, I do.

Socrates:: And sacrificing is giving to the gods, and prayer is asking of the gods?

Euthyphro:: Yes, Socrates.

Socrates:: Upon this view, then, piety is a science of asking and giving?

Euthyphro:: You understand me capitally, Socrates.

Socrates:: Yes, my friend; the reason is that I am a votary of your science, and give my mind to it, and therefore nothing which you say will be thrown away upon me. Please then to tell me, what is the nature of this service to the gods? Do you mean that we prefer requests and give gifts to them?

Euthyphro:: Yes, I do.

Socrates:: Is not the right way of asking to ask of them what we want?

Euthyphro:: Certainly.

Socrates:: And the right way of giving is to give to them in return what they want of us. There would be no meaning in an art which gives to any one that which he does not want.

Euthyphro:: Very true, Socrates.

Socrates:: Then piety, Euthyphro, is an art which gods and men have of doing business with one another?

Euthyphro:: That is an expression which you may use, if you like.

Socrates:: But I have no particular liking for anything but the truth. I wish, however, that you would tell me what benefit accrues to the gods from our gifts. There is no doubt about what they give to us; for there is no good thing which they do not give; but how we can give any good thing to them in return is far from being equally clear. If they give every thing and we give nothing, that must be an affair of business in which we have very greatly the advantage of them.

Euthyphro:: And do you imagine, Socrates, that any benefit accrues to the gods from our gifts?

Socrates:: But if not, Euthyphro, what is the meaning of gifts which are conferred by us upon the gods?

Euthyphro:: What else, but tributes of honor; and, as I was just now saying, what pleases them?

Socrates:: Piety, then, is pleasing to the gods, but not beneficial or dear to them?

Euthyphro:: I should say that nothing could be dearer.

Socrates:: Then once more the assertion is repeated that piety is dear to the gods?

Euthyphro:: Certainly.

Socrates:: And when you say this, can you wonder at your words not standing firm, but walking away? Will you accuse me of being the Daedalus who makes them walk away, not perceiving that there is another and far greater artist than Daedalus who makes them go round in a circle, and he is yourself; for the argument, as you will perceive, comes round to the same point. Were we not saying that the holy or pious was not the same with that which is loved of the gods? Have you forgotten?

Euthyphro:: I quite remember.

Socrates:: And are you not saying that what is loved of the gods is holy; and is not this the same as what is dear to them—do you see?

Euthyphro:: True.

Socrates:: Then either we were wrong in our former assertion; or, if we were right then, we are wrong now.

Euthyphro:: One of the two must be true.

Socrates:: Then we must begin again and ask, What is piety? That is an enquiry which I shall never be weary of pursuing as far as in me lies; and I entreat you not to scorn me, but to apply your mind to the utmost, and tell me the truth. For, if any man knows, you are he; and therefore I must detain you, like Proteus, until you tell. If you had not certainly known the nature of piety and impiety, I am confident that you would never, on behalf of a serf, have charged your aged father with murder. You would not have run such a risk of doing wrong in the sight of the gods, and you would have had too much respect for the opinions of men. I am sure, therefore, that you know the nature of piety and impiety. Speak out then, my dear Euthyphro, and do not hide your knowledge.

Euthyphro:: Another time, Socrates; for I am in a hurry, and must go now.

Socrates:: Alas! my companion, and will you leave me in despair? I was hoping that you would instruct me in the nature of piety and impiety; and then I might have cleared myself of Meletus and his indictment. I would have told him that I had been enlightened by Euthyphro, and had given up rash innovations and speculations, in which I indulged only through ignorance, and that now I am about to lead a better life.

## **The Euthyphro.**

Translated by Taylor, Thomas.

PERSONS OF THE DIALOGUE,
Euthyphro, Socrates.

---

Euthyphro:: What novel circumstance has happened, Socrates, that you, leaving the discussions in the Lyceum, are now waiting about the porch of the king? For you have not an action with the king, as I have.

Socrates:: The Athenians, Euthyphro, do not call it an action, but an accusation.

Euthyphro:: What do you say? Some one, as it seems, has accused you. For I should not think that you would accuse another.

Socrates:: I should not, indeed.

Euthyphro:: Has, then, another accused you?

Socrates:: Certainly.

Euthyphro:: Who is he?

Socrates:: I do not, Euthyphro, perfectly know the man: for he appears to me to be young, and of no note. But they call him, I think, Melitus; and he is of the town Pittheus: if you have in your recollection one Melitus, a Pitthean, who has long hair, a thin beard, and an aquiline nose.

Euthyphro:: I do not recollect him, Socrates. But what is his accusation of you?

Socrates:: What is it? Not an ignoble one, as it appears to me. For it is no despicable thing, for one who is a young man, to be knowing in a circumstance of such a magnitude. For he knows, as he says, how the youth are corrupted, and who they are that corrupt them. And he appears to be a certain wise man; and seeing my ignorance, and considering me as one who corrupts his equals in age, to have accused me to the city, as to a mother. In consequence of this, he only of the citizens seems to me to have begun rightly. For it is right to pay attention to youth, in the first place, that they may become the most excellent characters: just as it is reasonable that a good husbandman should first take care of the young plants, and after this of the others. Thus also Melitus perhaps will first cut us up who corrupt the blossoms of youth, as he says, and afterwards he will certainly pay attention to those of a more advanced age, and thus will be the cause of the most numerous and the greatest goods to the city. This is what may be expected to happen from one who makes such a beginning.

Euthyphro:: I should wish it were so, Socrates; but I tremble, lest the contrary should happen. For, in reality, he appears to me, by trying to injure you, to begin to hurt the city from the Vestal hearth itself. But tell me by what part of your conduct it is that he says you corrupt the youth?

Socrates:: The things of which he accuses me, O wonderful man, must be considered, when they are heard, as absurd. For he says that I am a maker of gods; and, as if I introduced new and did not believe in the ancient gods, has brought this accusation against me.

Euthyphro:: I understand you, Socrates; it is because you say that a dæmoniacal power is every where present with you. This accusation, therefore, is brought against you as one that introduces novelties in divine affairs; and as well knowing that the multitude are always disposed to receive such kind of calumnies. For indeed they ridicule me as one insane, when I say any thing in a public assembly concerning the gods, and predict to them future events; though I do not predict to them any thing which is not true. At the same time, however, they envy all such as we are. But indeed it is not fit to pay any attention to them; but we should still go on in our own way.

Socrates:: But, dear Euthyphro, to be ridiculed is perhaps a trifling thing. For the Athenians, as it appears to me, are not very much concerned whether or not a man is skilful in any thing, so long as he is not a teacher of his wisdom; but they are indignant with him whom they think makes others to be such, whether this is from envy, as you say, or from some other cause.

Euthyphro:: With respect to this circumstance, therefore, how they may be affected towards me I am not very desirous to try.

Socrates:: For perhaps you exhibit yourself but rarely, and are not willing to teach your wisdom; but I fear lest, through philanthropy, I should appear to disclose, with too much freedom, to every man whatever I possess, not only without taking a reward, but even willingly adding one, if any person is willing to hear me. As I therefore just now said, if they were only to ridicule me, as you say they do you, there would be nothing unpleasant in passing the time in a court of justice, jesting and laughing; but if they are in earnest, how this affair may terminate is immanifest, except to you diviners.

Euthyphro:: Perhaps, however, Socrates, the affair will be nothing; but you will plead your cause successfully, and I also think that I shall mine.

Socrates:: But what is the cause, Euthyphro, which you have to plead? Are you defendant or plaintiff?

Euthyphro:: I am plaintiff.

Socrates:: Whom do you prosecute?

Euthyphro:: One whom, by prosecuting, I appear to be insane.

Socrates:: What, then, do you pursue one that flies?

Euthyphro:: He is very far from flying; for he is very much advanced in years.

Socrates:: Who is he?

Euthyphro:: My father.

Socrates:: Your father? O best of men!

Euthyphro:: He is, indeed.

Socrates:: But what is the crime, and of what do you accuse him?

Euthyphro:: Of murder, Socrates.

Socrates:: O Hercules! The multitude, Euthyphro, will be ignorant how this can ever be right. For I do not think it is the province of any casual person to make such an accusation with rectitude, but of one who has made a very great proficiency in wisdom.

Euthyphro:: Very great indeed, by Jupiter, Socrates.

Socrates:: Is it any one of your relations who has been killed by your father? Though it certainly must be so; for you would not prosecute your father for the murder of a stranger.

Euthyphro:: It is ridiculous, Socrates, if you think it makes any difference whether he who is slain is a stranger or a relation, and are not persuaded that this alone ought to be attended to, whether he who committed the murder did it justly or not; and, if justly, that he should be dismissed; but, if unjustly, that he should be prosecuted, even though he should be your domestic, and partake of your table. For you become equally defiled with him, if you, knowingly associate with such a one, and do not expiate both yourself and him, by bringing him to justice. But to apprize you of the fact: The deceased was one of our farmers, who rented a piece of land of us when we dwelt at Naxus. This man, having one day drank too much wine, was so transported with rage against one of our slaves, that he killed him. My father, therefore, ordered him to be cast into a pit, with his hands and feet bound, and immediately sent hither, to consult one of the interpreters of sacred concerns what he should do with him; and in the mean time neglected this prisoner, and left him without sustenance as an assassin, whose life was of no consequence; so that he died. For hunger, cold, and the weight of chains killed him, before the person my father had sent returned. Hence my father and the rest of my relations are indignant with me, because I, for the sake of a homicide, accuse my father of murder, which, as they say, he has not committed; and if he had, since he who is dead was a homicide, they think I ought not to be concerned for the fate of such a man. For they say it is impious for a son to prosecute his father for murder; so little do they know the manner in which a divine nature is affected about piety and impiety.

Socrates:: But, by Jupiter, Euthyphro, do you think you possess such an accurate knowledge about divine affairs, and how things holy and impious are circumstanced, that these things having taken place as you say, you are not afraid, lest in prosecuting your father you should commit an impious action?

Euthyphro:: My profession, Socrates, would be of no advantage to me, nor would Euthyphro surpass in any respect other men, unless he accurately knew all such particulars.

Socrates:: O wonderful Euthyphro, it will therefore be a most excellent thing for me to become your disciple, and before the determination of my process to let Melitus know that I have hitherto considered the knowledge of divine concerns as a thing of the greatest consequence; and that now, since he says I am guilty of acting in a rash manner, and introducing novelties concerning divine natures, I am become your disciple. If, therefore, I shall say, you acknowledge, O Melitus, that Euthyphro is wise and thinks rightly in such affairs, think and judge also the same of me; but if you do not entertain this opinion, call him, my preceptor, to account before you call me, as one who corrupts elderly men, viz. me and his father; me by instructing, but him by reproving and punishing. And if he is not persuaded by me, but still continues his prosecution, or accuses me instead of you, it will be necessary to say the very same things on the trial, to which I shall have previously called his attention.

Euthyphro:: It will so, by Jupiter, Socrates; and if he attempts to accuse me, I shall find, as I think, his weak side, and he will be called to account in a court of justice long before me.

Socrates:: And I, O my dear associate, knowing these things, desire to become your disciple, as I am persuaded that no one, and not even Melitus himself, dares to look you in the face, though he so acutely, inartificially, and easily sees through me, that he has accused me of impiety.—Now therefore, by Jupiter, tell me that which you now strenuously contend you clearly know, viz. what kind of thing you assert holiness to be, and also unholiness, both respecting murder and other things? Or is not holiness the same with itself in every action? And again, is not unholiness, which is perfectly contrary to holiness itself, similar to itself? And does not every thing which it will be unholy to do, possess one certain idea according to unholiness?

Euthyphro:: Certainly, Socrates.

Socrates:: Tell me, then, what you say holiness, and also what unholiness is?

Euthyphro:: I say, therefore, that holiness is that which I now do, viz. to prosecute him who acts unjustly either with respect to murder or sacrilege, or any thing else of a similar nature; whether the offending person be a father or mother, or any other whatever; and that not to prosecute such a one is impious. For see, Socrates, what a great proof I will give you in law that it is so, and which I have also mentioned to others, viz. that it is right not to spare an impious man, whoever he may be. For men are firmly persuaded that Jupiter is the best and most just of gods, and yet they acknowledge that he put his father in chains, because he unjustly swallowed his children; and again, that Saturn castrated his father, through other things of a similar nature: but they are indignant with me, because I prosecute my father who has acted unjustly; and thus these men assert things contrary to each other in what they say concerning the gods and concerning me.

Socrates:: Is this the thing then, Euthyphro, on account of which I am brought to the bar, because when any one asserts things of this kind concerning the gods, I admit them with pain; and through which, as it seems, some one calls me an offender? Now, therefore, if these things thus appear also to you who are well acquainted with such particulars, it is necessary, as it seems, that we also should admit them. For what else can we say, who acknowledge that we know nothing about such things? But tell me, by Jupiter, who presides over friendship; do you think that these things thus happened in reality?

Euthyphro:: Yes, and things still more wonderful than these, Socrates, of which the multitude are ignorant.

Socrates:: Do you therefore think that the gods in reality wage war with each other, and that there are among them dire enmities and battles, and many other such like particulars as are related by the poets, with the representation of which by good painters our temples are decorated; and in the great Panathenææ a veil full of such like variegated ornaments is carried into the Acropolis. Must we say, O Euthyphro, that these things are true?

Euthyphro:: Not these only, O Socrates; but, as I just now said, I can relate to you many other things concerning divine affairs if you are willing, which when you hear I well know that you will be astonished.

Socrates:: I should not wonder; but you may relate these things to me hereafter, when you are at leisure. Now, however, endeavor to tell me more clearly that which I just now asked. For you have not yet, my friend, sufficiently answered my question what holiness is, but you have only told me that this which you are now doing is holy, viz. to prosecute your father for murder.

Euthyphro:: And I spoke the truth, Socrates.

Socrates:: Perhaps so. But, O Euthyphro, do you not also say that many other things are holy?

Euthyphro:: I do.

Socrates:: Recollect, therefore, that I did not request you to teach me one or two from among many holy things, but what that form itself is by which all holy things are holy. For you have said that things unholy are unholy by one idea; and also that things holy are holy by another. Or do you not remember?

Euthyphro:: I do.

Socrates:: Teach me, therefore, what this very idea is, that looking to it, and using it as a paradigm, I may say that whatever thing of this kind you or any other does is holy, and that whatever is not of this kind is unholy.

Euthyphro:: But if you wish it, Socrates, I will also tell you this.

Socrates:: I do wish it.

Euthyphro:: That, therefore, which is dear to the gods is holy, but that which is not dear to them is unholy.

Socrates:: You have now answered, O Euthyphro, most beautifully, and in such a manner as I wished you to answer. Whether truly or not however, this I do not yet know. But you will doubtless in addition to this teach me that what you say is true.

Euthyphro:: Certainly.

Socrates:: Come then, let us consider what we say. That which is dear to divinity, and the man who is dear to divinity, are holy; but that which is odious to divinity, and the man who is odious to divinity, are unholy. But the holy is not the same with the unholy, but is most contrary to it. Is it not so?

Euthyphro:: It certainly is so.

Socrates:: And these things appear to have been well said.

Euthyphro:: I think so, Socrates.

Socrates:: But has it not, O Euthyphro, also been said that there is sedition among the gods, and that they oppose and are enemies to each other?

Euthyphro:: It has been said.

Socrates:: But let us thus consider, excellent man, about what particulars discord produces enmity and wrath. If, therefore, I and you differed in opinion concerning numbers, which of them were more in quantity, would this difference make us enemies, and should we be enraged with each other? Or, betaking ourselves to computation about things of this kind, should we not be quickly liberated from this dissension?

Euthyphro:: Entirely so.

Socrates:: Hence also, if we differed concerning the greater and the lesser, should we not, by applying ourselves to measuring, soon bring our disagreement to an end?

Euthyphro:: We should.

Socrates:: And, as I think, by betaking ourselves to weighing, we should be able to judge concerning the heavier and the lighter.

Euthyphro:: Undoubtedly.

Socrates:: About what then disagreeing, and not being able to recur to a certain criterion, should we become enemies to, and be enraged with, each other? Perhaps you cannot readily inform me; but consider whether they are such as these, viz. the just and the unjust, the beautiful and the base, good and evil. Are not these the things about which disagreeing, and not being able to arrive at a certain judgment of them, we become enemies to each other, when we do so become, you and I, and all other men?

Euthyphro:: This, Socrates, is indeed the dissension, and it is about these things.

Socrates:: But what? Do not the gods, O Euthyphro, if they disagree in any respect, disagree on account of these very things?

Euthyphro:: By an abundant necessity.

Socrates:: Different gods, therefore, O generous Euthyphro, according to your assertion, think different things to be just, beautiful, base, good and evil. For they never would oppose each other unless they disagreed about these things. Or would they?

Euthyphro:: You speak rightly.

Socrates:: Do they not severally, therefore, love those things which they think to be beautiful, good and just, but hate the contraries of these?

Euthyphro:: Entirely so.

Socrates:: But with respect to these very things, some of the gods, as you say, think them to be just, and others unjust; about which also being dubious, they oppose and wage war with each other. Is it not so?

Euthyphro:: It is.

Socrates:: The same things therefore, as it seems, are hated and loved by the gods; and the things odious to and dear to the gods will be the very same.

Euthyphro:: So it appears.

Socrates:: Hence also the same things will be holy and unholy, O Euthyphro, from this reasoning.

Euthyphro:: It seems so.

Socrates:: You have not therefore, O wonderful man, answered my question. For I did not ask you this, to whom the same thing is both holy and unholy: but, as it seems, that which is dear is also odious to divinity. So that, Euthyphro, there is nothing wonderful if in this which you are now doing, viz. punishing your father, you should do that which is pleasing to Jupiter, but odious to Saturn and Heaven; and which is pleasing to Vulcan, but odious to Juno: and if any other of the gods differs from another about this very circumstance, you should in like manner do that which is approved by the one and hated by the other.

Euthyphro:: But I think, Socrates, that no one of the gods will differ from another in this affair, and assert that it is not proper for him to suffer punishment who has unjustly slain any one.

Socrates:: But what? Have you ever heard any man doubting, O Euthyphro, whether he who has unjustly slain another, or has done any thing else unjustly, ought to be punished?

Euthyphro:: They never cease doubting about these things, both elsewhere and in courts of justice. For those that act unjustly in a very great degree, say and do every thing in order to escape punishment.

Socrates:: Do they also, O Euthyphro, confess that they have acted unjustly? And confessing this, do they at the same time say, that they ought not to be punished.

Euthyphro:: They by no means say this.

Socrates:: They do not, therefore, say and do every thing. For I think they dare not say, nor even doubt this, that if they act unjustly punishment must be inflicted on them: but, as it appears to me, they deny that they have acted unjustly. Do they not?

Euthyphro:: You speak the truth.

Socrates:: They are not, therefore, dubious about this, whether he who acts unjustly ought to be punished; but they perhaps doubt who he is that acts unjustly, and by what action, and when, his conduct may be considered as unjust.

Euthyphro:: True.

Socrates:: Will not, therefore, the very same things happen to the gods if they oppose each other concerning things just and unjust, according to your assertion; and will not some of them say, that they act unjustly by each other, and others again deny this? Since, O wonderful man, no one, either of gods or men, dares to assert that punishment ought not to be inflicted on him who acts unjustly.

Euthyphro:: They will: and what you now say, Socrates, is summarily true.

Socrates:: But those who are dubious, as well gods as men, will be dubious respecting each of the transactions; if the gods disagree about any action, and some of them say that it is done justly, but others unjustly. Is it not so?

Euthyphro:: Certainly.

Socrates:: Come, then, my dear Euthyphro, teach me also that I may become more wise, what proof you have that all the gods think that he unjustly died, who having slain his fellow-servant, and being put in chains by the master of the deceased, perished before he that bound him received the answer from the interpreters, which was to inform him how he ought to act; and that, on account of such a man, it is right for a son to prosecute his father and accuse him of murder. Come, endeavor to demonstrate to me something clear about these things, and that all the gods consider this action to be right more than any thing. And if you demonstrate this to me sufficiently, I will never cease praising you for your wisdom.

Euthyphro:: But perhaps, Socrates, this is no trifling employment, otherwise I could clearly demonstrate it to you.

Socrates:: I understand you: I appear to you to be more dull of apprehension than the judges; since you will evidently prove to them that your father’s conduct was unjust, and that all the gods hate such-like actions.

Euthyphro:: I shall demonstrate this very clearly, Socrates, if they will only hear what I have to say.

Socrates:: But they will hear, if you shall appear to speak well. However, while you was just now speaking, I thus thought and considered with myself: If Euthyphro should especially convince me that all the gods think a death of this kind to be unjust, in what respect shall I have the more learned from Euthyphro what the holy is, and also the unholy? For this action, as it appears, will be odious to divinity. It has not, however, yet appeared from this, what is holy, and what not. For that which is odious has also appeared to be dear to divinity. So that I will grant you this, Euthyphro, and if you please let all the gods think it to be unjust, and let them all hate it. Shall we, therefore, now make this correction in the definition, that what all the gods hate is unholy, and what they all love is holy; but that what some of them love, and others hate, is neither, or both? Are you willing that at present we should thus desire concerning the holy and unholy?

Euthyphro:: What should hinder, Socrates.

Socrates:: Nothing hinders me, Euthyphro; but do you, as to what relates to yourself, consider whether, admitting this, you can so easily teach me what you promised?

Euthyphro:: But I say the holy is that which all the gods love; and its contrary, the unholy, that which all the gods hate.

Socrates:: Shall we not therefore consider, Euthyphro, whether this, is well said? Or shall we dismiss this consideration, and thus grant both to ourselves and others, that if any one only says that a certain thing is so, we shall admit that it is so? Or shall we consider what he who speaks says?

Euthyphro:: Consider it certainly; though I think that this is now, well said.

Socrates:: Perhaps, O good man, we shall know this more clearly. For consider as follows: Is the holy, because it is holy, beloved by the gods; or because it is beloved by them, is it holy?

Euthyphro:: I do not know what you say, Socrates.

Socrates:: But I will endeavor to speak more clearly. We say that a thing may be carried, and that a thing carries; that a thing may be led, and that a thing leads; that a thing may be seen, and that a thing sees; and every thing else of this kind. Do you understand that these are different from each other, and in what they differ?

Euthyphro:: I appear to myself to understand this.

Socrates:: Is therefore that which is beloved a certain thing, and that which loves another different from this?

Euthyphro:: Undoubtedly.

Socrates:: Tell me, therefore, whether that which maybe carried, may be carried because it is carried, or for some other reason?

Euthyphro:: For no other reason but for this.

Socrates:: And is this the case with that which may be led, because it is led; and with that which may be seen, because it is seen?

Euthyphro:: Entirely so.

Socrates:: A thing therefore is not seen because it may be seen; but, on the contrary, because it is seen, on this account it may be seen. Nor because a thing may be led, on this account is it led; but because it is led, on this account it may be led. Nor because a thing may be carried, is it carried; but because it is carried, it may be carried. Is then what I wish to say evident, Euthyphro? But what I wish to say is this: If any thing is making, or suffers any thing, it is not making because it may be made; but because it is making it may be made. Nor because it may suffer does it suffer; but because it suffers it may suffer. Or do you not admit this to be the case?

Euthyphro:: I do.

Socrates:: Is not this therefore also the case with that which is beloved, or making, or suffering something from some one?

Euthyphro:: Entirely so.

Socrates:: This therefore subsists in the same manner as the things before mentioned: it is not beloved by those by whom it is beloved, because it may be beloved; but because it is beloved, it may be beloved.

Euthyphro:: It is necessary.

Socrates:: What then do we say concerning holiness, O Euthyphro? Is it not this, that it is beloved by all the gods, according to your assertion?

Euthyphro:: Yes.

Socrates:: Is it therefore beloved on this account, because it is holy, or for some other reason?

Euthyphro:: For no other reason but on this account.

Socrates:: Because it is holy, therefore, it is beloved; but not because it is beloved, on this account it is holy.

Euthyphro:: It appears so.

Socrates:: Because however it is beloved by the gods, it may be beloved, and be dear to divinity.

Euthyphro:: Undoubtedly.

Socrates:: That which is dear to divinity, therefore, is not holy, O Euthyphro, nor must holiness be defined to be that which is dear to divinity as you say, but it is something different from this.

Euthyphro:: How is this, Socrates?

Socrates:: Because we have acknowledged that holiness is on this account beloved because it is holy; and not that it is holy because it is beloved. Did we not?

Euthyphro:: Yes.

Socrates:: But that which is dear to divinity, because it is beloved by the gods, from this very circumstance that it is beloved, is dear to divinity; but not because it is dear to divinity, on this account is it beloved.

Euthyphro:: True.

Socrates:: But, my dear Euthyphro, if that which is dear to divinity were the same with that which is holy, if holiness were beloved through its being holiness, that also which is dear to divinity would be beloved through its being dear to divinity. But if that which is dear to divinity were dear to divinity through being beloved by the gods, that which is holy would also be holy through being beloved. Now, however, you see that they are contrarily affected, as being perfectly different from each other. For the one, viz. what is dear to the gods because it is beloved, is a thing of that kind that it may be beloved; but the other, viz. holiness, because it is a thing which may be beloved, on this account is beloved. And you appear, O Euthyphro, when you was asked what holiness is, to have been unwilling to manifest the essence of it to me, but to have mentioned a certain affection pertaining to it, which this same thing holiness suffers, viz. the being beloved by all the gods; but you have not yet told me what it is. If therefore it is agreeable to you, do not conceal this from me, but again say from the beginning what holiness is, whether it be beloved by the gods, or has any other property whatever pertaining to it. For we shall not differ about this. But tell me readily what the holy, and also what the unholy is?

Euthyphro:: But, Socrates, I cannot tell you what I conceive. For whatever position we adopt, is always some how or other circumvented, and is not willing to remain where we have established it.

Socrates:: The things which you have asserted, O Euthyphro, appear to be the offspring of our progenitor Dædalus. And if I indeed had said and adopted these things, perhaps you would have derided me, as if my works also, which consist in discourse, through my alliance with him, privately escaped, and were unwilling to remain where they were placed. But now (for they are your hypotheses) the raillery of some other person is necessary. For they are unwilling to abide with you, as it also appears to you yourself.

Euthyphro:: But it appears to me, Socrates, that what is said ought to be exposed to nearly the same ridicule. For I am not the cause of the circuitous wandering of these assertions, and of their not abiding in the same place; but you appear to me to be the Dædalus. For so far as pertains to me, these things would have remained firm.

Socrates:: I appear therefore, my friend, to have become so much more skilful than that man in this art, in as much as he only made his own productions unstable; but I, besides my own, as it seems, make those of others to be so. And moreover, this is the most elegant circumstance pertaining to my art, that I am unwillingly wise. For I had rather that my reasonings should abide, and be established immoveable, than that the riches of Tantalus, together with the wisdom of Dædalus, should become my possession. But enough of this.—Since, however, you appear to be delicate, I, in conjunction with you, will endeavor to show how you may teach me concerning holiness, and not be weary till this is accomplished. For see whether it does not appear to you to be necessary that every thing holy should be just.

Euthyphro:: To me it does.

Socrates:: Is therefore every thing just also holy? or is every thing holy indeed just; but not every thing just holy, but partly holy, and partly something else?

Euthyphro:: I do not comprehend, Socrates, what you say.

Socrates:: And yet you are younger no less than you are wiser than I am; but, as I said, you are delicate through the riches of your wisdom. However, O blessed man, collect yourself: For it is not difficult to understand what I say. For I assert the contrary to the poet, who says;

> You Jove, the source of all, refuse to sing:
> For fear perpetually resides with shame.

I therefore differ from this poet. Shall I tell you in what respect?

Euthyphro:: By all means.

Socrates:: It does not appear to me, that wherever there is fear, there also there is shame. For there are many, as it seems to me, who fear diseases, poverty, and many other things of this kind, but who by no means are ashamed of these things which they fear. Does not the same thing also appear to you?

Euthyphro:: Certainly.

Socrates:: But wherever shame is, there also is fear. For Is there any one who is ashamed of and blushes at any thing, but who does not at the same time fear and dread the opinion of improbity?

Euthyphro:: He will certainly dread this.

Socrates:: It is not therefore right to say, that where there is fear, there also there is shame; but we should say that where there is shame, there also fear resides. For wherever there is fear, there is not also shame. For I think that fear extends further than shame; since shame is a part of fear, just as the odd is a part of number. So that it does not follow that wherever there is number, there also is the odd but wherever there is the odd, there also there is number. Do you now apprehend me?

Euthyphro:: Perfectly so.

Socrates:: Respecting a thing of this kind, therefore, I inquired above, when I asked you whether where the just was, there also the holy was; or whether where the holy was, there also the just was, but the holy was not to be found every wherein conjunction with the just. For the holy is a part of the just. Does it appear to you that we should thus speak, or otherwise?

Euthyphro:: Not otherwise; but thus. For you appear to me to speak rightly.

Socrates:: See then what follows: for, if the holy is a part of the just, it is necessary, as it seems, that we should discover what part of the just the holy will be. If therefore you should ask me some of the things just now mentioned as, for instance, what part of number the even is, and what number it is, I should say that it is not scalene, but isosceles. Or does it not appear so to you?

Euthyphro:: It does.

Socrates:: Do you therefore also endeavor in like manner to teach me what part of the just the holy is, that we may tell Melitus he must no longer act unjustly by us, nor accuse us of impiety, as having now sufficiently learnt from you what things are pious and holy, and what not.

Euthyphro:: This part then, Socrates, of the just, appears to me to be pious and holy, viz. that which is conversant with the culture of the gods; but that which is conversant with the culture of mankind is the remaining part of the just.

Socrates:: And you appear to me, Euthyphro, to speak well. However, I am still in want of a certain trifling particular. For I do not yet understand what culture you mean. For you certainly do not say that such as is the culture about other things, such also is that which pertains to the gods. For instance, we say not every one knows the culture of horses, but he who is skilled in equestrian affairs. Do we not?

Euthyphro:: Certainly.

Socrates:: For equestrian skill is the culture of horses.

Euthyphro:: It is.

Socrates:: Nor does every one know the culture of dogs, but this belongs to the huntsman.

Euthyphro:: It does.

Socrates:: For the art of hunting is the culture of dogs.

Euthyphro:: It is.

Socrates:: But the grazier's art is the culture of oxen.

Euthyphro:: Certainly.

Socrates:: But holiness and piety are the culture of the gods, O Euthyphro. Do you say so?

Euthyphro:: I do.

Socrates:: All culture, therefore, effects the same thing, viz. the good and advantage of that which is cultivated. Just as with respect to horses, you see that being cultivated by the equestrian art, they are advantaged by it and become better. Or does it not appear so to you?

Euthyphro:: It does.

Socrates:: Dogs also are benefited by the huntsman's art, and oxen by that of the grazier, and all other things in a similar manner. Or do you think that culture is the injury of that which is cultivated?

Euthyphro:: Not I, by Jupiter.

Socrates:: But the advantage therefore?

Euthyphro:: How should it not?

Socrates:: Is holiness, therefore, since it is a culture of the gods, an advantage to the gods, and does it make the gods better? And do you admit this, that when you perform any thing holy, you render some one of the gods better?

Euthyphro:: Not I, by Jupiter.

Socrates:: Nor do I, O Euthyphro, think that you say this: it certainly is far otherwise. And for this reason I asked you what this culture of the gods is, not thinking you would say a thing of this kind.

Euthyphro:: And you thought rightly, Socrates: for I do not say any such thing.

Socrates:: Be it so. But what culture of the gods will holiness be?

Euthyphro:: That culture, Socrates, which slaves pay to their masters.

Socrates:: I understand. It will be a certain subservience as it seems to the gods.

Euthyphro:: Entirely so.

Socrates:: Can you then tell me, with respect to the art subservient to physicians, to the accomplishment of what work it is subservient? Do you not think it is subservient to health?

Euthyphro:: I do.

Socrates:: But what? with respect to the art subservient to shipwrights, to the accomplishment of what work is it subservient?

Euthyphro:: Evidently, Socrates, to that of a ship.

Socrates:: And is not the art subservient to architects, subservient to the building of houses?

Euthyphro:: Yes.

Socrates:: Tell me, then, O best of men: with respect to the art subservient to the gods, to the accomplishment of what work will it be subservient? For it is evident that you know, because you say that you have a knowledge of divine concerns beyond that of other men.

Euthyphro:: And I say true, Socrates.

Socrates:: Inform me then, by Jupiter, what that all-beautiful work is which the gods effect, employing our subservience.

Euthyphro:: They are many and beautiful, Socrates.

Socrates:: The generals of an army too, my friend, accomplish many and beautiful things, but at the same time you can easily tell what that principal thing is which they effect, viz. victory in battle. Or can you not?

Euthyphro:: How is it possible I should not?

Socrates:: Husbandmen also, I think, accomplish many and beautiful things; but at the same time the principal thing which they produce is aliment from the earth.

Euthyphro:: Entirely so.

Socrates:: Of the many and beautiful things then which the gods accomplish, what is the principal?

Euthyphro:: I told you a little before, Socrates, that to learn accurately how all these things subsist is an arduous undertaking; but I now tell you simply this, that if any one knows how to say and do things acceptable to the gods, praying and sacrificing to them, these things are holy. Things of this kind also preserve both private houses and cities; but the contraries to things acceptable to the gods are impious, and these subvert and destroy all things.

Socrates:: You might, if you had been willing, Euthyphro, have told me the sum of my inquiries in a much shorter manner. But it is evident that you are not readily disposed to instruct me. For now when you drew near for this purpose you receded; though if you had answered, I should before this perhaps have learnt from you what holiness is. But now (for it is necessary that he who interrogates should follow him who is interrogated wherever he may lead) what do you again say the holy, and holiness, is? Do you not say it is a certain science of sacrificing and praying?

Euthyphro:: I do.

Socrates:: Is not to sacrifice to offer gifts to the gods; but to pray to request something of the gods?

Euthyphro:: Very much so, Socrates.

Socrates:: From this it follows that holiness will be the science of requesting and giving to the gods.

Euthyphro:: You have very well understood, Socrates, what I said.

Socrates:: For I am very desirous, my friend, of your wisdom, and I pay attention to it; so that what you say does not fall to the ground. But tell me what this subservience to the gods is? Do you say it is to request of them and to give to them?

Euthyphro:: I do.

Socrates:: Will it not follow, therefore, that to request rightly, will be to request of them those things of which we are in want?

Euthyphro:: What else can it be?

Socrates:: And again, will not to give rightly consist in giving to them in our turn such things as they are in want of from us? For it would not be conformable to art to bestow upon any one those things of which he is not in want.

Euthyphro:: You say true, Socrates.

Socrates:: Holiness, therefore, O Euthyphro, will be a certain mercantile art between gods and men.

Euthyphro:: Let it be mercantile, if it pleases you so to call it.

Socrates:: But it is not pleasing to me unless it be true. Tell me therefore what advantage the gods derive from the gifts which they receive from us? For the advantage arising from their gifts is evident to every one; since we have not any good which they do not impart. But in what respect are they benefited from what they receive from us? Or have we so much the advantage in this merchandise, that we receive every good from them, but they receive nothing from us?

Euthyphro:: But do you think, Socrates, that the gods are benefited by what they receive from us?

Socrates:: What is the use then, Euthyphro, of these our gifts to the gods?

Euthyphro:: What other use do you think except honor and reverence, and, as I just now said, gratitude?

Socrates:: Holiness then, Euthyphro, is that which is acceptable to the gods, but not that which is profitable to, or beloved by them.

Euthyphro:: I think it is the most of all things beloved by them.

Socrates:: This then again is as it seems holiness, viz. that which is dear to the gods.

Euthyphro:: Especially so.

Socrates:: Asserting these things, can you wonder that your discourse does not appear to be fixed, but wandering? And can you accuse me as being the Dædalus that causes them to wander, when you yourself far surpass Dædalus in art, and make your assertions to revolve in a circle? Or do you not perceive that our discourse, revolving again, comes to the same? For you remember that in the former part of our discourse, the holy, and the dear to divinity, did not appear to us to be the same, but different from each other: or do you not remember?

Euthyphro:: I do.

Socrates:: Now, therefore, do you not perceive that you say the holy is that which is beloved by the gods? But is this any thing else than that which is dear to divinity?

Euthyphro:: It is nothing else.

Socrates:: Either therefore we did not then conclude well, or, if we did, our present position is not right.

Euthyphro:: It seems so.

Socrates:: From the beginning, therefore, we must again consider what the holy is. For I shall not willingly, before I have learnt this, run timidly away. Do not then despise me, but paying all possible attention, tell me the truth in the most eminent degree. For you know it, if any man does; and you will not be dismissed like Proteus till you have told me. For if you had not clearly known what the holy, and also the unholy is, you never would have attempted, for the sake of a man who is a hireling, to accuse your father of murder, when he is now advanced in years; but you would have dreaded (lest you should not act rightly in this affair) the danger of incurring the anger of the gods, and the reproach of men. But now I well know that you clearly suspect, that you have a knowledge of what the holy and its contrary are. Tell me, therefore, most excellent Euthyphro, and do not conceal from me what you think it to be?

Euthyphro:: It must be at some other opportunity then, Socrates: for now I am in haste, and it is time for me to leave you.

Socrates:: What do you do, my friend? By your departure you will throw me from the great hope I had entertained of learning from you what things are holy, and what are not so, and of liberating myself from the accusation of Melitus, by showing him that I was become wise through Euthyphro in divine concerns; that I shall no longer speak rashly, nor introduce any novelties respecting them through ignorance; and also that I shall act better during the remainder of my life.

# **Euthyphro.**

Translated and edited by W. D. Woodhead. 1953

PERSONS OF THE DIALOGUE,
Euthyphro, Socrates.

---

Euthyphro:: Why, Socrates, what strange event has led you to abandon your usual haunts at the Lyceum and spend your time here, around the King's Portico? Surely you are not, like me, involved in an action before the King.

Socrates:: The Athenians, Euthyphro, do not call it an action, but a public prosecution.

Euthyphro:: What do you say? Somebody surely must have lodged an indictment against you: for I will never believe it of you, that you are prosecuting another.

Socrates:: No, indeed.

Euthyphro:: Then someone is prosecuting you?

Socrates:: Exactly.

Euthyphro:: Who is it?

Socrates:: I do not really know the man myself, Euthyphro: apparently he is young and unknown: but I believe they call him Meletus. He belongs to the parish of Pitthus—if you recall a Meletus of Pitthus, a straight-haired fellow with a hooked nose and a straggly bit of beard.

Euthyphro:: I do not remember him, Socrates: but what is this indictment that he has brought against you?

Socrates:: The indictment? Something quite fine, it seems to me. For it is no small matter for one so young to have made so important a discovery. He claims to know how our young men are corrupted and who are responsible. Apparently he is a man of wisdom; and seeing my stupidity in corrupting those of his own age, he comes before the State to accuse me, even as a boy might run to his mother. And in my opinion he is the only man who is making the right beginning in politics: for the right thing is to look after our young first and see that they become as good as possible, just as your good farmer will naturally first pay attention to his young plants and to the rest later. So too Meletus, I suppose, is first of all weeding us out who, according to him, are ruining the tender buds of youth: and thereafter obviously he will attend to the older folk and prove the author of many great blessings to the city. Such at least would be the natural result of so promising a beginning.

Euthyphro:: So I could wish, Socrates: but I am afraid the opposite will happen: for it seems to me that, in setting out to wrong you, he is literally striking at the very heart of the city. And now tell me how he claims you corrupt the young.

Socrates:: By conduct strange enough, my good friend, at first hearing. He says that I am a creator of gods: and it is because I manufacture strange new gods and do not worship the old, that he has now come forward to prosecute me, so he says.

Euthyphro:: I see, Socrates: doubtless it is because you speak of a divine presence as visiting you from time to time. And so it is on the ground that you are the pioneer of a new religion that he prosecutes you: and he is going into court to discredit you, knowing that it is easy to discredit such conduct before the people. Why, they scoff even at me as a madman whenever I speak in the Assembly about religious matters and foretell the future. And yet not one of my prophecies has failed to prove true. But none the less they bear malice against all people of our kind. However, we must not let them worry us, but must boldly go forth to meet them.

Socrates:: My dear Euthyphro, their ridicule is perhaps a matter of no importance. For the Athenians, in my opinion, feel little concern, if they think a man too clever, so long as they do not think he imparts his cleverness to others. But when they think he is training others to resemble himself, they grow angry, whether through envy, as you suggest, or for any other reason.

Euthyphro:: Well, I have no particular desire to discover by experience their feelings towards me in this matter.

Socrates:: Perhaps they think that you do not make yourself cheap and are not ready to teach your wisdom: but I myself—well, I am afraid they consider that through my love for humanity I pour forth lavishly to one and all everything that is mine, and not only ask no payment but would gladly pay money myself to any who care to listen to me. If, then, as I just now said, they were likely to laugh at me, as you claim they laugh at you, it would not be unpleasant to spend our time laughing and jesting in court: but if they are going to take it seriously, then only you seers can know what the issue will be.

Euthyphro:: Well, perhaps it will prove a trivial affair, Socrates, and you will fight your case to your satisfaction, as I think I shall mine.

Socrates:: And what is your suit, Euthyphro? Are you prosecutor or defendant?

Euthyphro:: I am prosecuting.

Socrates:: And whom are you suing?

Euthyphro:: One whom they think me as mad as ever to sue.

Socrates:: Why? Is it some winged bird?

Euthyphro:: So far from flying on the wing, he is quite an old man.

Socrates:: Who is he?

Euthyphro:: My father.

Socrates:: Your father, my dear man?

Euthyphro:: Certainly.

Socrates:: But why are you suing him, and what is the charge?

Euthyphro:: Murder, Socrates.

Socrates:: Heavens above! Surely, Euthyphro, the majority of people must be ignorant of what is right! I cannot believe that the ordinary person would act as you do, but only a man already far advanced in wisdom.

Euthyphro:: Far advanced indeed, Socrates, as God is my witness!

Socrates:: Is it one of your own family who was killed by your father? But of course it was: for you would hardly prosecute him for murder on a stranger's behalf.

Euthyphro:: How absurd of you, Socrates, to think it makes any difference whether the dead man be a relative or stranger! There is only one thing to consider, whether the slayer's deed was justified or not: and if it was justified, one should let him be: if not, one should prosecute him—even if the slayer shares one's hearth and board. For the taint of pollution extends equally to you, if with knowledge of his deed you associate with such a man and do not purify yourself and him by bringing him to justice. As a matter of fact, the victim was a laborer of mine, and when we were farming in Naxos he worked there on our estate. And in a fit of drunkenness he flew into a rage with one of our servants and brutally murdered him. And so my father bound him hand and foot, flung him into a ditch, and sent a man to Athens to inquire of the Religious Adviser what was to be done. Meanwhile he paid no attention to the bound man but neglected him as a murderer, considering that it mattered not even if he should die. And this is exactly what the fellow did: he died of hunger and cold and his bonds before the return of the messenger from the Adviser. Now that is just why my father and my other relations are annoyed with me, because it is on a murderer's behalf that I am prosecuting my father for murder. They insist that he did not kill the man: and even if he were never so responsible for the death, yet, the dead man being a murderer, I should not, they say, concern myself about such a creature, for it is an unholy action for son to prosecute father for murder. Little they know about heaven's attitude to what is holy or unholy.

Socrates:: But, in God's name, Euthyphro, do you actually consider yourself so expert in your knowledge of the divine and of what is or is not holy, that under the circumstances which you mentioned you are not afraid of being yourself guilty of an unholy act in prosecuting your father?

Euthyphro:: I should be a useless fellow, Socrates, if I had not expert knowledge in all these matters: and Euthyphro would in no way be superior to the mass of mankind.

Socrates:: Then, my wonderful friend, the best thing for me to do is to become your pupil and challenge Meletus on these very points before the case comes to trial, insisting that in the past I always considered it of great importance to know about religion and that now, since he accuses me of acting amiss by judging hastily and breaking new ground in these matters, I have become your pupil. And I might add: 'Meletus, if you admit that Euthyphro is wise in these affairs, then you must consider that I too am orthodox and give up the indictment: but if you do not, then pray take action against him, my teacher, rather than against me, on the ground that he is ruining the older men, namely myself by his teaching, and his father by correction and punishment.’ And if he refuses to listen to me and does not release me or prosecute you in my stead, then I might repeat in court the points of my challenge to him.

Euthyphro:: Good God, Socrates, if he should venture to prosecute me, I think I should discover where his weakness lies: and he would be under discussion in court long before me.

Socrates:: I too realize that, my dear friend, and I am anxious to become your disciple because I know that this fellow Meletus—along with others too perhaps—seems not even to see you, but for me so quick and keen in his vision that he has charged me with impiety. So now, in heaven’s name, expound to me what you just now maintained you know so clearly, just how you define piety and impiety, both with reference to murder and to other matters. Is not holiness consistently the same in every activity, and unholiness invariably its opposite—all that is to prove unholy being self-consistent and, in respect of its unholiness, possessed of one single form?

Euthyphro:: Assuredly, Socrates.

Socrates:: Then tell me how you define holiness and unholiness.

Euthyphro:: Well, then, holiness I describe as doing just what I am now doing. It is to prosecute the man who is guilty of acts of murder or sacrilege, or any other such offences, whether it be your father or mother or whoever it may be: and to decline to prosecute is unholy. Why, Socrates, observe what conclusive proof I can offer to you that this is [heaven’s] law—a proof which I have already presented to others in evidence that this conduct would be correct—the law that we should never give way to the impious man, no matter who he may be. Men regard Zeus as the best and most righteous of the gods, and yet they agree that he bound and imprisoned his own father for wickedly devouring his children, and that that father in turn castrated his own father for similar misdeeds: but. they are angry with me because I take action against my father for wrong-doing, and so they are self-contradictory in what they say about the gods and about me.

Socrates:: Can this be the reason for my prosecution, Euthyphro, that when people tell such stories about the gods, I listen with repugnance? And therefore people will say, I suppose, that I do wrong. But now, if you who are an expert in such matters share their opinion, I suppose I must give way. For what can I say, when I myself admit my ignorance in these things? But tell me, in Friendship's name, do you really believe that these things so happened?

Euthyphro:: Yes, and others stranger still, Socrates, of which the many know nothing.

Socrates:: And do you think that the gods are really at war with one another and that there are bitter enmities and battles and many other such things as are described by the poets and depicted by our worthy artists in our shrines, and especially in the robe covered with such embroidered scenes which is carried up to the Acropolis at the Great Panathenaea? Are we to say that all this is true, Euthyphro?

Euthyphro:: Yes, and that is not all, Socrates, but as I said just now, I can tell you many other stories, if you like, about things divine, which will astonish you, I am sure, when you hear them.

Socrates:: I should not be surprised. But these you shall tell me at your leisure some other time. But try now to answer more clearly the question I have just asked. For when I asked you, my friend, what holiness is, you did not sufficiently enlighten me, but replied that to proceed against your own father for murder, as you are now doing, is an act of holiness.

Euthyphro:: Well, what I said was true, Socrates.

Socrates:: Perhaps. But there are many other things which you call holy, Euthyphro.

Euthyphro:: There are indeed.

Socrates:: You must remember, then, that I did not ask you to inform me of one or two of those many things, but to define that one essential form which makes holy all that is holy: for you said, I believe, that holy actions are holy and unholy acts unholy by virtue in each case of a single form. Or do you not remember?

Euthyphro:: I do.

Socrates:: Explain to me then just what is this actual form: then by looking to it and using it as a pattern I can accept as holy any action by yourself or another that conforms to it, and reject what does not.

Euthyphro:: Well, if that is what you want, Socrates, I will explain it to you.

Socrates:: That is precisely what I want.

Euthyphro:: Then, what is dear to the gods is holy: what is not, unholy.

Socrates:: Excellent, Euthyphro: now you have answered just as I wanted you to answer. Whether your definition is true, I do not yet know: but obviously you will proceed to prove you are right.

Euthyphro:: Certainly.

Socrates:: Well then, let us consider what we mean. Things and persons dear to the gods are holy, those hateful to the gods, unholy: and the holy and the unholy are not the same but completely opposite. Is that our meaning?

Euthyphro:: Exactly so.

Socrates:: And the statement seems to be correct?

Euthyphro:: I think so, Socrates.

Socrates:: Has it not also been stated, Euthyphro, that there are factions and quarrels and mutual hatreds among the gods?

Euthyphro:: It has.

Socrates:: But in what matters do disagreements provoke enmity and anger, my worthy friend? Let us investigate the question in this way. If you and I were to differ as to which of two numbers is the greater, would our disagreement on this point make us enemies and angry with each other, or would we quickly settle such questions by counting?

Euthyphro:: Assuredly.

Socrates:: And if we differed about larger or smaller size, we should quickly end our difference by resorting to measurement?

Euthyphro:: That is so.

Socrates:: And by resorting to weighing, I fancy, we should quickly settle any dispute about the heavier or the lighter.

Euthyphro:: Of course.

Socrates:: Then what source of disagreement is there which, through lack of a means of settlement, might provoke us to enmity and anger? Perhaps the answer is not immediately ready to hand: but consider whether I am correct in suggesting that it is questions of right and wrong, noble and base, good and evil. Are not these the subjects which on occasion breed enmity among us when we differ and are unable to reach a satisfactory agreement, you and I and everyone else?

Euthyphro:: Yes, Socrates, such are the disagreements and such the causes.

Socrates:: And what about the gods, Euthyphro? If they quarrel at all, would it not be over such questions?

Euthyphro:: Most necessarily so.

Socrates:: Then according to what you say, my noble Euthyphro, the gods also differ in their opinions of what is right and noble, base and good and evil: for surely they would not engage in factions against each other, if they did not disagree about these things, would they?

Euthyphro:: You are right.

Socrates:: Then whatever each group considers noble and good and righteous, these things they love, and the opposite they hate?

Euthyphro:: Certainly.

Socrates:: Yes, but the selfsame things, according to you, are considered right by one group and wrong by another and it is because they disagree about these matters that they quarrel and fight with each other. Is it not so?

Euthyphro:: It is.

Socrates:: Then the same things apparently are hated and loved by the gods, and the same things must be hateful and dear to them.

Euthyphro:: So it seems.

Socrates:: By this account then, Euthyphro, the same things will be holy and unholy.

Euthyphro:: Apparently so.

Socrates:: Then, my strange friend, you have not answered my question. For I did not ask about something which, while remaining the same, is at once holy and unholy. But it seems that what is dear to the gods is also hated by the gods. And so it would not be surprising if your present action in punishing your father is welcome to Zeus but hateful to Cronos or Uranus, and pleasing to Hephaestus but hateful to Hera, and similarly pleasing or displeasing to other gods who are at variance with each other on the subject.

Euthyphro:: But surely, Socrates, there can be but one opinion among all the gods regarding the point of view that a man who has wrongfully killed another need not be punished.

Socrates:: What, Euthyphro? Among mankind have you ever heard anyone argue that the man who has wrongfully killed another or who is guilty of any other wrong should not be punished?

Euthyphro:: Indeed, they are never done with such arguments, both in the law-courts and elsewhere: for while men commit many evil deeds, they leave nothing unsaid or undone to escape punishment.

Socrates:: But do they admit their guilt, Euthyphro, and yet, in spite of their admission, insist that they should not be punished?

Euthyphro:: Oh, no: not that.

Socrates:: Then they do not leave nothing unsaid and undone: for, I fancy, they do not venture to dispute or argue that they should escape punishment if guilty: but, I think, they deny their guilt. Is it not so?

Euthyphro:: You are right.

Socrates:: They do not then dispute the point that the guilty should be punished, but rather perhaps the question who is the wrong-doer, and when, and what his action.

Euthyphro:: That is true.

Socrates:: Is it not exactly the same with the gods if, as you say, they are at variance about right and wrong and one party accuses the other of doing wrong and the other denies it? For surely no one, my strange friend, whether god or man, dares to assert that the guilty ought not to be punished.

Euthyphro:: Yes, you are right, Socrates, in the main.

Socrates:: But it is always about one particular act, I imagine, Euthyphro, that disputes arise among both gods and men, if indeed gods do disagree: it is with regard to some individual action that they differ when one party claims that it is right and the other that it is wrong. Is it not so?

Euthyphro:: Certainly.

Socrates:: Come then, my dear Euthyphro, instruct me too for my enlightenment. What proof have you that all the gods regard as unjust the death of your man—a laborer guilty of murder, who was bound by his victim’s master and died from his bonds before the man who had bound him could learn from the Advisers what action he should take? What proof have you that for such a man a son should denounce and indict his father for murder? Come, try to give me some definite proof in this case that all the gods beyond any question consider this action right: and if you prove this to my satisfaction, I will praise your wisdom for ever.

Euthyphro:: Well, perhaps that is no slight task, Socrates, though I could make it quite clear to you.

Socrates:: I understand: it is because you think me slower of comprehension than the judges, since it is obvious you will convince them that such deeds are wrong and detested by all the gods.

Euthyphro:: Quite conclusively, Socrates, if only they will listen to my words.

Socrates:: They will listen, if they consider that you speak well. But while you were speaking, another point occurred to me and I reflected: Suppose that Euthyphro should prove to me beyond all doubt that all the gods consider such a death unjust, I have not learnt any the more definitely from him the meaning of holiness and unholiness. This particular deed may apparently be hateful to the gods. But we have just seen that holiness and its opposite cannot be defined in this way: for we have discovered that what is hateful to the gods is also dear to them. On this point, then, I will let you off, Euthyphro: if you wish, let us allow that all the gods consider your father's action wrong and all detest it. But what of the amendment we now put forward in our definition—that what all the gods hate is unholy, and what they all love, holy: and what some hate and others love, is neither or both? Is that the definition of holiness and of unholiness you now wish us to accept?

Euthyphro:: What can hinder us, Socrates?

Socrates:: Oh, I offer no objection, Euthyphro: but consider for your part whether by such an assumption you can most easily give me the instruction which you promised?

Euthyphro:: Well then, I should maintain that the holy is what all the gods love, and its opposite—whatever all the gods hate—unholy.

Socrates:: Shall we examine this definition in turn, Euthyphro, and see whether it is correct, or shall we let it pass and without more ado accept statements from ourselves and others, admitting that things are as stated if anyone merely makes an assertion? Or should we inquire into the speaker's meaning?

Euthyphro:: We must inquire: however, I think that our present statement is right.

Socrates:: We shall soon know more certainly, my good friend. Just consider this problem: is holiness loved by the gods because it is holy, or is it holy because loved by the gods?

Euthyphro:: I do not understand what you mean, Socrates.

Socrates:: Then I will attempt to make it more clear. We speak of things being carried and carrying, being led and leading, being seen and seeing, and you understand that all such pairs differ from each other and how they differ.

Euthyphro:: Yes, I think I understand.

Socrates:: Then there is a thing that is loved and, different from it, a thing that loves.

Euthyphro:: Of course.

Socrates:: Tell me, is a thing carried a carried thing because it is carried, or for some other reason?

Euthyphro:: No, for that reason.

Socrates:: And a thing led is so called, because it is led: and a thing seen, because it is seen.

Euthyphro:: Certainly.

Socrates:: One does not see it, therefore, because it is a thing seen, but on the contrary it is a thing seen because one sees it: nor does one lead it because it is a thing led, but it is a thing led because one leads it: nor does one carry it because it is a thing carried, but it is a thing carried because one carries it. Is what I wish to say clear, Euthyphro? What I mean is this, that, if a thing is produced or affected, it is a thing produced because it is produced; not produced because it is a thing produced: and it is not affected because it is a thing affected; it is a thing affected because it is affected. Do you not agree?

Euthyphro:: I agree.

Socrates:: Now an object loved is either a thing produced or a thing affected by something?

Euthyphro:: Certainly.

Socrates:: Then the truth here is the same as in the former instances: a thing is not loved by its lovers because it is a loved object: it is a loved object because it is loved.

Euthyphro:: Necessarily.

Socrates:: What do we say then about the holy, Euthyphro? Is it not, according to your statement, loved by all the gods?

Euthyphro:: Yes.

Socrates:: Because it is holy, or for some other reason?

Euthyphro:: Because it is holy.

Socrates:: It is loved then because it is holy, not holy because it is loved?

Euthyphro:: So it seems.

Socrates:: But it is because it is loved by the gods that it is an object loved and dear to them?

Euthyphro:: Of course.

Socrates:: Then what is dear to the gods is not identical with the holy, nor is holiness identical with what is dear to the gods, as you assert, Euthyphro: they are different from one another.

Euthyphro:: How is that, Socrates?

Socrates:: Because we agree that the holy is loved because it is holy, not holy because it is loved, do we not?

Euthyphro:: Yes.

Socrates:: Well, but we agree also that what is dear to the gods is dear to them because they love it and in virtue of that love, not loved by them because it is dear to them.

Euthyphro:: You are right.

Socrates:: But supposing what is dear to the gods and what is holy were identical, then, my dear Euthyphro, if the holy were loved because it is holy, the gods would love what is dear to them because it was dear to them: and if what was dear to them were dear to them because they loved it, then the holy would be holy because they loved it. But as it is, you can see that the opposite is true of them and that they are entirely different from one another. For the one [what is dear to the gods] is lovable because it is loved: the other [holiness] is loved because it is lovable. And apparently, Euthyphro, when asked to define the holy, you do not wish to explain its true nature but merely mention an accident or attribute belonging to it, namely that it is loved by all the gods: but what it is, you have not yet told us. If it so please you, then, do not withhold it from me, but begin again and tell me just what this holiness is, regardless of whether it be loved by the gods or of any other attribute—we need not quarrel about that. But do your best to tell me what is holiness and what is unholiness.

Euthyphro:: Well, Socrates, I do not know how to explain to you what I think. Somehow or other whatever we put forward goes round in circles and refuses to stay where we put it.

Socrates:: Your definitions, Euthyphro, resemble the works of my ancestor Daedalus. And if I uttered them and put them forth, you would probably laugh at me and say that owing to that family connection my works of art in discourse run away and will not remain where they are placed. But, as it is, the definitions were proposed by you, and so some other jest is needed: for you yourself realize that they will not stand still.

Euthyphro:: In my opinion the same jest applies pretty well: for if the statements circle around and will not remain still, I am not the one who put this motion into them, but to my thinking it is you, you Daedalus; since, so far as I am concerned, they would have held their ground.

Socrates:: Apparently then, my friend, I am a more skilful artist than my worthy ancestor, to the extent that he made only his own statues move, whereas, it seems, I can make those of others move as well as my own. And the most charming thing about my craft is that I am skilful in my own despite. I would rather our statements remained firmly fixed than possess the wealth of Tantalus as well as the skill of Daedalus. But enough of this. Now, since you seem to be a spoilt creature, I will to the best of my ability help you to instruct me about the holy. And do not give in too early. Just consider whether you do not think that all holiness is right.

Euthyphro:: It is.

Socrates:: Then is everything that is right also holy? Or is all that is holy right, but not all that is right holy, but part of it holy, part something else?

Euthyphro:: I cannot follow what you are saying, Socrates.

Socrates:: And yet you are as superior to me in youth as you are in wisdom. But, as I say, your wealth of wisdom has spoilt you. Come, make a valiant effort, my good friend: it is not difficult to understand what I mean. I am saying the opposite of what the poet said when he wrote: e Even he who originated all this will not revile Zeus who wrought it: for where there is fear, there is also shame.’ Now I do not agree with this poet. Shall I tell you why?

Euthyphro:: Certainly.

Socrates:: I do not think it is true that 'where there is fear, there is also shame': for many who fear sickness and poverty and other such things seem to me to suffer fear but in no way to feel shame about what they fear. Do you not agree?

Euthyphro:: Certainly.

Socrates:: But where shame is, there fear is also: for surely no one who feels reverence or shame about anything does not at the same time dread and fear a repute for baseness.

Euthyphro:: No, he does fear.

Socrates:: It is not right then to say 'where there is fear, there is shame': where there is shame there is fear also: but there is not in every case shame where there is fear: for fear has a wider application than shame, shame being but a part of fear, just as the odd is a part of number: so that where there is number, there is not necessarily the odd: but where the odd is, there also is number. You follow me now, I suppose.

Euthyphro:: Certainly.

Socrates:: Well, this is the kind of thing I meant when I asked whether there is holiness wherever the right is; or whether, while there is always right where there is holiness, there is not everywhere holiness where there is right: since the holy is part of the right. Are we to accept this or do you think otherwise?

Euthyphro:: No, I accept it, for I think your statement is correct.

Socrates:: Then consider the next point. If holiness is a part of the right, we must apparently determine what part it is. Now if you had asked me one of the questions just mentioned, for instance, what part of number is the even and what kind of number, I should have defined it as represented by a triangle with two equal, not all unequal, sides. Do you not agree?

Euthyphro:: I do.

Socrates:: Try then in the same way to explain to me what part of the right is holiness: then I can tell Meletus to cease wronging me by his prosecution for impiety, since I have satisfactorily learnt from you what is pious and holy and the reverse.

Euthyphro:: Piety and holiness in my opinion, Socrates, are that part of the right which is concerned with attention to the gods: and the remaining part of the right has to do with care for men.

Socrates:: An excellent statement too, Euthyphro: but there is one trifling thing I still lack: I do not yet understand of what 'attention' you are speaking.

You cannot, I imagine, mean the same kind of attention to the gods as we bestow elsewhere: for that is the term we use, is it not? We say, for example, that not every man but only the trainer of horses knows how to attend to horses, do we not?

Euthyphro:: Certainly.

Socrates:: For the art of horsemanship attends to horses?

Euthyphro:: Yes.

Socrates:: And not everybody knows how to tend dogs, but only the huntsman?

Euthyphro:: That is so.

Socrates:: For the huntsman's art attends to dogs?

Euthyphro:: Yes.

Socrates:: And the herdsman's art attends to cattle?

Euthyphro:: Certainly.

Socrates:: And holiness and piety pay attention to the gods, Euthyphro: is that what you say?

Euthyphro:: I do.

Socrates:: Now does not every form of attention achieve the same purpose? What I mean to say is, that it exists for some benefit and advantage to the object tended: you see, for example, that horses when tended by the horseman's art are profited and improved. Do you not think so?

Euthyphro:: I do.

Socrates:: And so too, I suppose, with dogs tended by the huntsman's art, and cattle by the herdsman's, and everything else: or do you believe that attentive care is for the harm of the object tended?

Euthyphro:: No, indeed, I do not.

Socrates:: But for its benefit?

Euthyphro:: Of course.

Socrates:: Then holiness also, being attention bestowed on the gods, benefits and improves them? And you would agree that, when you perform a holy action, you are making one of the gods better?

Euthyphro:: No indeed, not I.

Socrates:: I too do not think that is your meaning. Far from it. And that is the reason why I asked what you meant by attention to the gods, because I did not believe you meant this.

Euthyphro:: You are right too, Socrates: that is not the kind of attention I mean.

Socrates:: Well then: what kind of attention to the gods would holiness be?

Euthyphro:: That which slaves, Socrates, render to their masters.

Socrates:: I understand: it would apparently be a kind of service to the gods.

Euthyphro:: Certainly.

Socrates:: Now could you tell me what result the art that serves a doctor is instrumental in producing? Do you not think it is health?

Euthyphro:: I do.

Socrates:: What of the art which serves a shipwright? What results does it minister to produce?

Euthyphro:: Obviously, Socrates, a ship.

Socrates:: And the builder's art, I suppose, a house?

Euthyphro:: Yes.

Socrates:: Tell me then, my good friend, what result is the art that serves the gods instrumental in producing? For it is obvious that you know, since you claim to know best of all men about things divine.

Euthyphro:: And my claim is true, Socrates.

Socrates:: Then tell me, in heaven's name, what is this splendid result which the gods achieve by using our services?

Euthyphro:: Many fine things, Socrates.

Socrates:: So do generals, my friend: none the less you could easily name the sum and substance of them, which is victory in war, is it not?

Euthyphro:: Of course.

Socrates:: And farmers too, I think, produce many fine things: but the sum and substance of their production is food from the soil.

Euthyphro:: Certainly.

Socrates:: What then of the many fine results achieved by the gods? What is the main result of their accomplishment?

Euthyphro:: I told you, Socrates, a little while ago that it is a considerable task to learn the truth about all this in detail. But this I can say in broad outline. If a man knows how to say and to do what is acceptable to the gods, by prayer and sacrifice, that is holiness. And such conduct brings with it safety to both private households and commonwealths: but the opposite to what is acceptable is impiety, which brings utter ruin and destruction.

Socrates:: You could have given me the sum and substance of your reply to my question far more briefly, Euthyphro, if you had wished: but you are not eager to instruct me, and that is evident. For just now, when you were on the point of answering me, you turned aside, though if you had answered, I should by now have learnt clearly enough from you the nature of holiness. But as it is, since the lover must follow the object of his love wherever he leads the way, what do you now mean by holiness and the holy? Is it not in your view a science of prayer and sacrifice?

Euthyphro:: It is.

Socrates:: And sacrifice is giving to the gods, and prayer asking of them?

Euthyphro:: Yes indeed, Socrates.

Socrates:: Then according to this statement holiness will be a science of petition and gifts to the gods.

Euthyphro:: You grasp my meaning admirably, Socrates.

Socrates:: Because I am anxious, my friend, to possess your wisdom; and I pay it all attention, so that not a word you utter will fall spent to the ground. But tell me, what is this service to the gods? You say it is to ask of them and to give to them?

Euthyphro:: I do.

Socrates:: And the right way to ask of them would be to ask what we need?

Euthyphro:: Of course.

Socrates:: And the right way to give would be to give them in return what they need from us. For surely it would not be very scientific to give to anybody presents which he does not need.

Euthyphro:: You are quite right, Socrates.

Socrates:: Then holiness will prove to be an art of mutual traffic between gods and men.

Euthyphro:: Call it trafficking, if that is the name you prefer to give it.

Socrates:: I do not prefer it, unless it happens to be true. But tell me, what benefit do the gods derive from the gifts they receive from us? What they themselves give us is plain to everybody: there is not a blessing which is not their gift to us. But how do they profit by what they receive from us? Have we so much the advantage over them in this trafficking that, while we receive all good gifts from them, they gain nothing from us?

Euthyphro:: But do you really imagine, Socrates, that the gods benefit by our gifts to them?

Socrates:: Then just what are these gifts of ours to the gods?

Euthyphro:: What else do you think but respect and honor and, as I said just now, what is agreeable to them?

Socrates:: Holiness, then, Euthyphro, is agreeable, but not profitable or dear to the gods.

Euthyphro:: Indeed, I think it is dear above all things to them.

Socrates:: Once again then holiness, it appears, is what is dear to the gods.

Euthyphro:: Most certainly.

Socrates:: Then if you say this, can you wonder that your words do not stay fixed but are on the move; and will you blame me as the Daedalus who makes them walk, when you yourself are much more skilful than Daedalus, and make them travel round in a circle? Do you not realize that our definition has made a circuit and come round to the same place? For you must remember that previously we discovered that holiness and what is dear to the gods are not the same but different: or do you not remember?

Euthyphro:: I do.

Socrates:: But do you not see that you are saying that what the gods love is holy? And is not this just the same as what is dear to the gods?

Euthyphro:: Certainly.

Socrates:: Then either we were wrong in our previous agreement or, if it was right, we are wrong now.

Euthyphro:: It seems so.

Socrates:: Let us consider then once more from the beginning what is the meaning of holiness: for I shall not willingly desert my post before I have discovered it. Do not disdain me but put your whole mind to it and now at last reveal to me the truth. For if any man knows it, you do; and I must hold fast to you as if you were Proteus, until you disclose it. If you had not fully known what holiness and unholiness are, you would never have ventured on behalf of a mere hireling to prosecute your aged father for murder. You would have feared the risk of angering the gods in case you were acting wrongly, and you would have been ashamed before your fellow-men. But now I am sure you are confident that you know what is holy and what is not. So tell me, my good Euthyphro, and do not withhold from me what you think it is.

Euthyphro:: Some other time, Socrates: for now I am in a hurry and it is time for me to be off elsewhere.

Socrates:: What a thing to do, my friend! You leave me after dashing the fine hope I had of learning from you what is holy and not, and ridding myself of Meletus' prosecution by pointing out to him that I have learnt wisdom about things divine from Euthyphro, that I am no longer in my ignorance making reckless judgments or innovations in these matters, and that I shall lead a better life in the future.

# Apology Of Socrates.

Translated by Henry Cary.

Socrates and Melitus.

---

Socrates:: I know not, O Athenians, how far you have been influenced by my accusers: for my part, in listening to them I almost forgot myself, so plausible were their arguments: however, so to speak, they have said nothing true. But of the many falsehoods which they uttered I wondered at one of them especially, that in which they said that you ought to be on your guard lest you should be deceived by me, as being eloquent in speech. For that they are not ashamed of being forthwith convicted by me in fact, when I shall show that I am not by any means eloquent, this seemed to me the most shameless thing in them, unless indeed they call him eloquent who speaks the truth. For, if they mean this, then I would allow that I am an orator, but not after their fashion: for they, as I affirm, have said nothing true; but from me you shall hear the whole truth. Not indeed, Athenians, arguments highly wrought, as theirs were, with choice phrases and expressions, nor adorned, but you shall hear a speech uttered without premeditation, in such words as first present themselves. For I am confident that what I say will be just, and let none of you expect otherwise: for surely it would not become my time of life to come before you like a youth with a got up speech. Above all things therefore I beg and implore this of you, O Athenians, if you hear me defending myself in the same language as that in which I am accustomed to speak both in the forum at the counters, where many of you have heard me, and elsewhere, not to be surprised or disturbed on this account. For the case is this: I now for the first time come before a court of justice, though more than seventy years old; I am therefore utterly a stranger to the language here. As, then, if I were really a stranger, you would have pardoned me if I spoke in the language and the manner in which I had been educated, so now I ask this of you as an act of justice, as it appears to me, to disregard the manner of my speech, for perhaps it may be somewhat worse, and perhaps better, and to consider this only, and to give your attention to this, whether I speak what is just or not; for this is the virtue of a judge, but of an orator to speak the truth.

First then, O Athenians, I am right in defending myself against the first false accusations alleged against me, and my first accusers, and then against the latest accusations, and the latest accusers. For many have been accusers of me to you, and for many years, who have asserted nothing true, of whom I am more afraid than of Anytus and his party, although they too are formidable; but those are still more formidable, Athenians, who laying hold of many of you from childhood, have persuaded you, and accused me of what is not true:—"that there is one Socrates, a wise man, who occupies himself about celestial matters, and has explored every thing under the earth, and makes the worse appear the better reason." Those, O Athenians, who have spread abroad this report are my formidable accusers: for they who hear them think that such as search into these things do not believe that there are gods. In the next place, these accusers are numerous, and have accused me now for a long time; moreover they said these things to you at that time of life in which you were most credulous, when you were boys and some of you youths, and they accused me altogether in my absence, when there was no one to defend me. But the most unreasonable thing of all is, that it is not possible to learn and mention their names, except that one of them happens to be a comic poet. Such, however, as influenced by envy and calumny have persuaded you, and those who, being themselves persuaded, have persuaded others, all these are most difficult to deal with; for it is not possible to bring any of them forward here, nor to confute any; but it is altogether necessary, to fight as it were with a shadow, in making my defence, and to convict when there is no one to answer. Consider, therefore, as I have said, that my accusers are twofold, some who have lately accused me, and others long since, whom I have made mention of; and believe that I ought to defend myself against these first; for you heard them accusing me first, and much more than these last.

Well. I must make my defence then, O Athenians, and endeavor in this so short a space of time to remove from your minds the calumny which you have long entertained. I wish, indeed, it might be so, if it were at all better both for you and me, and that in making my defence I could effect something more advantageous still: I think however that it will be difficult, and I am not entirely ignorant what the difficulty is. Nevertheless let this turn out as may be pleasing to God, I must obey the law, and make my defence.

Let us then repeat from the beginning what the accusation is from which the calumny against me has arisen, and relying on which Melitus has preferred this indictment against me. Well. What then do they who charge me say in their charge? For it is necessary to read their deposition as of public accusers. “Socrates acts wickedly, and is criminally curious in searching into things under the earth, and in the heavens, and in making the worse appear the better cause, and in teaching these same things to others.” Such is the accusation: for such things you have yourselves seen in the comedy of Aristophanes, one Socrates there carried about, saying that he walks in the air, and acting many other buffooneries, of which I understand nothing whatever. Nor do I say this as disparaging such a science, if there be any one skilled in such things, only let me not be prosecuted by Melitus on a charge of this kind; but I say it, O Athenians, because I have nothing to do with such matters. And I call upon most of you as witnesses of this, and require you to inform and tell each other, as many of you as have ever heard me conversing; and there are many such among you. Therefore tell each other, if any one of you has ever heard me conversing little or much on such subjects. And from this you will know that other things also, which the multitude assert of me, are of a similar nature.

However not one of these things is true; nor, if you have heard from any one that I attempt to teach men, and require payment, is this true. Though this indeed appears to me to be an honourable thing, if one should be able to instruct men, like Gorgias the Leontine, Prodicus the Cean, and Hippias the Elean. For each of these, O Athenians, is able, by going through the several cities, to persuade the young men, who can attach themselves gratuitously to such of their own fellow citizens as they please, to abandon their fellow citizens and associate with them, giving them money and thanks besides. There is also another wise man here, a Parian, who I hear is staying in the city. For I happened to visit a person who spends more money on the sophists than all others together, I mean Callias, son of Hipponicus. I therefore asked him, for he has two sons, “Callias,” I said, “if your two sons were colts or calves, we should have had to choose a master for them and hire a person who would make them excel in such qualities as belong to their nature: and he would have been a groom or an agricultural labourer. But now, since your sons are men, what master do you intend to choose for them? Who is there skilled in the qualities that become a man and a citizen? For I suppose you must have considered this, since you have sons. Is there any one," I said, "or not?" "Certainly," he answered. "Who is he?" said I, "and whence does he come? and on what terms does he teach?" He replied, "Evenus the Parian, Socrates, for five minæ." And I deemed Evenus happy, if he really possesses this art, and teaches so admirably. And I too should think highly of myself and be very proud, if I possessed this knowledge; but I possess it not, O Athenians.

Perhaps, one of you may now object: "But, Socrates, what have you done then? Whence have these calumnies against you arisen? For surely if you had not busied yourself more than others, such a report and story would never have got abroad, unless you had done something different from what most men do. Tell us, therefore, what it is, that we may not pass a hasty judgment on you." He who speaks thus appears to me to speak justly, and I will endeavor to show you what it is that has occasioned me this character and imputation. Listen then: to some of you perhaps I shall appear to jest, yet be assured that I shall tell you the whole truth. For I, O Athenians, have acquired this character through nothing else than a certain wisdom. Of what kind, then, is this wisdom? Perhaps it is merely human wisdom. For in this, in truth I appear to be wise. They probably, whom I just now mentioned, possessed a wisdom more than human, otherwise I know not what to say about it; for I am not acquainted with it, and whosoever says I am, speaks falsely and for the purpose of calumniating me. But, O Athenians, do not cry out against me, even though I should seem to you to speak somewhat arrogantly. For the account which I am going to give you, is not my own, but I shall refer to an authority whom you will deem worthy of credit. For I shall adduce to you the god at

Delphi as a witness of my wisdom, if I have any, and of what it is. You doubtless know Chærepho: he was my associate from youth, and the associate of most of you; he accompanied you in your late exile and returned with you. You know, then, what kind of a man Chærepho was, how earnest in whatever he undertook. Having once gone to Delphi, he ventured to make the following inquiry of the oracle, and, as I said, O Athenians, do not cry out, for he asked if there was any one wiser than me. The Pythian thereupon answered that there was not one wiser: and of this, his brother here will give you proofs, since he himself is dead.

Consider then why I mention these things: it is because I am going to show you whence the calumny against me arose. For when I heard this, I reasoned thus with myself, What does the god mean? What enigma is this? For I am not conscious to myself that I am wise, either much or little. What then does he mean by saying that I am the wisest? For assuredly he does not speak falsely: that he cannot do. And for a long time, I was in doubt what he meant; afterwards with considerable difficulty I had recourse to the following method of searching out his meaning. I went to one of those who have the character of being wise, thinking that there, if any where, I should confute the oracle, and show in answer to the response that This man is wiser than I, though you affirmed that I was the wisest. Having then examined this man, for there is no occasion to mention his name, he was however one of our great politicians, in examining whom I felt as I proceed to describe, O Athenians, having fallen into conversation with him, this man appeared to me to be wise in the opinion of most other men, and especially in his own opinion, though in fact he was not so. I thereupon endeavored to show him that he fancied himself to be wise, but really was not. Hence I became odious both to him, and to many others who were present. When I left him, I reasoned thus with myself, I am wiser than this man, for neither of us appear to know any thing great and good: but he fancies he knows something, although he knows nothing, whereas I, as I do not know any thing, so I do not fancy I do. In this trifling particular, then, I appear to be wiser than him, because I do not fancy I know what I do not know. After that I went to another who was thought to be wiser than the former, and formed the very same opinion. Hence I became odious to him and to many others.

After this I went to others in turn, perceiving indeed and grieving and alarmed that I was making myself odious; however it appeared necessary to regard the oracle of the god as of the greatest moment, and that in order to discover its meaning, I must go to all who had the reputation of possessing any knowledge. And by the dog, O Athenians, for I must tell you the truth, I came to some such conclusion as this: those who bore the highest reputation appeared to me to be most deficient, in my researches in obedience to the god, and others who were considered inferior, more nearly approaching to the possession of understanding. But I must relate to you my wandering, and the labours which I underwent, in order that the oracle might prove incontrovertible. For after the politicians I went to the poets as well the tragic as the dithyrambic and others, expecting that here I should in very fact find myself more ignorant than them. Taking up, therefore, some of their poems, which appeared to me most elaborately finished, I questioned them as to their meaning, that at the same time I might learn something from them. I am ashamed, O Athenians, to tell you the truth; however it must be told. For, in a word, almost all who were present could have given a better account of them than those by whom they had been composed. I soon discovered this, therefore, with regard to the poets, that they do not effect their object by wisdom, but by a certain natural inspiration and under the influence of enthusiasm like prophets and seers; for these also say many fine things, but they understand nothing that they say. The poets appeared to me to be affected in a similar manner: and at the same time I perceived that they considered themselves, on account of their poetry, to be the wisest of men in other things, in which they were not. I left them, therefore, under the persuasion that I was superior to them, in the same way that I was to the politicians.

At last, therefore, I went to the artizans. For I was conscious to myself that I knew scarcely any thing, but I was sure that I should find them possessed of much beautiful knowledge. And in this I was not deceived; for they knew things which I did not, and in this respect they were wiser than me. But, O Athenians, even the best workmen appeared to me to have fallen into the same error as the poets: for each, because he excelled in the practice of his art, thought that he was very wise in other most important matters, and this mistake of theirs obscured the wisdom that they really possessed. I therefore asked myself in behalf of the oracle, whether I should prefer to continue as I am, possessing none either of their wisdom or their ignorance, or to have both as they have. I answered, therefore, to myself and to the oracle, that it was better for me to continue as I am.

From this investigation, then, O Athenians, many enmities have arisen against me, and those the most grievous and severe, so that many calumnies have sprung from them and amongst them this appellation of being wise. For those who are from time to time present think that I am wise in those things, with respect to which I expose the ignorance of others. The god however, O Athenians, appears to be really wise, and to mean this by his oracle, that human wisdom is worth little or nothing; and it is clear that he did not say this of Socrates, but made use of my name, putting me forward as an example, as if he had said, that man is the wisest among you, who, like Socrates, knows that he is in reality worth nothing with respect to wisdom. Still therefore I go about and search and inquire into these things, in obedience to the god, both among citizens and strangers, if I think any one of them is wise; and when he appears to me not to be so, I take the part of the god, and show that he is not wise. And in consequence of this occupation I have no leisure to attend in any considerable degree to the affairs of the state or my own; but I am in the greatest poverty through my devotion to the service of the god.

In addition to this, young men, who have much leisure and belong to the wealthiest families, following me of their own accord, take great delight in hearing men put to the test, and often imitate me, and themselves attempt to put others to the test: and then, I think, they find a great abundance of men who fancy they know something, although they know little or nothing. Hence those who are put to the test by them are angry with me, and not with them, and say that “there is one Socrates, a most pestilent fellow, who corrupts the youth.” And when any one asks them by doing or teaching what, they have nothing to say, for they do not know: but that they may not seem to be at a loss, they say such things as are ready at hand against all philosophers; “that he searches into things in heaven and things under the earth, that he does not believe there are gods, and that he makes the worse appear the better reason.” For they would not, I think, be willing to tell the truth, that they have been detected in pretending to possess knowledge, whereas they know nothing. Therefore, I think, being ambitious and vehement and numerous, and speaking systematically and persuasively about me, they have filled your ears, for a long time and diligently calumniating me. From amongst these, Melitus, Anytus, and Lycon, have attacked me; Melitus being angry on account of the poets, Anytus on account of the artizans and politicians, and Lycon on account of the rhetoricians. So that as I said in the beginning, I should wonder if I were able in so short a time to remove from your minds a calumny that has prevailed so long. This, O Athenians, is the truth; and I speak it without concealing or disguising any thing from you, much or little; though I very well know that by so doing I shall expose myself to odium. This however is a proof that I speak the truth, and that this is the nature of the calumny against me, and that these are its causes. And if you will investigate the matter, either now or hereafter, you will find it to be so.

With respect then to the charges which my first accusers have alleged against me, let this be a sufficient apology to you. To Melitus, that good and patriotic man, as he says, and to my later accusers, I will next endeavor to give an answer; and here again, as there are different accusers let us take up their deposition. It is pretty much as follows: “Socrates,” it says, “Acts unjustly in corrupting the youth, and in not believing in those gods in whom the city believes, but in other strange divinities.” Such is the accusation; let us examine each particular of it. It says that I act unjustly in corrupting the youth. But I, O Athenians, say that Melitus acts unjustly, because he jests on serious subjects, rashly putting men upon trial, under pretence of being zealous and solicitous about things in which he never at any time took any concern. But that this is the case I will endeavor to prove to you.

Come then, Melitus, tell me; do you not consider it of the greatest importance that the youth should be made as virtuous as possible?

Meletus:: I do.

Socrates:: Well now, tell the judges who it is that makes them better, for it is evident that you know, since it concerns you so much: for, having detected me in corrupting them, as you say, you have cited me here and accused me; come then, say, and inform the judges who it is that makes them better. Do you see, Melitus, that you are silent, and have nothing to say? But does it not appear to you to be disgraceful and a sufficient proof of what I say, that you never took any concern about the matter? But tell me, friend, who makes them better?

Meletus:: The laws.

Socrates:: I do not ask this, most excellent sir, but what man, who surely must first know this very thing, the laws?

Meletus:: These, Socrates, the judges.

Socrates:: How say you, Melitus? Are these able to instruct the youth, and make them better?

Meletus:: Certainly.

Socrates:: Whether all, or some of them, and others not?

Meletus:: All.

Socrates:: You say well, by Juno, and have found a great abundance of those that confer benefit. But what further? Can these hearers make them better, or not?

Meletus:: They too can.

Socrates:: And what of the senators?

Meletus:: The senators also.

Socrates:: But, Melitus, do those who attend the public assemblies corrupt the younger men? or do they all make them better?

Meletus:: They too.

Socrates:: All the Athenians therefore, as it seems, make them honourable and good, except me, but I alone corrupt them. Do you say so?

Meletus:: I do assert this very thing.

Socrates:: You charge me with great ill-fortune. But answer me: does it appear to you to be the same with respect to horses? do all men make them better, and is there only some one that spoils them? or does quite the contrary of this take place? is there some one person who can make them better, or very few, that is the trainers? but if the generality of men should meddle with and make use of horses, do they spoil them? Is not this the case, Melitus, both with respect to horses and all other animals? It certainly is so, whether you and Anytus deny it or not. For it would be a great good-fortune for the youth if only one person corrupted, and the rest benefited them. However, Melitus, you have sufficiently shown that you never bestowed any care upon youth; and you clearly evince your own negligence, in that you have never paid any attention to the things with respect to which you accuse me.

Tell us further, Melitus, in the name of Jupiter, whether is it better to dwell with good or bad citizens? Answer, my friend: for I ask you nothing difficult. Do not the bad work some evil to those that are continually near them, but the good some good?

Meletus:: Certainly.

Socrates:: Is there any one that wishes to be injured rather than benefited by his associates? Answer, good man: for the law requires you to answer. Is there any one who wishes to be injured?

Meletus:: No, surely.

Socrates:: Come then, whether do you accuse me here, as one that corrupts the youth, and makes them more depraved, designedly or undesignedly?

Meletus:: Designedly, I say.

Socrates:: What then, Melitus, are you at your time of life so much wiser than me at my time of life, as to know that the evil are always working some evil to those that are most near to them, and the good some good; but I have arrived at such a pitch of ignorance as not to know, that if I make any one of my associates depraved, I shall be in danger of receiving some evil from him, and yet I designedly bring about this so great evil, as you say? In this I cannot believe you, Melitus, nor do I think would any other man in the world: but either I do not corrupt the youth, or if I do corrupt them, I do it undesignedly: so that in both cases you speak falsely. But if I corrupt them undesignedly, for such involuntary offences it is not usual to accuse one here, but to take one apart and teach and admonish one. For it is evident that if I am taught, I shall cease doing what I do undesignedly. But you shunned me, and were not willing to associate with and instruct me, but you accuse me here, where it is usual to accuse those who need punishment, and not instruction.

Thus, then, O Athenians, this now is clear that I have said, that Melitus never paid any attention to these matters, much or little. However tell us, Melitus, how you say I corrupt the youth? Is it not evidently, according to the indictment which you have preferred, by teaching them not to believe in the gods in whom the city believes, but in other strange deities? Do you not say that by teaching these things, I corrupt the youth?

Meletus:: Certainly I do say so.

Socrates:: By those very gods, therefore, Melitus, of whom the discussion now is, speak still more clearly both to me and to these men. For I cannot understand whether you say that I teach them to believe that there are certain gods, and in that case I do believe that there are gods, and am not altogether an atheist, nor in this respect to blame, not however those which the city believes in, but others, and this it is that you accuse me of, that I introduce others; or do you say outright that I do not myself believe that there are gods, and that I teach others the same?

Meletus:: I say this, that you do not believe in any gods at all.

Socrates:: O wonderful Melitus, how come you to say this? Do I not then like the rest of mankind, believe that the sun and moon are gods?

Meletus:: No, by Jupiter, O judges: for he says that the sun is a stone, and the moon an earth.

Socrates:: You fancy that you are accusing Anaxagoras, my dear Melitus, and thus you put a slight on these men, and suppose them to be so illiterate, as not to know that the books of Anaxagoras of Clazomene are full of such assertions. And the young, moreover, learn these things from me, which they might purchase for a drachma, at most, in the orchestra, and so ridicule Socrates, if he pretended they were his own, especially since they are so absurd? I ask then, by Jupiter, do I appear to you to believe that there is no god?

Meletus:: No, by Jupiter, none whatever.

Socrates:: You say what is incredible, Melitus, and that, as appears to me, even to yourself. For this man, O Athenians, appears to me to be very insolent and intemperate, and to have preferred this indictment through downright insolence, intemperance and wantonness. For he seems, as it were, to have composed an enigma for the purpose of making an experiment. Whether will Socrates the wise know that I am jesting, and contradict myself, or shall I deceive him and all who hear me? For in my opinion he clearly contradicts himself in the indictment, as if he should say, Socrates is guilty of wrong in not believing that there are gods, and in believing that there are gods. And this, surely, is the act of one who is trifling.

Consider with me now, Athenians, in what respect he appears to me to say so. And do you, Melitus, answer me; and do ye, as I besought you at the outset, remember not to make an uproar if I speak after my usual manner.

Is there any man, Melitus, who believes that there are human affairs, but does not believe that there are men? Let him answer, judges, and not make so much noise. Is there any one who does not believe that there are horses, but that there are things pertaining to horses? or who does not believe that there are pipers, but that there are things pertaining to pipes? There is not, O best of men: for since you are not willing to answer, I say it to you and to all here present. But answer to this at least: is there any one who believes that there are things relating to demons, but does not believe that there are demons?

Meletus:: There is not.

Socrates:: How obliging you are in having hardly answered, though compelled by these judges. You assert then that I do believe and teach things relating to demons, whether they be new or old; therefore, according to your admission, I do believe in things relating to demons, and this you have sworn in the bill of indictment. If then I believe in things relating to demons, there is surely an absolute necessity that I should believe that there are demons. Is it not so? It is. For I suppose you to assent, since you do not answer. But with respect to demons, do we not allow that they are gods, or the children of gods? Do you admit this or not?

Meletus:: Certainly.

Socrates:: Since then I allow that there are demons as you admit, if demons are a kind of gods, this is the point in which I say you speak enigmatically and divert yourself in saying that I do not allow there are gods, and again that I do allow there are, since I allow that there are demons? But if demons are the children of gods, spurious ones, either from nymphs or any others, of whom they are reported to be, what man can think that there are sons of gods, and yet that there are not gods? For it would be just as absurd, as if any one should think that there are mules the offspring of horses and asses, but should not think there are horses and asses. However, Melitus, it cannot be otherwise than that you have preferred this indictment for the purpose of trying me, or because you were at a loss what real crime to allege against me: for that you should persuade any man who has the smallest degree of sense, that the same person can think that there are things relating to demons and to gods, and yet that there are neither demons, nor gods, nor heroes, is utterly impossible.

That I am not guilty then, O Athenians, according to the indictment of Melitus, appears to me not to require a lengthened defence; but what I have said is sufficient. And as to what I said at the beginning, that there is a great enmity towards me among the multitude, be assured it is true. And this it is which will condemn me, if I am condemned, not Melitus, nor Anytus, but the calumny and envy of the multitude, which have already condemned many others, and those good men, and will I think condemn others also; for there is no danger that it will stop with me.

Perhaps, however, some one may say, “Are you not ashamed, Socrates, to have pursued a study, from which you are now in danger of dying?” To such a person I should answer with good reason, You do not say well, friend, if you think that a man, who is even of the least value, ought to take into the account the risk of life or death, and ought not to consider that alone when he performs any action, whether he is acting justly or unjustly, and the part of a good man or bad man. For according to your reasoning, all those demi-gods that died at Troy would be vile characters, as well all the rest as the son of Thetis, who so far despised danger in comparison of submitting to disgrace, that when his mother, who was a goddess, spoke to him, in his impatience to kill Hector, something to this effect, as I think, “My son, if you revenge the death of your friend Patroclus, and slay Hector, you will yourself die, for,” she said, “death awaits you immediately after Hector.” But he, on hearing this, despised death and danger, and dreading much more to live as a coward, and not avenge his friends said; “May I die immediately, when I have inflicted punishment on the guilty, that I may not stay here an object of ridicule, by the curved ships, a burden to the ground?” Do you think that he cared for death and danger? For thus it is, O Athenians, in truth; wherever any one has posted himself, either thinking it to be better, or has been posted by his chief, there, as it appears to me, he ought to remain and meet danger, taking no account either of death or any thing else in comparison with disgrace.

I then should be acting strangely, O Athenians, if, when the generals whom you chose to command me assigned me my post at Potidæa, at Amphipolis, and at Delium, I then remained where they posted me, like any other person, and encountered the danger of death, but when the deity as I thought and believed, assigned it as my duty to pass my life in the study of philosophy, and in examining myself and others, I should on that occasion, through fear of death or any thing else whatsoever, desert my post. Strange indeed would it be, and then in truth any one might justly bring me to trial, and accuse me of not believing in the gods, from disobeying the oracle, fearing death, and thinking myself to be wise when I am not. For to fear death, O Athenians, is nothing else than to appear to be wise, without being so; for it is to appear to know what one does not know. For no one knows but that death is the greatest of all goods to man; but men fear it, as if they well knew that it is the greatest of evils. And how is not this the most reprehensible ignorance, to think that one knows what one does not know? But I, O Athenians, in this perhaps differ from most men; and if I should say that I am in any thing wiser than another, it would be in this, that not having a competent knowledge of the things in Hades, I also think that I have not such knowledge. But to act unjustly, and to disobey my superior, whether God or man, I know is evil and base. I shall never, therefore, fear or shun things which, for aught I know, may be good, before evils which I know to be evils. So that even if you should now dismiss me, not yielding to the instances of Anytus, who said that either I should not appear here at all, or that, if I did appear, it was impossible not to put me to death, telling you that if I escaped, your sons, studying what Socrates teaches, would all be utterly corrupted; if you should address me thus, “Socrates, we shall not now yield to Anytus, but dismiss you, on this condition however, that you no longer persevere in your researches nor study philosophy, and if hereafter you are detected in so doing, you shall die,”—if, as I said, you should dismiss me an these terms, I should say to you:

“O Athenians, I honour and love you: but I shall obey God rather than you; and as long as I breathe and am able, I shall not cease studying philosophy, and exhorting you and warning any one of you I may happen to meet, saying as I have been accustomed to do: ‘O best of men, seeing you are an Athenian, of a city the most powerful and most renowned for wisdom and strength, are you not ashamed of being careful for riches, how you may acquire them in greatest abundance, and for glory and honour, but care not nor take any thought for wisdom and truth, and for your soul, how it may be made most perfect?” And if any one of you should question my assertion, and affirm that he does care for these things, I shall not at once let him go, nor depart, but I shall question him, sift and prove him. And if he should appear to me not to possess virtue, but to pretend that he does, I shall reproach him for that he sets the least value on things of the greatest worth, but the highest on things that are worthless. Thus I shall act to all whom I meet, both young and old, stranger and citizen, but rather to you my fellow citizens, because ye are more nearly allied to me. For be well assured, this the deity commands. And I think that no greater good has ever befallen you in the city, than my zeal for the service of the god. For I go about doing nothing else than persuading you, both young and old, to take no care either for the body, or for riches, prior to or so much as for the soul, how it may be made most perfect, telling you that virtue does not spring from riches, but riches and all other human blessings, both private and public, from virtue. If, then, by saying these things, I corrupt the youth, these things must be mischievous; but if any one says that I speak other things than these, he misleads you. Therefore I must say, O Athenians, either yield to Anytus or do not, either dismiss me or not, since I shall not act otherwise, even though I must die many deaths.

Murmur not, O Athenians, but continue to attend to my request, not to murmur at what I say, but to listen, for as I think, you will derive benefit from listening. For I am going to say other things to you, at which perhaps you will raise a clamour; but on no account do so. Be well assured, then, if you put me to death, being such a man as I say I am, you will not injure me more than yourselves. For neither will Melitus nor Anytus harm me; nor have they the power: for I do not think that it is possible for a better man to be injured by a worse. He may perhaps have me condemned to death, or banished or deprived of civil rights; and he or others may perhaps consider these as mighty evils: I however do not consider them so, but that it is much more so to do what he is now doing, to endeavor to put a man to death unjustly. Now, therefore, O Athenians, I am far from making a defence on my own behalf, as any one might think, but I do so on your behalf, lest by condemning me you should offend at all with respect to the gift of the deity to you. For, if you should put me to death, you will not easily find such another, though it may be ridiculous to say so, altogether attached by the deity to this city as to a powerful and generous horse, somewhat sluggish from his size, and requiring to be roused by a gad-fly; so the deity appears to have united me, being such a person as I am, to the city, that I may rouse you. and persuade and reprove every one of you, nor ever cease besetting you throughout the whole day. Such another man, O Athenians, will not easily be found, therefore, if you will take my advice, you will spare me. But you, perhaps, being irritated, like drowsy persons who are roused from sleep, will strike me, and, yielding to Anytus, will unthinkingly condemn me to death; and then you will pass the rest of your life in sleep, unless the deity, caring for you, should send some one else to you. But that I am a person who has been given by the deity to this city, you may discern from hence; for it is not like the ordinary conduct of men, that I should have neglected all my own affairs and suffered my private interest to be neglected for so many years, and that I should constantly attend to your concerns, addressing myself to each of you separately, like a father, or elder brother, persuading you to the pursuit of virtue. And if I had derived any profit from this course, and had received pay for my exhortations, there would have been some reason for my conduct; but now you see yourselves, that my accusers, who have so shamelessly calumniated me in every thing else, have not had the impudence to charge me with this, and to bring witnesses to prove that I ever either exacted or demanded any reward. And I think I produce a sufficient proof that I speak the truth, *namely*, my poverty.

Perhaps, however, it may appear absurd, that I, going about, thus advise you in private and make myself busy, but never venture to present myself in public before your assemblies and give advice to the city. The cause of this is that which you have often and in many places heard me mention: because I am moved by a certain divine and spiritual influence, which also Melitus, through mockery, has set out in the indictment. This began with me from childhood, being a kind of voice which, when present, always diverts me from what I am about to do, but never urges me on. This it is which opposed my meddling in public politics; and it appears to me to have opposed me very properly. For be well assured, O Athenians, if I had long since attempted to intermeddle with politics, I should have perished long ago, and should not have at all benefited you or myself. And be not angry with me for speaking the truth. For it is not possible that any man should be safe, who sincerely opposes either you, or any other multitude, and who prevents many unjust and illegal actions from being committed in a city; but it is necessary that he who in earnest contends for justice, if he will be safe for but a short time, should live privately, and take no part in public affairs.

I will give you strong proofs of this, not words, but, what you value, facts. Hear then what has happened to me, that you may know that I would not yield to any one contrary to what is just, through fear of death, at the same time that, by not yielding, I must perish. I shall tell you what will be displeasing and wearisome, yet true. For I, O Athenians, never bore any other magisterial office in the city, but have been a senator: and our Antiochean tribe happened to supply the Prytanes when you chose to condemn in a body the ten generals, who had not taken off those that perished in the sea-fight, in violation of the law, as you afterwards all thought. At that time I alone of the Prytanes opposed your doing any thing contrary to the laws, and I voted against you; and when the orators were ready to denounce me, and to carry me before a magistrate, and you urged and cheered them on, I thought I ought rather to meet the danger with law and justice on my side, than through fear of imprisonment or death to take part with you in your unjust designs. And this happened while the city was governed by a democracy. But when it became an oligarchy, the Thirty, having sent for me with four others to the Tholus, ordered us to bring Leon the Salaminian from Salamis, that he might be put to death; and they gave many similar orders to many others, wishing to involve as many as they could in guilt. Then however I shewed, not in word but in deed, that I did not care for death, if the expression be not too rude, in the smallest degree, but that all my care was to do nothing unjust or unholy. For that government, strong as it was, did not so overawe me as to make me commit an unjust action; but when we came out from the Tholus, the four went to Salamis, and brought back Leon; but I went away home. And perhaps for this I should have been put to death, if that government had not been speedily broken up. And of this you can have many witnesses.

Do you think, then, that I should have survived so many years, if I had engaged in public affairs, and, acting as becomes a good man, had aided the cause of justice, and, as I ought, had deemed this of the highest importance? Far from it, O Athenians: nor would any other man have done so. But I, through the whole of my life, if I have done any thing in public, shall be found to be a man, and the very same in private, who has never made a concession to any one contrary to justice, neither to any other, nor to any one of these whom my calumniators say are my disciples. I however was never the preceptor of any one; but if any one desired to hear me speaking and to see me busied about my own mission, whether he were young or old, I never refused him. Nor do I discourse when I receive money, and not when I do not receive any, but I allow both rich and poor alike to question me, and, if any one wishes it, to answer me and hear what I have to say. And for these, whether any one proves to be a good man or not, I cannot justly be responsible, because I never either promised them any instruction or taught them at all. But if any one says that he has ever learnt or heard any thing from me in private, which all others have not, be well assured that he does not speak the truth.

But why do some delight to spend so long a time with me? Ye have heard, O Athenians. I have told you the whole truth, that they delight to hear those closely questioned who think that they are wise but are not: for this is by no means disagreeable. But this duty, as I say, has been enjoined me by the deity, by oracles, by dreams, and by every mode by which any other divine decree has ever enjoined any thing to man to do. These things, O Athenians, are both true, and easily confuted if not true. For if I am now corrupting some of the youths, and have already corrupted others, it were fitting, surely, that if any of them, having become advanced in life, had discovered that I gave them bad advice when they were young, they should now rise up against me, accuse me, and have me punished; or if they were themselves unwilling to do this, some of their kindred, their fathers, or brothers, or other relatives, if their kinsmen have ever sustained any damage from me, should now call it to mind. Many of them however are here present, whom I see: first, Crito, my contemporary and fellow-burgher, father of this Critobulus; then, Lysanias of Sphettus, father of this Æschines; again, Antiphon of Cephisus, father of Epigenes; there are those others too, whose brothers maintained the same intimacy with me, namely, Nicostratus, son of Theosdotidus, brother of Theodotus—Theodotus indeed is dead, so that he could not deprecate his brother’s proceedings, and Paralus here, son of Demodocus, whose brother was Theages; and Adimantus son of Ariston, whose brother is this Plato; and Æantodorus, whose brother is this Apollodorus. I could also mention many others to you, some one of whom certainly Melitus ought to have adduced in his speech as a witness. If however he then forgot to do so, let him now adduce them, I give him leave to do so, and let him say it, if he has any thing of the kind to allege. But quite contrary to this, you will find, O Athenians, all ready to assist me, who have corrupted and injured their relatives, as Melitus and Anytus say. For those who have been themselves corrupted might perhaps have some reason for assisting me; but those who have not been corrupted, men now advanced in life, their relatives, what other reason can they have for assisting me, except that right and just one, that they know that Melitus speaks falsely, and that I speak the truth.

Well then, Athenians; these are pretty much the things I have to say in my defence, and others perhaps of the same kind. Perhaps, however, some among you will be indignant on recollecting his own case, if he, when engaged in a cause far less than this, implored and besought the judges with many tears, bringing forward his children in order that he might excite their utmost compassion, and many others of his relatives and friends, whereas I do none of these things, although I may appear to be incurring the extremity of danger. Perhaps, therefore, some one, taking notice of this, may become more determined against me, and, being enraged at this very conduct of mine, may give his vote under the influence of anger. If then any one of you is thus affected,—I do not however suppose that there is,—but if there should be, I think I may reasonably say to him; “I too, O best of men, have relatives; for to make use of that saying of Homer, I am not sprung from an oak, nor from a rock, but from men, so that I too, O Athenians, have relatives, and three sons, one now grown up, and two boys: I shall not however bring any one of them forward and implore you to acquit me. Why then shall I not do this? Not from contumacy, O Athenians, nor disrespect towards you. Whether or not I am undaunted at the prospect of death, is another question, but out of regard to my own character, and yours, and that of the whole city, it does not appear to me to be honourable that I should do any thing of this kind at my age, and with the reputation I have, whether true or false. For it is commonly agreed that Socrates in some respects excels the generality of men. If, then, those among you who appear to excel either in wisdom, or fortitude, or any other virtue whatsoever, should act in such a manner as I have often seen some when they have been brought to trial, it would be shameful, who appearing indeed to be something, have conducted themselves in a surprising manner, as thinking they should suffer something dreadful by dying, and as if they would be immortal if you did not put them to death. Such men appear to me to bring disgrace on the city, so that any stranger might suppose that such of the Athenians as excel in virtue, and whom they themselves choose in preference to themselves for magistracies and other honours, are in no respect superior to women. For these things, O Athenians, neither ought we to do who have attained to any height of reputation, nor, should we do them, ought you to suffer us; but you should make this manifest, that you will much rather condemn him who introduces these piteous dramas, and makes the city ridiculous, than him who quietly awaits your decision.

But reputation apart, O Athenians, it does not appear to me to be right to entreat a judge, or to escape by entreaty, but one ought to inform and persuade him. For a judge does not sit for the purpose of administering justice out of favour, but that he may judge rightly, and he is sworn not to show favour to whom he pleases, but that he will decide according to the laws. It is therefore right that neither should we accustom you, nor should you accustom yourselves to violate your oaths; for in so doing neither of us would act righteously. Think not then, O Athenians, that I ought to adopt such a course towards you as I neither consider honourable, nor just, nor holy, as well, by Jupiter, on any other occasion, and now especially when I am accused of impiety by this Melitus. For clearly, if I should persuade you, and by my entreaties should put a constraint on you who are bound by an oath, I should teach you to think that there are no gods, and in reality, while making my defence, should accuse myself of not believing in the gods. This, however, is far from being the case: for I believe, O Athenians, as none of my accusers do, and I leave it to you and to the deity to judge concerning me in such way as will be best both for me and for you.

Socrates here concludes his defence, and the votes being taken, he is declared guilty by a majority of voices. He thereupon resumes his address.

That I should not be grieved, O Athenians, at what has happened, namely, that you have condemned me, as well many other circumstances concur in bringing to pass, and moreover this, that what has happened has not happened contrary to my expectation; but I much rather wonder at the number of votes on either side. For I did not expect that I should be condemned by so small a number, but by a large majority; but now, as it seems, if only three more votes had changed sides, I should have been acquitted. As far as Melitus is concerned, as it appears to me, I have been already acquitted, and not only have I been acquitted, but it is clear to every one that had not Anytus and Lycon come forward to accuse me, he would have been fined a thousand drachmas, for not having obtained a fifth part of the votes.

The man then awards me the penalty of death. Well. But what shall I, on my part, O Athenians, award myself? Is it not clear that it will be such as I deserve? What then is that? do I deserve to suffer or to pay a fine, for that I have purposely during my life not remained quiet, but neglecting what most men seek after, money-making, domestic concerns, military command, popular oratory, and moreover all the magistracies, conspiracies and cabals that are met with in the city, thinking that I was in reality too upright a man to be safe if I took part in such things, I therefore did not apply myself to those pursuits, by attending to which I should have been of no service either to you or to myself; but in order to confer the greatest benefit on each of you privately, as I affirm, I thereupon applied myself to that object, endeavoring to persuade every one of you, not to take any care of his own affairs, before he had taken care of himself, in what way he may become the best and wisest, nor of the affairs of the city before he took care of the city itself; and that he should attend to other things in the same manner. What treatment then do I deserve, seeing I am such a man? Some reward, O Athenians, if at least I am to be estimated according to my real deserts; and moreover such a reward as would be suitable to me. What then is suitable to a poor man, a benefactor, and who has need of leisure in order to give you good advice? There is nothing so suitable, O Athenians, as that such a man should be maintained in the Prytaneum, and this much more than if one of you had been victorious at the Olympic games in a horse race, or in the two or four-horsed chariot race: for such a one makes you appear to be happy, but I, to be so: and he does not need support, but I do. If, therefore, I must award a sentence according to my just deserts, I award this, maintenance in the Prytaneum.

Perhaps, however, in speaking to you thus, I appear to you to speak in the same presumptuous manner as I did respecting commiseration and entreaties: but such is not the case, O Athenians, it is rather this. I am persuaded that I never designedly injured any man, though I cannot persuade you of this, for we have conversed with each other but for a short time. For if there was the same law with you as with other men, that in capital cases the trial should last not only one day but many, I think you would be persuaded; but it is not easy in a short time to do away with great calumnies. Being persuaded then that I have injured no one, I am far from intending to injure myself, and of pronouncing against myself that I am deserving of punishment, and from awarding myself any thing of the kind. Through fear of what? lest I should suffer that which Melitus awards me, of which I say I know not whether it be good or evil? instead of this, shall I choose what I well know to be evil, and award that? Shall I choose imprisonment? And why should I live in prison, a slave to the established magistracy, the Eleven? Shall I choose a fine, and to be imprisoned until I have paid it? But this is the same as that which I just now mentioned, for I have not money to pay it. Shall I then award myself exile? For perhaps you would consent to this award. I should indeed be very fond of life, O Athenians, if I were so devoid of reason as not to be able to reflect that you, who are my fellow citizens, have been unable to endure my manner of life and discourses, but they have become so burdensome and odious to you, that you now seek to be rid of them: others however will easily bear them: far from it, O Athenians. A fine life it would be for me at my age to go out wandering and driven from city to city, and so to live. For I well know that, wherever I may go, the youth will listen to me when I speak, as they do here. And if I repulse them, they will themselves drive me out, persuading the elders; and if I do not repulse them, their fathers and kindred will banish me on their account.

Perhaps however some one will say, Can you not, Socrates, when you have gone from us, live a silent and quiet life? This is the most difficult thing of all to persuade some of you. For if I say that that would be to disobey the deity, and that therefore it is impossible for me to live quietly, you would not believe me, thinking I spoke ironically. If, on the other hand, I say that this is the greatest good to man, to discourse daily on virtue, and other things which you have heard me discussing, examining both myself and others, but that a life without investigation is not worth living for, still less would you believe me if I said this. Such however is the case, as I affirm, O Athenians, though it is not easy to persuade you. And at the same time I am not accustomed to think myself deserving of any ill. If indeed I were rich, I would amerce myself in such a sum as I should be able to pay; for then I should have suffered no harm, but now—for I cannot, unless you are willing to amerce me in such a sum as I am able to pay. But perhaps I could pay you a mina of silver: in that sum then I amerce myself. But Plato here, O Athenians, and Crito Critobulus, and Apollodorus bid me amerce myself in thirty minæ, and they offer to be sureties. I amerce myself then to you in that sum; and they will be sufficient sureties for the money.

The judges now proceeded to pass the sentence, and condemned Socrates to death; whereupon he continued:

Socrates:: For the sake of no long space of time, O Athenians, you will incur the character and reproach at the hands of those who wish to defame the city, of having put that wise man, Socrates, to death. For those who wish to defame you will assert that I am wise, though I am not. If, then, you had waited for a short time, this would have happened of its own accord; for observe my age, that it is far advanced in life, and near death. But I say this not to you all, but to those only who have condemned me to die. And I say this too to the same persons. Perhaps you think, O Athenians, that I have been convicted through the want of arguments, by which I might have persuaded you, had I thought it right to do and say any thing, so that I might escape punishment. Far otherwise: I have been convicted through want indeed, yet not of arguments, but of audacity and impudence, and of the inclination to say such things to you as would have been most agreeable for you to hear, had I lamented and bewailed and done and said many other things unworthy of me, as I affirm, but such as you are accustomed to hear from others. But neither did I then think that I ought, for the sake of avoiding danger, to do any thing unworthy of a freeman, nor do I now repent of having so defended myself; but I should much rather choose to die, having so defended myself, than to live in that way. For neither in a trial nor in battle, is it right that I or any one else should employ every possible means whereby he may avoid death; for in battle it is frequently evident that a man might escape death by laying down his arms, and throwing himself on the mercy of his pursuers. And there are many other devices in every danger, by which to avoid death, if a man dares to do and say every thing. But this is not difficult, O Athenians, to escape death, but it is much more difficult to avoid depravity, for it runs swifter than death. And now I, being slow and aged, am overtaken by the slower of the two; but my accusers, being strong and active, have been overtaken by the swifter, wickedness. And now I depart, condemned by you to death; but they condemned by truth, as guilty of iniquity and injustice: and I abide my sentence and so do they. These things, perhaps, ought so to be, and I think that they are for the best.

In the next place, I desire to predict to you who have condemned me, what will be your fate: for I am now in that condition in which men most frequently prophecy, namely, when they are about to die. I say then to you, O Athenians, who have condemned me to death, that immediately after my death a punishment will overtake you, far more severe, by Jupiter, than that which you have inflicted on me. For you have done this, thinking you should be freed from the necessity of giving an account of your life. The very contrary however, as I affirm, will happen to you. Your accusers will be more numerous, whom I have now restrained, though you did not perceive it; and they will be more severe, inasmuch as they are younger, and you will be more indignant. For, if you think that by putting men to death you will restrain any one from upbraiding you because you do not live well, you are much mistaken; for this method of escape is neither possible nor honourable, but that other is most honourable and most easy, not to put a check upon others, but for a man to take heed to himself, how he may be most perfect. Having predicted thus much to those of you who have condemned me, I take my leave of you.

But with you who have voted for my acquittal, I would gladly hold converse on what has now taken place, while the magistrates are busy and I am not yet carried to the place where I must die. Stay with me then, so long, O Athenians, for nothing hinders our conversing with each other, whilst we are permitted to do so; for I wish to make known to you, as being my friends, the meaning of that which has just now befallen me. To me then, O my judges,—and in calling you judges I call you rightly,—a strange thing has happened. For the wonted prophetic voice of my guardian deity, on every former occasion even in the most trifling affairs opposed me, if I was about to do any thing wrong; but now, that has befallen me which ye yourselves behold, and which any one would think and which is supposed to be the extremity of evil, yet neither when I departed from home in the morning did the warning of the god oppose me, nor when I came up here to the place of trial, nor in my address when I was about to say any thing; yet on other occasions it has frequently restrained me in the midst of speaking. But now, it has never throughout this proceeding opposed me, either in what I did or said. What then do I suppose to be the cause of this? I will tell you: what has befallen me appears to be a blessing; and it is impossible that we think rightly who suppose that death is an evil. A great proof of this to me is the fact that it is impossible but that the accustomed signal should have opposed me, unless I had been about to meet with some good.

Moreover we may hence conclude that there is great hope that death is a blessing. For to die is one of two things: for either the dead may be annihilated and have no sensation of any thing whatever; or, as it is said, there is a certain change and passage of the soul from one place to another. And if it is a privation of all sensation, as it were a sleep in which the sleeper has no dream, death would be a wonderful gain. For I think that if any one, having selected a night, in which he slept so soundly as not to have had a dream, and having compared this night with all the other nights and days of his life, should be required on consideration to say how many days and nights he had passed better and more pleasantly than this night throughout his life, I think that not only a private person, but even the great king himself would find them easy to number in comparison with other days and nights. If, therefore, death is a thing of this kind, I say it is a gain; for thus all futurity appears to be nothing more than one night. But if, on the other hand, death is a removal from hence to another place, and what is said be true, that all the dead are there, what greater blessing can there be than this, my judges? For if, on arriving at Hades, released from these who pretend to be judges, one shall find those who are true judges, and who are said to judge there, Minos and Rhadamanthus, Æacus and Triptolemus, and such others of the demigods as were just during their own life, would this be a sad removal? At what price would you not estimate a conference with Orpheus and Musæus, Hesiod and Homer? I indeed should be willing to die often, if this be true. For to me the sojourn there would be admirable, when I should meet with Palamedes, and Ajax son of Telamon, and any other of the ancients who has died by an unjust sentence. The comparing my sufferings with theirs would, I think, be no unpleasing occupation. But the greatest pleasure would be to spend my time in questioning and examining the people there as I have done those here, and discovering who among them is wise, and who fancies himself to be so but is not. At what price, my judges, would not any one estimate the opportunity of questioning him who led that mighty army against Troy, or Ulysses, or Sisyphus, or ten thousand others, whom one might mention, both men and women? with whom to converse and associate, and to question them, would be an inconceivable happiness. Surely for that the judges there do not condemn to death; for in other respects those who live there are more happy than those that are here, and are henceforth immortal, if at least what is said be true.

You, therefore, O my judges, ought to entertain good hopes with respect to death, and to meditate on this one truth, that to a good man nothing is evil, neither while living nor when dead, nor are his concerns neglected by the gods. And what has befallen me is not the effect of chance; but this is clear to me, that now to die, and be freed from my cares, is better for me. On this account the warning in no way turned me aside; and I bear no resentment towards those who condemned me, or against my accusers, although they did not condemn and accuse me with this intention, but thinking to injure me: in this they deserve to be blamed.

Thus much however I beg of them. Punish my sons, when they grow up, O judges, paining them as I have pained you, if they appear to you to care for riches or any thing else before virtue, and if they think themselves to be something when they are nothing, reproach them as I have done you, for not attending to what they ought, and for conceiving themselves to be something when they are worth nothing. If ye do this, both I and my sons shall have met with just treatment at your hands.

But it is now time to depart,—for me to die, for you to live. But which of us is going to a better state is unknown to every one but God.

# The Apology

Translated by Church, F. J.

CHARACTERS.

Socrates; Meletus.

SCENE. The Court of Justice.

---

Socrates:: I cannot tell what impression my accusers have made upon you, Athenians; for my own part, I know that they nearly made me forget who I was, so plausible were they; and yet they have scarcely uttered one single word of truth. But of all their many falsehoods, the one which astonished me most, was when they said that I was a clever speaker, and that you must be careful not to let me mislead you. I thought that it was most impudent of them not to be ashamed to talk in that way; for as soon as I open my mouth the lie will be exposed, and I shall prove that I am not a clever speaker in any way at all; unless, indeed, by a clever speaker they mean a man who speaks the truth. If that is their meaning, I agree with them that I am a much greater orator than they. My accusers, then I repeat, have said little or nothing that is true; but from me you shall hear the whole truth. Certainly you will not hear an elaborate speech, Athenians, drest up, like theirs, with words and phrases. I will say to you what I have to say, without preparation, and in the words which come first, for I believe that my cause is just; so let none of you expect anything else. Indeed, my friends, it would hardly be seemly for me, at my age, to come before you like a young man with his specious falsehoods. But there is one thing, Athenians, which I do most earnestly beg and entreat of you. Do not be surprised and do not interrupt, if in my defence I speak in the same way that I am accustomed to speak in the market-place, at the tables of the money-changers, where many of you have heard me, and elsewhere. The truth is this. I am more than seventy years old, and this is the first time that I have ever come before a Court of Law; so your manner of speech here is quite strange to me. If I had been really a stranger, you would have forgiven me for speaking in the language and the fashion of my native country; and so now I ask you to grant me what I think I have a right to claim. Never mind the style of my speech—it may be better or it may be worse—give your whole attention to the question, Is what I say just, or is it not? That is what makes a good judge, as speaking the truth makes a good advocate.

I have to defend myself, Athenians, first against the old false charges of my old accusers, and then against the later ones of my present accusers. For many men have been accusing me to you, and for very many years, who have not uttered a word of truth; and I fear them more than I fear Anytus and his companions, formidable as they are. But, my friends, those others are still more formidable; for they got hold of most of you when you were children, and they have been more persistent in accusing me with lies, and in trying to persuade you that there is one Socrates, a wise man, who speculates about the heavens, and who examines into all things that are beneath the earth, and who can 'make the worse appear the better reason.' These men, Athenians, who spread abroad this report, are the accusers whom I fear; for their hearers think that persons who pursue such inquiries never believe in the gods. And then they are many, and their attacks have been going on for a long time; and they spoke to you when you were at the age most readily to believe them; for you were all young, and many of you were children; and there was no one to answer them when they attacked me. And the most unreasonable thing of all is that commonly I do not even know their names; I cannot tell you who they are, except in the case of the comic poets. But all the rest who have been trying to prejudice you against me, from motives of spite and jealousy, and sometimes, it may be, from conviction, are the enemies whom it is hardest to meet. For I cannot call any one of them forward in Court, to cross-examine him; I have, as it were, simply to fight with shadows in my defence, and to put questions which there is no one to answer. I ask you, therefore, to believe that, as I say, I have been attacked by two classes of accusers—first by Meletus and his friends, and then by those older ones of whom I have spoken. And, with your leave, I will defend myself first against my old enemies; for you heard their accusations first, and they were much more persistent than my present accusers are.

Well, I must make my defence, Athenians, and try in the short time allowed me to remove the prejudice which you have had against me for a long time. I hope that I may manage to do this, if it be good for you and for me, and that my defence may be successful; but I am quite aware of the nature of my task, and I know that it is a difficult one. Be the issue, however, as God wills, I must obey the law, and make my defence.

Let us begin again, then, and see what is the charge which has given rise to the prejudice against me, which was what Meletus relied on when he drew his indictment. What is the calumny which my enemies have been spreading about me? I must assume that they are formally accusing me, and read their indictment. 1 would run somewhat in this fashion; “Socrates is an evil-doer, who meddles with inquiries into things beneath the earth, and in heaven, and who ‘makes the worse appear the better reason,’ and who teaches others these same things.” That is what they say; and in the Comedy of Aristophanes you yourselves saw a man called Socrates swinging round in a basket, and saying that he walked the air, and talking a great deal of nonsense about matters of which I understand nothing, either more or less. I do not mean to disparage that kind of knowledge, if there is any man who possesses it. I trust Meletus may never be able to prosecute me for that. But, the truth is, Athenians, I have nothing to do with these matters, and almost all of you are yourselves my witnesses of this. I beg all of you who have ever heard me converse, and they are many, to inform your neighbours and tell them if any of you have ever heard me conversing about such matters, either more or less. That will show you that the other common stories about me are as false as this one.

But, the fact is, that not one of these stories is true; and if you have heard that I undertake to educate men, and exact money from them for so doing, that is not true either; though I think that it would be a fine thing to be able to educate men, as Gorgias of Leontini, and Prodicus of Ceos, and Hippias of Elis do. For each of them, my friends, can go into any city, and persuade the young men to leave the society of their fellow-citizens, with any of whom they might associate for nothing, and to be only too glad to be allowed to pay money for the privilege of associating with themselves. And I believe that there is another wise man from Paros residing in Athens at this moment. I happened to meet Callias, the son of Hipponicus, a man who has spent more money on the Sophists than every one else put together. So I said to him—he has two sons—Callias, if your two sons had been foals or calves, we could have hired a trainer for them who would have made them perfect in the excellence which belongs to their nature. He would have been either a groom or a farmer. But whom do you intend to take to train them, seeing that they are men? Who understands the excellence which belongs to men and to citizens? I suppose that you must have thought of this, because of your sons. Is there such a person, said I, or not? Certainly there is, he replied. Who is he, said I, and where does he come from, and what is his fee? His name is Evenus, Socrates, he replied; he comes from Paros, and his fee is five mints. Then I thought that Evenus was a fortunate person if he really understood this art and could teach so cleverly. If I had possessed knowledge of that kind, I should have given myself airs and prided myself on it. But, Athenians, the truth is that I do not possess it.

Perhaps some of you may reply; But, Socrates, what is this pursuit of yours? Whence come these calumnies against you? You must have been engaged in some pursuit out of the common. All these stories and reports of you would never have gone about, if you had not been in some way different from other men. So tell us what your pursuits are, that we may not give our verdict in the dark. I think that that is a fair question, and I will try to explain to you what it is that has raised these calumnies against me, and given me this name. Listen, then; some of you perhaps will think that I am jesting; but I assure you that I will tell you the whole truth. I have gained this name, Athenians, simply by reason of a certain wisdom. But by what kind of wisdom? It is by just that wisdom which is, I believe, possible to men. In that, it may be, I am really wise. But the men of whom I was speaking just now must be wise in a wisdom which is greater than human wisdom, or in some way which I cannot describe, for certainly I know nothing of it myself, and if any man says that I do, he lies and wants to slander me. Do not interrupt me, Athenians, even if you think that I am speaking arrogantly. What I am going to say is not my own; I will tell you who says it, and he is worthy of your credit. I will bring the god of Delphi to be the witness of the fact of my wisdom and of its nature. You remember Chaerephon. From youth upwards he was my comrade; and he went into exile with the people, and with the people he returned. And you remember, too, Chaerephon's character; how vehement he was in carrying through whatever he took in hand. Once he went to Delphi and ventured to put this question to the oracle,—I entreat you again, my friends, not to cry out,—he asked if there was any man who was wiser than I; and the priestess answered that there was no man. Chaerephon himself is dead, but his brother here will confirm what I say.

Now see why I tell you this. I am going to explain to you the origin of my unpopularity. When I heard of the oracle I began to reflect; What can God mean by this dark saying? I know very well that I am not wise, even in the smallest degree. Then what can he mean by saying that I am the wisest of men? It cannot be that he is speaking falsely, for he is a god and cannot lie. And for a long time I was at a loss to understand his meaning; then, very reluctantly, I turned to seek for it in this manner. I went to a man who was reputed to be wise, thinking that there, if anywhere, I should prove the answer wrong, and meaning to point out to the oracle its mistake, and to say, 'You said that I was the wisest of men, but this man is wiser than I am.' So I examined the man—I need not tell you his name, he was a politician—but this was the result, Athenians. When I conversed with him I came to see that, though a great many persons, and most of all he himself, thought that he was wise, yet he was not wise. And then I tried to prove to him that he was not wise, though he fancied that he was; and by so doing I made him, and many of the bystanders, my enemies. So when I went away, I thought to myself, "I am wiser than this man; neither of us probably knows anything that is really good, but he thinks that he has knowledge, when he has not, while I, having no knowledge, do not think that I have. I seem, at any rate, to be a little wiser than he is on this point; I do not think that I know what I do not know." Next I went to another man who was reputed to be still wiser than the last, with exactly the same result. And there again I made him, and many other men, my enemies.

Then I went on to one man after another, seeing that I was making enemies every day, which caused me much unhappiness and anxiety; still I thought that I must set Gods command above everything. So I had to go to every man who seemed to possess any knowledge, and search for the meaning of the oracle; and, Athenians, I must tell you the truth; verily, by the dog of Egypt, this was the result of the search which I made at Gods bidding. I found that the men, whose reputation for wisdom stood highest, were nearly the most lacking in it; while others, who were looked down on as common people, were much better fitted to learn. Now, I must describe to you the wanderings which I undertook, like a series of Heraclean labours, to make full proof of the oracle. After the politicians, I went to the poets, tragic, dithyrambic, and others, thinking that there I should find myself manifestly more ignorant than they. So I took up the poems on which I thought that they had spent most pains, and asked them what they meant, hoping at the same time to learn something from them. I am ashamed to tell you the truth, my friends, but I must say it. Almost any one of the bystanders could have talked about the works of these poets better than the poets themselves. So I soon found that it is not by wisdom that the poets create their works, but by a certain natural power and by inspiration, like soothsayers and prophets, who say many fine things, but who understand nothing of what they say. The poets seemed to me to be in a similar case. And at the same time I perceived that, because of their poetry, they thought that they were the wisest of men in other matters too, which they were not. So I went away again, thinking that I had the same advantage over the poets that I had over the politicians.

Finally, I went to the artizans, for I knew very well that I possessed no knowledge at all, worth speaking of, and I was sure that I should find that they knew many fine things. And in that I was not mistaken. They knew what I did not know, and so far they were wiser than I. But, Athenians, it seemed to me that the skilled artizans made the same mistake as the poets. Each of them believed himself to be extremely wise in matters of the greatest importance, because he was skilful in his own art; and this mistake of theirs threw their real wisdom into the shade. So I asked myself, on behalf of the oracle, whether I would choose to remain as I was, without either their wisdom or their ignorance, or to possess both, as they did. And I made answer to myself and to the oracle that it was better for me to remain as I was.

By reason of this examination, Athenians, I have made many enemies of a very fierce and bitter kind, who have spread abroad a great number of calumnies about me, and people say that I am ‘a wise man.’ For the bystanders always think that I am wise myself in any matter wherein I convict another man of ignorance. But, my friends, I believe that only God is really wise; and that by this oracle he meant that mens wisdom is worth little or nothing. I do not think that he meant that Socrates was wise. He only made use of my name, and took me as an example, as though he would say to men, ‘He among you is the wisest, who, like Socrates, knows that in very truth his wisdom is worth nothing at all.’ And therefore I still go about testing and examining every man whom I think wise, whether he be a citizen or a stranger, as God has commanded me; and whenever I find that he is not wise, I point out to him on the part of God that he is not wise. And I am so busy in this pursuit that I have never had leisure to take any part worth mentioning in public matters, or to look after my private affairs. I am in very great poverty by reason of my service to God.

And besides this, the young men who follow me about, who are the sons of wealthy persons and have a great deal of spare time, take a natural pleasure in hearing men cross-examined; and they often imitate me among themselves; then they try their hands at cross-examining other people. And, I imagine, they find a great abundance of men who think that they know a great deal, when in fact they know little or nothing. And then the persons who are cross-examined, get angry with me instead of with themselves, and say that Socrates is an abominable fellow who corrupts young men. And when they are asked, ‘Why, what does he do? what does he teach?’ they do not know what to say; but, not to seem at a loss, they repeat the stock charges against all philosophers, and allege that he investigates things in the air and under the earth, and that he teaches people to disbelieve in the gods, and ‘to make the worse appear the better reason.’ For, I fancy, they would not like to confess the truth, which is that they are shown up as ignorant pretenders to knowledge that they do not possess. And so they have been filling your ears with their bitter calumnies for a long time; for they are zealous and numerous and bitter against me; and they are well disciplined and plausible in speech. On these grounds Meletus and Anytus and Lycon have attacked me. Meletus is indignant with me on the part of the poets, and Anytus on the part of the artizans and politicians, and Lycon on the part of the orators.

And so, as I said at the beginning, I shall be surprised if I am able, in the short time allowed me for my defence, to remove from your minds this prejudice which has grown so strong. What I have told you, Athenians, is the truth; I neither conceal, nor do I suppress anything, small or great. And yet I know that it is just this plainness of speech which makes me enemies. But that is only a proof that my words are true, and that the prejudice against me, and the causes of it, are what I have said. And whether you look for them now or hereafter, you will find that they are so.

What I have said must suffice as my defence against the charges of my first accusers. I will try next to defend myself against that ‘good patriot’ Meletus, as he calls himself, and my later accusers. Let us assume that they are a new set of accusers, and read their indictment, as we did in the case of the others. It runs thus. He says that Socrates is an evildoer who corrupts the youth, and who does not believe in the gods whom the city believes in, but in other new divinities. Such is the charge. Let us examine each point in it separately. Meletus says that I do wrong by corrupting the youth; but I say, Athenians, that he is doing wrong; for he is playing off a solemn jest by bringing men lightly to trial, and pretending to have a great zeal and interest in matters to which he has never given a moments thought. And now I will try to prove to you that it is so.

Come here, Meletus. Is it not a fact that you think it very important that the younger men should be as excellent as possible?

Meletus:: It is.

Socrates:: Come then; tell the judges, who is it who improves them? You take so much interest in the matter that of course you know that. You are accusing me, and bringing me to trial, because, as. you say, you have discovered that I am the corrupter of the youth. Come now, reveal to the judges who improves them. You see, Meletus, you have nothing to say; you are silent. But dont you think that this is a scandalous thing? Is not your silence a conclusive proof of what I say, that you have never given a moments thought to the matter? Come, tell us, my good sir, who makes the young men better citizens?

Meletus:: The laws.

Socrates:: My excellent sir, that is not my question. What man improves the young, who starts with a knowledge of the laws?

Meletus:: The judges here, Socrates.

Socrates:: What do you mean, Meletus? Can they educate the young and improve them?

Meletus:: Certainly.

Socrates:: All of them? or only some of them?

Meletus:: All of them.

Socrates:: By Hêrê that is good news! There is a great abundance of benefactors. And do the listeners here improve them, or not?

Meletus:: They do.

Socrates:: And do the senators?

Meletus:: Yes.

Socrates:: Well then, Meletus; do the members of the Assembly corrupt the younger men? or do they again all improve them?

Meletus:: They too improve them.

Socrates:: Then all the Athenians, apparently, make the young into fine fellows except me, and I alone corrupt them. Is that your meaning?

Meletus:: Most certainly; that is my meaning.

Socrates:: You have discovered me to be a most unfortunate man. Now tell me; do you think that the same holds good in the case of horses? Does one man do them harm and every one else improve them? On the contrary, is it not one man only, or a very few—namely, those who are skilled in horses—who can improve them; while the majority of men harm them, if they use them, and have to do with them? Is it not so, Meletus, both with horses and with every other animal? Of course it is, whether you and Anytus say yes or no. And young men would certainly be very fortunate persons if only one man corrupted them, and every one else did them good. The truth is, Meletus, you prove conclusively that you have never thought about the youth in your life. It is quite clear, on your own showing, that you take no interest at all in the matters about which you are prosecuting me.

Now, be so good as to tell us, Meletus, is it better to live among good citizens or bad ones? Answer, my friend; I am not asking you at all a difficult question. Do not bad citizens do harm to their neighbours and good citizens good?

Meletus:: Yes.

Socrates:: Is there any man who would rather be injured than benefited by his companions? Answer, my good sir; you are obliged by the law to answer. Does any one like to be injured?

Meletus:: Certainly not.

Socrates:: Well then; are you prosecuting me for corrupting the young, and making them worse men, intentionally or unintentionally?

Meletus:: For doing it intentionally.

Socrates:: What, Meletus? Do you mean to say that you, who are so much younger than I, are yet so much wiser than I, that you know that bad citizens always do evil, and that good citizens always do good, to those with whom they come in contact, while I am so extraordinarily stupid as not to know that if I make any of my companions a rogue, he will probably injure me in some way, and as to commit this great crime, as you allege, intentionally? You will not make me believe that, nor any one else either, I should think. Either I do not corrupt the young at all; or if I do, I do so unintentionally; so that you are a liar in either case. And if I corrupt them unintentionally, the law does not call upon you to prosecute me for a fault like that, which is an involuntary one; you should take me aside and admonish and instruct me; for of course I shall cease from doing wrong involuntarily, as soon as I know that I have been doing wrong. But you declined to instruct me; you would have nothing to do with me; instead of that, you bring me up before the Court, where the law sends persons, not for instruction, but for punishment.

The truth is, Athenians, as I said, it is quite clear that Meletus has never paid the slightest attention to these matters. However, now tell us, Meletus, how do you say that I corrupt the younger men? Clearly, according to your indictment, by teaching them not to believe in the gods of the city, but in other new divinities instead. You mean that I corrupt young men by that teaching, do you not?

Meletus:: Yes; most certainly; I mean that.

Socrates:: Then in the name of these gods of whom we are speaking, explain yourself a little more clearly to me and to the judges here. I cannot understand what you mean. Do you mean that I teach young men to believe in some gods, but not in the gods of the city? Do you accuse me of teaching them to believe in strange gods? If that is your meaning, I myself believe in some gods, and my crime is not that of absolute atheism. Or do you mean that I do not believe in the gods at all myself, and that I teach other people not to believe in them either?

Meletus:: I mean that you do not believe in the gods in any way whatever.

Socrates:: Wonderful Meletus! Why do you say that? Do you mean that I believe neither the sun nor the moon to be gods, like other men?

Meletus:: I swear he does not, judges; he says that the sun is a stone, and the moon earth.

Socrates:: My dear Meletus, do you think that you are prosecuting Anaxagoras? You must have a very poor opinion of the judges, and think them very unlettered men, if you imagine that they do not know that the works of Anaxagoras of Clazomenae are full of these doctrines. And so young men learn these things from me, when they can often buy places in the theatre for a drachma at most, and laugh Socrates to scorn, were he to pretend that these doctrines, which are very peculiar doctrines too, were his. But please tell me, do you really think that I do not believe in the gods at all?

Meletus:: Most certainly I do. You are a complete atheist.

Socrates:: No one believes that, Meletus, and I think that you know it to be a lie yourself. It seems to me, Athenians, that Meletus is a very insolent and wanton man, and that he is prosecuting me simply in the insolence and wantonness of youth. He is like a man trying an experiment on me, by asking me a riddle that has no answer. 'Will this wise Socrates,' he says to himself, 'see that I am jesting and contradicting myself? or shall I outwit him and every one else who hears me?' Meletus seems to me to contradict himself in his indictment; it is as if he were to say, ‘Socrates is a wicked man who does not believe in the gods, but who believes in the gods.’ But that is mere trifling.

Now, my friends, let us see why I think that this is his meaning. Do you answer me, Meletus; and do you, Athenians, remember the request which I made to you at starting, and do not interrupt me if I talk in my usual way.

Is there any man, Meletus, who believes in the existence of things pertaining to men and not in the existence of men? Make him answer the question, my friends, without these absurd interruptions. Is there any man who believes in the existence of horsemanship and not in the existence of horses? or in flute-playing and not in flute-players? There is not, my excellent sir. If you will not answer, I will tell both you and the judges that. But you must answer my next question. Is there any man who believes in the existence of divine things and not in the existence of divinities?

Meletus:: There is not.

Socrates:: I am very glad that the judges have managed to extract an answer from you. Well then, you say that I believe in divine beings, whether they be old or new ones, and that I teach others to believe in them; at any rate, according to your statement, I believe in divine beings. That you have sworn in your deposition. But if I believe in divine beings, I suppose it follows necessarily that I believe in divinities. Is it not so? It is. I assume that you grant that, as you do not answer. But do we not believe that divinities are either gods themselves or the children of the gods? Do you admit that?

Meletus:: I do.

Socrates:: Then you admit that I believe in divinities; now, if these divinities are gods, then, as I say, you are jesting and asking a riddle, and asserting that I do not believe in the gods, and at the same time that I do, since I believe in divinities. But if these divinities are the illegitimate children of the gods, either by the nymphs or by other mothers, as they are said to be, then, I ask, what man could believe in the existence of the children of the gods, and not in the existence of the gods? That would be as strange as believing in the existence of the offspring of horses and asses, and not in the existence of horses and asses. You must have indicted me in this manner, Meletus, either to test my skill, or because you could not find any crime that you could accuse me of with truth. But you will never contrive to persuade any man, even of the smallest understanding, that a belief in divine things and things of the gods does not necessarily involve a belief in divinities, and in the gods, and in heroes.

But in truth, Athenians, I do not think that I need say very much to prove that I have not committed the crime for which Meletus is prosecuting me. What I have said is enough to prove that. But, I repeat, it is certainly true, as I have already told you, that I have incurred much unpopularity and made many enemies. And that is what will cause my condemnation, if I am condemned; not Meletus, nor Anytus either, but the prejudice and suspicion of the multitude. They have been the destruction of many good men before me, and I think that they will be so again. There is no fear that I shall be their last victim.

Perhaps some one will say; ‘Are you not ashamed, Socrates, of following pursuits which are very likely now to cause your death?’ I should answer him with justice, and say; ‘My friend, if you think that a man of any worth at all ought to reckon the chances of life and death when he acts, or that he ought to think of anything but whether he is acting rightly or wrongly, and as a good or a bad man would act, you are grievously mistaken. According to you, the demigods who died at Troy would be men of no great worth, and among them the son of Thetis, who thought nothing of danger when the alternative was disgrace. For when his mother, a goddess, addressed him, as he was burning to slay Hector, I suppose in this fashion, 'My son, if thou avengest the death of thy comrade Patroclus, and slayest Hector, thou wilt die thyself, for "fate awaits thee straightway after Hectors death;"' he heard what she said, but he scorned danger and death; he feared much more to live a coward, and not to avenge his friend. 'Let me punish the evil-doer and straightway die,' he said, 'that I may not remain here by the beaked ships, a scorn of men, encumbering the earth.' Do you suppose that he thought of danger or of death? For this, Athenians, I believe to be the truth. Wherever a mans post is, whether he has chosen it of his own will, or whether he has been placed at it by his commander, there it is his duty to remain and face the danger, without thinking of death, or of any other thing, except dishonour.

When the generals whom you chose to command me, Athenians, placed me at my post at Potidaea, and at Amphipolis, and at Delium, I remained where they placed me, and ran the risk of death, like other men; and it would be very strange conduct on my part if I were to desert my post now from fear of death or of any other thing, when God has commanded me, as I am persuaded that he has done, to spend my life in searching for wisdom, and in examining myself and others. That would indeed be a very strange thing; and then certainly I might with justice be brought to trial for not believing in the gods; for I should be disobeying the oracle, and fearing death, and thinking myself wise, when I was not wise. For to fear death, my friends, is only to think ourselves wise, without being wise;

for it is to think that we know what we do not know. For anything that men can tell, death may be the greatest good that can happen to them; but they fear it as if they knew quite well that it was the greatest of evils. And what is this but that shameful ignorance of thinking that we know what we do not know? In this matter too, my friends, perhaps I am different from the mass of mankind; and if I were to claim to be at all wiser than others, it would be because I do not think that I have any clear knowledge about the other world, when, in fact, I have none. But I do know very well that it is evil and base to do wrong, and to disobey my superior, whether he be man or god. And I will never do what I know to be evil, and shrink in fear from what, for all that I can tell, may be a good. And so, even if you acquit me now, and do not listen to Anytus argument that, if I am to be acquitted, I ought never to have been brought to trial at all; and that, as it is, you are bound to put me to death, because, as he said, if I escape, all your children will forthwith be utterly corrupted by practising what Socrates teaches; if you were therefore to say to me, Socrates, this time we will not listen to Anytus; we will let you go, but on this condition, that you cease from carrying on this search of yours, and from philosophy; if you are found following those pursuits again, you shall die;' I say, if you offered to let me go on these terms, I should reply;—'Athenians, I hold you in the highest regard and love; but I will obey God rather than you; and as long as I have breath and strength I will not cease from philosophy, and from exhorting you, and declaring the truth to every one of you whom I meet, saying, as I am wont, "My excellent friend, you are a citizen of Athens, a city which is very great and very famous for wisdom and power of mind; are you not ashamed of caring so much for the making of money, and for reputation, and for honour? Will you not think or care about wisdom, and truth, and the perfection of your soul?"' And if he disputes my words, and says that he does care about these things, I shall not forthwith release him and go away; I shall question him and cross-examine him and test him; and if I think that he has not virtue, though he says that he has, I shall reproach him for setting the lower value on the most important things, and a higher value on those that are of less account. This I shall do to every one whom I meet, young or old, citizen or stranger; but more especially to the citizens, for they are more nearly akin to me. For, know well, God has commanded me to do so. And I think that no better piece of fortune has ever befallen you in Athens than my service to God. For I spend my whole life in going about and persuading you all to give your first and chiefest care to the perfection of your souls, and not till you have done that to think of your bodies, or your wealth; and telling you that virtue does not come from wealth, but that wealth, and every other good thing which men have, whether in public, or in private, comes from virtue. If then I corrupt the youth by this teaching, the mischief is great; but if any man says that I teach anything else, he speaks falsely. And therefore, Athenians, I say, either listen to Anytus, or do not listen to him; either acquit me, or do not acquit me; but be sure that I shall not alter my way of life; no, not if I have to die for it many times.

Do not interrupt me, Athenians. Remember the request which I made to you, and listen to my words. I think that it will profit you to hear them. I am going to say something more to you, at which you may be inclined to cry out; but do not do that. Be sure that if you put me to death, who am what I have told you that I am, you will do yourselves more harm than me. Meletus and Anytus can do me no harm; that is impossible; for I am sure that God will not allow a good man to be injured by a bad one. They may indeed kill me, or drive me into exile, or deprive me of my civil rights; and perhaps Meletus and others think those things great evils. But I do not think so; I think that it is a much greater evil to do what he is doing now, and to try to put a man to death unjustly. And now, Athenians, I am not arguing in my own defence at all, as you might expect me to do; I am trying to persuade you not to sin against God, by condemning me, and rejecting his gift to you. For if you put me to death, you will not easily find another man to fill my place. God has sent me to attack the city, as if it were a great and noble horse, to use a quaint simile, which was rather sluggish from its size, and which needed to be aroused by a gadfly; and I think that I am the gadfly that God has sent to the city to attack it; for I never cease from settling upon you, as it were, at every point, and rousing, and exhorting, and reproaching each man of you all day long. You will not easily find any one else, my friends, to fill my place; and if you take my advice, you will spare my life. You are vexed, as drowsy persons are, when they are awakened, and of course, if you listened to Anytus, you could easily kill me with a single blow, and then sleep on undisturbed for the rest of your lives, unless God were to care for you enough to send another man to arouse you. And you may easily see that it is God who has given me to your city; a mere human impulse would never have led me to neglect all my own interests, or to endure seeing my private affairs neglected now for so many years, while it made me busy myself unceasingly in your interests, and go to each man of you by himself, like a father, or an elder brother, trying to persuade him to care for virtue. There would have been a reason for it, if I had gained any advantage by this conduct, or if I had been paid for my exhortations; but you see yourselves that my accusers, though they accuse me of everything else without blushing, have not had the effrontery to say that I ever either exacted or demanded payment. They could bring no evidence of that. And I think that I have sufficient evidence of the truth of what I say in my poverty. Perhaps it may seem strange to you that, though I am so busy in going about in private with my counsel, yet I do not venture to come forward in the assembly, and take part in the public councils. You have often heard me speak of my reason for this, and in many places; it is that I have a certain divine sign from God, which is the divinity that Meletus has caricatured in his indictment. I have had it from childhood; it is a kind of voice, which whenever I hear it, always turns me back from something which I was going to do, but never urges me to act. It is this which forbids me to take part in politics. And I think that it does well to forbid me. For, Athenians, it is quite certain that if I had attempted to take part in politics, I should have perished at once and long ago, without doing any good either to you or to myself. And do not be vexed with me for telling the truth. There is no man who will preserve his life for long, either in Athens or elsewhere, if he firmly opposes the wishes of the people, and tries to prevent the commission of much injustice and illegality in the State. He who would really fight for justice, must do so as a private man, not in public, if he means to preserve his life, even for a short time.

I will prove to you that this is so by very strong evidence, not by mere words, but by what you value highly, actions. Listen then to what has happened to me, that you may know that there is no man who could make me consent to do wrong from the fear of death; but that I would perish at once rather than give way. What I am going to tell you may be a commonplace in the Courts of Law; nevertheless it is true. The only office that I ever held in the State, Athenians, was that of Senator. When you wished to try the ten generals, who did not rescue their men after the battle of Arginusae, in a body, which was illegal, as you all came to think afterwards, the tribe Antiochis, to which I belong, held the presidency. On that occasion I alone of all the presidents opposed your illegal action, and gave my vote against you. The speakers were ready to suspend me and arrest me; and you were clamouring against me, and crying out to me to submit. But I thought that I ought to face the danger out in the cause of law and justice, rather than join with you in your unjust proposal, from fear of imprisonment or death. That was before the destruction of the democracy. When the oligarchy came, the Thirty sent for me, with four others, to the Council-Chamber, and ordered us to bring over Leon the Salaminian from Salamis, that they might put him to death. They were in the habit of frequently giving similar orders to many others, wishing to implicate as many men as possible in their crimes. But then I again proved, not by mere words, but by my actions, that, if I may use a vulgar expression, I do not care a straw for death; but that I do care very much indeed about not doing anything against the laws of God or man.

That government with all its power did not terrify me into doing anything wrong; but when we left the Council-Chamber, the other four went over to Salamis, and brought Leon across to Athens; and I went away home; and if the rule of the Thirty had not been destroyed soon afterwards, I should very likely have been put to death for what I did then. Many of you will be my witnesses in this matter.

Now do you think that I should have remained alive all these years, if I had taken part in public affairs, and had always maintained the cause of justice like an honest man, and had held it a paramount duty, as it is, to do so? Certainly not, Athenians, nor any other man either. But throughout my whole life, both in private, and in public, whenever I have had to take part in public affairs, you will find that I have never yielded a single point in a question of right and wrong to any man; no, not to those whom my enemies falsely assert to have been my pupils. But I was never any mans teacher. I have never withheld myself from any one, young or old, who was anxious to hear me converse while I was about my mission; neither do I converse for payment, and refuse to converse without payment; I am ready to ask questions of rich and poor alike, and if any man wishes to answer me, and then listen to what I have to say, he may. And I cannot justly be charged with causing these men to turn out good or bad citizens; for I never either taught, or professed to teach any of them any knowledge whatever. And if any man asserts that he ever learnt or heard any thing from me in private, which every one else did not hear as well as he, be sure that he does not speak the truth.

Why is it, then, that people delight in spending so much time in my company? You have heard why, Athenians. I told you the whole truth when I said that they delight in hearing me examine persons who think that they are wise when they are not wise. It is certainly very amusing to listen to that. And, I say, God has commanded me to examine men in oracles, and in dreams, and in every way in which the divine will was ever declared to man. This is the truth, Athenians, and if it were not the truth, it would be easily refuted. For if it were really the case that I have already corrupted some of the young men, and am now corrupting others, surely some of them, finding as they grew older that I had given them evil counsel in their youth, would have come forward to-day to accuse me and take their revenge. Or if they were unwilling to do so themselves, surely their kinsmen, their fathers, or brothers, or other relatives, would, if I had done them any harm, have remembered it, and taken their revenge. Certainly I see many of them in Court. Here is Crito, of my own deme and of my own age, the father of Critobulus; here is Lysanias of Sphettus, the father of Eschinus; here is also Antiphon of Cephisus, the father of Epigenes. Then here are others, whose brothers have spent their time in my company; Nicostratus, the son of Theozotides, and brother of Theodotus—and Theodotus is dead, so he at least cannot entreat his brother to be silent; here is Paralus, the son of Demodocus, and the brother of Theages; here is Adeimantus, the son of Ariston, whose brother is Plato here; and Eantodorus, whose brother is Aristodorus. And I can name many others to you, some of whom Meletus ought to have called as witnesses in the course of his own speech; but if he forgot to call them then, let him call them now—I will stand aside while he does so—and tell us if he has any such evidence. No, on the contrary, my friends, you will find all these men ready to support me, the corrupter, the injurer of their kindred, as Meletus and Anytus call me. Those of them who have been already corrupted might perhaps have some reason for supporting me; but what reason can their relatives, who are grown up, and who are uncorrupted, have, except the reason of truth and justice, that they know very well that Meletus is a liar, and that I am speaking the truth?

Well, my friends, this, together it may be with other things of the same nature, is pretty much what I have to say in my defence. There may be some one among you who will be vexed when he remembers how, even in a less important trial than this, he prayed and entreated the judges to acquit him with many tears, and brought forward his children and many of his friends and relatives in Court, in order to appeal to your feelings; and then finds that I shall do none of these things, though I am in what he would think the supreme danger. Perhaps he will harden himself against me when he notices this; it may make him angry, and he may give his vote in anger. If it is so with any of you—I do not suppose that it is, but in case it should be so—I think that I should answer him reasonably if I said; ‘My friend, I have kinsmen too, for, in the words of Homer, “I am not born of stocks and stones, but of woman;’ and so, Athenians, I have kinsmen, and I have three sons, one of them a lad, and the other two still children. Yet I will not bring any of them forward before you, and implore you to acquit me. And why will I do none of these things? It is not from arrogance, Athenians, nor because I hold you cheap; whether or no I can face death bravely is another question; but for my own credit, and for your credit, and for the credit of our city, I do not think it well, at my age, and with my name, to do anything of that kind. Rightly or wrongly, men have made up their minds that in some way Socrates is different from the mass of mankind. And it will be a shameful thing if those of you who are thought to excel in wisdom, or in bravery, or in any other virtue, are going to act in this fashion. I have often seen men with a reputation behaving in a strange way at their trial, as if they thought it a terrible fate to be killed, and as though they expected to live for ever, if you did not put them to death. Such men seem to me to bring discredit on the city; for any stranger would suppose that the best and most eminent Athenians, who are selected by their fellow-citizens to hold office, and for other honours, are no better than women. Those of you, Athenians, who have any reputation at all, ought not to do these things; and you ought not to allow us to do them; you should show that you will be much more merciless to men who make the city ridiculous by these pitiful pieces of acting, than to men who remain quiet.

But apart from the question of credit, my friends, I do not think that it is right to entreat the judge to acquit us, or to escape condemnation in that way. It is our duty to convince his mind by reason. He does not sit to give away justice to his friends, but to pronounce judgment; and he has sworn not to favour any man whom he would like to favour, but to decide questions according to law. And therefore we ought not to teach you to forswear yourselves; and you ought not to allow yourselves to be taught, for then neither you nor we would be acting righteously. Therefore, Athenians, do not require me to do these things, for I believe them to be neither good nor just nor holy; and, more especially do not ask me to do them to-day, when Meletus is prosecuting me for impiety. For were I to be successful, and to prevail on you by my prayers to break your oaths, I should be clearly teaching you to believe that there are no gods; and I should be simply accusing myself by my defence of not believing in them. But, Athenians, that is very far from the truth. I do believe in the gods as no one of my accusers believes in them; and to you and to God I commit my cause to be decided as is best for you and for me.

(He is found guilty by 281 votes to 220.)

Socrates:: I am not vexed at the verdict which you have given, Athenians, for many reasons. I expected that you would find me guilty; and I am not so much surprised at that, as at the numbers of the votes. I, certainly, never thought that the majority against me would have been so narrow. But now it seems that if only thirty votes had changed sides, I should have escaped. So I think that I have escaped Meletus, as it is; and not only have I escaped him; for it is perfectly clear that if Anytus and Lycon had not come forward to accuse me too, he would not have obtained the fifth part of the votes, and would have had to pay a fine of a thousand drachmae.

So he proposes death as the penalty. Be it so. And what counter- penalty shall I propose to you, Athenians? What I deserve, of course, must I not? What then do I deserve to pay or to suffer for having determined not to spend my life in ease? I neglected the things which most men value, such as wealth, and family interests, and military commands, and popular oratory, and all the political appointments, and clubs, and factions, that there are in Athens; for I thought that I was really too conscientious a man to preserve my life if I engaged in these matters. So I did not go where I should have done no good either to you or to myself. I went instead to each one of you by himself, to do him, as I say, the greatest of services, and strove to persuade him not to think of his affairs, until he had thought of himself, and tried to make himself as perfect and wise as possible; nor to think of the affairs of Athens, until he had thought of Athens herself; and in all cases to bestow his thoughts on things in the same manner. Then what do I deserve for such a life? Something good, Athenians, if I am really to propose what I deserve; and something good which it would be suitable to me to receive. Then what is a suitable reward to be given to a poor benefactor, who requires leisure to exhort you? There is no reward, Athenians, so suitable for him as a public maintenance in the Prytaneum. It is a much more suitable reward for him than for any of you who has won a victory at the Olympic games with his horse or his chariots. Such a man only makes you seem happy, but I make you really happy; and he is not in want, and I am. So if I am to propose the penalty which I really deserve, I propose this, a public maintenance in the Prytaneum. Perhaps you think me stubborn and arrogant in what I am saying now, as in what I said about the entreaties and tears. It is not so, Athenians; it is rather that I am convinced that I never wronged any man intentionally, though I cannot persuade you of that, for we have conversed together only a little time. If there were a law at Athens, as there is elsewhere, not to finish a trial of life and death in a single day, I think that I could have convinced you of it; but now it is not easy in so short a time to clear myself of the gross calumnies of my enemies. But when I am convinced that I have never wronged any man, I shall certainly not wrong myself, or admit that I deserve to suffer any evil, or propose any evil for myself as a penalty. Why should I? Lest I should suffer the penalty which Meletus proposes, when I say that I do not know whether it is a good or an evil? Shall I choose instead of it something which I know to be an evil, and propose that as a penalty? Shall I propose imprisonment? And why should I pass the rest of my days in prison, the slave of successive officials? Or shall I propose a fine, with imprisonment until it is paid? I have told you why I will not do that. I should have to remain in prison for I have no money to pay a fine with. Shall I then propose exile? Perhaps you would agree to that. Life would indeed be very dear to me, if I were unreasonable enough to expect that strangers would cheerfully tolerate my discussions and reasonings, when you who are my fellow-citizens cannot endure them, and have found them so burdensome and odious to you, that you are seeking now to be released from them. No, indeed, Athenians, that is not likely. A fine life I should lead for an old man, if I were to withdraw from Athens, and pass the rest of my days in wandering from city to city, and continually being expelled. For I know very well that the young men will listen to me, wherever I go, as they do here; and if I drive them away, they will persuade their elders to expel me; and if I do not drive them away, their fathers and kinsmen will expel me for their sakes.

Perhaps some one will say, ‘Why cannot you withdraw from Athens, Socrates, and hold your peace?’ It is the most difficult thing in the world to make you understand why I cannot do that. If I say that I cannot hold my peace, because that would be to disobey God, you will think that I am not in earnest and will not believe me. And if I tell you that no better thing can happen to a man than to converse every day about virtue and the other matters about which you have heard me conversing and examining myself and others, and that an unexamined life is not worth living, then you will believe me still less. But that is the truth, my friends, though it is not easy to convince you of it. And, what is more, I am not accustomed to think that I deserve any punishment. If I had been rich, I would have proposed as large a fine as I could pay; that would have done me no harm. But I am not rich enough to pay a fine, unless you are willing to fix it at a sum within my means. Perhaps I could pay you a mina; so I propose that. Plato here, Athenians, and Crito, and Critobulus, and Apollodorus bid me propose thirty minas, and they will be sureties for me. So I propose thirty minae. They will be sufficient sureties to you for the money.

(He is condemned to death.)

Socrates:: You have not gained very much time, Athenians, and. as the price of it, you will have an evil name from all who wish to revile the city, and they will cast in your teeth that you put Socrates, a wise man, to death. For they will certainly call me wise, whether I am wise or not, when they want to reproach you. If you would have waited for a little while, your wishes would have been fulfilled in the course of nature; for you see that I am an old man, far advanced in years, and near to death. I am speaking not to all of you, only to those who have voted for my death. And now I am speaking to them still. Perhaps, my friends, you think that I have been defeated because I was wanting in the arguments by which I could have persuaded you to acquit me, if, that is, I had thought it right to do or to say anything to escape punishment. It is not so. I have been defeated because I was wanting, not in arguments, but in over-boldness and effrontery; because I would not plead before you as you would have liked to hear me plead, or appeal to you with weeping and wailing, or say and do many other things, which I maintain are unworthy of me, but which you have been accustomed to from other men. But when I was defending myself, I thought that I ought not to do anything unmanly because of the danger which I ran, and I have not changed my mind now. I would very much rather defend myself as I did, and die, than as you would have had me do, and live. Both in a law suit, and in war, there are some things which neither I nor any other man may do in order to escape from death. In battle a man often sees that he may at least escape from death by throwing down his arms and falling on his knees before the pursuer to beg for his life. And there are many other ways of avoiding death in every danger, if a man will not scruple to say and to do anything. But, my friends, I think that it is a much harder thing to escape from wickedness than from death; for wickedness is swifter than death. And now I, who am old and slow, have been overtaken by the slower pursuer; and my accusers, who are clever and swift, have been overtaken by the swifter pursuer, which is wickedness. And now I shall go hence, sentenced by you to death; and they will go hence, sentenced by truth to receive the penalty of wickedness and evil. And I abide by this award as well as they. Perhaps it was right for these things to be so; and I think that they are fairly measured.

And now I wish to prophesy to you, Athenians who have condemned me. For I am going to die, and that is the time when men have most prophetic power. And I prophesy to you who have sentenced me to death, that a far severer punishment than you have inflicted on me, will surely overtake you as soon as I am dead. You have done this thing, thinking that you will be relieved from having to give an account of your lives. But I say that the result will be very different from that. There will be more men who will call you to account, whom I have held back, and whom you did not see. And they will be harder masters to you than I have been, for they will be younger, and you will be more angry with them. For if you think that you will restrain men from reproaching you for your evil lives by putting them to death, you are very much mistaken. That way of escape is hardly possible, and it is not a good one. It is much better, and much easier, not to silence reproaches, but to make yourselves as perfect as you can. This is my parting prophecy to you who have condemned me.

With you who have acquitted me I should like to converse touching this thing that has come to pass, while the authorities are busy, and before I go to the place where I have to die. So, I pray you, remain with me until I go hence; there is no reason why we should not converse with each other while it is possible. I wish to explain to you, as my friends, the meaning of what has befallen me. A wonderful thing has happened to me, judges,—for you I am right in calling judges. The prophetic sign, which I am wont to receive from the divine voice, has been constantly with me all through my life till now, opposing me in quite small matters if I were not going to act rightly. And now you yourselves see what has happened to me; a thing which might be thought, and which is sometimes actually reckoned, the supreme evil. But the sign of God did not withstand me when I was leaving my house in the morning, nor when I was coming up hither to the Court, nor at any point in my speech, when I was going to say anything; though at other times it has often stopped me in the very act of speaking. But now, in this matter, it has never once withstood me, either in my words or my actions. I will tell you what I believe to be the reason of that. This thing that has come upon me must be a good; and those of us who think that death is an evil must needs be mistaken. I have a clear proof that that is so; for my accustomed sign would certainly have opposed me, if I had not been going to fare well.

And if we reflect in another way we shall see that we may well hope that death is a good. For the state of death is one of two things; either the dead man wholly ceases to be, and loses all sensation; or, according to the common belief, it is a change and a migration of the soul unto another place. And if death is the absence of all sensation, and like the sleep of one whose slumbers are unbroken by any dreams, it will be a wonderful gain. For if a man had to select that night in which he slept so soundly that he did not even see any dreams, and had to compare with it all the other nights and days of his life, and then had to say how many days and nights in his life he had spent better and more pleasantly than this night, I think that a private person, nay, even the great King! himself, would find them easy to count, compared with the others. If that is the nature of death, I for one count it a gain. For then it appears that eternity is nothing more than a single night. But if death is a journey to another place, and the common belief be true, that there are all who have died, what good could be greater than this, my judges? Would a journey not be worth taking, at the end of which, in the other world, we should be released from the self-styled judges who are here, and should find the true judges, who are said to sit in judgment below, such as Minos, and Rhadamanthus, and Eacus, and Triptolemus, and the other demi-gods who were just in their lives? Or what would you not give to converse with Orpheus and Musseus and. Hesiod and Homer? I am willing to die many times, if this be true. And for my own part I should have a wonderful interest in meeting there Palamedes, and Ajax the son of Telamon, and the other men of old who have died through an unjust judgment, and in comparing my experiences with theirs. That I think would be no small pleasure. And, above all, I could spend my time in examining those who are there, as I examine men here, and in finding out which of them is wise, and which of them thinks himself wise, when he is not wise. What would we not give, my judges, to be able to examine the leader of the great expedition against Troy, or Odysseus, or Sisyphus, or countless other men and women whom we could name? It would be an infinite happiness to converse with them, and to live with them, and to examine them. Assuredly there they do not put men to death for doing that. For besides the other ways in which they are happier than we are, they are immortal, at least if the common belief be true.

And you too, judges, must face death with a good courage, and believe this as a truth, that no evil can happen to a good man, either in life, or after death. His fortunes are not neglected by the gods; and what has come to me to-day has not come by chance. I am persuaded that it was better for me to die now, and to be released from trouble; and that was the reason why the sign never turned me back. And so I am hardly angry with my accusers, or with those who have condemned me to die. Yet it was not with this mind that they accused me arid condemned me, but meaning to do me an injury. So far I may find fault with them.

Yet I have one request to make of them. When my sons grow up, visit them with punishment, my friends, and vex them in the same way that I have vexed you, if they seem to you to care for riches, or for any other thing, before virtue; and if they think that they are something, when they are nothing at all, reproach them, as I have reproached you, for not caring for what they should, and for thinking that they are great men when in fact they are worthless. And if you will do this, I myself and my sons will have received our deserts at your hands.

But now the time has come, and we must go hence; I to die, and you to live. Whether life or death is better is known to God, and to God only.

# The Defence Of Socrates At His Trial

Translated by Fowler.

[ETHICAL]

CHARACTERS.

Socrates; Meletus.

---

Socrates:: How you, men of Athens, have been affected by my accusers, I do not know; but I, for my part, almost forgot my own identity, so persuasively did they talk; and yet there is hardly a word of truth in what they have said. But I was most amazed by one of the many lies that they told—when they said that you must be on your guard not to be deceived by me, because I was a clever speaker. For I thought it the most shameless part of their conduct that they are not ashamed because they will immediately be convicted by me of falsehood by the evidence of fact, when I show myself to be not in the least a clever speaker, unless indeed they call him a clever speaker who speaks the truth; for if this is what they mean, I would agree that I am an orator not—after their fashion. Now they, as I say, have said little or nothing true; but you shall hear from me nothing but the truth. Not, however, men of Athens, speeches finely tricked out with words and phrases, as theirs are, nor carefully arranged, but you will hear things said at random with the words that happen to occur to me. For I trust that what I say is just; and let none of you expect anything else.

For surely it would not be fitting for one of my age to come before you like a youngster making up speeches. And, men of Athens, I urgently beg and beseech you if you hear me making my defence with the same words with which I have been accustomed to speak both in the market place at the bankers tables, where many of you have heard me, and elsewhere, not to be surprised or to make a disturbance on this account. For the fact is that this is the first time I have come before the court, although I am seventy years old; I am therefore an utter foreigner to the manner of speech here. Hence, just as you would, of course, if I were really a foreigner, pardon me if I spoke in that dialect and that manner in which I had been brought up, so now I make this request of you, a fair one, as it seems to me, that you disregard the manner of my speech—for perhaps it might be worse and perhaps better—and observe and pay attention merely to this, whether what I say is just or not; for that is the virtue of a judge, and an orators virtue is to speak the truth.

First then it is right for me to defend myself against the first false accusations brought against me, and the first accusers, and then against the later accusations and the later accusers. For many accusers have risen up against me before you, who have been speaking for a long time, many years already, and saying nothing true; and I fear them more than Anytus and the rest, though these also are dangerous; but those others are more dangerous, gentlemen, who gained your belief, since they got hold of most of you in childhood, and accused me without any truth, saying, “There is a certain Socrates, a wise man, a ponderer over the things in the air and one who has investigated the things beneath the earth and who makes the weaker argument the stronger.” These, men of Athens, who have spread abroad this report, are my dangerous enemies. For those who hear them think that men who investigate these matters do not even believe in gods. Besides, these accusers are many and have been making their accusations already for a long time, and moreover they spoke to you at an age at which you would believe them most readily (some of you in youth, most of you in childhood,) and the case they prosecuted went utterly by default, since nobody appeared in defence. But the most unreasonable thing of all is this, that it is not even possible to know and speak their names, except when one of them happens to be a writer of comedies. And all those who persuaded you by means of envy and slander—and some also persuaded others because they had been themselves persuaded—all these are most difficult to cope with; for it is not even possible to call any of them up here and cross-question him, but I am compelled in making my defence to fight, as it were, absolutely with shadows and to cross question when nobody answers. Be kind enough, then, to bear in mind, as I say, that there are two classes of my accusers—one those who have just brought their accusation, the other those who, as I was just saying, brought it long ago, and consider that I must defend myself first against the latter; for you heard them making their charges first and with much greater force than these who made them later. Well, then, I must make a defence, men of Athens, and must try in so short a time to remove from you this prejudice which you have been for so long a time acquiring. Now I wish that this might turn out so, if it is better for you and for me, and that I might succeed with my defence; but I think it is difficult, and I am not at all deceived about its nature. But nevertheless, let this be as is pleasing to God, the law must be obeyed and I must make a defence.

Now let us take up from the beginning the question, what the accusation is from which the false prejudice against me has arisen, in which Meletus trusted when he brought this suit against me. What did those who aroused the prejudice say to arouse it? I must, as it were, read their sworn statement as if they were plaintiffs; “Socrates is a criminal and a busybody, investigating the things beneath the earth and in the heavens and making the weaker argument stronger and teaching others these same things.” Something of that sort it is. For you yourselves saw these things in Aristophanes comedy, a Socrates being carried about there, proclaiming that he was treading on air and uttering a vast deal of other nonsense, about which I know nothing, either much or little. And I say this, not to cast dishonour upon such knowledge, if anyone is wise about such matters (may I never have to defend myself against Meletus on so great a charge as that!)—but I, men of Athens, have nothing to do with these things. And I offer as witnesses most of yourselves, and I ask you to inform one another and to tell, all those of you who ever heard me conversing—and there are many such among you—now tell, if anyone ever heard me talking much or little about such matters. And from this you will perceive that such are also the other things that the multitude say about me.

But in fact none of these things are true, and if you have heard from anyone that I undertake to teach people and that I make money by it, that is not true either. Although this also seems to me to be a fine thing, if one might be able to teach people, as Gorgias of Leontini and Prodicus of Ceos and Hippias of Elis are. For each of these men, gentlemen, is able to go into any one of the cities and persuade the young men, who can associate for nothing with whomsoever they wish among their own fellow citizens, to give up the association with those men and to associate with them and pay them money and be grateful besides.

And there is also another wise man here, a Parian, who I learned was in town; for I happened to meet a man who has spent more on sophists than all the rest, Callias, the son of Hipponicus; so I asked him—for he has two sons—

“Callias,” said I, “if your two sons had happened to be two colts or two calves, we should be able to get and hire for them an overseer who would make them excellent in the kind of excellence proper to them; and he would be a horse-trainer or a husbandman; but now, since they are two human beings, whom have you in mind to get as overseer? Who has knowledge of that kind of excellence, that of a man and a citizen? For I think you have looked into the matter, because you have the sons. Is there anyone,” said I, “or not?” “Certainly,” said he. “Who,” said I, “and where from, and what is his price for his teaching?” “Evenus,” he said, “Socrates, from Paros, five minae.” And I called Evenus blessed, if he really had this art and taught so reasonably. I myself should be vain and put on airs, if I understood these things; but I do not understand them, men of Athens.

Now perhaps someone might rejoin; “But, Socrates, what is the trouble about you? Whence have these prejudices against you arisen? For certainly this great report and talk has not arisen while you were doing nothing more out of the way than the rest, unless you were doing something other than most people; so tell us what it is, that we may not act unadvisedly in your case.” The man who says this seems to me to be right, and I will try to show you what it is that has brought about my reputation and aroused the prejudice against me. So listen. And perhaps I shall seem to some of you to be joking; be assured, however, I shall speak perfect truth to you.

The fact is, men of Athens, that I have acquired this reputation on account of nothing else than a sort of wisdom. What kind of wisdom is this? Just that which is perhaps human wisdom. For perhaps I really am wise in this wisdom; and these men, perhaps, of whom I was just speaking, might be wise in some wisdom greater than human, or I dont know what to say; for I do not understand it, and whoever says I do, is lying and speaking to arouse prejudice against me. And, men of Athens, do not interrupt me with noise, even if I seem to you to be boasting; for the word which I speak is not mine, but the speaker to whom I shall refer it is a person of weight. For of my wisdom—if it is wisdom at all—and of its nature, I will offer you the god of Delphi as a witness. You know Chaerephon, I fancy. He was my comrade from a youth and the comrade of your democratic party, and shared in the recent exile and came back with you. And you know the kind of man Chaerephon was, how impetuous in whatever he undertook. Well, once he went to Delphi and made so bold as to ask the oracle this question; and, gentlemen, dont make a disturbance at what I say; for he asked if there were anyone wiser than I. Now the Pythia replied that there was no one wiser. And about these things his brother here will bear you witness, since Chaerephon is dead.

But see why I say these things; for I am going to tell you whence the prejudice against me has arisen. For when I heard this, I thought to myself; “What in the world does the god mean, and what riddle is he propounding? For I am conscious that I am not wise either much or little. What then does he mean by declaring that I am the wisest? He certainly cannot be lying, for that is not possible for him.” And for a long time I was at a loss as to what he meant; then with great reluctance I proceeded to investigate him somewhat as follows.

I went to one of those who had a reputation for wisdom, thinking that there, if anywhere, I should prove the utterance wrong and should show the oracle “This man is wiser than I, but you said I was wisest.” So examining this man—for I need not call him by name, but it was one of the public men with regard to whom I had this kind of experience, men of Athens—and conversing with him, this man seemed to me to seem to be wise to many other people and especially to himself, but not to be so; and then I tried to show him that he thought he was wise, but was not. As a result, I became hateful to him and to many of those present; and so, as I went away, I thought to myself, “I am wiser than this man; for neither of us really knows anything fine and good, but this man thinks he knows something when he does not, whereas I, as I do not know anything, do not think I do either. I seem, then, in just this little thing to be wiser than this man at any rate, that what I do not know I do not think I know either.” From him I went to another of those who were reputed to be wiser than he, and these same things seemed to me to be true; and there I became hateful both to him and to many others.

After this then I went on from one to another, perceiving that I was hated, and grieving and fearing, but nevertheless I thought I must consider the gods business of the highest importance. So I had to go, investigating the meaning of the oracle, to all those who were reputed to know anything. And by the Dog, men of Athens—for I must speak the truth to you—this, I do declare, was my experience; those who had the most reputation seemed to me to be almost the most deficient, as I investigated at the gods behest, and others who were of less repute seemed to be superior men in the matter of being sensible. So I must relate to you my wandering as I performed my Herculean labours, so to speak, in order that the oracle might be proved to be irrefutable. For after the public men I went to the poets, those of tragedies, and those of dithyrambs, and the rest, thinking that there I should prove by actual test that I was less learned than they. So, taking up the poems of theirs that seemed to me to have been most carefully elaborated by them, I asked them what they meant, that I might at the same time learn something from them. Now I am ashamed to tell you the truth, gentlemen; but still it must be told. For there was hardly a man present, one might say, who would not speak better than they about the poems they themselves had composed. So again in the case of the poets also I presently recognised this, that what they composed they composed not by wisdom, but by nature and because they were inspired, like the prophets and givers of oracles; for these also say many fine things, but know none of the things they say; it was evident to me that the poets too had experienced something of this same sort. And at the same time I perceived that they, on account of their poetry, thought that they were the wisest of men in other things as well, in which they were not. So I went away from them also thinking that I was superior to them in the same thing in which I excelled the public men.

Finally then I went to the hand-workers. For I was conscious that I knew practically nothing, but I knew I should find that they knew many fine things. And in this I was not deceived; they did know what I did not, and in this way they were wiser than I. But, men of Athens, the good artisans also seemed to me to have the same failing as the poets; because of practising his art well, each one thought he was very wise in the other most important matters, and this folly of theirs obscured that wisdom, so that I asked myself in behalf of the oracle whether I should prefer to be as I am, neither wise in their wisdom nor foolish in their folly, or to be in both respects as they are. I replied then to myself and to the oracle that it was better for me to be as I am.

Now from this investigation, men of Athens, many enmities have arisen against me, and such as are most harsh and grievous, so that many prejudices have resulted from them and I am called a wise man. For on each occasion those who are present think I am wise in the matters in which I confute someone else; but the fact is, gentlemen, it is likely that the god is really wise and by his oracle means this; “Human wisdom is of little or no value.” And it appears that he does not really say this of Socrates, but merely uses my name, and makes me an example, as if he were to say; “This one of you, O human beings, is wisest, who, like Socrates, recognises that he is in truth of no account in respect to wisdom.”

Therefore I am still even now going about and searching and investigating at the gods behest anyone, whether citizen or foreigner, who I think is wise; and when he does not seem so to me, I give aid to the god and show that he is not wise. And by reason of this occupation I have no leisure to attend to any of the affairs of the state worth mentioning, or of my own, but am in vast poverty on account of my service to the god.

And in addition to these things, the young men who have the most leisure, the sons of the richest men, accompany me of their own accord, find pleasure in hearing people being examined, and often imitate me themselves, and then they undertake to examine others; and then, I fancy, they find a great plenty of people who think they know something, but know little or nothing. As a result, therefore, those who are examined by them are angry with me, instead of being angry with themselves, and say that “Socrates is a most abominable person and is corrupting the youth.”

And when anyone asks them “by doing or teaching what?” they have nothing to say, but they do not know, and that they may not seem to be at a loss, they say these things that are handy to say against all the philosophers, “the things in the air and the things beneath the earth” and “not to believe in the gods” and “to make the weaker argument the stronger." For they would not, I fancy, care to say the truth, that it is being made very clear that they pretend to know, but know nothing. Since, then, they are jealous of their honour and energetic and numerous and speak concertedly and persuasively about me, they have filled your ears both long ago and now with vehement slanders.

From among them Meletus attacked me, and Anytus and Lycon, Meletus angered on account of the poets, and Anytus on account of the artisans and the public men, and Lycon on account of the orators; so that, as I said in the beginning, I should be surprised if I were able to remove this prejudice from you in so short a time when it has grown so great. There you have the truth, men of Athens, and I speak without hiding anything from you, great or small or prevaricating. And yet I know pretty well that I am making myself hated by just that conduct; which is also a proof that I am speaking the truth and that this is the prejudice against me and these are its causes. And whether you investigate this now or hereafter, you will find that it is so.

Now so far as the accusations are concerned which my first accusers made against me, this is a sufficient defence before you; but against Meletus, the good and patriotic, as he says, and the later ones, I will try to defend myself next. So once more, as if these were another set of accusers, let us take up in turn their sworn statement. It is about as follows; it states that Socrates is a wrongdoer because he corrupts the youth and does not believe in the gods the state believes in, but in other new spiritual beings.

Such is the accusation. But let us examine each point of this accusation. He says I am a wrongdoer because I corrupt the youth. But I, men of Athens, say Meletus is a wrongdoer, because he jokes in earnest, lightly involving people in a lawsuit, pretending to be zealous and concerned about things for which he never cared at all. And that this is so I will try to make plain to you also.

Come here, Meletus, tell me; dont you consider it of great importance that the youth be as good as possible?

Meletus:: "I do."

Socrates:: Come now, tell these gentlemen who makes them better? For it is evident that you know, since you care about it. For you have found the one who corrupts them, as you say, and you bring me before these gentlemen and accuse me; and now, come, tell who makes them better and inform them who he is. Do you see, Meletus, that you are silent and cannot tell? And yet does it not seem to you disgraceful and a sufficient proof of what I say, that you have never cared about it? But tell, my good man, who makes them better?

Meletus:: "The laws."

Socrates:: But that is not what I ask, most excellent one, but what man, who knows in the first place just this very thing, the laws.

Meletus:: "These men, Socrates, the judges."

Socrates:: What are you saying, Meletus? Are these gentlemen able to instruct the youth, and do they make them better?

Meletus:: "Certainly."

Socrates:: All, or some of them and others not?

Meletus:: "All."

Socrates:: Well said, by Hera, and this is a great plenty of helpers you speak of. But how about this? Do these listeners make them better, or not?

Meletus:: "These also."

Socrates:: And how about the senators?

Meletus:: “The senators also.”

Socrates:: But, Meletus, those in the assembly, the assembly-men, dont corrupt the youth, do they? or do they also all make them better?

Meletus:: “They also.”

Socrates:: All the Athenians, then, as it seems, make them excellent, except myself, and I alone corrupt them. Is this what you mean?

Meletus:: “Very decidedly, that is what I mean.”

Socrates:: You have condemned me to great unhappiness! But answer me; does it seem to you to be so in the case of horses, that those who make them better are all mankind, and he who injures them some one person? Or, quite the opposite of this, that he who is able to make them better is some one person, or very few, the horse-trainers, whereas most people, if they have to do with and use horses, injure them? Is it not so, Meletus, both in the case of horses and in that of all other animals? Certainly it is, whether you and Anytus deny it or agree; for it would be a great state of blessedness in the case of the youth if one alone corrupts them, and the others do them good. But, Meletus, you show clearly enough that you never thought about the youth, and you exhibit plainly your own carelessness, that you have not cared at all for the things about which you hale me into court.

But besides, tell us, for heavens sake, Meletus, is it better to live among good citizens, or bad? My friend, answer; for I am not asking anything hard. Do not the bad do some evil to those who are with them at any time and the good some good?

Meletus:: “Certainly.”

Socrates:: Is there then anyone who prefers to be injured by his associates rather than benefited? Answer, my good man; for the law orders you to answer. Is there anyone who prefers to be injured?

Meletus:: “Of course not.”

Socrates:: Come then, do you hale me in here on the ground that I am corrupting the youth and making them worse voluntarily or involuntarily?

Meletus:: “Voluntarily I say.”

Socrates:: What then, Meletus? Are you at your age so much wiser than I at my age, that you have recognized that the evil always do some evil to those nearest them, and the good some good; whereas I have reached such a depth of ignorance that I do not even know this, that if I make anyone of my associates bad I am in danger of getting some harm from him, so that I do this great evil voluntarily, as you say? I dont believe this, Meletus, nor do I think anyone else in the world does! but either I do not corrupt them, or if I corrupt them, I do it involuntarily, so that you are lying in both events. But if I corrupt them involuntarily, for such involuntary errors the law is not to hale people into court, but to take them and instruct and admonish them in private. For it is clear that if I am told about it, I shall stop doing that which I do involuntarily. But you avoided associating with me and instructing me, and were unwilling to do so, but you hale me in here, where it is the law to hale in those who need punishment, not instruction.

But enough of this, for, men of Athens, this is clear, as I said, that Meletus never cared much or little for these things. But nevertheless, tell us, how do you say, Meletus, that I corrupt the youth? Or is it evident, according to the indictment you brought, that it is by teaching them not to believe in the gods the state believes in, but in other new spiritual beings? Do you not say that it is by teaching this that I corrupt them?

Meletus:: “Very decidedly that is what I say.”

Socrates:: Then, Meletus, for the sake of these very gods about whom our speech now is, speak still more clearly both to me and to these gentlemen. For I am unable to understand whether you say that I teach that there are some gods, and myself then believe that there are some gods, and am not altogether godless and am not a wrongdoer in that way, that these, however, are not the gods whom the state believes in, but others, and this is what you accuse me for, that I believe in others; or you say that I do not myself believe in gods at all and that I teach this unbelief to other people.

Meletus:: “That is what I say, that you do not believe in gods at all.”

Socrates:: You amaze me, Meletus! Why do you say this? Do I not even believe that the sun or yet the moon are gods, as the rest of mankind do?

Meletus:: “No, by Zeus, judges, since he says that the sun is a stone and the moon earth.”

Socrates:: Do you think you are accusing Anaxagoras, my dear Meletus, and do you so despise these gentlemen and think they are so unversed in letters as not to know, that the books of Anaxagoras the Clazomenian are full of such utterances? And forsooth the youth learn these doctrines from me, which they can buy sometimes (if the price is high) for a drachma in the orchestra and laugh at Socrates, if he pretends they are his own, especially when they are so absurd! But for heavens sake, do you think this of me, that I do not believe there is any god?

Meletus:: “No, by Zeus, you don’t, not in the least.”

Socrates:: You cannot be believed, Meletus, not even, as it seems to me, by yourself. For this man appears to me, men of Athens, to be very violent and unrestrained, and actually to have brought this indictment in a spirit of violence and unrestraint and rashness. For he seems, as it were, by composing a puzzle to be making a test; Will Socrates, the wise man, recognize that I am joking and contradicting myself, or shall I deceive him and the others who hear me? For he appears to me to contradict himself in his speech, as if he were to say, Socrates is a wrongdoer, because he does not believe in gods, but does believe in gods. And yet this is the conduct of a jester.

Join me, then, gentlemen, in examining how he appears to me to say this; and do you, Meletus, answer; and you, gentlemen, as I asked you in the beginning, please bear in mind not to make a disturbance if I conduct my argument in my accustomed manner.

Is there any human being who believes that there are things pertaining to human beings, but no human beings? Let him answer, gentlemen, and not make a disturbance in one way or another. Is there anyone who does not believe in horses, but does believe in things pertaining to horses? or who does not believe that flute-players exist, but that things pertaining to flute-players do? There is not, best of men; if you do not wish to answer, I say it to you and these others here. But answer at least the next question. Is there anyone who believes spiritual things exist, but does not believe in spirits?

Meletus:: “There is not.”

Socrates:: Thank you for replying reluctantly when forced by these gentlemen. Then you say that I believe in spiritual beings, whether new or old, and teach that belief; but then I believe in spiritual beings at any rate, according to your statement, and you swore to that in your indictment. But if I believe in spiritual beings, it is quite inevitable that I believe also in spirits; is it not so? It is; for

I assume that you agree, since you do not answer. But do we not think the spirits are gods or children of gods? Yes, or no?

Meletus:: "Certainly."

Socrates:: Then if I believe in spirits, as you say, if spirits are a kind of gods, that would be the puzzle and joke which I say you are uttering in saying that I, while I do not believe in gods, do believe in gods again, since I believe in spirits; but if, on the other hand, spirits are a kind of bastard children of gods, by nymphs or by any others, whoever their mothers are said to be, what man would believe that there are children of gods, but no gods? It would be just as absurd as if one were to believe that there are children of horses and asses, namely mules, but no horses and asses. But, Meletus, you certainly must have brought this suit either to make a test of us or because you were at a loss as to what true wrongdoing you could accuse me of; but there is no way for you to persuade any man who has even a little sense that it is possible for the same person to believe in spiritual and divine existences and again for the same person not to believe in spirits or gods or heroes.

Well then, men of Athens, that I am not a wrongdoer according to Meletus's indictment, seems to me not to need much of a defence, but what has been said is enough. But you may be assured that what I said before is true, that great hatred has arisen against me and in the minds of many persons. And this it is which will cause my condemnation, if it is to cause it, not Meletus or Anytus, but the prejudice and dislike of the many. This has condemned many other good men, and I think will do so; and there is no danger that it will stop with me. But perhaps someone might say; "Are you then not ashamed, Socrates, of having followed such a pursuit, that you are now in danger of being put to death as a result?” But I should make to him a just reply; “You do not speak well, Sir, if you think a man in whom there is even a little merit ought to consider danger of life or death, and not rather regard this only, when he does things, whether the things he does are right or wrong and the acts of a good or a bad man. For according to your argument all the demigods would be bad who died at Troy, including the son of Thetis, who so despised danger, in comparison with enduring any disgrace, that when his mother (and she was a goddess) said to him, as he was eager to slay Hector, something like this, I believe, ‘My son, if you avenge the death of your friend Patroclus and kill Hector, you yourself shall die; “for straightway,” she says, “after Hector, is death appointed unto thee;”’ he, when he heard this, made light of death and danger, and feared much more to live as a coward and not to avenge his friends, and ‘Straightway,’ said he, ‘may I die, after doing vengeance upon the wrongdoer, that I may not stay here, jeered at beside the curved ships, a burden of the earth.’ Do you think he considered death and danger?”

For thus it is, men of Athens, in truth; wherever a man stations himself, thinking it is best to be there, or is stationed by his commander, there he must, as it seems to me, remain and run his risks, considering neither death nor any other thing more than disgrace.

So I should have done a terrible thing, if, when the commanders whom you chose to command me stationed me, both at Potidaea and at Amphipolis and at Delium, I remained where they stationed me, like anybody else, and ran the risk of death, but when the god gave me a station, as I believed and understood, with orders to spend my life in philosophy and in examining myself and others, then I were to desert my post through fear of death or anything else whatsoever. It would be a terrible thing, and truly one might then justly hale me into court, on the charge that I do not believe that there are gods, since I disobey the oracle and fear death and think I am wise when I am not. For to fear death, gentlemen, is nothing else than to think one is wise when one is not; for it is thinking one knows what one does not know. For no one knows whether death be not even the greatest of all blessings to man, but they fear it as if they knew that it is the greatest of evils. And is not this the most reprehensible form of ignorance, that of thinking one knows what one does not know? Perhaps, gentlemen, in this matter also I differ from other men in this way, and if I were to say that I am wiser in anything, it would be in this, that not knowing very much about the other world, I do not think I know. But I do know that it is evil and disgraceful to do wrong and to disobey him who is better than I, whether he be god or man. So I shall never fear or avoid those things concerning which I do not know whether they are good or bad rather than those which I know are bad. And therefore, even if you acquit me now and are not convinced by Anytus, who said that either I ought not to have been brought to trial at all, or since I was brought to trial, I must certainly be put to death, adding that if I were acquitted your sons would all be utterly ruined by practising what I teach—if you should say to me in reply to this; “Socrates, this time we will not do as Anytus says, but we will let you go, on this condition, however, that you no longer spend your time in this investigation or in philosophy, and if you are caught doing so again you shall die;” if you should let me go on this condition which I have mentioned, I should say to you, Men of Athens, I respect and love you, but I shall obey the god rather than you, and while I live and am able to continue, I shall never give up philosophy or stop exhorting you and pointing out the truth to any one of you whom I may meet, saying in my accustomed way; “Most excellent man, are you who are a citizen of Athens, the greatest of cities and the most famous for wisdom and power, not ashamed to care for the acquisition of wealth and for reputation and honour, when you neither care nor take thought for wisdom and truth and the perfection of your soul?” And if any of you argues the point, and says he does care, I shall not let him go at once, nor shall I go away, but I shall question and examine and cross-examine him, and if I find that he does not possess virtue, but says he does, I shall rebuke him for scorning the things that are of most importance and caring more for what is of less worth. This I shall do to whomever I meet, young and old, foreigner and citizen, but most to the citizens, inasmuch as you are more nearly related to me. For know that the god commands me to do this, and I believe that no greater good ever came to pass in the city than my service to the god. For I go about doing nothing else than urging you, young and old, not to care for your persons or your property more than for the perfection of your souls, or even so much; and I tell you that virtue does not come from money, but from virtue comes money and all other good things to man, both to the individual and to the state. If by saying these things I corrupt the youth, these things must be injurious; but if anyone asserts that I say other things than these, he says what is untrue. Therefore I say to you, men of Athens, either do as Anytus tells you, or not, and either acquit me, or not, knowing that I shall not change my conduct even if I am to die many times over.

Do not make a disturbance, men of Athens; continue to do what I asked of you, not to interrupt my speech by disturbances, but to hear me; and I believe you will profit by hearing. Now I am going to say some things to you at which you will perhaps cry out; but do not do so by any means. For know that if you kill me, I being such a man as I say I am, you will not injure me so much as yourselves; for neither Meletus nor Anytus could injure me; that would be impossible, for I believe it is not Gods will that a better man be injured by a worse. He might, however, perhaps kill me or banish me or disfranchise me; and perhaps he thinks he would thus inflict great injuries upon me, and others may think so, but I do not; I think he does himself a much greater injury by doing what he is doing now—killing a man unjustly. And so, men of Athens, I am now making my defence not for my own sake, as one might imagine, but far more for yours, that you may not by condemning me err in your treatment of the gift the God gave you. For if you put me to death, you will not easily find another, who, to use a rather absurd figure, attaches himself to the city as a gadfly to a horse, which, though large and well bred, is sluggish on account of his size and needs to be aroused by stinging. I think the god fastened me upon the city in some such capacity, and I go about arousing, and urging and reproaching each one of you, constantly alighting upon you everywhere the whole day long. Such another is not likely to come to you, gentlemen; but if you take my advice, you will spare me. But you, perhaps, might be angry, like people awakened from a nap, and might slap me, as Anytus advises, and easily kill me; then you would pass the rest of your lives in slumber, unless God, in his care for you, should send someone else to sting you. And that I am, as I say, a kind of gift from the god, you might understand from this; for I have neglected all my own affairs and have been enduring the neglect of my concerns all these years, but I am always busy in your interest, coming to each one of you individually like a father or an elder brother and urging you to care for virtue; now that is not like human conduct. If I derived any profit from this and received pay for these exhortations, there would be some sense in it; but now you yourselves see that my accusers, though they accuse me of everything else in such a shameless way, have not been able to work themselves up to such a pitch of shamelessness as to produce a witness to testify that I ever exacted or asked pay of anyone. For I think I have a sufficient witness that I speak the truth, namely, my poverty.

Perhaps it may seem strange that I go about and interfere in other peoples affairs to give this advice in private, but do not venture to come before your assembly and advise the state. But the reason for this, as you have heard me say at many times and places, is that something divine and spiritual comes to me, the very thing which Meletus ridiculed in his indictment. I have had this from my childhood; it is a sort of voice that comes to me, and when it comes it always holds me back from what I am thinking of doing, but never urges me forward. This it is which opposes my engaging in politics. And I think this opposition is a very good thing; for you may be quite sure, men of Athens, that if I had undertaken to go into politics, I should have been put to death long ago and should have done no good to you or to myself. And do not be angry with me for speaking the truth; the fact is that no man will save his life who nobly opposes you or any other populace and prevents many unjust and illegal things from happening in the state. A man who really fights for the right, if he is to preserve his life for even a little while, must be a private citizen, not a public man.

I will give you powerful proofs of this, not mere words, but what you honour more,—actions. And listen to what happened to me, that you may be convinced that I would never yield to any one, if that was wrong, through fear of death, but would die rather than yield. The tale I am going to tell you is ordinary and commonplace, but true. I, men of Athens, never held any other office in the state, but I was a senator; and it happened that my tribe held the presidency when you wished to judge collectively, not severally, the ten generals who had failed to gather up the slain after the naval battle; this was illegal, as you all agreed afterwards. At that time I was the only one of the prytanes who opposed doing anything contrary to the laws, and although the orators were ready to impeach and arrest me, and though you urged them with shouts to do so, I thought I must run the risk to the end with law and justice on my side, rather than join with you when your wishes were unjust, through fear of imprisonment or death. That was when the democracy still existed; and after the oligarchy was established, the Thirty sent for me with four others to come to the rotunda and ordered us to bring Leon the Salaminian from Salamis to be put to death. They gave many such orders to others also, because they wished to implicate as many in their crimes as they could. Then I, however, showed again, by action, not in word only, that I did not care a whit for death if that be not too rude an expression, but that I did care with all my might not to do anything unjust or unholy. For that government, with all its power, did not frighten me into doing anything unjust, but when we came out of the rotunda, the other four went to Salamis and arrested Leon, but I simply went home; and perhaps I should have been put to death for it, if the government had not quickly been put down. Of these facts you can have many witnesses.

Do you believe that I could have lived so many years if I had been in public life and had acted as a good man should act, lending my aid to what is just and considering that of the highest importance? Far from it, men of Athens; nor could any other man. But you will find that through all my life, both in public, if I engaged in any public activity, and in private, I have always been the same as now, and have never yielded to any one wrongly, whether it were any other person or any of those who are said by my traducers to be my pupils. But I was never any ones teacher. If any one, whether young or old, wishes to hear me speaking and pursuing my mission, I have never objected, nor do I converse only when I am paid and not otherwise, but I offer myself alike to rich and poor; I ask questions, and whoever wishes may answer and hear what I say. And whether any of them turns out well or ill, I should not justly be held responsible, since I never promised or gave any instruction to any of them; but if any man says that he ever learned or heard anything privately from me, which all the others did not, be assured that he is lying.

But why then do some people love to spend much of their time with me? You have heard the reason, men of Athens; for I told you the whole truth; it is because they like to listen when those are examined who think they are wise and are not so; for it is amusing. But, as I believe, I have been commanded to do this by the God through oracles and dreams and in every way in which any man was ever commanded by divine power to do anything whatsoever. This, Athenians, is true and easily tested. For if I am corrupting some of the young men and have corrupted others, surely some of them who have grown older, if they recognise that I ever gave them any bad advice when they were young, ought now to have come forward to accuse me. Or if they did not wish to do it themselves, some of their relatives—fathers or brothers or other kinsfolk—ought now to tell the facts. And there are many of them present, whom I see; first Crito here, who is of my own age and my own deme and father of Critobulus, who is also present; then there is Lysanias the Sphettian, father of

Aeschines, who is here; and also Antiphon of Cephisus, father of Epigenes. Then here are others whose brothers joined in my conversations, Nicostratus, son of Theozotides and brother of Theodotus (now Theodotus is dead, so he could not stop him by entreaties,) and Paralus, son of Demodocus; Theages was his brother; and Adimantus, son of Aristo, whose brother is Plato here; and Aeantodorus, whose brother Apollodorus is present. And I can mention to you many others, some one of whom Meletus ought certainly to have produced as a witness in his speech; but if he forgot it then, let him do so now; I yield the floor to him, and let him say, if he has any such testimony. But you will find that the exact opposite is the case, gentlemen, and that they are all ready to aid me, the man who corrupts and injures their relatives, as Meletus and Anytus say. Now those who are themselves corrupted might have some motive in aiding me; but what reason could their relatives have, who are not corrupted and are already older men, unless it be the right and true reason, that they know that Meletus is lying and I am speaking the truth?

Socrates:: Well, gentlemen, this, and perhaps more like this, is about all I have to say in my defence. Perhaps some one among you may be offended when he remembers his own conduct, if he, even in a case of less importance than this, begged and besought the judges with many tears, and brought forward his children to arouse compassion, and many other friends and relatives; whereas I will do none of these things, though I am, apparently, in the very greatest danger. Perhaps some one with these thoughts in mind may be harshly disposed toward me and may cast his vote in anger. Now if any one of you is so disposed—I do not believe there is such a person—but if there should be, I think I should be speaking fairly if I said to him, My friend, I too have relatives, for I am, as Homer has it, “not born of an oak or a rock,” but of human parents, so that I have relatives and, men of Athens, I have three sons, one nearly grown up, and two still children; but nevertheless I shall not bring any of them here and beg you to acquit me. And why shall I not do so? Not because I am stubborn, Athenians, or lack respect for you. Whether I fear death or not is another matter, but for the sake of my good name and yours and that of the whole state, I think it is not right for me to do any of these things in view of my age and my reputation, whether deserved or not; for at any rate the opinion prevails that Socrates is in some way superior to most men. If then those of you who are supposed to be superior either in wisdom or in courage or in any other virtue whatsoever are to behave in such a way, it would be disgraceful. Why, I have often seen men who have some reputation behaving in the strangest manner, when they were on trial, as if they thought they were going to suffer something terrible if they were put to death, just as if they would be immortal if you did not kill them. It seems to me that they are a disgrace to the state and that any stranger might say that those of the Athenians who excel in virtue, men whom they themselves honour with offices and other marks of esteem, are no better than women. Such acts, men of Athens, we who have any reputation at all ought not to commit, and if we commit them you ought not to allow it, but you should make it clear that you will be much more ready to condemn a man who puts before you such pitiable scenes and makes the city ridiculous than one who keeps quiet.

But apart from the question of reputation, gentlemen, I think it is not right to implore the judge or to get acquitted by begging; we ought to inform and convince him. For the judge is not here to grant favours in matters of justice, but to give judgment; and his oath binds him not to do favours according to his pleasure, but to judge according to the laws; therefore, we ought not to get you into the habit of breaking your oaths, nor ought you to fall into that habit; for neither of us would be acting piously. Do not, therefore, men of Athens, demand of me that I act before you in a way which I consider neither honourable nor right nor pious, especially when impiety is the very thing for which Meletus here has brought me to trial. For it is plain that if by persuasion and supplication I forced you to break your oaths I should teach you to disbelieve in the existence of the gods and in making my defence should accuse myself of not believing in them. But that is far from the truth; for I do believe in them, men of Athens, more than any of my accusers, and I entrust my case to you and to God to decide it as shall be best for me and for you.

I am not grieved, men of Athens, at this vote of condemnation you have cast against me, and that for many reasons, among them the fact that your decision was not a surprise to me. I am much more surprised by the number of votes for and against it; for I did not expect so small a majority, but a large one. Now, it seems, if only thirty votes had been cast the other way, I should have been acquitted. And so, I think, so far as Meletus is concerned, I have even now been acquitted, and not merely acquitted, but anyone can see that, if Anytus and Lycon had not come forward to accuse me, he would have been fined a thousand drachmas for not receiving a fifth part of the votes.

And so the man proposes the penalty of death. Well, then, what shall I propose as an alternative? Clearly that which I deserve, shall I not? And what do I deserve to suffer or to pay, because in my life I did not keep quiet, but neglecting what most men care for—money-making and property, and military offices, and public speaking, and the various offices and plots and parties that come up in the state—and thinking that I was really too honourable to engage in those activities and live, refrained from those things by which I should have been of no use to you or to myself, and devoted myself to conferring upon each citizen individually what I regard as the greatest benefit? For I tried to persuade each of you to care for himself and his own perfection in goodness and wisdom rather than for any of his belongings, and for the state itself rather than for its interests, and to follow the same method in his care for other things. What, then, does such a man as I deserve? Some good thing, men of Athens, if I must propose something truly in accordance with my deserts; and the good thing should be such as is fitting for me. Now what is fitting for a poor man who is your benefactor, and who needs leisure to exhort you? There is nothing, men of Athens, so fitting as that such a man be given his meals in the prytaneum. That is much more appropriate for me than for any of you who has won a race at the Olympic games with a pair of horses or a four-in-hand. For he makes you seem to be happy, whereas I make you happy in reality; and he is not at all in need of sustenance, but I am needy. So if I must propose a penalty in accordance with my deserts, I propose maintenance in the prytaneum.

Perhaps some of you think that in saying this, as in what I said about lamenting and imploring, I am speaking in a spirit of bravado; but that is not the case. The truth is rather that I am convinced that I never intentionally wronged any one; but I cannot convince you of this, for we have conversed with each other only a little while. I believe if you had a law, as some other people have, that capital cases should not be decided in one day, but only after several days, you would be convinced; but now it is not easy to rid you of great prejudices in a short time. Since, then, I am convinced that I never wronged any one, I am certainly not going to wrong myself, and to say of myself that I deserve anything bad, and to propose any penalty of that sort for myself. Why should I? Through fear of the penalty that Meletus proposes, about which I say that I do not know whether it is a good thing or an evil? Shall I choose instead of that something which I know to be an evil? What penalty shall I propose? Imprisonment? And why should I live in prison a slave to those who may be in authority? Or shall I propose a fine, with imprisonment until it is paid? But that is the same as what I said just now, for I have no money to pay with. Shall I then propose exile as my penalty? Perhaps you would accept that. I must indeed be possessed by a great love of life if I am so irrational as not to know that if you, who are my fellow citizens, could not endure my conversation and my words, but found them too irksome and disagreeable, so that you are now seeking to be rid of them, others will not be willing to endure them. No, men of Athens, they certainly will not. A fine life I should lead if I went away at my time of life, wandering from city to city and always being driven out! For well I know that wherever I go, the young men will listen to my talk, as they do here; and if I drive them away, they will themselves persuade their elders to drive me out, and if I do not drive them away, their fathers and relatives will drive me out for their sakes.

Perhaps someone might say, “Socrates, can you not go away from us and live quietly, without talking?” Now-this is the hardest thing to make some of you believe. For if I say that such conduct would be disobedience to the god and that therefore I cannot keep quiet, you will think I am jesting and will not believe me; and if again I say that to talk every day about virtue and the other things about which you hear me talking and examining myself and others is the greatest good to man, and that the unexamined life is not worth living, you will believe me still less. This is as I say, gentlemen, but it is not easy to convince you. Besides, I am not accustomed to think that I deserve anything bad. If I had money, I would have proposed a fine, as large as I could pay; for that would have done me no harm.

But as it is I have no money, unless you are willing to impose a fine which I could pay. I might perhaps pay a mina of silver. So I propose that penalty; but Plato here, men of Athens, and Crito and Critobulus, and Apollodorus tell me to propose a fine of thirty minas, saying that they are sureties for it. So I propose a fine of that amount, and these men, who are amply sufficient, will be my sureties.

It is no long time, men of Athens, which you gain, and for that those who wish to cast a slur upon the state will give you the name and blame of having killed Socrates, a wise man; for, you know, those who wish to revile you will say I am wise, even though I am not. Now if you had waited a little while, what you desire would have come to you of its own accord; for you see how old I am, how far advanced in life and how near death. I say this not to all of you, but to those who voted for my death. And to them also I have something else to say. Perhaps you think, gentlemen, that I have been convicted through lack of such words as would have moved you to acquit me, if I had thought it right to do and say everything to gain an acquittal. Far from it. And yet it is through a lack that I have been convicted, not however a lack of words, but of impudence and shamelessness, and of willingness to say to you such things as you would have liked best to hear. You would have liked to hear me wailing and lamenting and doing and saying many things which are, as I maintain, unworthy of me such things as you are accustomed to hear from others.

But I did not think at the time that I ought, on account of the danger I was in, to do anything unworthy of a free man, nor do I now repent of having made my defence as I did, but I much prefer to die after such a defence than to live after a defence of the other sort. For neither in the court nor in war ought I or any other man to plan to escape death by every possible means. In battles it is often plain that a man might avoid death by throwing down his arms and begging mercy of his pursuers; and there are many other means of escaping death in dangers of various kinds if one is willing to do and say anything. But, gentlemen, it is not hard to escape death; it is much harder to escape wickedness, for that runs faster than death. And now I, since I am slow and old, am caught by the slower runner, and my accusers, who are clever and quick, by the faster, wickedness. And now I shall go away convicted by you and sentenced to death, and they go convicted by truth of villainy and wrong. And I abide by my penalty, and they by theirs. Perhaps these things had to be so, and I think they are well.

And now I wish to prophesy to you, O ye who have condemned me; for I am now at the time when men most do prophesy, the time just before death. And I say to you, ye men who have slain me, that punishment will come upon you straightway after my death, far more grievous in sooth than the punishment of death which you have meted out to me. For now you have done this to me because you hoped that you would be relieved from rendering an account of your lives, but I say that you will find the result far different. Those who will force you to give an account will be more numerous than heretofore; men whom I restrained, though you knew it not; and they will be harsher, inasmuch as they are younger, and you will be more annoyed. For if you think that by putting men to death you will prevent anyone from reproaching you because you do not act as you should, you are mistaken. That mode of escape is neither possible at all nor honourable, but the easiest and most honourable escape is not by suppressing others, but by making yourselves as good as possible. So with this prophecy to you who condemned me I take my leave.

But with those who voted for my acquittal I should like to converse about this which has happened, while the authorities are busy and before I go to the place where I must die. Wait with me so long, my friends; for nothing prevents our chatting with each other while there is time. I feel that you are my friends, and I wish to show you the meaning of this which has now happened to me. For, judges—and in calling you judges I give you your right name—a wonderful thing has happened to me. For hitherto the customary prophetic monitor always spoke to me very frequently and opposed me even in very small matters, if I was going to do anything I should not; but now, as you yourselves see, this thing which might be thought, and is generally considered, the greatest of evils has come upon me; but the divine sign did not oppose me either when I left my home in the morning, or when I came here to the court, or at any point of my speech, when I was going to say anything; and yet on other occasions it stopped me at many points in the midst of a speech; but now, in this affair, it has not opposed me in anything I was doing or saying. What then do I suppose is the reason? I will tell you. This which has happened to me is doubtless a good thing, and those of us who think death is an evil must be mistaken. A convincing proof of this has been given me; for the accustomed sign would surely have opposed me if I had not been going to meet with something good.

Let us consider in another way also how good reason there is to hope that it is a good thing. For the state of death is one of two things; either it is virtually nothingness, so that the dead has no consciousness of anything, or it is, as people say, a change and migration of the soul from this to another place. And if it is unconsciousness, like a sleep in which the sleeper does not even dream, death would be a wonderful gain. For I think if any one were to pick out that night in which he slept a dreamless sleep and, comparing with it the other nights and days of his life, were to say, after due consideration, how many days and nights in his life had passed more pleasantly than that night,—I believe that not only any private person, but even the great King of Persia himself would find that they were few in comparison with the other days and nights. So if such is the nature of death, I count it a gain; for in that case, all time seems to be no longer than one night. But on the other hand, if death is, as it were, a change of habitation from here to some other place, and if what we are told is true, that all the dead are there, what greater blessing could there be, judges? For if a man when he reaches the other world, after leaving behind these who claim to be judges, shall find those who are really judges who are said to sit in judgment there, Minos and Rhadamanthus, and Aeacus and Triptolemus, and all the other demigods who were just men in their lives, would the change of habitation be undesirable? Or again, what would any of you give to meet with Orpheus and Musaeus and Hesiod and Homer? I am willing to die many times over, if these things are true; for I personally should find the life there wonderful, when I met Palamedes or Ajax, the son of Telamon, or any other men of old who lost their lives through an unjust judgment, and compared my experience with theirs. I think that would not be unpleasant. And the greatest pleasure would be to pass my time in examining and investigating the people there, as I do those here, to find out who among them is wise and who thinks he is when he is not. What price would any of you pay, judges, to examine him who led the great army against Troy, or Odysseus, or Sisyphus, or countless others, both men and women, whom I might mention? To converse and associate with them and examine them would be immeasurable happiness. At any rate, the folk there do not kill people for it; since, if what we are told is true, they are immortal for all future time, besides being happier in other respects than men are here.

But you also, judges, must regard death hopefully and must bear in mind this one truth, that no evil can come to a good man either in life or after death, and God does not neglect him. So, too, this which has come to me has not come by chance, but I see plainly that it was better for me to die now and be freed from troubles. That is the reason why the sign never interfered with me, and I am not at all angry with those who condemned me or with my accusers. And yet it was not with that in view that they condemned and accused me, but because they thought to injure me. They deserve blame for that. However, I make this request of them; when my sons grow up, gentlemen, punish them by troubling them as I have troubled you; if they seem to you to care for money or anything else more than for virtue, and if they think they amount to something when they do not, rebuke them as I have rebuked you because they do not care for what they ought, and think they amount to something when they are worth nothing. If you do this, both I and my sons shall have received just treatment from you.

But now the time has come to go away. I go to die, and you to live; but which of us goes to the better lot, is known to none but God.

# Apology

Translated by G.M.A. Grube.

CHARACTERS.

Socrates; Meletus.

---

Socrates:: I do not know, men of Athens, how my accusers affected you; as for me, I was almost carried away in spite of myself, so persuasively did they speak. And yet, hardly anything of what they said is true. Of the many lies they told, one in particular surprised me, namely that you should be careful not to be deceived by an accomplished speaker like me. That they were not ashamed to be immediately proved wrong by the facts, when I show myself not to be an accomplished speaker at all, that I thought was most shameless on their part—unless indeed they call an accomplished speaker the man who speaks the truth. If they mean that, I would agree that I am an orator, but not after their manner, for indeed, as I say, practically nothing they said was true. From me you will hear the whole truth, though not, by Zeus, gentlemen, expressed in embroidered and stylized phrases like theirs, but things spoken at random and expressed in the first words that come to mind, for I put my trust in the justice of what I say, and let none of you expect anything else. It would not be fitting at my age, as it might be for a young man, to toy with words when I appear before you.

One thing I do ask and beg of you, gentlemen: if you hear me making my defense in the same kind of language as I am accustomed to use in the marketplace by the bankers' tables, where many of you have heard me, and elsewhere, do not be surprised or create a disturbance on that account. The position is this: this is my first appearance in a law-court, at the age of seventy; I am therefore simply a stranger to the manner of speaking here. Just as if I were really a stranger, you would certainly excuse me if I spoke in that dialect and manner in which I had been brought up, so too my present request seems a just one, for you to pay no attention to my manner of speech—be it better or worse—but to concentrate your attention on whether what I say is just or not, for the excellence of a judge lies in this, as that of a speaker lies in telling the truth.

It is right for me, gentlemen, to defend myself first against the first lying accusations made against me and my first accusers, and then against the later accusations and the later accusers. There have been many who have accused me to you for many years now, and none of their accusations are true. These I fear much more than I fear Anytus and his friends, though they too are formidable. These earlier ones, however, are more so, gentlemen; they got hold of most of you from childhood, persuaded you and accused me quite falsely, saying that there is a man called Socrates, a wise man, a student of all things in the sky and below the earth, who makes the worse argument the stronger. Those who spread that rumor, gentlemen, are my dangerous accusers, for their hearers believe that those who study these things do not even believe in the gods. Moreover, these accusers are numerous, and have been at it a long time; also, they spoke to you at an age when you would most readily believe them, some of you being children and adolescents, and they won their case by default, as there was no defense.

What is most absurd in all this is that one cannot even know or mention their names unless one of them is a writer of comedies. Those who maliciously and slanderously persuaded you—who also, when persuaded themselves then persuaded others—all those are most difficult to deal with: one cannot bring one of them into court or refute him; one must simply fight with shadows, as it were, in making one’s defense, and cross-examine when no one answers. I want you to realize too that my accusers are of two kinds: those who have accused me recently, and the old ones I mention; and to think that I must first defend myself against the latter, for you have also heard their accusations first, and to a much greater extent than the more recent.

Very well then. I must surely defend myself and attempt to uproot from your minds in so short a time the slander that has resided there so long. I wish this may happen, if it is in any way better for you and me, and that my defense may be successful, but I think this is very difficult and I am fully aware of how difficult it is. Even so, let the matter proceed as the god may wish, but I must obey the law and make my defense.

Let us then take up the case from its beginning. What is the accusation from which arose the slander in which Meletus trusted when he wrote out the charge against me? What did they say when they slandered me? I must, as if they were my actual prosecutors, read the affidavit they would have sworn. It goes something like this: Socrates is guilty of wrongdoing in that he busies himself studying things in the sky and below the earth; he makes the worse into the stronger argument, and he teaches these same things to others. You have seen this yourself in the comedy of Aristophanes, a Socrates swinging about there, saying he was walking on air and talking a lot of other nonsense about things of which I know nothing at all. I do not speak in contempt of such knowledge, if someone is wise in these things—lest Meletus bring more cases against me—but, gentlemen, I have no part in it, and on this point I call upon the majority of you as witnesses. I think it right that all those of you who have heard me conversing, and many of you have, should tell each other if anyone of you has ever heard me discussing such subjects to any extent at all. From this you will learn that the other things said about me by the majority are of the same kind.

Not one of them is true. And if you have heard from anyone that I undertake to teach people and charge a fee for it, that is not true either. Yet I think it a fine thing to be able to teach people as Gorgias of Leontini does, and Prodicus of Ceos, and Hippias of Elis. Each of these men can go to any city and persuade the young, who can keep company with anyone of their own fellow citizens they want without paying, to leave the company of these, to join with themselves, pay them a fee, and be grateful to them besides. Indeed, I learned that there is another wise man from Paros who is visiting us, for I met a man who has spent more money on Sophists than everybody else put together, Callias, the son of Hipponicus. So I asked him—he has two sons—"Callias," I said, "if your sons were colts or calves, we could find and engage a supervisor for them who would make them excel in their proper qualities, some horse breeder or farmer. Now since they are men, whom do you have in mind to supervise them? Who is an expert in this kind of excellence, the human and social kind? I think you must have given thought to this since you have sons. Is there such a person," I asked, "or is there not?" "Certainly there is," he said. "Who is he?" I asked, "What is his name, where is he from? and what is his fee?" "His name, Socrates, is Evenus, he comes from Paros, and his fee is five minas." I thought Evenus a happy man, if he really possesses this art, and teaches for so moderate a fee. Certainly I would pride and preen myself if I had this knowledge, but I do not have it, gentlemen.

One of you might perhaps interrupt me and say: "But Socrates, what is your occupation? From where have these slanders come? For surely if you did not busy yourself with something out of the common, all these rumors and talk would not have arisen unless you did something other than most people. Tell us what it is, that we may not speak inadvisedly about you.” Anyone who says that seems to be right, and I will try to show you what has caused this reputation and slander. Listen then. Perhaps some of you will think I am jesting, but be sure that all that I shall say is true. What has caused my reputation is none other than a certain kind of wisdom. What kind of wisdom? Human wisdom, perhaps. It may be that I really possess this, while those whom I mentioned just now are wise with a wisdom more than human; else I cannot explain it, for I certainly do not possess it, and whoever says I do is lying and speaks to slander me. Do not create a disturbance, gentlemen, even if you think I am boasting, for the story I shall tell does not originate with me, but I will refer you to a trustworthy source. I shall call upon the god at Delphi as witness to the existence and nature of my wisdom, if it be such. You know Chaerephon. He was my friend from youth, and the friend of most of you, as he shared your exile and your return. You surely know the kind of man he was, how impulsive in any course of action. He went to Delphi at one time and ventured to ask the oracle—as I say, gentlemen, do not create a disturbance—he asked if any man was wiser than I, and the Pythian replied that no one was wiser. Chaerephon is dead, but his brother will testify to you about this.

Consider that I tell you this because I would inform you about the origin of the slander. When I heard of this reply I asked myself: “Whatever does the god mean? What is his riddle? I am very conscious that I am not wise at all; what then does he mean by saying that I am the wisest? For surely he does not lie; it is not legitimate for him to do so.” For a long time I was at a loss as to his meaning; then I very reluctantly turned to some such investigation as this; I went to one of those reputed wise, thinking that there, if anywhere, I could refute the oracle and say to it: “This man is wiser than I, but you said I was." Then, when I examined this man— there is no need for me to tell you his name, he was one of our public men—my experience was something like this: I thought that he appeared wise to many people and especially to himself, but he was not. I then tried to show him that he thought himself wise, but that he was not. As a result he came to dislike me, and so did many of the bystanders. So I withdrew and thought to myself: "I am wiser than this man; it is likely that neither of us knows anything worthwhile, but he thinks he knows something when he does not, whereas when I do not know, neither do I think I know; so I am likely to be wiser than he to this small extent, that I do not think I know what I do not know." After this I approached another man, one of those thought to be wiser than he, and I thought the same thing, and so I came to be disliked both by him and by many others.

After that I proceeded systematically. I realized, to my sorrow and alarm, that I was getting unpopular, but I thought that I must attach the greatest importance to the god's oracle, so I must go to all those who had any reputation for knowledge to examine its meaning. And by the dog, gentlemen of the jury—for I must tell you the truth—I experienced something like this: in my investigation in the service of the god I found that those who had the highest reputation were nearly the most deficient, while those who were thought to be inferior were more knowledgeable. I must give you an account of my journeyings as if they were labors I had undertaken to prove the oracle irrefutable. After the politicians, I went to the poets, the writers of tragedies and dithyrambs and the others, intending in their case to catch myself being more ignorant than they. So I took up those poems with which they seemed to have taken most trouble and asked them what they meant, in order that I might at the same time learn something from them. I am ashamed to tell you the truth, gentlemen, but I must. Almost all the bystanders might have explained the poems better than their authors could. I soon realized that poets do not compose their poems with knowledge, but by some inborn talent and by inspiration, like seers and prophets who also say many fine things without any understanding of what they say. The poets seemed to me to have had a similar experience. At the same time I saw that, because of their poetry, they thought themselves very wise men in other respects, which they were not. So there again I withdrew, thinking that I had the same advantage over them as I had over the politicians.

Finally I went to the craftsmen, for I was conscious of knowing practically nothing, and I knew that I would find that they had knowledge of many fine things. In this I was not mistaken; they knew things I did not know, and to that extent they were wiser than I. But, gentlemen of the jury, the good craftsmen seemed to me to have the same fault as the poets: each of them, because of his success at his craft, thought himself very wise in other most important pursuits, and this error of theirs overshadowed the wisdom they had, so that I asked myself, on behalf of the oracle, whether I should prefer to be as I am, with neither their wisdom nor their ignorance, or to have both. The answer I gave myself and the oracle was that it was to my advantage to be as I am.

As a result of this investigation, gentlemen of the jury, I acquired much unpopularity, of a kind that is hard to deal with and is a heavy burden; many slanders came from these people and a reputation for wisdom, for in each case the bystanders thought that I myself possessed the wisdom that I proved that my interlocutor did not have. What is probable, gentlemen, is that in fact the god is wise and that his oracular response meant that human wisdom is worth little or nothing, and that when he says this man, Socrates, he is using my name as an example, as if he said: ‘This man among you, mortals, is wisest who, like Socrates, understands that his wisdom is worthless.” So even now I continue this investigation as the god bade me—and I go around seeking out anyone, citizen or stranger, whom I think wise. Then if I do not think he is, I come to the assistance of the god and show him that he is not wise. Because of this occupation, I do not have the leisure to engage in public affairs to any extent, nor indeed to look after my own, but I live in great poverty because of my service to the god.

Furthermore, the young men who follow me around of their own free will, those who have most leisure, the sons of the very rich, take pleasure in hearing people questioned; they themselves often imitate me and try to question others. I think they find an abundance of men who believe they have some knowledge but know little or nothing. The result is that those whom they question are angry, not with themselves but with me. They say: ‘That man Socrates is a pestilential fellow who corrupts the young.” If one asks them what he does and what he teaches to corrupt them, they are silent, as they do not know, but, so as not to appear at a loss, they mention those accusations that are available against all philosophers, about “things in the sky and things below the earth,” about “not believing in the gods” and “making the worse the stronger argument”; they would not want to tell the truth, I’m sure, that they have been proved to lay claim to knowledge when they know nothing. These people are ambitious, violent and numerous; they are continually and convincingly talking about me; they have been filling your ears for a long time with vehement slanders against me. From them Meletus attacked me, and Anytus and Lycon, Meletus being vexed on behalf of the poets, Anytus on behalf of the craftsmen and the politicians, Lycon on behalf of the orators, so that, as I started out by saying, I should be surprised if I could rid you of so much slander in so short a time. That, gentlemen of the jury, is the truth for you. I have hidden or disguised nothing. I know well enough that this very conduct makes me unpopular, and this is proof that what I say is true, that such is the slander against me, and that such are its causes. If you look into this either now or later, this is what you will find.

Let this suffice as a defense against the charges of my earlier accusers. After this I shall try to defend myself against Meletus, that good and patriotic man, as he says he is, and my later accusers. As these are a different lot of accusers, let us again take up their sworn deposition. It goes something like this: Socrates is guilty of corrupting the young and of not believing in the gods in whom the city believes, but in other new spiritual things? Such is their charge. Let us examine it point by point.

He says that I am guilty of corrupting the young, but I say that Meletus is guilty of dealing frivolously with serious matters, of irresponsibly bringing people into court, and of professing to be seriously concerned with things about none of which he has ever cared, and I shall try to prove that this is so. Come here and tell me, Meletus. Surely you consider it of the greatest importance that our young men be as good as possible?—

Meletus:: Indeed I do.

Socrates:: Come then, tell the jury who improves them. You obviously know, in view of your concern. You say you have discovered the one who corrupts them, namely me, and you bring me here and accuse me to the jury. Come, inform the jury and tell them who it is. You see, Meletus, that you are silent and know not what to say. Does this not seem shameful to you and a sufficient proof of what I say, that you have not been concerned with any of this? Tell me, my good sir, who improves our young men?—

Meletus:: The laws.

Socrates:: That is not what I am asking, but what person who has knowledge of the laws to begin with?—

Meletus:: These jurymen, Socrates.

Socrates:: How do you mean, Meletus? Are these able to educate the young and improve them?—

Meletus:: Certainly.

Socrates:: All of them, or some but not others?—

Meletus:: All of them.

Socrates:: Very good, by Hera. You mention a great abundance of benefactors. But what about the audience? Do they improve the young or not?

Meletus:: —They do, too.

Socrates:: What about the members of Council?—

Meletus:: The Councillors, also.

Socrates:: But, Meletus, what about the assembly? Do members of the assembly corrupt the young, or do they all improve them?—

Meletus:: They improve them.

Socrates:: All the Athenians, it seems, make the young into fine good men, except me, and I alone corrupt them. Is that what you mean?—

Meletus:: That is most definitely what I mean.

Socrates:: You condemn me to a great misfortune. Tell me: does this also apply to horses do you think? That all men improve them and one individual corrupts them? Or is quite the contrary true, one individual is able to improve them, or very few, namely, the horse breeders, whereas the majority, if they have horses and use them, corrupt them? Is that not the case, Meletus, both with horses and all other animals? Of course it is, whether you and Anytus say so or not. It would be a very happy state of affairs if only one person corrupted our youth, while the others improved them.

You have made it sufficiently obvious, Meletus, that you have never had any concern for our youth; you show your indifference clearly; that you have given no thought to the subjects about which you bring me to trial.

And by Zeus, Meletus, tell us also whether it is better for a man to live among good or wicked fellow citizens. Answer, my good man, for I am not asking a difficult question. Do not the wicked do some harm to those who are ever closest to them, whereas good people benefit them?

Meletus:: —Certainly.

Socrates:: And does the man exist who would rather be harmed than benefited by his associates? Answer, my good sir, for the law orders you to answer. Is there any man who wants to be harmed?—

Meletus:: Of course not.

Socrates:: Come now, do you accuse me here of corrupting the young and making them worse deliberately or unwillingly?—

Meletus:: Deliberately.

Socrates:: What fellows, Meletus? Are you so much wiser at your age than I am at mine that you understand that wicked people always do some harm to their closest neighbors while good people do them good, but I have reached such a pitch of ignorance that I do not realize this, namely that if I make one of my associates wicked I run the risk of being harmed by him so that I do such a great evil deliberately, as you say? I do not believe you, Meletus, and I do not think anyone else will. Either I do not corrupt the young or, if I do, it is unwillingly, and you are lying in either case. Now if I corrupt them unwillingly, the law does not require you to bring people to court for such unwilling wrongdoings, but to get hold of them privately, to instruct them and exhort them; for clearly, if I learn better, I shall cease to do what I am doing unwillingly. You, however, have avoided my company and were unwilling to instruct me, but you bring me here, where the law requires one to bring those who are in need of punishment, not of instruction.

And so, gentlemen of the jury, what I said is clearly true: Meletus has never been at all concerned with these matters. Nonetheless tell us, Meletus, how you say that I corrupt the young; or is it obvious from your deposition that it is by teaching them not to believe in the gods in whom the city believes but in other new spiritual things? Is this not what you say I teach and so corrupt them?—

Meletus:: That is most certainly what I do say.

Socrates:: Then by those very gods about whom we are talking, Meletus, make this clearer to me and to the jury: I cannot be sure whether you mean that I teach the belief that there are some gods—and therefore I myself believe that there are gods and am not altogether an atheist, nor am I guilty of that—not, however, the gods in whom the city believes, but others, and that this is the charge against me, that they are others. Or whether you mean that I do not believe in gods at all, and that this is what I teach to others.—

Meletus:: This is what I mean, that you do not believe in gods at all.

Socrates:: You are a strange fellow, Meletus. Why do you say this? Do I not believe, as other men do, that the sun and the moon are gods?—

Meletus:: No, by Zeus, jurymen, for he says that the sun is stone, and the moon earth.

Socrates:: My dear Meletus, do you think you are prosecuting Anaxagoras? Are you so contemptuous of the jury and think them so ignorant of letters as not to know that the books of Anaxagoras of Clazomenae are full of those theories, and further, that the young men learn from me what they can buy from time to time for a drachma, at most, in the bookshops, and ridicule Socrates if he pretends that these theories are his own, especially as they are so absurd? Is that, by Zeus, what you think of me, Meletus, that I do not believe that there are any gods?—

Meletus:: That is what I say, that you do not believe in the gods at all.

Socrates:: You cannot be believed, Meletus, even, I think, by yourself. The man appears to me, gentlemen of the jury, highly insolent and uncontrolled. He seems to have made this deposition out of insolence, violence and youthful zeal. He is like one who composed a riddle and is trying it out: “Will the wise Socrates realize that I am jesting and contradicting myself, or shall I deceive him and others?” I think he contradicts himself in the affidavit, as if he said: “Socrates is guilty of not believing in gods but believing in gods,” and surely that is the part of a jester!

Examine with me, gentlemen, how he appears to contradict himself, and you, Meletus, answer us. Remember, gentlemen, what I asked you when I began, not to create a disturbance if I proceed in my usual manner.

Does any man, Meletus, believe in human activities who does not believe in humans? Make him answer, and not again and again create a disturbance. Does any man who does not believe in horses believe in horsemen’s activities? Or in flute-playing activities but not in flute-players? No, my good sir, no man could. If you are not willing to answer, I will tell you and the jury. Answer the next question, however. Does any man believe in spiritual activities who does not believe in spirits?—

Meletus:: No one.

Socrates:: Thank you for answering, if reluctantly, when the jury made you. Now you say that I believe in spiritual things and teach about them, whether new or old, but at any rate spiritual things according to what you say, and to this you have sworn in your deposition. But if I believe in spiritual things I must quite inevitably believe in spirits. Is that not so? It is indeed. I shall assume that you agree, as you do not answer. Do we not believe spirits to be either gods or the children of gods? Yes or no?—

Meletus:: Of course.

Socrates:: Then since I do believe in spirits, as you admit, if spirits are gods, this is what I mean when I say you speak in riddles and in jest, as you state that I do not believe in gods and then again that I do, since I do believe in spirits. If on the other hand the spirits are children of the gods, bastard children of the gods by nymphs or some other mothers, as they are said to be, what man would believe children of the gods to exist, but not gods? That would be just as absurd as to believe the young of horses and asses, namely mules, to exist, but not to believe in the existence of horses and asses. You must have made this deposition, Meletus, either to test us or because you were at a loss to find any true wrongdoing of which to accuse me. There is no way in which you could persuade anyone of even small intelligence that it is possible for one and the same man to believe in spiritual but not also in divine things, and then again for that same man to believe neither in spirits nor in gods nor in heroes.

I do not think, gentlemen of the jury, that it requires a prolonged defense to prove that I am not guilty of the charges in Meletus' deposition, but this is sufficient. On the other hand, you know that what I said earlier is true, that I am very unpopular with many people. This will be my undoing, if I am undone, not Meletus or Anytus but the slanders and envy of many people. This has destroyed many other good men and will, I think, continue to do so. There is no danger that it will stop at me.

Someone might say: "Are you not ashamed, Socrates, to have followed the kind of occupation that has led to your being now in danger of death?" However, I should be right to reply to him: "You are wrong, sir, if you think that a man who is any good at all should take into account the risk of life or death; he should look to this only in his actions, whether what he does is right or wrong, whether he is acting like a good or a bad man." According to your view, all the heroes who died at Troy were inferior people, especially the son of Thetis who was so contemptuous of danger compared with disgrace. When he was eager to kill Hector, his goddess mother warned him, as I believe, in some such words as these: "My child, if you avenge the death of your comrade, Patroclus, and you kill Hector, you will die yourself, for your death is to follow immediately after Hector's." Hearing this, he despised death and danger and was much more afraid to live a coward who did not avenge his friends. "Let me die at once," he said, "when once I have given the wrongdoer his deserts, rather than remain here, a laughingstock by the curved ships, a burden upon the earth." Do you think he gave thought to death and danger?

This is the truth of the matter, gentlemen of the jury: wherever a man has taken a position that he believes to be best, or has been placed by his commander, there he must I think remain and face danger, without a thought for death or anything else, rather than disgrace. It would have been a dreadful way to behave, gentlemen of the jury, if, at Potidaea, Amphipolis and Delium, I had, at the risk of death, like anyone else, remained at my post where those you had elected to command had ordered me, and then, when the god ordered me, as I thought and believed, to live the life of a philosopher, to examine myself and others, I had abandoned my post for fear of death or anything else. That would have been a dreadful thing, and then I might truly have justly been brought here for not believing that there are gods, disobeying the oracle, fearing death, and thinking I was wise when I was not. To fear death, gentlemen, is no other than to think oneself wise when one is not, to think one knows what one does not know. No one knows whether death may not be the greatest of all blessings for a man, yet men fear it as if they knew that it is the greatest of evils. And surely it is the most blameworthy ignorance to believe that one knows what one does not know. It is perhaps on this point and in this respect, gentlemen, that I differ from the majority of men, and if I were to claim that I am wiser than anyone in anything, it would be in this, that, as I have no adequate knowledge of things in the underworld, so I do not think I have. I do know, however, that it is wicked and shameful to do wrong, to disobey one's superior, be he god or man. I shall never fear or avoid things of which I do not know, whether they may not be good rather than things that I know to be bad. Even if you acquitted me now and did not believe Anytus, who said to you that either I should not have been brought here in the first place, or that now I am here, you cannot avoid executing me, for if I should be acquitted, your sons would practice the teachings of Socrates and all be thoroughly corrupted; if you said to me in this regard: "Socrates, we do not believe Anytus now; we acquit you, but only on condition that you spend no more time on this investigation and do not practice philosophy, and if you are caught doing so you will die;" if, as I say, you were to acquit me on those terms, I would say to you: "Gentlemen of the jury, I am grateful and I am your friend, but I will obey the god rather than you, and as long as I draw breath and am able, I shall not cease to practice philosophy, to exhort you and in my usual way to point out to any one of you whom I happen to meet: Good Sir, you are an Athenian, a citizen of the greatest city with the greatest reputation for both wisdom and power; are you not ashamed of your eagerness to possess as much wealth, reputation and honors as possible, while you do not care for nor give thought to wisdom or truth, or the best possible state of your soul?" Then, if one of you disputes this and says he does care, I shall not let him go at once or leave him, but I shall question him, examine him and test him, and if I do not think he has attained the goodness that he says he has, I shall reproach him because he attaches little importance to the most important things and greater importance to inferior things. I shall treat in this way anyone I happen to meet, young and old, citizen and stranger, and more so the citizens because you are more kindred to me. Be sure that this is what the god orders me to do, and I think there is no greater blessing for the city than my service to the god. For I go around doing nothing but persuading both young and old among you not to care for your body or your wealth in preference to or as strongly as for the best possible state of your soul, as I say to you: "Wealth does not bring about excellence, but excellence makes wealth and everything else good for men, both individually and collectively."

Now if by saying this I corrupt the young, this advice must be harmful, but if anyone says that I give different advice, he is talking nonsense. On this point I would say to you, gentlemen of the jury: "Whether you believe Anytus or not, whether you acquit me or not, do so on the understanding that this is my course of action, even if I am to face death many times." Do not create a disturbance, gentlemen, but abide by my request not to cry out at what I say but to listen, for I think it will be to your advantage to listen, and I am about to say other things at which you will perhaps cry out. By no means do this. Be sure that if you kill the sort of man I say I am, you will not harm me more than yourselves. Neither Meletus nor Anytus can harm me in any way; he could not harm me, for I do not think it is permitted that a better man be harmed by a worse; certainly he might kill me, or perhaps banish or disfranchise me, which he and maybe others think to be great harm, but I do not think so. I think he is doing himself much greater harm doing what he is doing now, attempting to have a man executed unjustly. Indeed, gentlemen of the jury, I am far from making a defense now on my own behalf, as might be thought, but on yours, to prevent you from wrongdoing by mistreating the god's gift to you by condemning me; for if you kill me you will not easily find another like me. I was attached to this city by the god—though it seems a ridiculous thing to say—as upon a great and noble horse which was somewhat sluggish because of its size and needed to be stirred up by a kind of gadfly. It is to fulfilll some such function that I believe the god has placed me in the city. I never cease to rouse each and every one of you, to persuade and reproach you all day long and everywhere I find myself in your company.

Another such man will not easily come to be among you, gentlemen, and if you believe me you will spare me. You might easily be annoyed with me as people are when they are aroused from a doze, and strike out at me; if convinced by Anytus you could easily kill me, and then you could sleep on for the rest of your days, unless the god, in his care for you, sent you someone else. That I am the kind of person to be a gift of the god to the city you might realize from the fact that it does not seem like human nature for me to have neglected all my own affairs and to have tolerated this neglect now for so many years while I was always concerned with you, approaching each one of you like a father or an elder brother to persuade you to care for virtue. Now if I profited from this by charging a fee for my advice, there would be some sense to it, but you can see for yourselves that, for all their shameless accusations, my accusers have not been able in their impudence to bring forward a witness to say that I have ever received a fee or ever asked for one. I, on the other hand, have a convincing witness that I speak the truth, my poverty.

It may seem strange that while I go around and give this advice privately and interfere in private affairs, I do not venture to go to the assembly and there advise the city. You have heard me give the reason for this in many places. I have a divine or spiritual sign which Meletus has ridiculed in his deposition. This began when I was a child. It is a voice, and whenever it speaks it turns me away from something I am about to do, but it never encourages me to do anything. This is what has prevented me from taking part in public affairs, and I think it was quite right to prevent me. Be sure, gentlemen of the jury, that if I had long ago attempted to take part in politics, I should have died long ago, and benefited neither you nor myself. Do not be angry with me for speaking the truth; no man will survive who genuinely opposes you or any other crowd and prevents the occurrence of many unjust and illegal happenings in the city. A man who really fights for justice must lead a private, not a public, life if he is to survive for even a short time.

I shall give you great proofs of this, not words but what you esteem, deeds. Listen to what happened to me, that you may know that I will not yield to any man contrary to what is right, for fear of death, even if I should die at once for not yielding. The things I shall tell you are commonplace and smack of the law-courts, but they are true. I have never held any other office in the city, but I served as a member of the Council, and our tribe Antiochis was presiding at the time when you wanted to try as a body the ten generals who had failed to pick up the survivors of the naval battle. This was illegal, as you all recognized later. I was the only member of the presiding committee to oppose your doing something contrary to the laws, and I voted against it. The orators were ready to prosecute me and take me away, and your shouts were egging them on, but I thought I should run any risk on the side of law and justice rather than join you, for fear of prison or death, when you were engaged in an unjust course.

This happened when the city was still a democracy. When the oligarchy was established, the Thirty summoned me to the Hall, along with four others, and ordered us to bring Leon from Salamis, that he might be executed. They gave many such orders to many people, in order to implicate as many as possible in their guilt. Then I showed again, not in words but in action, that, if it were not rather vulgar to say so, death is something I couldn’t care less about, but that my whole concern is not to do anything unjust or impious. That government, powerful as it was, did not frighten me into any wrongdoing. When we left the Hall, the other four went to Salamis and brought in Leon, but I went home. I might have been put to death for this, had not the government fallen shortly afterwards. There are many who will witness to these events.

Do you think I would have survived all these years if I were engaged in public affairs and, acting as a good man must, came to the help of justice and considered this the most important thing? Far from it, gentlemen of the jury, nor would any other man. Throughout my life, in any public activity I may have engaged in, I am the same man as I am in private life. I have never come to an agreement with anyone to act unjustly, neither with anyone else nor with any one of those who they slanderously say are my pupils. I have never been anyone's teacher. If anyone, young or old, desires to listen to me when I am talking and dealing with my own concerns, I have never begrudged this to anyone, but I do not converse when I receive a fee and not when I do not. I am equally ready to question the rich and the poor if anyone is willing to answer my questions and listen to what I say. And I cannot justly be held responsible for the good or bad conduct of these people, as I never promised to teach them anything and have not done so. If anyone says that he has learned anything from me, or that he heard anything privately that the others did not hear, be assured that he is not telling the truth.

Why then do some people enjoy spending considerable time in my company? You have heard why, gentlemen of the jury, I have told you the whole truth. They enjoy hearing those being questioned who think they are wise, but are not. And this is not unpleasant. To do this has, as I say, been enjoined upon me by the god, by means of oracles and dreams, and in every other way that a divine manifestation has ever ordered a man to do anything. This is true, gentlemen, and can easily be established.

If I corrupt some young men and have corrupted others, then surely some of them who have grown older and realized that I gave them bad advice when they were young should now themselves come up here to accuse me and avenge themselves. If they were unwilling to do so themselves, then some of their kindred, their fathers or brothers or other relations should recall it now if their family had been harmed by me. I see many of these present here, first Crito, my contemporary and fellow demesman, the father of Critobulus here; next Lysanias of Sphettus, the father of Aeschines here; also Antiphon the Cephisian, the father of Epigenes; and others whose brothers spent their time in this way; Nicostratus, the son of Theozotides, brother of Theodotus, and Theodotus has died so he could not influence him; Paralius here, son of Demodocus, whose brother was Theages; there is Adeimantus, son of Ariston, brother of Plato here; Acantidorus, brother of Apollodorus here.

I could mention many others, some one of whom surely Meletus should have brought in as witness in his own speech. If he forgot to do so, then let him do it now; I will yield time if he has anything of the kind to say. You will find quite the contrary, gentlemen. These men are all ready to come to the help of the corruptor, the man who has harmed their kindred, as Meletus and Anytus say. Now those who were corrupted might well have reason to help me, but the uncorrupted, their kindred who are older men, have no reason to help me except the right and proper one, that they know that Meletus is lying and that I am telling the truth.

Very well, gentlemen of the jury. This, and maybe other similar things, is what I have to say in my defense. Perhaps one of you might be angry as he recalls that when he himself stood trial on a less dangerous charge, he begged and implored the jury with many tears, that he brought his children and many of his friends and family into court to arouse as much pity as he could, but that I do none of these things, even though I may seem to be running the ultimate risk. Thinking of this, he might feel resentful toward me and, angry about this, cast his vote in anger. If there is such a one among you—I do not deem there is, but if there is—I think it would be right to say in reply: My good sir, I too have a household and, in Homer's phrase, I am not born "from oak or rock" but from men, so that I have a family, indeed three sons, gentlemen of the jury, of whom one is an adolescent while two are children. Nevertheless, I will not beg you to acquit me by bringing them here. Why do I do none of these things? Not through arrogance, gentlemen, nor through lack of respect for you. Whether I am brave in the face of death is another matter, but with regard to my reputation and yours and that of the whole city, it does not seem right to me to do these things, especially at my age and with my reputation. For it is generally believed, whether it be true or false, that in certain respects Socrates is superior to the majority of men. Now if those of you who are considered superior, be it in wisdom or courage or whatever other virtue makes them so, are seen behaving like that, it would be a disgrace. Yet I have often seen them do this sort of thing when standing trial, men who are thought to be somebody, doing amazing things as if they thought it a terrible thing to die, and as if they were to be immortal if you did not execute them. I think these men bring shame upon the city so that a stranger, too, would assume that those who are outstanding in virtue among the Athenians, whom they themselves select from themselves to fill offices of state and receive other honors, are in no way better than women. You should not act like that, gentlemen of the jury, those of you who have any reputation at all, and if we do, you should not allow it. You should make it very clear that you will more readily convict a man who performs these pitiful dramatics in court and so makes the city a laughingstock, than a man who keeps quiet.

Quite apart from the question of reputation, gentlemen, I do not think it right to supplicate the jury and to be acquitted because of this, but to teach and persuade them. It is not the purpose of a juryman's office to give justice as a favor to whoever seems good to him, but to judge according to law, and this he has sworn to do. We should not accustom you to perjure yourselves, nor should you make a habit of it. This is irreverent conduct for either of us.

Do not deem it right for me, gentlemen of the jury, that I should act towards you in a way that I do not consider to be good or just or pious, especially, by Zeus, as I am being prosecuted by Meletus here for impiety; clearly, if I convinced you by my supplication to do violence to your oath of office, I would be teaching you not to believe that there are gods, and my defense would convict me of not believing in them. This is far from being the case, gentlemen, for I do believe in them as none of my accusers do. I leave it to you and the god to judge me in the way that will be best for me and for you.

[The jury now gives its verdict of guilty, and Meletus asks for the penalty of death.]

Socrates:: There are many other reasons for my not being angry with you for convicting me, gentlemen of the jury, and what happened was not unexpected. I am much more surprised at the number of votes cast on each side for I did not think the decision would be by so few votes but by a great many. As it is, a switch of only thirty votes would have acquitted me. I think myself that I have been cleared on Meletus' charges, and not only this, but it is clear to all that, if Anytus and Lycon had not joined him in accusing me, he would have been fined a thousand drachmas for not receiving a fifth of the votes.

He assesses the penalty at death. So be it. What counter-assessment should I propose to you, gentlemen of the jury? Clearly it should be a penalty I deserve, and what do I deserve to suffer or to pay because I have deliberately not led a quiet life but have neglected what occupies most people: wealth, household affairs, the position of general or public orator or the other offices, the political clubs and factions that exist in the city? I thought myself too honest to survive if I occupied myself with those things. I did not follow that path that would have made me of no use either to you or to myself, but I went to each of you privately and conferred upon him what I say is the greatest benefit, by trying to persuade him not to care for any of his belongings before caring that he himself should be as good and as wise as possible, not to care for the city's possessions more than for the city itself, and to care for other things in the same way. What do I deserve for being such a man? Some good, gentlemen of the jury, if I must truly make an assessment according to my deserts, and something suitable. What is suitable for a poor benefactor who needs leisure to exhort you? Nothing is more suitable, gentlemen, than for such a man to be fed in the Prytaneum much more suitable for him than for any one of you who has won a victory at Olympia with a pair or a team of horses. The Olympian victor makes you think yourself happy; I make you be happy. Besides, he does not need food, but I do. So if I must make a just assessment of what I deserve, I assess it as this: free meals in the Prytaneum.

When I say this you may think, as when I spoke of appeals to pity and entreaties, that I speak arrogantly, but that is not the case, gentlemen of the jury; rather it is like this: I am convinced that I never willingly wrong anyone, but I am not convincing you of this, for we have talked together but a short time. If it were the law with us, as it is elsewhere, that a trial for life should not last one but many days, you would be convinced, but now it is not easy to dispel great slanders in a short time. Since I am convinced that I wrong no one, I am not likely to wrong myself, to say that I deserve some evil and to make some such assessment against myself. What should I fear? That I should suffer the penalty

Meletus has assessed against me, of which I say I do not know whether it is good or bad? Am I then to choose in preference to this something that I know very well to be an evil and assess the penalty at that? Imprisonment? Why should I live in prison, always subjected to the ruling magistrates, the Eleven? A fine, and imprisonment until I pay it? That would be the same thing for me, as I have no money. Exile? for perhaps you might accept that assessment.

I should have to be inordinately fond of life, gentlemen of the jury, to be so unreasonable as to suppose that other men will easily tolerate my company and conversation when you, my fellow citizens, have been unable to endure them, but found them a burden and resented them so that you are now seeking to get rid of them. Far from it, gentlemen. It would be a fine life at my age to be driven out of one city after another, for I know very well that wherever I go the young men will listen to my talk as they do here. If I drive them away, they will themselves persuade their elders to drive me out; if I do not drive them away, their fathers and relations will drive me out on their behalf.

Perhaps someone might say: But Socrates, if you leave us will you not be able to live quietly, without talking? Now this is the most difficult point on which to convince some of you. If I say that it is impossible for me to keep quiet because that means disobeying the god, you will not believe me and will think I am being ironical. On the other hand, if I say that it is the greatest good for a man to discuss virtue every day and those other things about which you hear me conversing and testing myself and others, for the unexamined life is not worth living for men, you will believe me even less.

What I say is true, gentlemen, but it is not easy to convince you. At the same time, I am not accustomed to think that I deserve any penalty. If I had money, I would assess the penalty at the amount I could pay, for that would not hurt me, but I have none, unless you are willing to set the penalty at the amount I can pay, and perhaps I could pay you one mina of silver. So that is my assessment.

Plato here, gentlemen of the jury, and Crito and Critobulus and Apollodorus bid me put the penalty at thirty minae, and they will stand surety for the money. Well then, that is my assessment, and they will be sufficient guarantee of payment.

[The jury now votes again and sentences Socrates to death.]

Socrates:: It is for the sake of a short time, gentlemen of the jury, that you will acquire the reputation and the guilt, in the eyes of those who want to denigrate the city, of having killed Socrates, a wise man, for they who want to revile you will say that I am wise even if I am not. If you had waited but a little while, this would have happened of its own accord. You see my age, that I am already advanced in years and close to death. I am saying this not to all of you but to those who condemned me to death, and to these same jurors I say: Perhaps you think that I was convicted for lack of such words as might have convinced you, if I thought I should say or do all I could to avoid my sentence. Far from it. I was convicted because I lacked not words but boldness and shamelessness and the willingness to say to you what you would most gladly have heard from me, lamentations and tears and my saying and doing many things that I say are unworthy of me but that you are accustomed to hear from others. I did not think then that the danger I ran should make me do anything mean, nor do I now regret the nature of my defense. I would much rather die after this kind of defense than live after making the other kind. Neither I nor any other man should, on trial or in war, contrive to avoid death at any cost. Indeed it is often obvious in battle that one could escape death by throwing away one's weapons and by turning to supplicate one's pursuers, and there are many ways to avoid death in every kind of danger if one will venture to do or say anything to avoid it. It is not difficult to avoid death, gentlemen of the jury, it is much more difficult to avoid wickedness, for it runs faster than death. Slow and elderly as I am, I have been caught by the slower pursuer, whereas my accusers, being clever and sharp, have been caught by the quicker, wickedness. I leave you now, condemned to death by you, but they are condemned by truth to wickedness and injustice. So I maintain my assessment, and they maintain theirs. This perhaps had to happen, and I think it is as it should be.

Now I want to prophesy to those who convicted me, for I am at the point when men prophesy most, when they are about to die. I say gentlemen, to those who voted to kill me, that vengeance will come upon you immediately after my death, a vengeance much harder to bear than that which you took in killing me. You did this in the belief that you would avoid giving an account of your life, but I maintain that quite the opposite will happen to you. There will be more people to test you, whom I now held back, but you did not notice it. They will be more difficult to deal with as they will be younger and you will resent them more. You are wrong if you believe that by killing people you will prevent anyone from reproaching you for not living in the right way. To escape such tests is neither possible nor good, but it is best and easiest not to discredit others but to prepare oneself to be as good as possible. With this prophecy to you who convicted me, I part from you.

I should be glad to discuss what has happened with those who voted for my acquittal during the time that the officers of the court are busy and I do not yet have to depart to my death. So, gentlemen, stay with me awhile, for nothing prevents us from talking to each other while it is allowed. To you, as being my friends, I want to show the meaning of what has occurred. A surprising thing has happened to me, judges—you I would rightly call judges. At all previous times my familiar prophetic power, my spiritual manifestation, frequently opposed me, even in small matters, when I was about to do something wrong, but now that, as you can see for yourselves, I was faced with what one might think, and what is generally thought to be, the worst of evils, my divine sign has not opposed me, either when I left home at dawn, or when I came into court, or at any time that I was about to say something during my speech. Yet in other talks it often held me back in the middle of my speaking, but now it has opposed no word or deed of mine. What do I think is the reason for this? I will tell you. What has happened to me may well be a good thing, and those of us who believe death to be an evil are certainly mistaken. I have convincing proof of this, for it is impossible that my familiar sign did not oppose me if I was not about to do what was right.

Let us reflect in this way, too, that there is good hope that death is a blessing, for it is one of two things: either the dead are nothing and have no perception of anything, or it is, as we are told, a change and a relocating for the soul from here to another place. If it is complete lack of perception, like a dreamless sleep, then death would be a great advantage. For I think that if one had to pick out that night during which a man slept soundly and did not dream, put beside it the other nights and days of his life, and then see how many days and nights had been better and more pleasant than that night, not only a private person but the great king would find them easy to count compared with the other days and nights. If death is like this I say it is an advantage, for all eternity would then seem to be no more than a single night. If, on the other hand, death is a change from here to another place, and what we are told is true and all who have died are there, what greater blessing could there be, gentlemen of the jury? If anyone arriving in Hades will have escaped from those who call themselves judges here, and will find those true judges who are said to sit in judgment there, Minos and Rhadamanthus and Aeacus and Triptolemus and the other demi-gods who have been upright in their own life, would that be a poor kind of change? Again, what would one of you give to keep company with Orpheus and Musaeus, Hesiod and Homer? I am willing to die many times if that is true. It would be a wonderful way for me to spend my time whenever I met Palamedes and Ajax, the son of Telamon, and any other of the men of old who died through an unjust conviction, to compare my experience with theirs. I think it would be pleasant. Most important, I could spend my time testing and examining people there, as I do here, as to who among them is wise, and who thinks he is, but is not.

What would one not give, gentlemen of the jury, for the opportunity to examine the man who led the great expedition against Troy, or Odysseus, or Sisyphus, and innumerable other men and women one could mention. It would be an extraordinary happiness to talk with them, to keep company with them and examine them. In any case, they would certainly not put one to death for doing so. They are happier there than we are here in other respects, and for the rest of time they are deathless, if indeed what we are told is true.

You too must be of good hope as regards death, gentlemen of the jury, and keep this one truth in mind, that a good man cannot be harmed either in life or in death, and that his affairs are not neglected by the gods. What has happened to me now has not happened of itself, but it is clear to me that it was better for me to die now and to escape from trouble.

That is why my divine sign did not oppose me at any point. So I am certainly not angry with those who convicted me, or with my accusers. Of course that was not their purpose when they accused and convicted me, but they thought they were hurting me, and for this they deserve blame. This much I ask from them: when my sons grow up, avenge yourselves by causing them the same kind of grief that I caused you, if you think they care for money or anything else more than they care for virtue, or if they think they are somebody when they are nobody. Reproach them as I reproach you, that they do not care for the right things and think they are worthy when they are not worthy of anything. If you do this, I shall have been justly treated by you, and my sons also.

Now the hour to part has come. I go to die, you go to live. Which of us goes to the better lot is known to no one, except the god.

# Apology.

Translated by Jowett 3rd ed.

CHARACTERS.

Socrates; Meletus.

---

Socrates:: How you, O Athenians, have been affected by my accusers, I cannot tell; but I know that they almost made me forget who I was—so persuasively did they speak; and yet they have hardly uttered a word of truth. But of the many falsehoods told by them, there was one which quite amazed me;—I mean when they said that you should be upon your guard and not allow yourselves to be deceived by the force of my eloquence. To say this, when they were certain to be detected as soon as I opened my lips and proved myself to be anything but a great speaker, did indeed appear to me most shameless—unless by the force of eloquence they mean the force of truth; for if such is their meaning, I admit that I am eloquent. But in how different a way from theirs! Well, as I was saying, they have scarcely spoken the truth at all; but from me you shall hear the whole truth: not, however, delivered after their manner in a set oration duly ornamented with words and phrases. No, by heaven! but I shall use the words and arguments which occur to me at the moment; for I am confident in the justice of my cause: at my time of life I ought not to be appearing before you, O men of Athens, in the character of a juvenile orator—let no one expect it of me. And I must beg of you to grant me a favour:—If I defend myself in my accustomed manner, and you hear me using the words which I have been in the habit of using in the agora, at the tables of the money-changers, or anywhere else, I would ask you not to be surprised, and not to interrupt me on this account. For I am more than seventy years of age, and appearing now for the first time in a court of law, I am quite a stranger to the language of the place; and therefore I would have you regard me as if I were really a stranger, whom you would excuse if he spoke in his native tongue, and after the fashion of his country:—Am I making an unfair request of you? Never mind the manner, which may or may not be good; but think only of the truth of my words, and give heed to that: let the speaker speak truly and the judge decide justly.

And first, I have to reply to the older charges and to my first accusers, and then I will go on to the later ones. For of old I have had many accusers, who have accused me falsely to you during many years; and I am more afraid of them than of Anytus and his associates, who are dangerous, too, in their own way. But far more dangerous are the others, who began when you were children, and took possession of your minds with their falsehoods, telling of one Socrates, a wise man, who speculated about the heaven above, and searched into the earth beneath, and made the worse appear the better cause. The disseminators of this tale are the accusers whom I dread; for their hearers are apt to fancy that such enquirers do not believe in the existence of the gods. And they are many, and their charges against me are of ancient date, and they were made by them in the days when you were more impressible than you are now—in childhood, or it may have been in youth—and the cause when heard went by default, for there was none to answer. And hardest of all, I do not know and cannot tell the names of my accusers; unless in the chance case of a Comic poet. All who from envy and malice have persuaded you—some of them having first convinced themselves—all this class of men are most difficult to deal with; for I cannot have them up here, and cross-examine them, and therefore I must simply fight with shadows in my own defence, and argue when there is no one who answers. I will ask you then to assume with me, as I was saying, that my opponents are of two kinds; one recent, the other ancient: and I hope that you will see the propriety of my answering the latter first, for these accusations you heard long before the others, and much oftener.

Well, then, I must make my defence, and endeavor to clear away in a short time, a slander which has lasted a long time. May I succeed, if to succeed be for my good and yours, or likely to avail me in my cause! The task is not an easy one; I quite understand the nature of it. And so leaving the event with God, in obedience to the law I will now make my defence.

I will begin at the beginning, and ask what is the accusation which has given rise to the slander of me, and in fact has encouraged Meletus to prefer this charge against me. Well, what do the slanderers say? They shall be my prosecutors, and I will sum up their words in an affidavit: ‘Socrates is an evil-doer, and a curious person, who searches into things under the earth and in heaven, and he makes the worse appear the better cause; and he teaches the aforesaid doctrines to others.’ Such is the nature of the accusation: it is just what you have yourselves seen in the comedy of Aristophanes, who has introduced a man whom he calls Socrates, going about and saying that he walks in air, and talking a deal of nonsense concerning matters of which I do not pretend to know either much or little—not that I mean to speak disparagingly of any one who is a student of natural philosophy. I should be very sorry if Meletus could bring so grave a charge against me. But the simple truth is, O Athenians, that I have nothing to do with physical speculations. Very many of those here present are witnesses to the truth of this, and to them I appeal. Speak then, you who have heard me, and tell your neighbours whether any of you have ever known me hold forth in few words or in many upon such matters....You hear their answer. And from what they say of this part of the charge you will be able to judge of the truth of the rest.

As little foundation is there for the report that I am a teacher, and take money; this accusation has no more truth in it than the other. Although, if a man were really able to instruct mankind, to receive money for giving instruction would, in my opinion, be an honour to him. There is Gorgias of Leontium, and Prodicus of Ceos, and Hippias of Elis, who go the round of the cities, and are able to persuade the young men to leave their own citizens by whom they might be taught for nothing, and come to them whom they not only pay, but are thankful if they may be allowed to pay them. There is at this time a Parian philosopher residing in Athens, of whom I have heard; and I came to hear of him in this way:—I came across a man who has spent a world of money on the Sophists, Callias, the son of Hipponicus, and knowing that he had sons, I asked him: 'Callias,' I said, 'if your two sons were foals or calves, there would be no difficulty in finding some one to put over them; we should hire a trainer of horses, or a farmer probably, who would improve and perfect them in their own proper virtue and excellence; but as they are human beings, whom are you thinking of placing over them? Is there any one who understands human and political virtue? You must have thought about the matter, for you have sons; is there any one?' 'There is,' he said. 'Who is he?' said I; 'and of what country? and what does he charge?' 'Evenus the Parian,' he replied; 'he is the man, and his charge is five minae.' Happy is Evenus, I said to myself, if he really has this wisdom, and teaches at such a moderate charge. Had I the same, I should have been very proud and conceited; but the truth is that I have no knowledge of the kind.

I dare say, Athenians, that some one among you will reply, 'Yes, Socrates, but what is the origin of these accusations which are brought against you; there must have been something strange which you have been doing? All these rumours and this talk about you would never have arisen if you had been like other men: tell us, then, what is the cause of them, for we should be sorry to judge hastily of you.' Now I regard this as a fair challenge, and I will endeavor to explain to you the reason why I am called wise and have such an evil fame. Please to attend then. And although some of you may think that I am joking, I declare that I will tell you the entire truth. Men of Athens, this reputation of mine has come of a certain sort of wisdom which I possess. If you ask me what kind of wisdom, I reply, wisdom such as may perhaps be attained by man, for to that extent I am inclined to believe that I am wise; whereas the persons of whom I was speaking have a superhuman wisdom, which I may fail to describe, because I have it not myself; and he who says that I have, speaks falsely, and is taking away my character. And here, O men of Athens, I must beg you not to interrupt me, even if I seem to say something extravagant. For the word which I will speak is not mine. I will refer you to a witness who is worthy of credit; that witness shall be the God of Delphi—he will tell you about my wisdom, if I have any, and of what sort it is. You must have known Chaerephon; he was early a friend of mine, and also a friend of yours, for he shared in the recent exile of the people, and returned with you. Well, Chaerephon, as you know, was very impetuous in all his doings, and he went to Delphi and boldly asked the oracle to tell him whether—as I was saying, I must beg you not to interrupt—he asked the oracle to tell him whether any one was wiser than I was, and the Pythian prophetess answered, that there was no man wiser. Chaerephon is dead himself; but his brother, who is in court, will confirm the truth of what I am saying.

Why do I mention this? Because I am going to explain to you why I have such an evil name. When I heard the answer, I said to myself, What can the god mean? and what is the interpretation of his riddle? for I know that I have no wisdom, small or great. What then can he mean when he says that I am the wisest of men? And yet he is a god, and cannot lie; that would be against his nature. After long consideration, I thought of a method of trying the question. I reflected that if I could only find a man wiser than myself, then I might go to the god with a refutation in my hand. I should say to him, 'Here is a man who is wiser than I am; but you said that I was the wisest.' Accordingly I went to one who had the reputation of wisdom, and observed him—his name I need not mention; he was a politician whom I selected for examination—and the result was as follows: When I began to talk with him, I could not help thinking that he was not really wise, although he was thought wise by many, and still wiser by himself; and thereupon I tried to explain to him that he thought himself wise, but was not really wise; and the consequence was that he hated me, and his enmity was shared by several who were present and heard me. So I left him, saying to myself, as I went away: Well, although I do not suppose that either of us knows anything really beautiful and good, I am better off than he is,—for he knows nothing, and thinks that he knows; I neither know nor think that I know. In this latter particular, then, I seem to have slightly the advantage of him. Then I went to another who had still higher pretensions to wisdom, and my conclusion was exactly the same. Whereupon I made another enemy of him, and of many others besides him.

Then I went to one man after another, being not unconscious of the enmity which I provoked, and I lamented and feared this: but necessity was laid upon me,—the word of God, I thought, ought to be considered first. And I said to myself, Go I must to all who appear to know, and find out the meaning of the oracle. And I swear to you, Athenians, by the dog I swear!—for I must tell you the truth—the result of my mission was just this: I found that the men most in repute were all but the most foolish; and that others less esteemed were really wiser and better. I will tell you the tale of my wanderings and of the 'Herculean' labours, as I may call them, which I endured only to find at last the oracle irrefutable. After the politicians, I went to the poets; tragic, dithyrambic, and all sorts. And there, I said to myself, you will be instantly detected; now you will find out that you are more ignorant than they are. Accordingly, I took them some of the most elaborate passages in their own writings, and asked what was the meaning of them—thinking that they would teach me something. Will you believe me? I am almost ashamed to confess the truth, but I must say that there is hardly a person present who would not have talked better about their poetry than they did themselves. Then I knew that not by wisdom do poets write poetry, but by a sort of genius and inspiration; they are like diviners or soothsayers who also say many fine things, but do not understand the meaning of them. The poets appeared to me to be much in the same case; and I further observed that upon the strength of their poetry they believed themselves to be the wisest of men in other things in which they were not wise. So I departed, conceiving myself to be superior to them for the same reason that I was superior to the politicians.

At last I went to the artisans, for I was conscious that I knew nothing at all, as I may say, and I was sure that they knew many fine things; and here I was not mistaken, for they did know many things of which I was ignorant, and in this they certainly were wiser than I was. But I observed that even the good artisans fell into the same error as the poets;—because they were good workmen they thought that they also knew all sorts of high matters, and this defect in them overshadowed their wisdom; and therefore I asked myself on behalf of the oracle, whether I would like to be as I was, neither having their knowledge nor their ignorance, or like them in both; and I made answer to myself and to the oracle that I was better off as I was.

This inquisition has led to my having many enemies of the worst and most dangerous kind, and has given occasion also to many calumnies. And I am called wise, for my hearers always imagine that I myself possess the wisdom which I find wanting in others: but the truth is, O men of Athens, that God only is wise; and by his answer he intends to show that the wisdom of men is worth little or nothing; he is not speaking of Socrates, he is only using my name by way of illustration, as if he said, He, O men, is the wisest, who, like Socrates, knows that his wisdom is in truth worth nothing. And so I go about the world, obedient to the god, and search and make enquiry into the wisdom of any one, whether citizen or stranger, who appears to be wise; and if he is not wise, then in vindication of the oracle I show him that he is not wise; and my occupation quite absorbs me, and I have no time to give either to any public matter of interest or to any concern of my own, but I am in utter poverty by reason of my devotion to the god.

There is another thing:—young men of the richer classes, who have not much to do, come about me of their own accord; they like to hear the pretenders examined, and they often imitate me, and proceed to examine others; there are plenty of persons, as they quickly discover, who think that they know something, but really know little or nothing; and then those who are examined by them instead of being angry with themselves are angry with me: This confounded Socrates, they say; this villainous misleader of youth!—and then if somebody asks them, Why, what evil does he practise or teach? they do not know, and cannot tell; but in order that they may not appear to be at a loss, they repeat the ready-made charges which are used against all philosophers about teaching things up in the clouds and under the earth, and having no gods, and making the worse appear the better cause; for they do not like to confess that their pretence of knowledge has been detected—which is the truth; and as they are numerous and ambitious and energetic, and are drawn up in battle array and have persuasive tongues, they have filled your ears with their loud and inveterate calumnies. And this is the reason why my three accusers, Meletus and Anytus and Lycon, have set upon me; Meletus, who has a quarrel with me on behalf of the poets; Anytus, on behalf of the craftsmen and politicians; Lycon, on behalf of the rhetoricians: and as I said at the beginning, I cannot expect to get rid of such a mass of calumny all in a moment. And this, O men of Athens, is the truth and the whole truth; I have concealed nothing, I have dissembled nothing. And yet, I know that my plainness of speech makes them hate me, and what is their hatred but a proof that I am speaking the truth?—Hence has arisen the prejudice against me; and this is the reason of it, as you will find out either in this or in any future enquiry.

I have said enough in my defence against the first class of my accusers; I turn to the second class. They are headed by Meletus, that good man and true lover of his country, as he calls himself. Against these, too, I must try to make a defence:—Let their affidavit be read: it contains something of this kind: It says that Socrates is a doer of evil, who corrupts the youth; and who does not believe in the gods of the state, but has other new divinities of his own. Such is the charge; and now let us examine the particular counts. He says that I am a doer of evil, and corrupt the youth; but I say, O men of Athens, that Meletus is a doer of evil, in that he pretends to be in earnest when he is only in jest, and is so eager to bring men to trial from a pretended zeal and interest about matters in which he really never had the smallest interest. And the truth of this I will endeavor to prove to you.

Come hither, Meletus, and let me ask a question of you. You think a great deal about the improvement of youth?

Meletus:: Yes, I do.

Socrates:: Tell the judges, then, who is their improver; for you must know, as you have taken the pains to discover their corrupter, and are citing and accusing me before them. Speak, then, and tell the judges who their improver is.—Observe, Meletus, that you are silent, and have nothing to say. But is not this rather disgraceful, and a very considerable proof of what I was saying, that you have no interest in the matter? Speak up, friend, and tell us who their improver is.

Meletus:: The laws.

Socrates:: But that, my good sir, is not my meaning. I want to know who the person is, who, in the first place, knows the laws.

Meletus:: The judges, Socrates, who are present in court.

Socrates:: What, do you mean to say, Meletus, that they are able to instruct and improve youth?

Meletus:: Certainly they are.

Socrates:: What, all of them, or some only and not others?

Meletus:: All of them.

Socrates:: By the goddess Herè, that is good news! There are plenty of improvers, then. And what do you say of the audience,—do they improve them?

Meletus:: Yes, they do.

Socrates:: And the senators?

Meletus:: Yes, the senators improve them.

Socrates:: But perhaps the members of the assembly corrupt them?—or do they too improve them?

Meletus:: They improve them.

Socrates:: Then every Athenian improves and elevates them; all with the exception of myself; and I alone am their corrupter? Is that what you affirm?

Meletus:: That is what I stoutly affirm.

Socrates:: I am very unfortunate if you are right. But suppose I ask you a question: How about horses? Does one man do them harm and all the world good? Is not the exact opposite the truth? One man is able to do them good, or at least not many;—the trainer of horses, that is to say, does them good, and others who have to do with them rather injure them? Is not that true, Meletus, of horses, or of any other animals? Most assuredly it is; whether you and Anytus say yes or no. Happy indeed would be the condition of youth if they had one corrupter only, and all the rest of the world were their improvers. But you, Meletus, have sufficiently shown that you never had a thought about the young: your carelessness is seen in your not caring about the very things which you bring against me.

And now, Meletus, I will ask you another question—by Zeus I will: Which is better, to live among bad citizens, or among good ones? Answer, friend, I say; the question is one which may be easily answered. Do not the good do their neighbours good, and the bad do them evil?

Meletus:: Certainly.

Socrates:: And is there any one who would rather be injured than benefited by those who live with him? Answer, my good friend, the law requires you to answer—does any one like to be injured?

Meletus:: Certainly not.

Socrates:: And when you accuse me of corrupting and deteriorating the youth, do you allege that I corrupt them intentionally or unintentionally?

Meletus:: Intentionally, I say.

Socrates:: But you have just admitted that the good do their neighbours good, and the evil do them evil. Now, is that a truth which your superior wisdom has recognized thus early in life, and am I, at my age, in such darkness and ignorance as not to know that if a man with whom I have to live is corrupted by me, I am very likely to be harmed by him; and yet I corrupt him, and intentionally, too—so you say, although neither I nor any other human being is ever likely to be convinced by you. But either I do not corrupt them, or I corrupt them unintentionally; and on either view of the case you lie. If my offence is unintentional, the law has no cognizance of unintentional offences: you ought to have taken me privately, and warned and admonished me; for if I had been better advised, I should have left off doing what I only did unintentionally—no doubt I should; but you would have nothing to say to me and refused to teach me. And now you bring me up in this court, which is a place not of instruction, but of punishment.

It will be very clear to you, Athenians, as I was saying, that Meletus has no care at all, great or small, about the matter. But still I should like to know, Meletus, in what I am affirmed to corrupt the young. I suppose you mean, as I infer from your indictment, that I teach them not to acknowledge the gods which the state acknowledges, but some other new divinities or spiritual agencies in their stead. These are the lessons by which I corrupt the youth, as you say.

Meletus:: Yes, that I say emphatically.

Socrates:: Then, by the gods, Meletus, of whom we are speaking, tell me and the court, in somewhat plainer terms, what you mean! for I do not as yet understand whether you affirm that I teach other men to acknowledge some gods, and therefore that I do believe in gods, and am not an entire atheist—this you do not lay to my charge,—but only you say that they are not the same gods which the city recognizes—the charge is that they are different gods. Or, do you mean that I am an atheist simply, and a teacher of atheism?

Meletus:: I mean the latter—that you are a complete atheist.

Socrates:: What an extraordinary statement! Why do you think so, Meletus? Do you mean that I do not believe in the godhead of the sun or moon, like other men?

Meletus:: I assure you, judges, that he does not: for he says that the sun is stone, and the moon earth.

Socrates:: Friend Meletus, you think that you are accusing Anaxagoras: and you have but a bad opinion of the judges, if you fancy them illiterate to such a degree as not to know that these doctrines are found in the books of Anaxagoras the Clazomenian, which are full of them. And so, forsooth, the youth are said to be taught them by

Socrates, when there are not unfrequently exhibitions of them at the theatre (price of admission one drachma at the most); and they might pay their money, and laugh at Socrates if he pretends to father these extraordinary views. And so, Meletus, you really think that I do not believe in any god?

Meletus:: I swear by Zeus that you believe absolutely in none at all.

Socrates:: Nobody will believe you, Meletus, and I am pretty sure that you do not believe yourself. I cannot help thinking, men of Athens, that Meletus is reckless and impudent, and that he has written this indictment in a spirit of mere wantonness and youthful bravado. Has he not compounded a riddle, thinking to try me? He said to himself:—I shall see whether the wise Socrates will discover my facetious contradiction, or whether I shall be able to deceive him and the rest of them. For he certainly does appear to me to contradict himself in the indictment as much as if he said that Socrates is guilty of not believing in the gods, and yet of believing in them—but this is not like a person who is in earnest.

I should like you, O men of Athens, to join me in examining what I conceive to be his inconsistency; and do you, Meletus, answer. And I must remind the audience of my request that they would not make a disturbance if I speak in my accustomed manner:

Did ever man, Meletus, believe in the existence of human things, and not of human beings?…I wish, men of Athens, that he would answer, and not be always trying to get up an interruption. Did ever any man believe in horsemanship, and not in horses? or in flute-playing, and not in flute-players? No, my friend; I will answer to you and to the court, as you refuse to answer for yourself. There is no man who ever did. But now please to answer the next question: Can a man believe in spiritual and divine agencies, and not in spirits or demigods?

Meletus:: He cannot.

Socrates:: How lucky I am to have extracted that answer, by the assistance of the court! But then you swear in the indictment that I teach and believe in divine or spiritual agencies (new or old, no matter for that); at any rate, I believe in spiritual agencies,—so you say and swear in the affidavit; and yet if I believe in divine beings, how can I help believing in spirits or demigods;—must I not? To be sure I must; and therefore I may assume that your silence gives consent. Now what are spirits or demigods? are they not either gods or the sons of gods?

Meletus:: Certainly they are.

Socrates:: But this is what I call the facetious riddle invented by you: the demigods or spirits are gods, and you say first that I do not believe in gods, and then again that I do believe in gods; that is, if I believe in demigods. For if the demigods are the illegitimate sons of gods, whether by the nymphs or by any other mothers, of whom they are said to be the sons—what human being will ever believe that there are no gods if they are the sons of gods? You might as well affirm the existence of mules, and deny that of horses and asses. Such nonsense, Meletus, could only have been intended by you to make trial of me. You have put this into the indictment because you had nothing real of which to accuse me. But no one who has a particle of understanding will ever be convinced by you that the same men can believe in divine and superhuman things, and yet not believe that there are gods and demigods and heroes.

I have said enough in answer to the charge of Meletus: any elaborate defence is unnecessary; but I know only too well how many are the enmities which I have incurred, and this is what will be my destruction if I am destroyed;—not Meletus, nor yet Anytus, but the envy and detraction of the world, which has been the death of many good men, and will probably be the death of many more; there is no danger of my being the last of them.

Some one will say: And are you not ashamed, Socrates, of a course of life which is likely to bring you to an untimely end? To him I may fairly answer: There you are mistaken: a man who is good for anything ought not to calculate the chance of living or dying; he ought only to consider whether in doing anything he is doing right or wrong—acting the part of a good man or of a bad. Whereas, upon your view, the heroes who fell at Troy were not good for much, and the son of Thetis above all, who altogether despised danger in comparison with disgrace; and when he was so eager to slay Hector, his goddess mother said to him, that if he avenged his companion Patroclus, and slew Hector, he would die himself—'Fate,' she said, in these or the like words, 'waits for you next after Hector;' he, receiving this warning, utterly despised danger and death, and instead of fearing them, feared rather to live in dishonour, and not to avenge his friend. 'Let me die forthwith,' he replies, 'and be avenged of my enemy, rather than abide here by the beaked ships, a laughing-stock and a burden of the earth.' Had Achilles any thought of death and danger? For wherever a man's place is, whether the place which he has chosen or that in which he has been placed by a commander, there he ought to remain in the hour of danger; he should not think of death or of anything but of disgrace. And this, O men of Athens, is a true saying.

Strange, indeed, would be my conduct, O men of Athens, if I who, when I was ordered by the generals whom you chose to command me at Potidaea and Amphipolis and Delium, remained where they placed me, like any other man, facing death—if now, when, as I conceive and imagine, God orders me to fulfil the philosopher's mission of searching into myself and other men, I were to desert my post through fear of death, or any other fear; that would indeed be strange, and I might justly be arraigned in court for denying the existence of the gods, if I disobeyed the oracle because I was afraid of death, fancying that I was wise when I was not wise. For the fear of death is indeed the pretence of wisdom, and not real wisdom, being a pretence of knowing the unknown; and no one knows whether death, which men in their fear apprehend to be the greatest evil, may not be the greatest good. Is not this ignorance of a disgraceful sort, the ignorance which is the conceit that a man knows what he does not know? And in this respect only I believe myself to differ from men in general, and may perhaps claim to be wiser than they are:—that whereas I know but little of the world below, I do not suppose that I know: but I do know that injustice and disobedience to a better, whether God or man, is evil and dishonourable, and I will never fear or avoid a possible good rather than a certain evil. And therefore if you let me go now, and are not convinced by Anytus, who said that since I had been prosecuted I must be put to death; (or if not that I ought never to have been prosecuted at all); and that if I escape now, your sons will all be utterly ruined by listening to my words—if you say to me, Socrates, this time we will not mind Anytus, and you shall be let off, but upon one condition, that you are not to enquire and speculate in this way any more, and that if you are caught doing so again you shall die;—if this was the condition on which you let me go, I should reply: Men of Athens, I honour and love you; but I shall obey God rather than you, and while I have life and strength I shall never cease from the practice and teaching of philosophy, exhorting any one whom I meet and saying to him after my manner: You, my friend,—a citizen of the great and mighty and wise city of Athens,—are you not ashamed of heaping up the greatest amount of money and honour and reputation, and caring so little about wisdom and truth and the greatest improvement of the soul, which you never regard or heed at all? And if the person with whom I am arguing, says: Yes, but I do care; then I do not leave him or let him go at once; but I proceed to interrogate and examine and cross-examine him, and if I think that he has no virtue in him, but only says that he has, I reproach him with undervaluing the greater, and overvaluing the less. And I shall repeat the same words to every one whom I meet, young and old, citizen and alien, but especially to the citizens, inasmuch as they are my brethren. For know that this is the command of God; and I believe that no greater good has ever happened in the state than my service to the God. For I do nothing but go about persuading you all, old and young alike, not to take thought for your persons or your properties, but first and chiefly to care about the greatest improvement of the soul. I tell you that virtue is not given by money, but that from virtue comes money and every other good of man, public as well as private. This is my teaching, and if this is the doctrine which corrupts the youth, I am a mischievous person. But if any one says that this is not my teaching, he is speaking an untruth. Wherefore, O men of Athens, I say to you, do as Anytus bids or not as Anytus bids, and either acquit me or not; but whichever you do, understand that I shall never alter my ways, not even if I have to die many times.

Men of Athens, do not interrupt, but hear me; there was an understanding between us that you should hear me to the end: I have something more to say, at which you may be inclined to cry out; but I believe that to hear me will be good for you, and therefore I beg that you will not cry out. I would have you know, that if you kill such an one as I am, you will injure yourselves more than you will injure me. Nothing will injure me, not Meletus nor yet Anytus—they cannot, for a bad man is not permitted to injure a better than himself. I do not deny that Anytus may, perhaps, kill him, or drive him into exile, or deprive him of civil rights; and he may imagine, and others may imagine, that he is inflicting a great injury upon him: but there I do not agree. For the evil of doing as he is doing—the evil of unjustly taking away the life of another—is greater far.

And now, Athenians, I am not going to argue for my own sake, as you may think, but for yours, that you may not sin against the God by condemning me, who am his gift to you. For if you kill me you will not easily find a successor to me, who, if I may use such a ludicrous figure of speech, am a sort of gadfly, given to the state by God; and the state is a great and noble steed who is tardy in his motions owing to his very size, and requires to be stirred into life. I am that gadfly which God has attached to the state, and all day long and in places am always fastening upon you, arousing and persuading and reproaching you. You will not easily find another like me, and therefore I would advise you to spare me. I dare say that you may feel out of temper (like a person who is suddenly awakened from sleep), and you think that you might easily strike me dead as Anytus advises, and then you would sleep on for the remainder of your lives, unless God in his care of you sent you another gadfly. When I say that I am given to you by God, the proof of my mission is this:—if I had been like other men, I should not have neglected all my own concerns or patiently seen the neglect of them during all these years, and have been doing yours, coming to you individually like a father or elder brother, exhorting you to regard virtue; such conduct, I say, would be unlike human nature. If I had gained anything, or if my exhortations had been paid, there would have been some sense in my doing so; but now, as you will perceive, not even the impudence of my accusers dares to say that I have ever exacted or sought pay of any one; of that they have no witness. And I have a sufficient witness to the truth of what I say—my poverty.

Some one may wonder why I go about in private giving advice and busying myself with the concerns of others, but do not venture to come forward in public and advise the state. I will tell you why. You have heard me speak at sundry times and in divers places of an oracle or sign which comes to me, and is the divinity which Meletus ridicules in the indictment. This sign, which is a kind of voice, first began to come to me when I was a child; it always forbids but never commands me to do anything which I am going to do. This is what deters me from being a politician. And rightly, as I think. For I am certain, O men of Athens, that if I had engaged in politics, I should have perished long ago, and done no good either to you or to myself. And do not be offended at my telling you the truth: for the truth is, that no man who goes to war with you or any other multitude, honestly striving against the many lawless and unrighteous deeds which are done in a state, will save his life; he who will fight for the right, if he would live even for a brief space, must have a private station and not a public one.

I can give you convincing evidence of what I say, not words only, but what you value far more—actions. Let me relate to you a passage of my own life which will prove to you that I should never have yielded to injustice from any fear of death, and that 'as I should have refused to yield' I must have died at once. I will tell you a tale of the courts, not very interesting perhaps, but nevertheless true. The only office of state which I ever held, O men of Athens, was that of senator: the tribe Antiochis, which is my tribe, had the presidency at the trial of the generals who had not taken up the bodies of the slain after the battle of Arginusae; and you proposed to try them in a body, contrary to law, as you all thought afterwards; but at the time I was the only one of the Prytanes who was opposed to the illegality, and I gave my vote against you; and when the orators threatened to impeach and arrest me, and you called and shouted, I made up my mind that I would run the risk, having law and justice with me, rather than take part in your injustice because I feared imprisonment and death. This happened in the days of the democracy. But when the oligarchy of the Thirty was in power, they sent for me and four others into the rotunda, and bade us bring Leon the Salaminian from Salamis, as they wanted to put him to death. This was a specimen of the sort of commands which they were always giving with the view of implicating as many as possible in their crimes; and then I showed, not in word only but in deed, that, if I may be allowed to use such an expression, I cared not a straw for death, and that my great and only care was lest I should do an unrighteous or unholy thing. For the strong arm of that oppressive power did not frighten me into doing wrong; and when we came out of the rotunda the other four went to Salamis and fetched Leon, but I went quietly home. For which I might have lost my life, had not the power of the Thirty shortly afterwards come to an end. And many will witness to my words.

Now do you really imagine that I could have survived all these years, if I had led a public life, supposing that like a good man I had always maintained the right and had made justice, as I ought, the first thing? No indeed, men of Athens, neither I nor any other man. But I have been always the same in all my actions, public as well as private, and never have I yielded any base compliance to those who are slanderously termed my disciples, or to any other. Not that I have any regular disciples. But if any one likes to come and hear me while I am pursuing my mission, whether he be young or old, he is not excluded. Nor do I converse only with those who pay; but any one, whether he be rich or poor, may ask and answer me and listen to my words; and whether he turns out to be a bad man or a good one, neither result can be justly imputed to me; for I never taught or professed to teach him anything. And if any one says that he has ever learned or heard anything from me in private which all the world has not heard, let me tell you that he is lying.

But I shall be asked, Why do people delight in continually conversing with you? I have told you already, Athenians, the whole truth about this matter: they like to hear the cross-examination of the pretenders to wisdom; there is amusement in it. Now this duty of cross-examining other men has been imposed upon me by God; and has been signified to me by oracles, visions, and in every way in which the will of divine power was ever intimated to any one. This is true, O Athenians; or, if not true, would be soon refuted. If I am or have been corrupting the youth, those of them who are now grown up and have become sensible that I gave them bad advice in the days of their youth should come forward as accusers, and take their revenge; or if they do not like to come themselves, some of their relatives, fathers, brothers, or other kinsmen, should say what evil their families have suffered at my hands. Now is their time. Many of them I see in the court. There is Crito, who is of the same age and of the same deme with myself, and there is Critobulus his son, whom I also see. Then again there is Lysanias of Sphettus, who is the father of Aeschines—he is present; and also there is Antiphon of Cephisus, who is the father of Epigenes; and there are the brothers of several who have associated with me. There is Nicostratus the son of Theosdotides, and the brother of Theodotus (now Theodotus himself is dead, and therefore he, at any rate, will not seek to stop him); and there is Paralus the son of Demodocus, who had a brother Theages; and Adeimantus the son of Ariston, whose brother Plato is present; and Aeantodorus, who is the brother of Apollodorus, whom I also see. I might mention a great many others, some of whom Meletus should have produced as witnesses in the course of his speech; and let him still produce them, if he has forgotten—I will make way for him. And let him say, if he has any testimony of the sort which he can produce. Nay, Athenians, the very opposite is the truth. For all these are ready to witness on behalf of the corrupter, of the injurer of their kindred, as Meletus and Anytus call me; not the corrupted youth only—there might have been a motive for that—but their uncorrupted elder relatives. Why should they too support me with their testimony? Why, indeed, except for the sake of truth and justice, and because they know that I am speaking the truth, and that Meletus is a liar.

Well, Athenians, this and the like of this is all the defence which I have to offer. Yet a word more. Perhaps there may be some one who is offended at me, when he calls to mind how he himself on a similar, or even a less serious occasion, prayed and entreated the judges with many tears, and how he produced his children in court, which was a moving spectacle, together with a host of relations and friends; whereas I, who am probably in danger of my life, will do none of these things. The contrast may occur to his mind, and he may be set against me, and vote in anger because he is displeased at me on this account. Now if there be such a person among you,—mind, I do not say that there is,—to him I may fairly reply: My friend, I am a man, and like other men, a creature of flesh and blood, and not ‘of wood or stone,’ as Homer says; and I have a family, yes, and sons, O Athenians, three in number, one almost a man, and two others who are still young; and yet I will not bring any of them hither in order to petition you for an acquittal. And why not? Not from any self-assertion or want of respect for you. Whether I am or am not afraid of death is another question, of which I will not now speak. But, having regard to public opinion, I feel that such conduct would be discreditable to myself, and to you, and to the whole state. One who has reached my years, and who has a name for wisdom, ought not to demean himself. Whether this opinion of me be deserved or not, at any rate the world has decided that Socrates is in some way superior to other men. And if those among you who are said to be superior in wisdom and courage, and any other virtue, demean themselves in this way, how shameful is their conduct! I have seen men of reputation, when they have been condemned, behaving in the strangest manner: they seemed to fancy that they were going to suffer something dreadful if they died, and that they could be immortal if you only allowed them to live; and I think that such are a dishonour to the state, and that any stranger coming in would have said of them that the most eminent men of Athens, to whom the Athenians themselves give honour and command, are no better than women. And I say that these things ought not to be done by those of us who have a reputation; and if they are done, you ought not to permit them; you ought rather to show that you are far more disposed to condemn the man who gets up a doleful scene and makes the city ridiculous, than him who holds his peace.

But, setting aside the question of public opinion, there seems to be something wrong in asking a favour of a judge, and thus procuring an acquittal, instead of informing and convincing him. For his duty is, not to make a present of justice, but to give judgment; and he has sworn that he will judge according to the laws, and not according to his own good pleasure; and we ought not to encourage you, nor should you allow yourselves to be encouraged, in this habit of perjury—there can be no piety in that. Do not then require me to do what I consider dishonourable and impious and wrong, especially now, when I am being tried for impiety on the indictment of Meletus. For if, O men of Athens, by force of persuasion and entreaty I could overpower your oaths, then I should be teaching you to believe that there are no gods, and in defending should simply convict myself of the charge of not believing in them. But that is not so—far otherwise. For I do believe that there are gods, and in a sense higher than that in which any of my accusers believe in them. And to you and to God I commit my cause, to be determined by you as is best for you and me.

* * *

There are many reasons why I am not grieved, O men of Athens, at the vote of condemnation. I expected it, and am only surprised that the votes are so nearly equal; for I had thought that the majority against me would have been far larger; but now, had thirty votes gone over to the other side, I should have been acquitted. And I may say, I think, that I have escaped Meletus. I may say more; for without the assistance of Anytus and Lycon, any one may see that he would not have had a fifth part of the votes, as the law requires, in which case he would have incurred a fine of a thousand drachmae.

And so he proposes death as the penalty. And what shall I propose on my part, O men of Athens? Clearly that which is my due. And what is my due? What return shall be made to the man who has never had the wit to be idle during his whole life; but has been careless of what the many care for—wealth, and family interests, and military offices, and speaking in the assembly, and magistracies, and plots, and parties. Reflecting that I was really too honest a man to be a politician and live, I did not go where I could do no good to you or to myself; but where I could do the greatest good privately to every one of you, thither I went, and sought to persuade every man among you that he must look to himself, and seek virtue and wisdom before he looks to his private interests, and look to the state before he looks to the interests of the state; and that this should be the order which he observes in all his actions. What shall be done to such an one? Doubtless some good thing, O men of Athens, if he has his reward; and the good should be of a kind suitable to him. What would be a reward suitable to a poor man who is your benefactor, and who desires leisure that he may instruct you? There can be no reward so fitting as maintenance in the Prytaneum, O men of Athens, a reward which he deserves far more than the citizen who has won the prize at Olympia in the horse or chariot race, whether the chariots were drawn by two horses or by many. For I am in want, and he has enough; and he only gives you the appearance of happiness, and I give you the reality. And if I am to estimate the penalty fairly, I should say that maintenance in the Prytaneum is the just return.

Perhaps you think that I am braving you in what I am saying now, as in what I said before about the tears and prayers. But this is not so. I speak rather because I am convinced that I never intentionally wronged any one although I cannot convince you—the time has been too short; if there were a law at Athens, as there is in other cities, that a capital cause should not be decided in one day, then I believe that I should have convinced you. But I cannot in a moment refute great slanders; and, as I am convinced that I never wronged another, I will assuredly not wrong myself. I will not say of myself that I deserve any evil, or propose any penalty. Why should I? Because I am afraid of the penalty of death which Meletus proposes? When I do not know whether death is a good or an evil, why should I propose a penalty which would certainly be an evil? Shall I say imprisonment? And why should I live in prison and be the slave of the magistrates of the year—of the Eleven? Or shall the penalty be a fine, and imprisonment until the fine is paid? There is the same objection. I should have to lie in prison, for money I have none, and cannot pay. And if I say exile (and this may possibly be the penalty which you will affix), I must indeed be blinded by the love of life, if I am so irrational as to expect that when you, who are my own citizens, cannot endure my discourses and words, and have found them so grievous and odious that you will have no more of them, others are likely to endure me. No indeed, men of Athens, that is not very likely. And what a life should I lead, at my age, wandering from city to city, ever changing my place of exile, and always being driven out! For I am quite sure that wherever I go, there, as here, the young men will flock to me; and if I drive them away, their elders will drive me out at their request; and if I let them come, their fathers and friends will drive me out for their sakes.

Some one will say: Yes, Socrates, but cannot you hold your tongue, and then you may go into a foreign city, and no one will interfere with you? Now I have great difficulty in making you understand my answer to this. For if I tell you that to do as you say would be a disobedience to the God, and therefore that I cannot hold my tongue, you will not believe that I am serious; and if I say again that daily to discourse about virtue, and of those other things about which you hear me examining myself and others, is the greatest good of man, and that the unexamined life is not worth living, you are still less likely to believe me. Yet I say what is true, although a thing of which it is hard for me to persuade you. Also, I have never been accustomed to think that I deserve to suffer any harm. Had I money I might have estimated the offence at what I was able to pay, and not have been much the worse. But I have none, and therefore I must ask you to proportion the fine to my means. Well, perhaps I could afford a mina, and therefore I propose that penalty: Plato, Crito, Critobulus, and Apollodorus, my friends here, bid me say thirty minae, and they will be the sureties. Let thirty minae be the penalty; for which sum they will be ample security to you.

---

Not much time will be gained, O Athenians, in return for the evil name which you will get from the detractors of the city, who will say that you killed Socrates, a wise man; for they will call me wise, even although I am not wise, when they want to reproach you. If you had waited a little while, your desire would have been fulfilled in the course of nature. For I am far advanced in years, as you may perceive, and not far from death. I am speaking now not to all of you, but only to those who have condemned me to death. And I have another thing to say to them: You think that I was convicted because I had no words of the sort which would have procured my acquittal—I mean, if I had thought fit to leave nothing undone or unsaid. Not so; the deficiency which led to my conviction was not of words—

certainly not. But I had not the boldness or impudence or inclination to address you as you would have liked me to do, weeping and wailing and lamenting, and saying and doing many things which you have been accustomed to hear from others, and which, as I maintain, are unworthy of me. I thought at the time that I ought not to do anything common or mean when in danger: nor do I now repent of the style of my defence; I would rather die having spoken after my manner, than speak in your manner and live. For neither in war nor yet at law ought I or any man to use every way of escaping death. Often in battle there can be no doubt that if a man will throw away his arms, and fall on his knees before his pursuers, he may escape death; and in other dangers there are other ways of escaping death, if a man is willing to say and do anything. The difficulty, my friends, is not to avoid death, but to avoid unrighteousness; for that runs faster than death. I am old and move slowly, and the slower runner has overtaken me, and my accusers are keen and quick, and the faster runner, who is unrighteousness, has overtaken them. And now I depart hence condemned by you to suffer the penalty of death,—they too go their ways condemned by the truth to suffer the penalty of villainy and wrong; and I must abide by my award—let them abide by theirs. I suppose that these things may be regarded as fated,—and I think that they are well.

And now, O men who have condemned me, I would fain prophesy to you; for I am about to die, and in the hour of death men are gifted with prophetic power. And I prophesy to you who are my murderers, that immediately after my departure punishment far heavier than you have inflicted on me will surely await you. Me you have killed because you wanted to escape the accuser, and not to give an account of your lives. But that will not be as you suppose:

far otherwise. For I say that there will be more accusers of you than there are now; accusers whom hitherto I have restrained: and as they are younger they will be more inconsiderate with you, and you will be more offended at them. If you think that by killing men you can prevent some one from censuring your evil lives, you are mistaken; that is not a way of escape which is either possible or honourable; the easiest and the noblest way is not to be disabling others, but to be improving yourselves. This is the prophecy which I utter before my departure to the judges who have condemned me.

Friends, who would have acquitted me, I would like also to talk with you about the thing which has come to pass, while the magistrates are busy, and before I go to the place at which I must die. Stay then a little, for we may as well talk with one another while there is time. You are my friends, and I should like to show you the meaning of this event which has happened to me. O my judges—for you I may truly call judges—I should like to tell you of a wonderful circumstance. Hitherto the divine faculty of which the internal oracle is the source has constantly been in the habit of opposing me even about trifles, if I was going to make a slip or error in any matter; and now as you see there has come upon me that which may be thought, and is generally believed to be, the last and worst evil. But the oracle made no sign of opposition, either when I was leaving my house in the morning, or when I was on my way to the court, or while I was speaking, at anything which I was going to say; and yet I have often been stopped in the middle of a speech, but now in nothing I either said or did touching the matter in hand has the oracle opposed me. What do I take to be the explanation of this silence? I will tell you. It is an intimation that what has happened to me is a good, and that those of us who think that death is an evil are in error. For the customary sign would surely have opposed me had I been going to evil and not to good.

Let us reflect in another way, and we shall see that there is great reason to hope that death is a good; for one of two things—either death is a state of nothingness and utter unconsciousness, or, as men say, there is a change and migration of the soul from this world to another. Now if you suppose that there is no consciousness, but a sleep like the sleep of him who is undisturbed even by dreams, death will be an unspeakable gain. For if a person were to select the night in which his sleep was undisturbed even by dreams, and were to compare with this the other days and nights of his life, and then were to tell us how many days and nights he had passed in the course of his life better and more pleasantly than this one, I think that any man, I will not say a private man, but even the great king will not find many such days or nights, when compared with the others. Now if death be of such a nature, I say that to die is gain; for eternity is then only a single night. But if death is the journey to another place, and there, as men say, all the dead abide, what good, O my friends and judges, can be greater than this? If indeed when the pilgrim arrives in the world below, he is delivered from the professors of justice in this world, and finds the true judges who are said to give judgment there, Minos and Rhadamanthus and Aeacus and Triptolemus, and other sons of God who were righteous in their own life, that pilgrimage will be worth making. What would not a man give if he might converse with Orpheus and Musaeus and Hesiod and Homer? Nay, if this be true, let me die again and again. I myself, too, shall have a wonderful interest in there meeting and conversing with Palamedes, and Ajax the son of Telamon, and any other ancient hero who has suffered death through an unjust judgment; and there will be no small pleasure, as I think, in comparing my own sufferings with theirs. Above all, I shall then be able to continue my search into true and false knowledge; as in this world, so also in the next; and I shall find out who is wise, and who pretends to be wise, and is not. What would not a man give, O judges, to be able to examine the leader of the great Trojan expedition; or Odysseus or Sisyphus, or numberless others, men and women too! What infinite delight would there be in conversing with them and asking them questions! In another world they do not put a man to death for asking questions: assuredly not. For besides being happier than we are, they will be immortal, if what is said is true.

Wherefore, O judges, be of good cheer about death, and know of a certainty, that no evil can happen to a good man, either in life or after death. He and his are not neglected by the gods; nor has my own approaching end happened by mere chance. But I see clearly that the time had arrived when it was better for me to die and be released from trouble; wherefore the oracle gave no sign. For which reason, also, I am not angry with my condemners, or with my accusers; they have done me no harm, although they did not mean to do me any good; and for this I may gently blame them.

Still I have a favour to ask of them. When my sons are grown up, I would ask you, O my friends, to punish them; and I would have you trouble them, as I have troubled you, if they seem to care about riches, or anything, more than about virtue; or if they pretend to be something when they are really nothing,—then reprove them, as I have reproved you, for not caring about that for which they ought to care, and thinking that they are something when they are really nothing. And if you do this, both I and my sons will have received justice at your hands.

The hour of departure has arrived, and we go our ways—I to die, and you to live. Which is better God only knows.

# The Judgment Of Socrates.

## The Apology.

Translated by Paul Elmer More.

CHARACTERS.

Socrates; Meletus.

---

Socrates:: How you have felt, O men of Athens, while my accusers were speaking, I cannot tell; as for myself, I almost forgot who I was, so persuasive were their words, although, if I may say it, not a single word they spoke was true. But of all their falsehoods this one amazed me most, that they should dare to bid you be on your guard against me and not be deceived by my skilful pleading; for they must have known that their falsehood would be exposed the moment I opened my mouth and showed myself the owner of no such skill at all. Really this must have been mere wanton insolence on their part, unless indeed they call a man eloquent who simply speaks the truth. If that is their meaning, I might confess myself an orator—only not after the manner of these men, for in their words there was no truth at all, whereas in mine you shall hear the truth and the whole truth. Do not then expect from me, Athenians, an elaborate oration like theirs, decked out and daintily adorned with fine phrases—God forbid. You shall hear whatever language comes uppermost, for I trust that what I am going to say is right and just, and that is sufficient; let no one expect anything else. Neither would it be seemly at my time of life to come before you with cunningly prepared phrases like a young man. But this one thing above all I ask and beg of you, men of Athens: if you hear me defending myself with the same sort of words I have always used about the money-changers' tables in the market-place, where many of you have heard me talk, or anywhere else, do not be surprised at this and do not interrupt me. The simple fact is, this is the first time I have ever appeared in a law-court, although I am now seventy years old; and consequently I am a complete stranger to the language of the place. You would readily have patience with me if I were really a foreigner and spoke after the language and fashion of the land where I grew up; and now in the same way I may claim the privilege, I think, of asking you to overlook my manner of speech—it might be better and it might be worse—and to mark this and fix your minds on this question alone, whether what I say is justified by the facts or not. For this is the judge's office, as the orator's is to speak the truth.

In the first place, then, it behooves me, O men of Athens, to answer first the old lying charges against me and my earlier accusers, and after that these later ones. For I have had many accusers before you now these many years, whose slanders have gained strength with age, and whom I fear more than Anytus and his accomplices, although these, too, may well fill me with alarm. But those are the more dangerous who began to instil their slanders in your ears when you were children, and taught you that there is one Socrates, a philosopher, who speculates about the heavens above, and pries into the earth beneath, and makes the worse appear the better cause. These men, Athenians, who have scattered abroad rumors like this, are my serious accusers. Their hearers are only too quick to fancy that all speculators of the kind are natural atheists. Besides that, these accusers are many and their charges are of long standing: they began with you in childhood, or in youth, perhaps, when the mind is quick to believe; and the case went against me by default, there being none to answer. And strangest of all, it is impossible to know even their names and tell you who they are—unless it be perhaps some comic poet. And how shall I deal with those who have won your ears through sheer envy and malignity, and with those, too, who first honestly convinced themselves and then persuaded others? I cannot summon any one of them here before you and confute him, but I must make my defence as a man fights with shadows, and question when there is none to answer.—Well, as I was saying, you are to understand that I have two sets of accusers,—those who have brought the present indictment against me, and others of older date whom I have just mentioned. You will understand also why I turn to these ancient accusers first, since you heard their charges first and much oftener, too, than the recent charges. Very well, gentlemen, you shall hear my apology. In this brief time allotted me I must endeavor to overcome your long-standing prejudices. Gladly would I prosper in my attempt and come out well from my defence, if it were better for you and for me. The task is not easy, nay, I know too well how hard it is; yet be the issue as God wills, it is mine to obey the law and render my apology.

Let us go back to the beginning and see from what accusation arose the calumnies which now embolden Meletus to bring forward his indictment. How have these backbiters been slandering me? Let us read their affidavit as if they accused me legally: “Socrates is an evil-doer and a busybody who investigates what is beneath the earth and above in the heavens, who makes the worse appear the better cause, and imparts these notions to others.”—Such is the accusation; and you yourselves have seen in the comedy of Aristophanes how one Socrates is exhibited swung about in a basket, declaring that he treads the air and uttering a deal of nonsense regarding things of which I have no knowledge at all. I do not mean to speak in contempt of such knowledge, if there be any one really wise in these matters—may no Meletus, I pray, bring such a charge against me—I merely say, Athenians, that I myself have nothing to do with them. Most of you who are present here will confirm me in this: many of you are familiar with my mode of talking, and I may call on you to testify for me to your neighbors; tell them now whether any one of you ever heard me say anything whatsoever, in few words or many, about these matters. From this you may assume that the other stories current about me are of the same fabrication.

And furthermore if you have heard any one assert that I undertake to give instruction and demand fees, this is equally false. Yet I am ready to admit such a course would be perfectly honorable if one were really able to give instruction,—like Gorgias of Leontini, for instance, and Prodicus of Ceos, and Hippias of Elis, each of whom travels about from city to city and cunningly persuades the young men to leave their fellow townsmen whose instruction they might have quite freely and without price, and to follow after the new master at considerable cost and with gratitude besides. There is another of these philosophers, a Parian, who, I understand, is in the city at this moment. I heard of him from a man who has probably spent more money on these sophists than anybody else in the world,—I mean Callias, the son of Hipponicus. Happening to fall in with him one day, I began to question him about his two sons: “Callias,” said I, “if your two boys were only foals or calves, we should know well enough where to hire a master who would train them so as to bring out their best qualities; some horse-breeder or farmer would serve our purpose. But now, seeing they are men, what master have you in mind for them? Do you know any one who has made a science of bringing out the qualities necessary to a man and a citizen? No doubt you have looked into the matter on account of these sons of yours. Is there any such master?" "To be sure there is," he replied. "Who," said I, "and whence does he hail, and what is his fee?" "Evenus, the Parian, my Socrates; and he charges five minae." Happy Evenus, thought I to myself, if he in sooth possesses this art and teaches so reasonably. How I should plume myself, and how conceited I should be, if I had this wisdom. But alas, Athenians, I have it not.

Perhaps some one may retort: But, Socrates, what have you done then? Why have all these calumnies sprung up against you? For unless you had shown yourself a busybody in some way or other and had acted differently from other people, surely all this talk and rumor would never have got about. We do not wish to judge you unadvisedly; tell us the whole story.—Now this seems to me a fair request, and I will try to explain how I came by such an ill-omened name. Hear me out; I mean to tell the whole truth, though to some of you it will sound like a tale told in jest. The fact is, men of Athens, I got this name because of a sort of wisdom in me and for no other reason. What sort of wisdom, you ask? Well, it might be called strictly human wisdom, for really I may claim a share of that. These philosophers I mentioned just now possibly possess some wisdom of a higher sort, something superhuman—I hardly know how to name it, for I myself have no part in it, and who ever says I have lies and utters a slander. I beg you, Athenians, do not cry out if I appear to speak boastfully; the word I shall speak, however it sound, is not of me but of a greater, and he who uttered it is worthy of credence. Of this wisdom of mine, if so be I have any, and of its nature, I offer to you as witness the god who abides at Delphi. Chaerephon you certainly know. He was my friend from youth up; he was a friend of the people, too, following you in the recent exile and returning with you. You know the man, how eager he was in all his ventures. Well, Chaerephon once took upon himself to go to Delphi and inquire of the oracle there—now I beseech you, Athenians, hear me quietly; he inquired of the oracle whether there was any one wiser than I, and the Pythian priestess declared there was none wiser. He himself is dead, but his brother is present to-day and will testify to these things.

Perhaps you may wonder why I relate this story: it is because I am going to show you how the calumnies rose against me. For when the oracle was brought to me, I began to ask myself, What does the god mean, and what is the reading of his riddle? Certainly so far as I know myself I am not conscious of being wise in any matter great or small. What, then, does he mean by calling me the wisest? At any rate he does not lie, for that were contrary to his nature.—So for a long while I was in doubt about the oracle, until at length I bethought me of the following method of testing it. I went straight to one of our reputed wise men, thinking that here, if anywhere, I should be able to refute the oracle and say to the god, Look you! this man is wiser than I, and yet you call me wisest. Well, I examined this man (never mind his name, but my first adventure was with one of our politicians) and conversed with him, and it soon became apparent that to many people and most of all to himself he seemed quite wise, whereas in truth he was not so at all. Thereupon I undertook to show him how he was wise in opinion only and not in reality; but I only made myself a nuisance to him and to many of those about him. So I went away reflecting that at least I was wiser than this man. Neither of us apparently knows anything much worth while, but he in his ignorance thinks he knows, whereas I neither know nor think I know. Surely I may claim a little more of wisdom than he, in so far as I do not think I know what I do not know. After this I approached one whose character for wisdom was still higher, but with no different result; I only gained the ill will of him and a host of others.

So I went from one to another in succession, perceiving all the while that I was but making enemies, sorrowing and fearing, and yet compelled, as it were, to honor the god above all things and to prove his oracle by approaching all who were reputed to have any knowledge. And I swear by the dog, O men of Athens—for I must declare the truth—I swear that this was all my profit. Searching by command of the god, I found that those who had the greatest renown for wisdom were in general the most lacking of all, whereas others of no reputation were really the better and wiser men. But let me narrate my wanderings in detail and the labors I endured, like a second Heracles, to confirm the oracle to my own mind. After the politicians I went to the poets, tragic, dithyrambic, and what not, making sure that in comparison with these I should detect myself in the very act of folly. I took their own poems which they had apparently elaborated with the greatest care, and with these in my hand proceeded to ask the authors what they signified, expecting, of course, to pick up some curious information at the same time. I am ashamed to tell you the truth, my friends, and yet it must out. Will you believe me, almost any one here in this court would speak more intelligently about these works than the authors themselves. I very soon learned of the poets that they compose not by wisdom but by a certain inspiration and gift of nature, like diviners and soothsayers, who in the same way utter many noble sentiments, yet understand nothing of what they say. Such appeared to be the state of the poets; yet I perceived that deluded by their poetic genius they deemed themselves the wisest of men in other matters also, wherein they were nothing. So I gave up the poets too, thinking I surpassed them in the same way as the politicians.

Finally I went to the artisans. Here at least I had no knowledge at all, and I was sure to find these men skilled in many noble crafts. And in this I was not deceived; they knew what I did not know and in so far were wiser than I. Nevertheless these excellent artisans, as I discovered, had the same weakness as the poets: because they wrought well in their own craft, every one of them deemed himself most wise in other weighty matters; and this error went far to obscure their real wisdom. Come, then, I said to myself, in behalf of the oracle, will you be content with your present lot, being neither wise in the wisdom of these men nor foolish in their folly, or would you choose their dubious state? And immediately I answered to myself and to the oracle that it was better for me as I am.

From this investigation, O men of Athens, many enmities sprang up against me, such as are grievous and dangerous, and such as gave birth to a host of slanders; from thence, too, arose the name I had of being wise. Those who are present always take it for granted that I myself am wise in those things wherein I expose the ignorance of others. But the truth would seem to be, O Athenians, that God alone is really wise, and this he sets forth in the oracle, signifying that human wisdom is worth little or nothing at all. Neither doth he care aught for Socrates, but merely employed my name, using me as an illustration, as if to say: Hear, all ye men! he is wisest among you who, like Socrates, knows that his wisdom is of nothing worth.—And I even to this day go about seeking as the god wills, and am ever on the scent, if perchance any citizen or stranger may appear to me truly wise. And when he proves other than wise, then, in vindication of the god, I expose the man’s ignorance. And by reason of this task laid upon me. I have no leisure for the important affairs of state and home, but live always in utter poverty as a servant of the god.

In addition to this, many young men from our wealthy families, who have nothing else to do, flock after me unbidden and take delight in hearing my cross-questionings. Indeed, they often imitate me, trying their wit at refuting others; and I dare say they find plenty of men ready at hand who pretend to know, but really know little or nothing at all. Straightway these pretenders, on being exposed, fall into a rage against me, instead of blaming themselves, and call down curses on this Socrates who is corrupting our young men. And when they are asked what this Socrates does and teaches, they are at a loss, having nothing to say; and so they try to cover up their confusion by repeating the old trumpery charges against the whole body of philosophers about things in heaven and beneath the earth, you know, and atheism, and making the worse appear the better cause. They are not likely to confess the truth, that they have been detected in assuming knowledge which they never had. These men are self-important and revengeful and numerous, and so, I think, with their loud and overbearing words they have dinned these ancient and bitter slanders into your ears. No doubt this is why Meletus and Anytus and Lycon have set upon me,—Meletus having a grudge against me on the part of the poets, Anytus of the artisans, and Lycon of the orators. It would be a wonder, then, as I remarked at the beginning, if in the brief time allotted me I should be able to root out of your minds this calumny now grown so huge. This is the very truth, O men of Athens, and I speak before you, nothing concealing, whether great or small, nothing dissimulating. Yet I know well enough that I but increase the hatred towards me by my frankness; and this is a proof, if need be, that my words are true, and a witness to the slander of my life and the causes thereof. Examine the matter now or later at your leisure; you will find it thus.

And now sufficient has been said in regard to those earlier enemies and their charges; I will proceed in my defence against Meletus—that worthy patriot as he calls himself—and my recent accusers. Let us treat them as new plaintiffs and read their affidavit anew. So it runs: Socrates is an evil-doer and corrupter of the youth, who denies the gods of the city, and introduces strange daemonic powers of his own. Such is the accusation; let us examine it point by point. It asserts that I am an evil-doer and corrupter of the youth; but I, O Athenians, assert that this Meletus is an evil-doer; for see how he jests in so serious an affair, thoughtlessly dragging men into court, and affecting to be serious and solicitous about matters for which he never cared a whit. No, I am not misrepresenting him, as you shall see for yourselves.

Now, Meletus, speak up and answer me. Of course you are highly concerned that our young men shall turn out for the best?

Meletus:: I am.

Socrates:: Very good; now inform these gentlemen who it is improves them. You must certainly know, since you make this your business. Having tracked down their corrupter, as you say, you summon me hither and lodge a complaint. Now, then, speak out and declare to the court who it is improves them. What, Meletus, you are silent and have nothing to say? Yet isn’t your silence a little disgraceful now, and even a good proof of my taunt that you do not care a straw for these things? Nay, tell us, my good Sir, who it is improves them.

Meletus:: The laws.

Socrates:: I didn't ask about them, my dear Sir; but first of all, who is the man that knows the laws?

Meletus:: The men before you, Socrates, the judges.

Socrates:: What's this you say, Meletus? Are these men capable of instructing and improving the youth?

Meletus:: So I said.

Socrates:: Do you mean all of them, or only part?

Meletus:: All of them.

Socrates:: Well said, by the goddess Hera, and a mighty abundance of helpers for our youth! And what follows? Do the gentlemen of the audience yonder improve them?

Meletus:: They do.

Socrates:: And the senators, too?

Meletus:: Yes, and the senators.

Socrates:: Well, then, Meletus, perhaps those who sit in the great assembly corrupt the youth; or do all of these, too, improve them?

Meletus:: Yes, these, too.

Socrates:: Why, then, it should seem that all the Athenians train our young men to be good and honorable—except me; I alone spread corruption. Is this your meaning?

Meletus:: It is precisely what I mean.

Socrates:: Alas, you lay a great evil at my door. But tell me: in the case of horses, is it your opinion that all the world can improve them, while only one man injures? On the contrary, isn't it true that one particular man, or perhaps some few men, horse-men by profession, improve them, whereas most people who meddle with horses really spoil them? Isn't this the case, Meletus, with horses and all kinds of creatures? Indeed it is, no matter whether you and Anytus say yes or no. And it would be a great and strange blessing for our youth if only one man spread corruption and all the rest of the world helped them. Really, Meletus, you prove sufficiently well that our young men have never given you a care; and you set forth your own heedlessness in bringing me to court for matters that concern you not at all.

But I am not done with you, Meletus. Tell me whether it is better to live amidst good or wicked citizens. Answer, I say, for the question is quite simple. Do not wicked citizens do ill to their neighbors, and good citizens good?

Meletus:: Yes, they do.

Socrates:: Would anybody in the world wish to be harmed by his fellow men rather than benefited?

Answer, my friend; indeed, the law requires you to answer. Would anybody wish to be harmed?

Meletus:: Of course not.

Socrates:: Well, then, do you summon me hither because I corrupt the youth and make them wicked intentionally or against my will?

Meletus:: Intentionally, I say.

Socrates:: How is this, Meletus? Are you as a young man so much wiser than I in my old age? Have you learned that the evil always do ill to those about them, and the good, good, whereas I am so far gone in folly as not to know that if I make any one of my fellows a rascal I am likely to receive harm from him? Am I so foolish as to commit this great wrong intentionally, as you say? I cannot accept your statement, Meletus; nor will any one else, I think. Either I do not corrupt the youth, or, if I do, it is unwittingly; and in either case you are proved a liar. If I corrupt them unwittingly, then for such unintentional errors you have no authority in law to prosecute me here; but rather taking me apart you should instruct and admonish me, for certainly I would turn from unwitting wrong were I shown my error.

Yet you have always avoided me, never once trying to enlighten my ignorance, and now you prosecute me before this court where those are properly indicted who require punishment and not enlightenment.

It is now perfectly clear, Athenians, that Meletus, as I said before, has never troubled himself in the least about any of these matters. Yet, tell me, Meletus, how is it you say I corrupt the youth. Evidently, according to your written indictment, by denying the gods of the city and introducing strange daemonic powers of my own. Do you mean that I corrupt them by spreading such doctrines as this?

Meletus:: So I assert, and boldly.

Socrates:: I conjure you, Meletus, by these very gods who are now in question, make your charge a little more explicit to me and to the court. I do not quite understand. Do you mean that I teach the belief in certain gods, and myself believe that such exist, not being altogether an atheist and evil-doer in this respect, but that my gods are not those of the city?, Is that your charge? Or do you claim that I utterly deny the gods and spread abroad this doctrine of atheism?

Meletus:: I claim that you absolutely deny the existence of the gods.

Socrates:: Extraordinary! Why do you say that, Meletus? Do not I, like other men, believe the sun and the moon to be gods?

Meletus:: Hear him, judges! Does he not call the sun a stone and the moon earth?

Socrates:: Why, my dear Meletus, you must think you are accusing Anaxagoras. Do you so despise these gentlemen, and deem them so illiterate as not to know that the works of Anaxagoras the Clazomenian are full of such notions? And of course the young men come to me to learn these doctrines, when they have plenty of opportunities of hearing them in the theatre for a drachma at most, and so turning the laugh on poor Socrates if he palms them off as his own,—such outlandish doctrines, too. But, in heaven's name, do you really think me such an atheist?

Meletus:: A complete and utter atheist.

Socrates:: Incredible, Meletus; you are lying and you know it.—O Athenians, the man is utterly insolent and wanton; he has made this indictment in the merest insolence and wantonness and youthful bravado. He seems to have patched together a kind of riddle to try our wits, as if to say, Will the wise Socrates detect my jesting and self-contradictions, or shall I hoodwink him and the whole court? So far as I can make out, he has contradicted himself flatly in his own indictment, which as much as says, Socrates is an evil-doer who does not believe in the gods, yet believes in the gods.—It is the trick of a jester.

And now let us see why I have such an opinion of him. Do you, Meletus, answer my questions; and do you, gentlemen, as I requested at the beginning, remember not to interrupt me if I talk along in my usual manner.—Is there, Meletus, in all the world a man who recognizes human works, but denies that there are men?—The court sees that he won't answer, but tries to make a distraction.—Does any one believe there is horsemanship, but no horses? or flute-playing, but no flute-players? Of course not, my honest friend; so much I may affirm to you and to the others here, since you are unready to reply. But at least answer me this: Does any one deny there are daemons, who yet acknowledges their power?

Meletus:: No one.

Socrates:: How delighted I am that at last, compelled by the court, you deign to answer. So, then, as you say, I do believe and teach there are daemonic powers; whether old or new ones of my own invention, no matter, for according to your words I do believe in these powers, and this you have sworn to in your affidavit. But if I believe in daemonic powers, I must needs believe in daemons, must I not? Of course. You see I take your silence for tacit agreement. And do we not regard the daemons as gods or children of the gods? Answer me, yes or no.

Meletus:: Yes.

Socrates:: Since, then, I acknowledge there are daemons, what riddling and jesting is this of yours? For in the one case if the daemons are nothing more than gods, and I believe in these daemons, why, then, with one breath you declare that I do and do not believe in the gods. But if on the other hand these daemons are the illegitimate children of the gods by the nymphs or other mothers, as the stories go, then who in the world would say there are children of the gods, but no gods? Absurd; you might as well say there are mules from horses and asses, and deny the existence of horses and asses. The gist of it all is just this, Meletus: you have brought that indictment against me either to test my wits, or else because you wished to accuse me and could find no real wrong to attack. But there is no art by which you will ever persuade any one not utterly devoid of reason that the same person can believe in daemonic and divine agencies and at the same time believe neither in daemons nor gods nor half-gods—that is quite impossible.

In truth, men of Athens, there is no need of many words to free myself from the charge of Meletus; and sufficient has been said.

But as I was saying, and as you yourselves know, there are many enemies and a deal of hatred arrayed against me. It is this will condemn me, if I am cast; not Meletus or Anytus, but the envious detraction of the multitude which has condemned many an honest man before me and will do the same hereafter—there is no danger it will stop with me.

Possibly some one will say here: But are you not ashamed, Socrates, to have lived such a life that now you stand in peril of death? I might fairly reply to such an one: You are far from the mark, my friend, if you suppose that a man of any worth in the world ought to reckon on the chances of life and death. Not so; when he acts he has only this one thing to consider,—whether he acts righteously or unrighteously, and whether as a good or a bad man. Poor creatures indeed your notion would make of the heroes who fell at Troy, and among them Thetis' son, Achilles, who so despised danger, in comparison with dishonor, that he heeded not the warning words of his mother, though she. was a goddess. For so I can imagine her pleading with him in his deadly wrath against Hector, and saying: "O my child, if you avenge the death of your comrade Patroclus and slay Hector, you, too, must die;

> 'Ready thy fate stands against thee after that Hector hath fallen.'"

Still when he heard this, he accounted death and peril as but a little thing, fearing far more to live a coward and leave his friends unavenged. "Let me perish straightway," he said, "and be avenged of mine enemy, that I abide not here by the beaked ships, a laughing-stock and a burden of the earth."—Think you, this man cared for death and peril? Nay, Athenians, the truth is quite otherwise; for wherever a man takes his post, deeming it best for him there, or wherever the leader places him, there let him abide, say I, awaiting danger, taking account of naught, be it death or any other thing, except only dishonor.

Strange indeed would my conduct be, men of Athens, if I, who have stood like many another man at my post and faced death, when the generals chosen by you to command gave me my orders,—strange indeed if, now when the god, as I firmly believe and am convinced, bids me stand forth as one devoted to wisdom, a questioner of myself and all the world, I were to desert my post through fear of death or any other thing. That would be strange indeed, I repeat, and justly then might a man charge me in court with denying the gods if I disobeyed the oracle, and feared death, and in my folly deemed myself wise. For the fear of death, my friends, is only another form of appearing wise when we are foolish and of seeming to know what we know not. No mortal knoweth of death whether it be not the greatest of all good things to man, yet do men fear it as if knowing it to be the greatest of evils.

And is not this that most culpable ignorance which pretends to know what it knows not? It may be, my friends, that in this I am different from the world; and certainly if I should claim to be wiser than another in any one thing, it would be herein, that having no certain knowledge of the life beyond, I pretend to none. Yet this knowledge I have, and this I know, that it is an evil and shameful thing to do wrong and to disobey our superior, whether human or divine. Never, then, will I shrink and flee from what may be an unknown blessing rather than from evil known to be such.

And therefore if now you should release me and pay no heed to Anytus, who declares that the trial should never have been admitted at all unless I am to be punished with death, for otherwise all your sons will follow in my steps and be utterly corrupted,—if notwithstanding this you should say to me: Socrates, this time we will let you off in spite of Anytus, but on one condition, that you give up this investigation of yours and this pursuit of wisdom, under penalty of death should you be caught at it again,—if, I repeat, you were to release me on these terms, then I should say to you: Omen of Athens, I do indeed salute you and wish you all happiness, but I obey God rather than you, and while there is breath to me and so far as my strength permits, I will not cease from this pursuit of wisdom, neither will I desist from admonishing you. And whomsoever of you I meet, with him I will argue as my wont is and say to him: My good friend, you who belong to Athens, this city great and glorious for wisdom and power, are you not ashamed that your life is given up to the winning of much money and reputation and rank, while for wisdom and truth and the good of your own soul you care not and have no concern? And if he disputes and asserts his care for these things, I will not quickly let him go or leave him, but will question and examine him and put him to the proof; and if then he seems to claim a virtue which he does not possess, I will rebuke him because the things of most worth he little esteems, but prizes what is valueless. In this way I shall act toward young and old, whomever I meet, whether stranger or citizen, and especially toward citizens, as they are closer akin to me. For this, I assure you, is the command of the god; and I think no greater blessing has ever befallen you in the city than this my service to the god. For I do nothing else but go about persuading you, young and old, not to take thought first for your bodies and for money, but more diligently to consider the welfare of your own souls; and I say to you always that not from money proceedeth virtue, but from virtue proceed money and all good things that men cherish in public and in private. If by teaching this doctrine I corrupt the youth, the mischief is great; but if any one asserts that my teaching is other than this, his words are naught. Therefore I say to you, Athenians, yield to Anytus or yield not, acquit me or acquit me not,—never will I alter my ways, though I suffer death many times.

Do not cry out, Athenians; but remember how I besought you to remain quiet and listen, no matter what I said. Indeed, I think you will profit by hearing. Now I am going to say something else at which perhaps you will raise a shout—yet I beg you do not. Be assured, then, that if I am such an one as I said and you put me to death, you will be doing yourselves greater harm than me.

Neither Meletus nor Anytus can injure me a whit; there is no power in them to do that; for it is not decreed above that the better man can be injured by the worse. He may inflict death, perhaps, or exile, or civil dishonor; and possibly Meletus and his guild reckon these things to be great calamities; but I for my part deem it a far greater calamity to plot unrighteously against a man’s life as Meletus is now doing. And therefore, men of Athens, I am not concerned to plead for myself, as one might expect of me, but am rather pleading for you, lest by condemning me in your ignorance you throw away God’s gift to you.

For if you kill me, you will not speedily find another like me, sent, as it were, by the hand of God upon the city. You will laugh at my words, but really this people resembles a huge horse, thoroughbred, but sluggish from his very size and needing a gadfly to excite him. So the god seems to have set me upon the city as a gadfly, and without respite I am fastening on you the livelong day, and exciting and urging and reproaching every one I meet. Such another man is not so readily found, my friends; you had better take my advice and spare me. Now, like a man disturbed in his sleep, you may of course fall into a rage and crush me with a blow, as you would a fly—and so you will please Anytus. After that you may quietly slumber away the rest of your lives, unless God in his mercy sends some other upon you. That I am really such an one given to the city by God, you may understand from my life; for it is not from merely human reasons that I neglect my own affairs and see them going to waste these many years, while unweariedly I look to your interests and come to you all individually, as if I were a father or an elder brother, with my message and persuasion of virtue. If I reaped any profit from this life or took pay for my exhortations, it would be a simple matter. My accusers have shamelessly brought forward every other possible charge against me; and yet, as you yourselves see, they have not dared to assert, under the testimony of witnesses, that I ever exacted a fee or asked any man for such. I think, indeed, my poverty is sufficient evidence to the contrary.

It may perhaps seem inconsistent that I go about so busily giving my advice in private, but never venture to come up with you to the assembly and speak out before the whole city. I have a reason for this, as you have often heard me explain and in many places; for there is a certain divine or daemonic witness abides with me, and it is this that Meletus has caricatured in the indictment. From childhood it has been with me, as it were a voice speaking at intervals, always warning me against something I had in hand to do, but never urging me to act. This it is has restrained me from a public life. And wisely has it hindered me; for doubtless, Athenians, if I had busied myself with public affairs, my death would have fallen long before now, and I should have profited neither you nor myself. Do not chafe at hearing the truth. No man will save his own life who boldly opposes you or any other people and checks the wicked and lawless proceedings in his city. He who would preserve his life for a little while to fight the brave fight of justice must seek his ends in private and not in public.

I can offer you convincing evidence of these things,—not in words, but in what you appreciate, deeds. Hear what actually befell me, and you will see that I am not one to yield the right to any man (through fear of death, but would rather die unyielding. My story may sound vulgar and commonplace, but it is at least true. You know I have never held any public office in the city except to sit in the senate. Now it happened that the tribe Antiochis, to which I belong, held the presidency at the time of the battle of Arginusae when the ten generals were charged with neglecting the bodies of the lost. You remember you wished to try them in a body, quite contrary to law, as you yourselves afterwards acknowledged. At that time I alone of the presidents held out and voted against this illegal proceeding. The demagogues were ready to arrest and impeach me; you were urging them on and shouting out against me; nevertheless I thought it behooved me to take this hazard with law and justice on my side, rather than stand with you against justice through fear of bonds or death. This happened while the people were still in power; but during the Oligarchy the thirty tyrants once summoned me, with four others, to the city hall, and bade us fetch over Leon of Salamis from that island to be executed. Such commands, you know, they were constantly giving in order to implicate as many as possible in their crimes. Then again I proved, not by words but by deeds, that I cared not a straw for death, if I may speak so boldly, but was anxious above all else in the world to shun injustice and impiety. Not even that strong and oppressive tyranny could terrify me into abetting injustice. When we came from the hall the other four went to Salamis and brought back Leon, but I went quietly home. Probably it would have cost me my life, had not the government of the Thirty fallen shortly afterwards.—This is my story and there are many to bear witness to its truth.

Now do you suppose I could have lived through all these years if I had gone into public affairs, and like an honest man had made it my first duty always to support the right? Far from it, O Athenians; neither I nor any other could have done it. Examine my whole life and it will appear that such has been my conduct wherever I have touched on public affairs. And in private I am the same, for never once have I yielded to any man in a question of right and wrong, no, not even to one of those who by these slanderers are called my disciples. I am no master to have disciples. If any one, young or old, ever cares to listen to me while I talk and go about my business, I do not repulse him; neither do I discourse for money, but to rich and poor alike I offer myself; anybody may start the question, and, if. ready to answer my queries, may hear whatever I have to say. And I am in no wise accountable if those who listen to me turn out good or bad, for to none of them have I ever promised or given any kind of instruction. Should any one claim to have heard or learned from me in private what all the world has not heard, the man simply lies.

Do you ask why certain persons take pleasure in my company year after year? That has already been explained to you, Athenians. I told you the whole truth when I said their pleasure was in hearing our pretenders to wisdom detected in folly. There is a certain satisfaction in this; but as for me, my course was pointed out by God himself, whose admonitions came to me in oracles and dreams and signs, in whatsoever way the divine will is at times made manifest to men to guide their actions. My statement, Athenians, is true and easily proved. For if aforetime I corrupted the youth and do still corrupt them, then some of those who have now grown old enough to recognize the evil counsel given them in their youth ought to come forward and avenge themselves by denouncing me. And if they themselves hesitate to do this, then their relatives, their fathers or brothers or others of their kin, ought to bear in mind the dishonor of their family and seek vengeance. A number of these men I see present to-day: yonder is Crito, who is of the same age and deme with me; and there is his son Critobulus; then I see Lysanias of Sphettus, the father of Aeschines yonder; there is Antiphon of Cephisus, the father of Epigenes. Others I see whose brothers have been much about me: Nicostratus, the son of Theozotides, who might speak for his brother Theodotus, now dead and no longer able to command his silence; and Paralus yonder, the son of Demodocus, whose brother was Theages; here is Adeimantus, the son of Ariston, whose brother Plato is also present; and Aeantodorus, whose brother Apollodorus I likewise see. I might point out a number of others, among whom Meletus ought certainly to have found some one to produce as a witness during his speech.

Perhaps he forgot while speaking: let him bring forward his witnesses now—I yield the floor—let him say if he has any such testimony. No, Athenians, you will find, on the contrary, they are all ready to witness for me, for me the corrupter and destroyer of their families, if you art to believe Meletus and Anytus. No doubt those whom I actually corrupted may have their ground: for supporting me; but the uncorrupted, these older men, their relatives, what other reason can they have for abetting me but the plain and straightforward reason of justice? They know, forsooth, that Meletus lies and that I speak the truth.

Well, gentlemen, this and the like of this is about all I have to offer as an apology. Yet there may be some one among you who will be indignant when he recalls his own conduct on such an occasion. He may have had less at stake than I, yet with many tears he implored and supplicated the judges, dragging his little children before the court and a swarm of friends and relatives to awaken pity; whereas I will do nothing of the sort, although my danger, it might seem, is the extremest of all. Such an one, observing my conduct, may harden himself against me and suffer anger to influence his vote. If any one is so disposed—but that is hardly possible—still if there be any such, I might fittingly say to him: My dear friend, I, too, have my family ties; I, too, as Homer says, was born of human parents, and not of a stock or a stone; I have my own kith and kin, and even children, three sons, Athenians, one a grown boy and the other two quite young. But I will drag none of these hither and so beseech you to release me. You ask my reasons for refusing? Not out of wilfulness, gentlemen, or because I contemn you; and whether I hold death lightly or not is another question. The point is that out of regard for myself and for you and for the whole city I deem it degrading to stoop to any such means. For I am now an old man and have, whether rightly or wrongly, acquired a certain name,—yes, the saying has gone abroad that Socrates is different from the rest of the world. It is a shameful thing, if those among you who are held superior for wisdom or courage or some other virtue are willing to act in this way. Indeed, I have more than once seen men of reputation behave in the strangest fashion when on trial; one might suppose they looked on death as a monstrous ill, just as though they were to be immortal if once they escaped your hands. Such men, I say, are an opprobrium to the city; they leave any foreigner to remark of us, that the best of Athenians in virtue, the men chosen by the Athenians for place and honor, are in reality no better than women. O men of Athens, we who have a name among you ought not to behave thus, nor, if we would, ought you to allow it. You ought clearly to show that condemnation inevitably falls, not on the man who keeps his peace, but on those who go through these piteous farces and render the city ridiculous.

And apart from appearances, O Athenians, it does not seem right to appeal to the sympathy of the judges and escape by such means, but rather to inform and convince them. The judge does not sit here to grant justice as a favor, but to decide the truth; he is under oath to give judgment in accordance with the laws and to show partiality to none. Is it your wish that we encourage perjury amongst you? and how, then, shall you and we escape the evil of impiety? Do not therefore require of me, Athenians, to demean myself before you in a manner that I consider neither honorable nor right in the eyes of God and men, and especially now when I am charged by Meletus here with the very crime of impiety. For clearly were I to persuade you and force you by my supplications to forswear yourselves, clearly, then, I should be teaching you to disbelieve in the gods; and in the very act of my apology I should be accusing myself of atheism. But such disbelief is far from my thoughts, Athenians; I do believe, though my belief is beyond the understanding of my accusers. And now I commit myself to you and to God, to judge as it shall be best for me and for you.

[Socrates is condemned by a majority of 281 to 220.—He now discusses the penalty to he inflicted. According to the custom of the Athenian courts, prosecutor and defendant each proposed a penalty, and it was left to the judges to decide between these two. Meletus has proposed the death-penalty.]

There are many reasons, O men of Athens, why I am not troubled that the verdict has gone against me. Indeed, the result was fully anticipated, and I am only surprised at the evenness of the vote. I thought to be condemned by a large majority, and now it appears that only thirty votes were needed to acquit me. So far as Meletus is concerned, I have, I think, escaped, and more than escaped; for it must be apparent to all that if Anytus and Lycon had not taken part in the accusation he would have fallen below one fifth of the votes and so forfeited the thousand drachmas.

The man has proposed death as the penalty. Very good; and what counter-penalty shall I propose? Evidently what I deserve. And what is that? what do I deserve to suffer or pay? Look at me: never in all my life have I learned to be idle; for a higher end I have neglected all that the world most covets,—wealth, property, military command, public leadership, office, the influence of party and faction in the state,—deeming myself too honest a man to indulge in these pursuits and save my own life. Neither did I see any profit in these things to you or to myself, and therefore I passed them by and took up a new pursuit.

Going to each of you in private, I conferred on him what I call the highest benefit in the world, by persuading him to think first of the good of his own real self and afterwards of his worldly affairs; to think first of the good of the city itself and afterwards of her interests, and so in all things. You see what man I am; what should be done to me? Some good thing, Athenians, if I am to propose what I really deserve,—and some good thing that shall be suited to me. What, then, is suited to a poor man, your benefactor, who only demands leisure to go on admonishing you? There is no other reward so appropriate as a seat at the tables in the Prytaneum. This he deserves more than any of your victors with horse or chariot at the Olympic games; for these champions give you but the name of fortunate, whereas I render you such in reality. Moreover they need no support, and I do. Therefore if I must propose the proper and just reward, my proposition is a seat at the tables in the Prytaneum.

Possibly I may seem to you now to be speaking with the same arrogance as before in the matter of tears and supplications. That is not the case; rather I am persuaded that never once have I willingly wronged a human being, however I fail to convince you of the fact. A little while only we have talked here with one another; and I think you, too, might be convinced if your custom permitted us to discuss the sentence of death, not for one day only, but for several days, as other states do. Now it is not easy in this brief time to root out deep-seated prejudices. Being persuaded, then, that I have never wronged any man, I am not likely now to wrong myself, or say of myself that I deserve any evil, or pronounce any such sentence upon myself. And why should I? Through fear of the penalty proposed by Meletus? But as I have already stated, I do not know whether death is really a blessing or an evil. And instead of this shall I name some penalty which I know to be an evil? imprisonment, for example? Why should I pass my life in prison, the slave of each succeeding officer? Shall I propose a fine, with imprisonment until the sum is paid? But in my case that would be confinement for life, as I have no money to pay withal. Or exile, perhaps? It is quite probable you would agree to that. But what a poor spirit mine would be, what blindness of heart, if I supposed that any other people would put up with me when you, my fellow citizens, find my continual discoursing and arguing so intolerably odious that you must needs get rid of me. My blindness is not so great, Athenians. It would be a noble life for me in my old age to go forth an exile and be bandied about from city to city. Well I know that wherever I went the young men would flock to hear my words just as they do here. If I drove them away, they themselves would call upon the elders to banish me; and if I suffered them to follow me, then in fear for them their fathers and kinsmen would banish me.

Does any one ask, Why can't you withdraw somewhere, Socrates, and live in silence and peace? It seems strangely difficult to enlighten you on this point. If I say I cannot hold my peace because this would be to disobey the god, you will take my words in jest. If on the other hand I say that the one good thing in all the world for a man is to pass his days in converse about virtue and these other matters whereof I am continually talking and questioning myself and others, and that a life unquestioned is no life at all for a man,—if I say this, you will believe me even less. Nevertheless I speak truly, though you are slow to believe. And further I am not accustomed to think of myself as deserving punishment. Had I money, I should propose a fine, the greatest I could pay, and account it no evil. But this cannot be, unless you accept a sum within my scant means. For example, I might perhaps pay a silver mina; and this fine I will propose. Plato here, O Athenians, and Crito and Critobulus and Apollodorus bid me name thirty minae, and offer themselves as security. This sum, therefore, I finally propose, and these men will be sufficient security to you for the payment.

[He is condemned, to death.]

You have gained but a little, Athenians, and at how great a cost! From those who are prompt to revile our city you will receive the name and opprobrium of killing Socrates, a man of wisdom,—for in their eagerness to blame you they will call me wise whether I am so or not. Could you have waited but a little while, the event would have come of itself.

My age is not hidden; you see that I am far on in life and near to death. I am not speaking now to all, but to those of you who voted my death. And to them I say further: You suppose, gentlemen, that I have lost through lack of words to convince you, even provided I had stooped to say and do anything to escape. Not so. I am cast, not through lack of words, but through lack of impudence and shamelessness, and because I would not speak what you are most pleased to hear, nor weep and wail, nor do and say a thousand other degrading things which others have taught you to expect. At the time it did not seem worth while to demean myself as a slave through fear; neither do I now repent of my manner of defence. I choose to defend myself thus and die, rather than as you would have me and live. Neither in war nor in a lawsuit ought a man, neither I nor any other, to accept every means of avoiding death. In battle, for instance, a man often sees that he may save his life by throwing away his arms and falling in supplication before his pursuers; and so in all times of peril there are ways of escape if one will submit to any baseness. Nay, Athenians, it is not so hard to shun death, but hard indeed to shun evil, for it runs more swiftly than death. I, you see, an old man and slow of gait, have been overtaken by the slower runner; whereas my accusers, who are young and nimble, are caught by the swifter runner, which is wickedness. And now I go away condemned by you to death, but they depart hence condemned by truth herself to injustice and sin. I abide by my award, and they by theirs. Some fate, it may be, has meted out the awards, and I at least am content.

And now a word of prophecy for those who condemned me; for I stand at the threshold of death, when, if ever, men speak with prophetic insight. So I say to you who have slain me that straightway after my death a punishment shall come upon you far more terrible, God knows, than your slaying me. You have committed this crime, thinking to shake off the burden of accounting for your lives; but the result, I tell you now, will be quite the contrary. There are many who. will call you to account,—men whom I have restrained and whom you have never suspected; younger men who will attack you more savagely and cause you still greater annoyance. You are wide of the mark if you hope by executions to silence all censures of your evil conduct. That way of escape is neither very effective nor very honorable. But there is another way easier and far more noble: do not crush others, but look to the bettering of your own lives. I have made my prophecy, and have done with you who condemned me.

And last with those who voted for my acquittal I would talk over this event, while the authorities are busy, and before I go thither where I must die. Remain with me that little while, my friends. There is nothing to hinder our talking together until I go; and I wish to point out to you, as my well-wishers, the significance of what has happened to me. A wonderful thing, O judges,—for you I may rightly call judges,—a wonderful thing has befallen me. Constantly before this the wonted sign, the warning voice of the daemon, has come to me and opposed me in the most trivial affairs if I chanced to be going wrong. And now you see what has befallen me, this calamity which might be called the greatest of all evils; yet neither this morning when I left my house, nor when I came up here to the court, nor during the whole course of my speech,—not once has the divine warning deterred me. And this is remarkable, for often on other occasions the sign has stopped me short in the very midst of what I was saying. But now through this whole affair it has not once opposed me in what I have done or said. You ask how I interpret this? I will tell you. It indicates that everything has happened for my good, and that those of us who think it an evil to die are quite wrong in our notion.

It must be so; the accustomed sign would have warned me, had I not been in the way of good.

But we have other reasons for hoping confidently that death is a blessing. Consider a moment. To die must be one of two things: either the dead are as nothing and have no perception or feeling whatsoever, or else, as many believe, there is a change and migration of the soul from this world to another. If, now, there is no consciousness in the grave, but deep sleep, as when a man in slumber discerns not even a dream, then will death be a marvellous gain. For consider such a night of slumber when we behold not the shadow of a dream; compare all the other days and nights of our life with such a night, and ask ourselves how many of them could be called happier than this night of deep sleep; we should find them but few in number and easily counted in the course of a long life; and this I believe will hold good, not only of us poor mortals, but of the great King of Persia himself. If death is like this, I at least reckon it a gain, and endless time will seem no more than a single night. But if death is, as it were, a journeying hence to another world, where, as men believe, the departed dead dwell together,—what greater blessing than this could you desire, my judges? Will not that be a wonderful journey, if, escaping these self-styled judges, we go to that other world and stand there before those true judges, as the saying is, Minos and Rhadamanthys and Aeacus and Triptolemus, and others of the half-gods who lived righteously in this life? Would any of you count it a little thing to meet Orpheus and Musaeus and Hesiod and Homer, and talk with them? I am ready to die many times if this belief is true. That would be a glorious life for me there where I might meet Palamedes, and Ajax the son of Telamon, and others perhaps who long ago perished by an unrighteous judgment; and how glad I should be to compare my wrongs with theirs. But the greatest joy would be in questioning the inhabitants there as I do here, and examining them to discover who is really wise and who only in his own conceit. What would not a man give, O judges, to examine the leader of the great Trojan armament, or Odysseus, or Sisyphus, or any of a thousand other men and women whom it would be our infinite joy to meet and question and call our friends. Assuredly they of that world do not put men to death for doing this. They are altogether happier there than we, happier and deathless forever more, if the saying be true.

And ye too, my judges, ought to be of good hope toward death, being persuaded of this one thing at least, that no evil can befall a good man either in life or in death, and that his affairs are all in the hands of God. Neither have these events befallen by chance, but I see clearly it was better for me to die and be released from this labor of life. Therefore not once in my trial was a sign given to turn me aside, and therefore I feel little anger toward those who accused and condemned me. Yet because they did not accuse and condemn me in this mind, but thinking to do me harm, for this they are worthy of blame. And I may make of them this one request: When my sons have grown up, I would ask you, gentlemen, to worry them as I have worried you, if they seem to care more for money and such things than for virtue, and if they claim to be something when they are naught. Do you rebuke them as I have rebuked you for not caring about what they should, and for thinking themselves something when they are of nothing worth. If you do this, both I and my sons shall have received justice at your hands.—And now it is time to depart hence, I to die and you to live; but which of us goes to the better fate no one knoweth save only God.

# The Apology Of Socrates.

Translated by Nevill, D. F.

CHARACTERS.

Socrates; Meletus.

---

Socrates:: How you, men of Athens, have been influenced by my accusers, I know not; I at any rate even myself almost forgot my own case in listening to them; so persuasively did they speak. And yet not a word, as I may say, of truth have they uttered. But of the many false statements which they made I was particularly amazed at one,—that in which they said that you must take care not to be deceived by me, for I was clever at speaking. For the fact that they were not ashamed that they would at once be refuted practically, when I should appear not in the least clever at speaking,—this seemed to me to be the most shameless thing in them; unless of course they call the man who speaks the truth a clever speaker for if this is what they mean, I indeed would confess that I am an orator, ‘but not after their style. Well, as I say, these have uttered little or nothing that is true; but from me you shall hear the whole truth. But, by Zeus, men of Athens, not a speech finely decked oat, as theirs was, with expressions and words nor a prepared speech, but you will hear things spoken at random in the first words that occur; for I believe that what I say is just, and let none of you expect otherwise; indeed it would not, I suppose, be seemly for me at my age to come before you like a lad fabricating a story.

And I must most earnestly, men of Athens, beg and entreat this of you; if you hear me making my defence in the same language as I am wont to use both in the market at the counters, where many of you have heard me, and elsewhere, not to be surprised nor to interrupt on this account. For the truth is this. This is the first time that I have come before a court, though I am seventy years of age; I am therefore literally a stranger to your manner of speech here. And so, just as, supposing I happened actually to be a stranger, you would, I presume, forgive my speaking in the language and the fashion in which I had been brought up, so also now I beg this of you as what, in my opinion, is just, that you pass over the manner of my speech,—for it might perhaps be worse or perhaps better,—but consider this point and to this give your attention, whether I say what is just or not; for this is the virtue of a judge, but an orator's virtue is to speak the truth.

First, then, it is right that I should make my defence, men of Athens, against the first [false] charges brought against me and my first accusers, and then against the later charges and the later accusers. For many have arisen accusing me to you even of old, talking now for many years and saying nothing true. And I am more afraid of them than of Anytus and his friends, though these too are dangerous. But, men of Athens, still more dangerous are those who taking most of you in hand from your childhood were more successful both in persuading you and in accusing me of nothing true, saying that there is one Socrates, a wise man, one who both speculates about the heavens and who has inquired into everything beneath the earth and who makes the worse appear the better cause. These, men of Athens, who have scattered abroad this rumour, are my dangerous accusers; for their hearers think that those who make these inquiries do not believe in the gods either. And then these accusers are many and have now been accusing me for a long time, and were moreover speaking to you at that time of life at which you would have most readily believed them, when you were children, and some of you too were youths, literally prosecuting a suit given by default, where no one appeared for the defence. But the most unreasonable thing of all is that one cannot even know and mention the names of any of them, except one who happens to be a writer of comedies. But all who employing spite and slander used to persuade you, some of them persuading others after having also been themselves persuaded, these are all most difficult to deal with; for it is not possible to call one of them here or to cross-examine him, but it is necessary literally, as it were, to fight with shadows, both making my defence and putting my questions whilst no one answers. Do you also then assume that, as I say, my accusers have been of two kinds, firstly those who have recently accused me, and secondly those who accused me long ago, of whom I am speaking. And believe that I ought first to defend myself against those; for you also heard them accusing me earlier and much more often than these later accusers.

Very well; I must indeed make my defence and try to remove from your minds in so short a time this prejudice which you in so long a time conceived. Now I should wish that this might so befall, if it should be in aught better for both you and me, and that I should gain some benefit in making my defence; but I think that my task is difficult, and its nature does not altogether escape me. Nevertheless let the result go as the god wills, but I must obey the law and make my defence.

Let us then resume from the beginning and see what is the charge, out of which the prejudice against me has arisen, on which of coarse Meletus relied, when he preferred this indictment against me. Well, what did the slanderers really say, when they slandered me?

I must read their deposition as if they were formal accusers. ‘Socrates is on evil-doer and is overbusy investigating what is under the earth and what is in heaven and making the worse appear the better cause and teaching others these same things. It is something like that; for you saw this yourselves in the comedy of Aristophanes, you saw there a man called Socrates swinging about saying that he walked on air and talking a great deal of nonsense besides about matters of which I know nothing either great or small. And I do not speak as disparaging that kind of knowledge, if anyone is wise about such things. May I never be prosecuted by Meletus upon so many charges; but the truth is, men of Athens, I have nothing to do with these matters. And as witnesses I call the majority of you yourselves, and request you to inform and tell one another, all you who have ever yet heard me conversing; and there are many of you who have. Then tell one another if any of you ever yet heard me in anything small or great conversing about such matters; and from this you will learn that all the other things too which people say about me are of this kind.

But as a matter of fact none of this is so, nor yet, if you have heard anyone say that I try to educate men and demand payment, is this true either. Although this too seems to me to be a fine thing, if anyone could educate men, as do both Gorgias of Leontini and Prodicus of Ceos and Hippias of Elis. For each of these, men of Athens, [is able] going to each of the cities to persuade the young, who are at liberty to associate without fee with whomsoever of their own citizens they may wish,—they persuade these to leave the schools of those men and! associate with themselves paying fees, and to feel gratitude besides. For that matter there is also another wise man here, one from Paros, who I heard was staying in the city; for I happened to meet a man who has spent more money on sophists than everyone else put together, I mean ‘Callias the son of Hipponicus. So I asked him,—he has two sons,—’Callias,’ said I, ‘if your sons had been foals or calves, we could have got and hired a trainer for them who might have made them beautiful and good in their proper excellence. And this person would have been either one of those who understand horses, or of those skilled in farming; but, as it is, since they are men, whom are you minded to get as a trainer for them? Who is skilled in this kind of excellence, that of a man and of a citizen? For I suppose you have thought of this owing to your having sons. Is there anyone,’ said I, ‘or not?’ ‘Certainly there is,’ he replied. ‘Who,’ said I, ‘and of what country? And for how much does he teach?’ ‘Evenus of Paros, Socrates,’ he said, ‘for five minæ.’ And I thought Evenus fortunate if in truth he has this art and teaches for so modest a fee. I myself too should give myself both airs and graces, if I understood these things; but, as a matter of fact, men of Athens, I do not understand them.

Perhaps one of you might reply, ‘But your own profession, Socrates, what is that? Whence have these slanders against you arisen? For surely all this rumour and talking has not resulted, while you were practising nothing more extraordinary than the rest of mankind [unless you were doing something of a different kind from most.] Tell us then what it is, in order that we may not pass a hasty judgment on you.’ The man who says this appears to me to say what is just, and I will try to explain to you what this can be which has created for me both the name and the prejudice. Listen then. And perhaps I shall seem to some of you to be jesting, but, be well assured, I shall tell you the whole truth. For I, men of Athens, have acquired this name through nothing but a certain wisdom. What kind of wisdom then is this? Perhaps it is such wisdom as is possible to man. For really it is probable that I am wise in this; but these men, of whom I spoke just now, would perhaps be wise in some wisdom too great for man, or I know not what to call it; for I certainly do not understand it myself and whoever says that I do, both lies and speaks with a view to slandering me. And, men of Athens, pray do not interrupt, even if I seem at all to you to speak arrogantly; for it is not as my own that I shall utter the words which I speak; but I shall refer them to the speaker,—one worthy of your credit. For it is the god of Delphi whom I shall call as a witness to you of my wisdom, whether indeed it exists, and of what sort it is. I suppose you know Chærephon. He was my comrade from youth and was also a comrade to your popular party and he shared the recent exile and returned with you. And you know well what kind of man Chærephon was, how impetuous in whatever he set to work at. For instance, once he went to Delphi and ventured to ask the oracle this question,—and, as I say, men of Athens, do not interrupt; he actually asked if anyone was wiser than I. So the priestess answered that no one was wiser. And since he himself is dead, his brother here will give you evidence of these things.

Now see for what reasons I mention this; I am going to tell you whence the prejudice against me has arisen. When I heard this, I began to reflect as follows, 'What can the god mean, and what can he be hinting at? For certainly I know that I am not wise in any degree either great or small; what then can he mean by asserting that I am the wisest of men? for surely he, at any rate, is not lying; for a god may not do that.' And for a long time I was perplexed as. to what he could mean, then most reluctantly I turned to an investigation of the matter which was something like this. I went to one of those reputed to be wise, thinking that there, if anywhere, I should refute the oracle and state a proof to this prophecy thus, 'This man is wiser than I, but you said that I was the wisest of men.' do I, examining this man,—I need not mention him by name, but it was one of the public men, in whose case I in my inquiry experienced something of this kind, men of Athens,—and conversing with him, it became clear to me that this man appeared to be wise both to many other men and especially to himself, but that really he was not. And then I tried to show him that he thought he was wise, but that he was not. So by that I made myself odious both to this man and to many of those who were present; anyhow, when I went away, I thought to myself,' I am wiser than this man; for it is probable that neither of us knows anything really excellent, but he indeed thinks that he knows something when he does not, whereas I, as in reality I do not know, do not think that I know either.' At all events I seem to be in some slight degree wiser than him in just this, that what I do not know I do not think that I know either. Thence I went to another man, one of those who were thought to be wiser than that man and I came to the same conclusion as before; and there I made myself odious to him also and to many others.

So after this I already began going my rounds, perceiving indeed and grieving and fearing that I was making myself odious, but yet it teemed to me that I must set the god's command before everything; so I must go in my quest for the meaning of the oracle to all those who were thought to know anything. And, by the dog, men of Athens,—for I must tell you the truth,—verily I experienced something like this. Those who were especially well esteemed seemed to me, while I inquired according to the god's command, to be almost the most deficient; whereas others, who were thought inferior, seemed to be more promising men as far as wisdom was concerned. Now I must describe to you how I wandered, as if performing certain labours, in order that my oracle might be mode quite irrefutable. After the public men I went to the poets, both the poets of tragedy and those of the dithyramb and the rest, thinking that there I should catch myself in the very act of being more ignorant than they. So taking up those of their poems which seemed to me to have cost them most pains, I would ask them what they meant, in order that at the same time I might also learn something from them. Well, I am ashamed to tell you the truth, men of Athens; but yet it must be told. In short almost all, I may say, of those who were present would have given a better account than they about that which they had themselves composed. So I soon discovered concerning the poets too this fact, that it is not by wisdom that they make their poetry, but by a kind of instinct and by being in ecstasy, like the diviners and soothsayers. For these say many fine things, but they understand none of the things which they say. The poets also appeared to me to be in some such state as this. And at the same time I perceived that because of their poetry they fancied themselves to be the wisest of men in everything else also, which they were not. So I departed from them too, thinking that I had prevailed over them in the same particular as over the public men.

Then finally I went to the artisans; for I was conscious that I had, I may say, no knowledge, but I knew that I should find that these at any rate had knowledge of many fine things. And in this I was not deceived, for they knew what I did not know, and in this way were wiser than I. But, men of Athens, the good craftsmen as well seemed to me to have the same defect as the poets; each, because he executed his art well, claimed to be most wise in all other, even the highest, matters, and this failing of theirs threw into the shade that wisdom; so that I asked myself on behalf of the oracle, whether I should choose to be as I am, being neither at all wise in their wisdom nor ignorant in their ignorance, or to have, what they have, both. So I answered myself and the oracle that it was better for me to be as I am.

From this investigation then, men of Athens, have resulted for me many enmities and such as are most harsh and grievous, so that many slanders have sprung from them and I am called by this name, that I am wise. For those who are present always imagine that I am wise myself in that in which I refute another; whereas the fact probably is, men of Athens, that it is really the god who is wise, and by this oracle means this, that the wisdom of man is worth little or nothing; and he appears not to say this of Socrates, but to have made use of my name, making me an example, as though he would say,' Mortals, that man of you is wisest, who, like Socrates, has discovered that in truth with regard to wisdom he is worth nothing.' As to this then I am still even now going round and searching and examining according to the god's command anyone, be he citizen or stranger, whom I may imagine to be wise; and when he does not appear so to me, I support the god and show that he is not wise. And by this occupation I have been left no time to take any part worth mentioning either in the affairs of the State or my private concerns, but am in extreme poverty through my service to the god.

And in addition to this the young men, who most have leisure, the sons of the most wealthy, following me of their own accord, delight in hearing men being examined and themselves often imitate me and so try to examine others; and then, I fancy, they find a great abundance of men who think they know something, but who know little or nothing. Consequently those who are examined by them are angry not with themselves, but with me, and say that a person called Socrates is most objectionable and corrupts the young. And whenever anyone asks them, by doing what and by teaching what, they have nothing to say, and do not know, but in order that they may not appear to be at a loss, they utter these stock charges against all who are philosophers, that they investigate the things in the air and the things under the earth and do not believe in gods and make the worse appear the better cause. For, I fancy, they would not care to tell the truth, which is that they are convicted of pretending to know, when they know nothing. And so inasmuch as they are, I think, ambitious and vehement and numerous and are well drilled and plausible in what they say about me, they have filled your ears, slandering me both long and fiercely. As a result of this also Meletus attacked me and Anytus and Lycon, Meletus being aggrieved for the poets, and Anytus for the craftsmen and the public men, and Lycon for the rhetoricians. So that, as I said at the beginning, I should be surprised if I could in such a short time remove this prejudice from you, so strong has it grown. In this, men of Athens, you have the truth and I speak without concealing from you anything great or small and without dissembling. And yet I know well enough that it is for this same reason that I am disliked. Which is also a proof that I speak the truth and that the prejudice against me is this and that its causes are these. And whether you investigate this now or hereafter, you will find that it is so.

With regard then to the accusations of my first accusers let this be a sufficient defence before you; but against Meletus the good and the patriotic, as he calls himself, and my later accusers, I will try to make my defence next. Again then, as if these were a second set of accusers, let us take up their deposition. It is. something like this; it says that Socrates is an evil-doer, both corrupting the young and not believing in the gods in whom the State believes, but in other new divinities. The indictment then is like that; but let us examine each point of this indictment. It says in fact that I am an evil-doer in corrupting the young. But for my part, men of Athens, I say that Meletus is an evil-doer, because he is jesting in earnest, lightly bringing men to trial, pretending to be in earnest and to care about affairs in which he has never yet taken the slightest interest. And I shall endeavor also to prove to you that this is so.

Come hither then, Meletus, and tell me, Do you not consider it of great importance that the younger men should be as excellent as possible?

Meletus:: 'I do.'

Socrates:: Come then now tell the judges, who improves them? For it is clear that you know, since at any rate you care about it. For having discovered their corrupter, as you call me, you are bringing me here before the judges and accusing me; but come, speak and declare to them who it is that really improves the young. Do you see, Meletus, that you are silent and have nothing to say? And yet does it not seem to you to be disgraceful and a sufficient proof of what I in fact say, that you have not cared about it at all But tell me, my good friend, who improves them?

Meletus:: 'The laws.'

Socrates:: Most excellent sir, that is not what I ask, but what man, who first knows just this very thing,—the laws.

Meletus:: 'These, Socrates, the judges.'

Socrates:: What do you mean, Meletus? Are these able to educate the young and improve them?

Meletus:: 'Certainly.'

Socrates:: All of them, or some of them and others not?

Meletus:: 'All.'

Socrates:: By Hera, you give us good news indeed, and a great abundance of benefactors. But what then? Do these our hearers improve them or not?

Meletus:: 'Yes, they also.'

Socrates:: But what of the senators?

Meletus:: 'The senators too.'

Socrates:: But, Meletus, of course those in the Assembly [the members of the Assembly] do not corrupt the younger men? On the contrary do not all those also improve them?

Meletus:: 'Those also.'

Socrates:: Then, apparently, all the Athenians make them beautiful and good except me, and I alone corrupt them. Is this what you mean?

Meletus:: 'Most decidedly I mean this.'

Socrates:: You have discovered a great misfortune in me. Fray answer me; in the case of horses also do you think this is so, that those who improve them are all mankind, whereas it is some one person only who spoils them? Or is it quite the opposite of this, that only some one person or vary few, I mean the horse-trainers, can improve them, but the majority, if they have anything to do with horses and make use of them, spoil them? Is not this the case, Meletus, both with horses and with every other animal? Of course it is, whether you and Anytus deny it or admit it; for great would be the good-fortune of the young, if indeed only one man corrupts them, and all the rest benefit them. But in fact, Meletus, you give ample proof that you never yet thought of the young, and you clearly exhibit your indifference, in that you have not taken any interest in the matters as to which you are bringing me to trial.

Now once more, do, by Zeus, tell us, Meletus, is it better to live among good citizens or bad ones? Answer, my good friend; for surely I am asking nothing difficult. Do not the wicked do some evil to those who are for the time being nearest to them, whilst the good do some good?

Meletus:: 'Undoubtedly.'

Socrates:: Then is there anyone who would rather be injured than benefited by his companions? Answer, my good man; and in fact the law requires you to answer. Is there anyone who desires to be injured?

Meletus:: 'Of course not.'

Socrates:: Very well, you are bringing me here as one who corrupts the younger men and makes them more wicked; do you mean intentionally or unintentionally?

Meletus:: 'I mean intentionally.'

Socrates:: What then, Meletus? Are you at your time of life so much wiser than I at mine, that you have discovered that those who are evil always do some evil to those who are nearest to them, but the good do some good; whereas I, it seems, have come to such a pitch of ignorance, that I do not know even this,—that, if I make any one of my companions wicked, I shall be likely to receive some evil at his hands, so that, according to you, I create so great an evil as this intentionally? In this I do not believe you, Meletus, and I think that no one else will either; but either I do not corrupt them, or, if I corrupt them, I do so unintentionally, so that in both cases you lie. And if I am corrupting them unintentionally, it is not the custom that one should bring a man here for errors of this kind [and unintentional,] but that one should take him privately and teach and instruct him; for it is clear that, if I learn, I shall cease from doing that at any rate which I do unintentionally. But you shrank from and objected to associating with me and teaching me, but you bring me here, whither it is the custom to bring those who need not instruction, but punishment.

But in fact, men of Athens, that which I said is already apparent, that Meletus never yet took any interest either great or small in these matters. But yet, Meletus, do tell us, in what way do you say that I corrupt the younger men? Or rather, is it not clear that according to the indictment, which you preferred, I do so by teaching them not to believe in the gods in whom the State believes, but in other new divinities? Do you not mean that I corrupt them by teaching this?

Meletus:: 'Yes, most decidedly I mean that.'

Socrates:: Then, Meletus, by these very gods, of whom the question now is, speak still more clearly both to me and to the judges here.

For I cannot understand whether you mean that I teach men to believe that there are some gods, and therefore myself believe that there are gods and am not altogether an atheist and do not offend in this respect, not however those at any rate in whom the State believes, but others, and that it is this with which you charge me, that I teach belief in others; or whether you say that I both absolutely disbelieve in gods myself and teach this to everyone else.

Meletus:: 'I say this, that you entirely disbelieve in gods?

Socrates:: O wonderful Meletus, wherefore do you say this? Do I not even believe, like everyone else, that the sun and moon are gods?

Meletus:: 'No, by Zeus, judges, for he says that the sun is a stone and the moon earth.'

Socrates:: My dear Meletus, do you imagine that you are accusing 'Anaxagoras, and have you such a contempt for the judges, and do you think them so ignorant of letters, as not to know that the books of Anaxagoras of Clazomenæ are full of these assertions? And what is more the young learn from me those things which they are sometimes at liberty to buy for a drachma, at most, from the orchestra, and then to laugh at Socrates, if he pretends that they are his own, especially as they are so peculiar. But, by Zeus, is this your opinion of me,—that I do not believe in the existence of any god?

Meletus:: 'Indeed, by Zeus, you do not, not in the least.'

Socrates:: You are incredible, Meletus, and that too, as I think, even to yourself. For man appears to me, men of Athens, to be an utterly insolent and wanton person, and literally to have preferred this indictment with a kind of insolence and wantonness and youthful petulance. He is like one making trial of us, putting together a sort of riddle, 'Will that wise man Socrates find out that I am jesting and contradicting myself, or shall I deceive him and the rest of my hearers?' For this man appears to me to be contradicting himself in his indictment, as if he were to say, 'Socrates is an evil-doer, who does not believe in gods, but believes in gods.' Yet this is mere trifling.

Help me now to consider, men of Athens, how he appears to me to mean this; but do you, Meletus, answer us. And you, men of Athens, as I requested you at the beginning, pray remember not to interrupt, if I conduct my speech in my customary manner. Is there anyone amongst men, Meletus, who believes that there are human things, but does not believe that there are human beings? He must answer, men of Athens, and not interrupt with first one remark and then another; is there anyone who does not believe in the existence of horses, but believes in that of things pertaining to horses? or who does not believe in flute-players, but believes in flute-playing? There is not, best of men. If you do not wish to give the answer, I tell it to you and everyone else here. But at least answer the next question. Is there anyone who believes in divine things, and does not believe in divinities?

Meletus:: 'There is not.'

Socrates:: How obliging of you to answer at last, on being compelled by the judges. Well then, you say that I believe in and teach the existence of divine things, whether new or old; then at all events I believe in divine things according to your statement; moreover you swore this in your deposition. But if I believe in divine things, I suppose it is an absolute necessity that I should believe in divinities. Is not this so? Of course it is; I set you down as admitting that, as you do not answer. But do we not consider that divinities are either gods or children of gods? Yes or no?

Meletus:: 'Certainly, yes.'

Socrates:: Well then, if I do believe in divinities as you say I do, if indeed divinities are gods of some kind, this would be that about which I say that you are making riddles and jesting, saying that I, while not believing in the gods, do again on the contrary believe in them, inasmuch as I do at least believe in divinities; but if again divinities are, as it were, illegitimate children of gods, either by nymphs or some other mothers, whose children in fact they are said to be, who amongst men would believe that children of gods exist, but that gods do not? For it would be just as absurd as if anyone were to believe in the offspring of horses or likewise of asses [mules,] but were not to believe in the existence of horses and asses. But, Meletus, you must herein surely have been making trial of me when you brought this indictment, or have been in doubt as to what genuine misdeed you should lay to my charge; but that you should persuade any man who has even the smallest intelligence that it is (not) possible for the same man to believe in both divine things and things of the gods, and on the other hand possible for the same man to believe in neither divinities nor gods nor heroes, is quite inconceivable.

But in truth, men of Athens, to show that I am not indeed guilty according to Meletus' indictment, does not seem to me to require a long defence, but even this is sufficient; but as to that which I said in my foregoing remarks also, that there has arisen against me a great and widespread enmity, be well assured that it is true; and this is what will convict me, if anything does, not Meletus nor Anytus, but the prejudice and spite of the multitude; which have in fact convicted many other good men too, and, I fancy, also will convict them; there is no fear of their stopping short at me.

Well, perhaps someone might say, 'What, Socrates! are you not ashamed of having followed such a pursuit, one from which you are now in danger of death?' But I could give this man a just reply, 'You say not well, my friend, if you think that a man who is worth any thing however little ought to take account of chances of life or death, and not to look, when he acts, to this alone, whether he is doing what is just or what is an just, the deeds of a good man or of a bad man. For base indeed, in your esteem at least, would be all those demigods who died at Troy, the son of Thetis above all, who thought so little of danger compared with enduring a disgrace, that when his mother, who was a goddess, spoke to him while he was burning to slay Hector, in some such words as those, I believe, 'My son, if thou shalt avenge the death of thy friend Patroclus and slay Hector, thou thyself wilt die; for in truth straightway after Hector is thy doom ready.' So she spoke; but he, hearing this, made light of death and of danger, and fearing much more to live a coward and not to avenge his friends, replied, 'Straightway may I die, having requited the evil-doer, that I may not remain here laughed to scorn beside the beaked ships, a cumberer of the ground.’ Do you suppose that he cared for death and danger? For so, in truth, it is, men of Athens. Wherever a man stations himself [either] believing it to be best or is stationed by a commander, there he ought, as I think, to remain and face the danger, taking no account of anything either of death or anything else before disgrace.

Therefore, men of Athens, I should be one who has done strange things, if, when the commanders whom you chose to command me assigned to me my post both at Potidæa and at Amphipolis and at Delium, I then indeed remained at the post which they assigned like any other man and ran- the risk of death, but when the god assigned to me, as I both believed and understood, the duty of spending my life in philosophy and in examining myself and everyone else, in that case I were to take fright at death or any other thing whatever and desert my post, Strange indeed would it be, and then in truth anyone might justly bring me into court for not believing in gods, for I should be disobeying the oracle and fearing death and thinking myself to be wise, when I was not. For to fear death, men of Athens, is nothing else than to think one is wise, when one is not, for it is to think one knows what one does not know. For indeed no one knows whether death happens to be even the greatest of all blessings to man, but men fear it as though they knew well that it was the greatest of evils. And this is surely that reprehensible ignorance, that of thinking one knows what one does not know. And in this point, men of Athens, I am here too perhaps better than most men, and if I were really to say that I am wiser than anyone in anything, it would be in this, that not having full knowledge about matters in Hades, so also I think that I do not know; but to do wrong and to disobey my superior, be he god or man, I know to be evil and base. Sooner then than the evils which I know to be evils, I will never fear nor shun things as to which I know not whether they may happen to be good. And so, not even if you now acquit me, disbelieving Anytus, who said that either I ought not to have come in here in the first instance, or, as I had come in, it was impossible not to put me to death, telling you that, if I should escape, straightway would your sons, practising what Socrates teaches, all be utterly corrupted,—if you were to say to me with regard to this, Socrates, this time we will not listen to Anytus, and we acquit you, on this condition however, on condition that you no longer continue in this research nor pursue philosophy; but if you are caught doing this again, you shall die'; if then, as I said, you were to acquit me on these terms, I should say to you, 'Men of Athens, I honour and love you, but I shall obey the god rather than you, and as long as I breathe and have strength, never will I cease from pursuing philosophy and both exhorting your and demonstrating to whomsoever of you I may At any time meet, saying the kind of things that I am wont to say, "Best of men, you are a citizen of Athens, the greatest and most glorious city in wisdom and power, and are you not ashamed of caring for money, that you shall have as much as possible, and for reputation and honour, whilst for wisdom and truth and the soul, that it shall be as good as possible, you do not care nor take thought?" 'And if one of you disputes my words and says that he does care, I shall not at once release him nor depart, but I shall question and cross-question and refute him, and if he seems to me not to possess virtue, but to say that he does, I shall reproach him, because he sets least value on that which is worth most, and sets more value on that which is worth less. These things will I do to whomsoever I meet, be he young or old, citizen or stranger, but especially to you citizens, inasmuch as you are nearer to me by birth. For, know well, the god commands this. And I think that no greater blessing yet befell you in the State than my service of the god. For I go about doing naught else than persuading both the younger and older of you to care neither for your bodies nor your money sooner than, or so earnestly as, for the soul, that it may be as excellent as possible, telling you that virtue does not come from money, but that money and all other blessings that men have, both in private and in public, come from virtue. Well, if I corrupt the young by saying this, that would be mischievous indeed. But if anyone declares that I say anything other than this, he is wrong. With regard to this, I would say, 'Men of Athens, either take Anytus' advice or do not, and either acquit me or do not acquit me, for I shall not act otherwise, not even if I have to die many times.'

Do not interrupt me, men of Athens, but pray abide by that which I requested of you, not to murmur at what I say, but to listen; indeed you will, as I think, derive benefit from listening; for I am in fact about to tell you certain other things also, at which perhaps you will raise a clamour; but on no account do this. For, be well assured, if you put me to death being such a man as I say I am, you will not be doing so much harm to me as to yourselves. For neither Meletus nor Anytus would do me any harm. In fact he would not have the power; for I do not think that a better man may be harmed by a worse. He might however kill me perhaps or banish me or disgrace me. And he, perhaps, and possibly others, think these things great evils; I however do not think them so, but much more to do what he is now doing, to try to put a man to death unjustly.

Now therefore, men of Athens, I am far from making a defence for my own sake, as one might suppose, but for yours, lest by condemning me you should at all offend with respect to the god's gift to you. For if you put me to death, you will not easily find such another, one who literally, though it may be a somewhat ridiculous thing to say, is attached by the god to the State, as if to a horse which is great indeed and noble, but somewhat sluggish from its size and requiring to be roused by some gadfly; and as such, I think, has the god attached me to the State, being such an one as I am, who, rousing and persuading and reproaching each one of you, never cease settling upon you at every point the whole day long; another such man then will not easily be found for you, men of Athens, but if you take my advice, you will spare me. But you perhaps being vexed, like those who while napping are awakened, might; strike me, and, yielding to Anytus, might thoughtlessly kill me, then you might go to sleep and so continue for the rest of your lives, unless the god, caring for you, should send upon you some other. But that I happen to be such as to have been given by the god to the State, you might discern from this; it is not like human nature that I have neglected all my own affairs and have now for so many years suffered my private Interests to be neglected, whereas I am always doing your business, going to each man separately and, like a father or an elder brother, persuading him to care for virtue. And certainly, if I had been deriving any profit from this, and had received payment for these exhortations, I should have had some reason for my conduct; but as it is you see of course yourselves, that my accusers, while in all else accusing me so shamelessly, could not at any rate have the effrontery to produce a witness and say that I ever either exacted or requested any payment. For sufficient, I think, is the witness I produce that I speak the truth,—my poverty.

Now perhaps it might appear to be strange that I do indeed give this advice in private, going about and being very busy, whereas I do not venture to come forward in public before your assembly and give advice to the State. But the reason of this is what you have often heard me say in many places, that there comes to me something from the gods and divine [a voice,] which, as you know, Meletus caricatured in his indictment, when he drew it up. But I have had this, beginning from my childhood, a kind of voice coming to me, which when it comes always diverts me from that which I am about to do, but never urges me on; this it is which opposes my taking part in politics; for, be well assured, men of Athens, if I had [long ago] attempted to take part in political affairs, I should [as] long ago have perished and have done no good either to you or to myself. And be not angry with me when I tell you the truth; there is no man who will preserve his life while honestly opposing either you or any other multitude and preventing many unjust and unlawful things being done in the State, but it is necessary that he who will really fight for what is just, if he is to preserve his life even for a short time, should be a private citizen and not a public man.

And I will give you strong proofs of this, not words, but, what you value, deeds. Listen then to what has happened to me, in order that you may know that I would not through fear of death yield to any man contrary to what is just, but that, if I did not yield at once, I should also at once be likely to perish. What I shall tell you will be commonplace and forensic, yet true. For I, men of Athens, never yet held any office in the State, but once I was a senator; and our tribe [Antiochis] happened to be presiding, when you wished to judge in a body the ten generals who did not rescue their men after the sea-fight, illegally, as afterwards you all came to think. On that occasion I alone of all the presidents opposed [your] doing anything contrary to the laws, [and gave my vote against you;] and when the speakers were ready to denounce and arrest me, and you were urging them on and shouting, I thought I ought rather to face the danger out on the side of the law and justice than through fear of imprisonment or death, to side with you who were meditating on unjust course. And that was while the State was still a democracy. But again when it became an oligarchy, the Thirty, having sent for me and four others to come to the Rotunda, ordered us to bring Leon the Salaminian from Salamis, that he might be put to death; and, as you know, they gave many such orders to many others, wishing to contaminate with guilt as many as they could. Then however I again showed not in word, but in deed, that for death indeed,—if the expression be not too rude,—I do not care a jot, but as to doing nothing unjust or unholy, that is all my care. For I was not so terrified by that government, strong as it was, as to commit an unjust action, but when we came out from the Rotunda, the four indeed went to Salamis and brought Leon, but I departed and went home. And perhaps I should have suffered death for this, if the government had not speedily been overthrown; and of this you will have many witnesses.

Do you then suppose that I should have survived for so many years, if I had taken part in public affairs, and, acting in a manner worthy of a good man, had supported what was just, and had, as I ought, set the highest value on that? Far from it, men of Athens; nor in fact would any other man. But I throughout my life, if I did anything anywhere in public, shall be found to have been a man of this kind, and in private also the same, one who never yet has yielded to any man in anything contrary to what is just either to any other or to one of these, who those who slander me say are my disciples. I however never yet became any man's teacher; but, if anyone desires to hear me speaking and doing my own work, whether he be young or old, I never grudged it to anyone. Neither do I converse only if I receive payment, and not if I receive none, but I offer myself to rich and poor alike to ask me questions and to anyone who wishes to answer and hear what I have to say. And for these, whether anyone turns out a good man or not, I should not justly incur the responsibility, to none of whom I ever yet either promised any instruction or taught them.

And if anyone says that he has ever yet learnt or heard from me in private anything which everyone else did not also hear, be well assured that he is not speaking the truth.

But why really do some delight in spending much time with me? You have heard, men of Athens; I told you the whole truth, that, hearing they take delight in the examination of those who think they are wise, but are not; ‘for that is somewhat amusing. And this, as I say, has been assigned to me by the god to do, both by oracles and by dreams and in every way in which any other divine decree also ever assigned anything whatever to a man to do. This, men of Athens, is both true and easy to prove. For if I am in fact corrupting some of the young, and have corrupted others, they surely ought, if any of them when they grew older had found out that I ever gave them any bad advice when they were young, to have come forward now and accused me and taken their revenge; but if they themselves were unwilling, some of their kinsmen, fathers or brothers or other relatives, if their kinsmen had suffered any evil from me, should have remembered it now [and taken their revenge.] And certainly many of them are present here, whom I see; first, there is Crito, of the same age and dome as myself, father of Critobulus here; then Lysanias of Sphettus, father of Æschines here; again, here in Antiphon of Cephisus, father of Epigenes. Here are those others besides, whose brothers have engaged in this occupation of mine, Nicostratus, the son of Theozotides, brother of Theodotus,—Theodotus indeed is dead, so that he at least could not try to influence him,—and here is Paralus, the son of Demodocus, whose brother was Theages. And Adeimantus, the son of Ariston, whose brother is Plato here, and Æantodorus, whose brother is Apollodorus here. And I could mention to you many others, of whom Meletus ought certainly to have called some one as a witness in the course of his own speech; but if he forgot then, let him call one now,—I give him my place,—and let him speak, if he has any such evidence. But quite contrary to this, men of Athens, you will find them all ready to support me, who corrupt, who work evil against their kinsmen, as Meletus and Anytus declare. For those who themselves have been corrupted would perhaps have some reason for supporting me; but those who are uncorrupted, men now advanced in years, the relations of these, what other reason have they for supporting me except the right and just reason, that they are conscious that Meletus is lying, but that I am speaking the truth?

Very well, men of Athens; the things which I might have to say in my defence are pretty much these and others perhaps of the same kind. But perhaps someone among you might be displeased on remembering his own case, if he indeed, when contesting a suit even less important than this, both implored and besought the judges with many tears, having brought before the court not only his own children, in order that he might be pitied as much as possible, but also many of his relations and friends besides, whereas I, it appears, will do none of these things, and that too when, as it seems, I am in the extremity of danger. Perhaps then someone, having reflected upon this, might become more remorseless towards me, and being angered for these very reasons, might give his vote in anger. Now if anyone among you is in this state of mind,—I do not assume that be is; but if he is, I think that I should say what is reasonable in answer to him, if I said, 'Best of men, I perhaps have some kinsmen too.' In fact, to use that saying of Homer, 'Neither am I born of oak or rock,' but of man; and so I also have kinsmen and I have sons, men of Athens, three sons, one now a youth and two still children. But yet I shall not bring any of them forward here and implore you to acquit me. Now why is it that I shall do none of these things? Not out of obstinacy, men of Athens, nor out of disrespect to you, but whether or not I am undaunted in the face of death, is another question; at any rate both for my own credit and yours and that of the State as a whole, it does not seem to me to be honourable that I should do any of these things, both as being of such an age and as bearing this name, whether it be true or a lie; but at least it has been decided that Socrates is in some respect superior to the multitude. If therefore those of you who are thought to be superior whether in wisdom or courage or any other virtue whatsoever, shall be men of this kind, it would be disgraceful; the kind, I mean, of which I have often seen some, when they are brought to trial, men considered to be somewhat, but making marvellous efforts, as imagining that they would suffer a terrible thing, it they were put to death, as though they would be immortal, if you did not kill them; and these seem to me to fasten discredit on the State, so that any stranger too might suppose that those of the Athenians who excel in virtue, those whom they themselves select in preference to themselves both in the magistracies and in the other posts of honour,—these are in naught superior to women. For, men of Athens, neither ought we who are thought to be even anything whatever to do these things, nor if we do them, ought you to allow it, but you should show this very thing, that you will much rather condemn the man who introduces these pitiful stage-effects and makes the State ridiculous than him who remains quiet.

But apart from reputation, men of Athens, it does not seem to me to be just either, to entreat a judge nor by entreating to gain acquittal, but to inform and persuade him. For it is not for this that a judge sits,—for dispensing justice by favour, but for giving judgment thereupon; and he has sworn not to favour whomsoever he pleases, but to judge according to the laws. It is therefore neither right that we should accustom you to perjure yourselves nor that you should become accustomed so to do; for neither of us would be acting with piety.

Do not therefore deem it right that I should do towards you such things as I consider neither honourable nor just nor holy,—yes, by Zeus, in all cases and especially now, when I am being accused of impiety by Meletus here. For if I were to persuade you and by entreating were to put constraint upon you when you had taken an oath, I should clearly be teaching you not to believe that there are gods, and while making my defence, should literally be accusing myself of not believing in gods. But this is far from being the case; for I believe, men of Athens, as none of my accusers do, and I leave it to you and the god to judge concerning me in whatever way is destined to be best both for me and for you.

That I am not vexed, men of Athens, at this which has happened, that you have condemned me, both many other things contribute to bring about, and especially this,—that what has happened has not happened contrary to my expectation, but much more do I wonder at the resulting number of the votes on each side. For I at least did not imagine that it would be by so little, but by much; but as it is, apparently, if only thirty of the votes had changed their side, I should have been acquitted.

As against Meletus indeed, I think, I have even as it is gained an acquittal, and not only have I gained an acquittal, but this at least is clear to everyone, that if Anytus and Lycon had not come forward to accuse me, he would even have been fined a thousand drachma, for not having obtained the fifth part of the votes.

So the man assesses the penalty at death. Very well. But at what would you have me set the counter-assessment, men of Athens? Evidently at my deserts, would you not? 'What then shall I say? What do I deserve to suffer or to pay, because during my life I did not remain quiet, but having neglected what most men care for, money-making and domestic affairs and military appointments and popular oratory and also all the offices and clubs and factions which exist in the State, thinking myself to be in reality too honest to enter upon these and yet preserve my life, so I did not indeed enter on that, by entering on which I was not likely to be of any service either to you or myself, but entering on doing in private to each individual the greatest service, as I call it, [on that I entered] trying to persuade each of you not to care first either for any of his own affairs before he cared for himself, that he might be as good and wise as possible, nor for any of the affairs of the State before the State itself; and to care for everything else thus in the same manner. What then do I, being a man of this kind, deserve to suffer? Something good, men of Athens, if at least I must in truth assess the penalty according to my deserts; and moreover a good thing of a kind which would be suitable for me. What then is suitable for a poor man, a benefactor, one who requires to be at leisure for the purpose of exhorting you? There is nothing, men of Athens, which is more suitable than that such a man should be maintained in the Prytaneum, much more at least than anyone among you who has won a victory at Olympia with a horse or a pair or a team. For he indeed makes you appear to be happy, but I make you to be so; and he is not in need of support, but I am. If then I must assess the penalty at my deserts according to what is just, I assess it at this, maintenance in the Prytaneum.

Now perhaps in saying this also, I seem to speak in much the same way as about lamentations and entreaty, speaking pre-sumptuously; but the case is not, men of Athens, like that, but rather like this. I am convinced that I never wronged any man intentionally, but I do not convince you of this; for it is but a short time that we have conversed with one another; or else, as I believe, if you had a law, as ‘other men have, not to decide a capital case in a single day only, but in many,’ you would have been convinced. But, as it is, to clear away gross calumnies in a short time is no easy matter. Convinced then as I am that I have wronged no man, I am far from likely to wrong myself and to declare against myself that I am worthy of any evil and to assess the penalty for myself at something of this kind. Through fear of what? Is it lest I should suffer that which Meletus assesses ¦ for me, as to which I say I know not either if it is good or if it is evil? Instead of this then am I to choose what I well know are evils, assessing it at this? At imprisonment? And why should I live in a prison, a slave to the ‘magistracy appointed from time to time [the Eleven?] Or at a fine and to lie imprisoned until I have paid it? But for me that is the same as what I mentioned just now; for I have no money, from which to pay. Then am I to assess it at exile? For perhaps you would assess it at this for me. A great love of life would indeed possess me, if I were to be so devoid of reason as not to be able to infer, that you indeed being my fellow-citizens became unable to bear my occupations and my discourses, and they have become burdensome and odious to you, so that you are now seeking to be released from them, whereas others of course will bear them cheerfully. Far from it, men of Athens; a fine life indeed would it be for a man of my age, having gone into exile, to live changing from one city to another and being expelled. For I know well that, wherever I go, the young will listen to me discoursing, as they do here; and, if I drive them away, they will themselves expel me, persuading their elders; but if I do not drive them away, their fathers and kinsmen will expel me for their sakes.

Perhaps then someone would say, ‘But will you not be able, Socrates, having gone Into exile, to live being silent and remaining quiet?’ It is just this, of which it is the hardest of all to convince some of you. For if on the one hand I say that this is to disobey the god and that for this reason it is impossible to remain quiet, you will not believe me, thinking that I am dissembling; or if on the other hand I say that this happens also to be a very great blessing to a man, to discourse each day on virtue and the other matters, about which you hear me conversing and examining myself and others, and that an unexamined life is not worth living, when I say this still less will you believe me. The facts are indeed as I say, men of Athens, but to convince you is no easy matter. And at the same time I have not been accustomed to deem myself deserving of any evil. If indeed I had money, I should have assessed the penalty at a fine of as much as I was expected to pay; for I should have suffered no harm; but as it is,—for I have none, unless of course you wish to assess it for me at as much as I should be able to pay. And perhaps I should have been able to pay you a mina of silver; at so much then I assess it. But Plato here, men of Athens, and Crito and Critobulus and Apollodorus tell me to assess it at thirty mines, and that they themselves are my sureties; so I assess it at so much. And these will lie trustworthy sureties to you for the money.

It is not for the sake of much time, men of Athens, that you will have the name and the blame from those who wish to defame the State, of having put to death Socrates, a wise man. For they who wish to reproach you will say indeed that I am wise, even although I am not. Now if you had waited for a short time, this would have happened for you of its own accord; for you surely observe my age, that it is already far on in life, and nigh to death. And I say this not to you all, but to those who have condemned me to death. And to these very men I say this also. Perhaps you think, men of Athens, that I have been convicted through deficiency of the kind of argument, by which I should have convinced you, had I thought it right to do and to say anything, so as to be acquitted. Far from it. I have indeed been convicted through deficiency, not however of arguments, but of audacity and impudence and the will to utter before you such things as would have been most pleasant to you to hear, namely me both wailing and lamenting and doing and saying many other things, which, as I say, are unworthy of me; such things in fact as you have been accustomed to hear from other men. But neither then did I think that I ought because of the danger to do any slavish action, nor now do I repent of having thus made my defence, but much rather do I prefer to have made my defence in this way and to die than to have made it in that way and to live; for neither in a lawsuit nor in war ought I or any other person to contrive this, how by using any means he shall avoid death. And in fact it often becomes evident in battles that a man might escape, At least from death, by laying down his arms and turning to supplication of his pursuers; and there are many devices in every danger so as to escape death, if a man will venture to do and say anything. But this, I think, may not be difficult, men of Athens, to escape death, but it is far more difficult to escape wickedness; for it runs swifter than death. And now I, inasmuch as I am slow and old, have been overtaken by the slower, but my accusers, inasmuch as they are clever and swift, have been overtaken by the swifter, wickedness. And now I indeed shall depart, having been condemned by you to death, but these, having been condemned by truth to depravity and injustice. And I abide by the assessment and so do they. Perhaps it was necessary too that these things should so befall, and I think that they are fair.

In the next place I desire to prophesy to you who have condemned me; for I am in fact now in that case in which men most do prophesy,—when they are about to die. Men of Athens, I tell you, who have put me to death, that straightway after my death a punishment will come upon you far more severe, by Zeus, than that with which you have put me to death; for now you have done this, thinking you would be released from giving an account of your lives. But, I tell you, the case will turn out for you far otherwise. Those who call you to account will be more numerous, whom I have now restrained, though you did not perceive it; and they will be more severe inasmuch as they are younger and you will be more vexed. For if you imagine that by putting men to death you will stop anyone from reproaching you for not living rightly, you are mistaken; for that method of escape is neither altogether possible nor honourable, but this is both very honourable and very easy, not to suppress other men, but to prepare one’s self to be as good as possible. Having then prophesied this to you who have voted against me, I take my leave of you.

But with you who have voted for my acquittal I would gladly converse about this thing which has come to pass, while the magistrates are busy, and while yet I do not go to the place where I must go and die. Stay here with me then, men of Athens, so long. For nothing hinders our talking with one another, while we may. For I wish to explain to you, as being my friends, what may be the meaning of that which has now befallen me. To me, my judges,—for in calling you judges I should call you rightly,—a marvellous thing has happened. For my customary prophetic voice, that of the divinity, in all the former time was on all occasions quite constant, opposing me even in quite trifling matters, if in aught I were not going to act rightly; but now that has happened to me which you yourselves also see, which anyone might surely suppose, and which is considered, to be the extreme of evil. Yet neither when in the morning I was leaving my house did the sign of the god oppose me, nor when I was coming up here [before the court,] nor anywhere in my speech when I was about to say anything; and yet in other discourses it has at many points checked me in the midst of speaking. But now it has nowhere in this matter opposed me either in any deed or word. What then do I conceive to be the reason of this? I will tell you; it is probable that this which has happened has been a good thing for me, and it cannot be that we conceive rightly, as many of us as suppose that to die is an evil. Surely a great proof of this has arisen; for it is not possible that the accustomed sign would have failed to oppose me, if I had not been about to achieve some good.

And let us consider in this way also, that there is much hope that it is a good thing. For to die is one of two things; either it is such that the dead man is nothing and has no sensation of anything, or, according to what men say, it happens to be a kind of change and migration of the soul from the present abode, into another. And ‘if on the one hand there is no sensation, but something like a sleep wherein one sleeping sees not even a dream, death would be a marvellous gain. For I think that if a man had to select that night in which he slept so soundly that he did not even see a dream, and, having compared with this night all the other nights and days of his life, had to reflect and say how many days and nights in bin life he had spent better and more pleasantly than this night, I think that not only a private person, but even the great king himself would find these easy to count compared with the other days and nights. If then death is such as this, I for my part count it a gain. For in fact all time thus appears to be nothing more than a single night. But if on the other hand death is like going a journey from here to another place, and what is said is true, namely that all the dead are there, what greater blessing could there be than this, my judges? For if anyone, having arrived at Hades, delivered from these who profess to be judges, shall find those who truly are judges, who are also said to give judgment there, Minos and Rhadamanthus and Æacus and Triptolemus, and such others of the demigods as were just in their lives, would the journey be worthless? Or again, how much would any of you give to associate with Orpheus and Musæus and Hesiod and Homer? I indeed nm willing to die many times, if these things are true; for to myself especially the sojourn there would be admirable, when I should meet with Palamedes and Ajax the son of Telamon, and any other of the ancients who has died through an unjust judgment, and for me to compare my own sufferings with theirs would, as I think, be not unpleasant; and, the greatest thing of all, to spend my time questioning and making inquiry of those who are there, as of those here, to see which of them is wise and which thinks that he is, but is not. And how much, my judges, would anyone give to question him who led the great army against Troy, or Odysseus or Sisyphus or ten thousand others one might mention, both men and women? To converse with whom and to be with them and question them would be an infinite degree of happiness. There, I suppose, they certainly do not put men to death for this; ‘for those that are there are not only happier in all else than those that are here, but are now and for ever immortal, if at least what is said is true.

But you also, my judges, ought to be of good cheer with respect to death and to contemplate this one thing as true, that for a good man there is no evil, either while living or when dead, nor are his fortunes neglected by the gods; nor have mine now befallen me by chance, but this is clear to me, that to die now and be rid of trouble was better for me. On this account the sign nowhere turned me aside, and I for my part am hardly angry with my accusers. And yet it was not with this intention that they condemned me or accused me, but thinking to do me harm; for this they deserve blame. Thus much however I beg of them; punish my sons when they grow up, men of Athens, troubling them in the very same way as I have troubled you, if they seem to you to care either for money or for anything else sooner than for virtue; and if they think that they are something, when they are nothing at all, reproach them, as I did you, because they care not for what they ought and think that they are something when they are worth nothing. And if you do this, I shall have received justice at your hands, both myself and my sons. But now it is time to depart,—for me to die, for you to live. But which of us goes to the better lot, is unknown to everyone but the god.

# The Apology.
of
Socrates.
Translated by Taylor, Thomas.
CHARACTERS.
Socrates; Melitus.

---

Socrates:: I know not, O Athenians, how you may be affected by my accusers: I indeed have through them almost forgotten myself, so persuasively have they spoken; though, as I may say, they have not asserted any thing which is true. But among the multitude of their false assertions I am most surprised at this, in which they say that you ought to beware of being deceived by me, as if I were an eloquent speaker. For that they should not be ashamed of asserting that which will be immediately confuted by me in reality, since in the present instance I shall appear to you to be by no means eloquent,—this seems to me to be the consummation of impudence; unless they call him eloquent who speaks the truth. For, if they assert this, I shall indeed acknowledge myself to be a rhetorician, though not according to their conceptions. They have not then, as I said, asserted any thing which is true; but from me you will hear all the truth. Not, by Jupiter, O Athenians, that you will hear from me a discourse splendidly decorated with nouns and verbs, and adorned in other respects, like the harangues of these men; but you will hear me speaking in such language as may casually present itself. For I am confident that what I say will be just, nor let any one of you expect it will be otherwise: For it does not become one of my age to come before you like a lad with a studied discourse. And, indeed, I very much request and beseech you, O Athenians, that if you should hear me apologizing in the same terms and modes of expression which I am accustomed to use in the Forum, on the Exchange and public Banks, and in other places, where many of you have heard me,—that you will neither wonder nor be disturbed on this account; for the case is as follows:—I now for the first time come before this tribunal, though I am more than seventy years old; and consequently I am a stranger to the mode of speaking which is here adopted. As, therefore, if I were in reality a foreigner, you would pardon me for using the language and the manner in which I had been educated, so now I request you, and this justly, as it appears to me, to suffer the mode of my diction, whether it be better or worse, and to attend to this, whether I speak what is just or not: for this is the virtue of a judge, as that of an orator is to speak the truth. In the first place, therefore, O Athenians, it is just that I should answer the first false accusations of me, and my first accusers, and afterwards the latter accusations, and the latter accusers. For many have been accusers of me to you for many years, and who have asserted nothing true, of whom I am more afraid than of Anytus and his accomplices, though these indeed are powerful in persuading; but those are still more so, who having been conversant with many of you from infancy, have persuaded you, and accused me falsely. For they have said, that there is one Socrates, a wise man, studious of things on high, and exploring every thing under the earth, and who also can make the worse to be the better argument. These men, O Athenians, who spread this report are my dire accusers. For those who hear it think that such as investigate these things do not believe that there are Gods. In the next place, these accusers are numerous, and have accused me for a long time. They also said these things to you in that age in which you would most readily believe them, some of you being boys and lads; and they accused me quietly, no one speaking in my defence. But that which is most irrational of all is this, that neither is it possible to know and tell their names, except some one of them should be a comic poet. Such however as have persuaded you by employing envy and calumny, together with those who being persuaded themselves have persuaded others,—with respect to all these, the method to be adopted is most dubious. For it is not possible to call them to account here before you, nor to confute any one of them; but it is necessary, as if fighting with shadows, to make my defence and refutation without any to answer me. Consider, therefore, as I have said, that my accusers are two-fold, some having accused me lately, and others formerly; and think that it is necessary I should answer the latter of these first; for you also have heard these my accusers, and much more than you have those by whom I have been recently accused. Be it so. I must defend myself then, O Athenians, and endeavor in this so short a space of time to remove from you the calumny which you have so long entertained. I wish, therefore, that this my defence may effect something better both for you and me, and that it may contribute to some more important end. I think however that it will be attended with difficulty, and I am not entirely ignorant what the difficulty is. At the same time let this terminate as Divinity pleases. It is my business to obey the law, and to make my apology.

Let us repeat, therefore, from the beginning what the accusation was, the source of that calumny in which Melitus confiding brought this charge against me. Be it so. What then do my accusers say? For their accusation must be formally recited as if given upon oath. It is this: SOCRATES ACTS WICKEDLY, AND WITH CRIMINAL CURIOSITY

INVESTIGATES THINGS UNDER THE EARTH, AND IN THE HEAVENS. HE ALSO MAKES THE WORSE TO BE THE BETTER ARGUMENT; AND HE TEACHES THESE THINGS TO OTHERS. Such is the accusation: for things of this kind you also have yourselves seen in the comedy of Aristophanes: for there one Socrates is carried about, who affirms that he walks upon the air, and idly asserts many other trifles of this nature; of which things however I neither know much nor little. Nor do I say this as despising such a science, if there be any one wise about things of this kind, lest Melitus should charge me with this as a new crime; but because, O Athenians, I have no such knowledge. I adduce many of you as witnesses of this, and I call upon such of you as have at any time heard me discoursing, and there are many such among you, to teach and declare to each other, if you have ever heard me speak much or little about things of this kind. And from this you may know that other things also, which the multitude assert of me, are all of them of a similar nature: for no one of them is true. For neither if you have heard any one assert that I attempt to teach men, and that I make money by so doing,—neither is this true. This indeed appears to me to be a beautiful thing, if some one is able to instruct men, like Gorgias the Leontine, Prodicus the Cean, and Hippias the Elean. For each of these, in the several cities which he visits, has the power of persuading the young men, who are permitted to apply themselves to such of their own countrymen as they please without any charge, to adhere to them only, and to give them money and thanks besides for their instruction. There is also another wise man, a Parian, who I hear has arrived hither. For it happened that I once met with a man who spends more money on the sophists than all others,—I mean Callias the son of Hipponicus. I therefore asked him, for he has two sons, O Callias, said I, if your two sons were two colts or calves, should we not have some one to take care of them, who would be paid for so doing, and who would make them beautiful, and the possessors of such good qualities as belong to their nature? But now, since your sons are men, what master do you intend to have for them? Who is there that is scientifically knowing in human and political virtue of this kind? For I think that you have considered this, since you have sons. Is there such a one, said I, or not? There certainly is, he replied. Who is he? said I. And whence is he? And for how much money does he teach? It is Evenus the Parian, said he, Socrates, and he teaches for five minæ. And I indeed have considered Evenus as blessed. if he in reality possesses this art, and so elegantly teaches. I, therefore, should also glory and think highly of myself, if I had a scientific knowledge of these things; but this, O Athenians, is certainly not the case.

Perhaps, however, some one may reply: But, Socrates, what have you done then? Whence have these calumnies against you arisen? For unless you had more curiously employed yourself than others, and had done something different from the multitude, so great a rumour would never have been raised against you. Tell us, therefore, what it is, that we may not pass an unadvised sentence against you. He who says these things appears to me to speak justly, and I will endeavor to show you what that is which has occasioned me this appellation and calumny. Hear, therefore; and though perhaps I shall appear to some of you to jest, yet be well assured that I shall tell you all the truth. For I, O Athenians, have acquired this name through nothing else than a certain wisdom. But of what kind is this wisdom? Perhaps it is human wisdom. For this in reality I appear to possess. Those indeed whom I just now mentioned possessed perhaps more than human wisdom, which I know not how to denominate: for I have no knowledge of it. And whoever says that I have, speaks falsely, and asserts this to calumniate me. But, O Athenians, be not disturbed if I appear to speak somewhat magnificently of myself. For this which I say is not my own assertion, but I shall refer it to one who is considered by you as worthy of belief. For I shall adduce to you the Delphic Deity himself as a testimony of my wisdom, if I have any, and of the quality it possesses. You certainly then know Chærepho: he was my associate from a youth, was familiar with most of you, and accompanied you in and returned with you from your exile. You know, therefore, what kind of a man Chærepho was, and how eager in all his undertakings. He then, coming to Delphi, had the boldness to consult the oracle about this particular. Be not, as I said, O Athenians, disturbed: for he asked if there was any one more wise than I am. The Pythian priestess, therefore, answered that there was not any one more wise. His brother can testify to you the truth of these things; for Chærepho himself is dead.

Consider then on what account I assert these things: for I am going to inform you whence this calumny against me arose. When, therefore, I had heard this answer of the oracle, I thus considered with myself, What does the God say? and what does he obscurely signify? For I am not conscious to myself that I am wise, either in a great or in a small degree. What then does he mean in saying that I am most wise? For he does not lie, since this is not lawful to him. And for a long time, indeed, I was dubious what he could mean. Afterwards with considerable difficulty I betook myself to the following mode of investigating his meaning. I went to one of those who appear to be wise men, that here if any where I might confute the prediction, and evince to the oracle that this man was more wise than I.

Surveying, therefore, this man, (for there is no occasion to mention his name, but he was a politician;) while I beheld him and discoursed with him, it so happened, O Athenians, that this man appeared to me to be wise in the opinion of many other men, and especially in his own, but that he was not so. And afterwards I endeavored to show him that he fancied himself to be wise, but was not. Hence I became odious to him, and also to many others that were present. Departing, therefore, I reasoned with myself that I was wiser than this man. For it appears that neither of us knows any thing beautiful or good: but he indeed not knowing, thinks that he knows something; but I, as I do not know any thing, neither do I think that I know. Hence in this trifling particular I appear to be wiser than him, because I do not think that I know things which I do not know. After this I went to another of those who appeared to be wiser than him; and of him also I formed the same opinion. Hence also I became odious to him and many others.

Afterwards however I went to others, suspecting and grieving and fearing that I should make enemies. At the same time however it appeared to me to be necessary to pay the greatest attention to the oracle of the God, and that, considering what could be its meaning, I should go to all that appeared to possess any knowledge. And by the dog, O Athenians, (For it is necessary to tell you the truth,) that which happened to me was as follows. Those that were most celebrated for their wisdom appeared to me to be most remote from it; but others who were considered as far inferior to them possessed more of intellect. But it is necessary to relate to you my wandering, and the labours as it were which I endured, that the oracle might become to me unconfuted. For after the politicians I went to the poets both tragic and dithyrambic, and also others, expecting that I should here immediately find myself to be less wise than these. Taking up, therefore, some of their poems which appeared to me to be the most elaborately written, I asked them what was their meaning, that at the same time I might learn something from them. I am ashamed indeed, O Athenians, to tell you the truth; but at the same time it must be told. For, as I may say, all that were present would have spoken better about the things which they had composed. I discovered this, therefore, in a short time concerning the poets, that they did not effect, by wisdom that which they did, but by a certain genius and from enthusiastic energy, like prophets and those that utter oracles. For these also say many and beautiful things, but they understand nothing of what they say. Poets, therefore, appeared to me to be affected in a similar manner. And at the same time I perceived that they considered themselves, on account of their poetry, to be the wisest of men in other things, in which they were not so. I departed, therefore, also from them, thinking that I surpassed them by the very same thing in which I surpassed the politicians.

In the last place, therefore, I went to the artificers. For I was conscious to myself that I knew nothing, as I may say, but that these men possessed knowledge, because I had found them acquainted with many and beautiful things. And in this indeed I was not deceived; for they knew things which I did not, and in this they were wiser than I. But, O Athenians, good artificers also appeared to me to have the same fault as the poets. For each, in consequence of performing well in his art, thought that he was also most wise in other things, and those the greatest. And this their error obscured that very wisdom which they did possess. I therefore asked myself in behalf of the oracle, whether I would choose to be as I am, possessing no part either of their wisdom or ignorance, or to have both which they possess. I answered, therefore, for myself and for the oracle, that it was advantageous for me to be as I am.

From this my investigation, O Athenians, many enmities were excited against me, and such as were most grievous and weighty, so that many calumnies were produced from them; and hence I obtained the appellation of the wise man. For those that hear me think that I am wise in these things, the ignorance of which I confute in others. It appears however, O Athenians, that Divinity is wise in reality, and that in this oracle he says this, that human wisdom is but of little, or indeed of no worth; and it seems that he used my name, making me an example, as if he had said, He, O men, is the wisest among you, who, like Socrates, knows that he is in reality of no worth with respect to wisdom. These things, therefore, going about, I even now inquire and explore in obedience to the God, both among citizens and strangers, if any one of them appears to me to be wise; and when I find he is not, giving assistance to the God, I demonstrate that he is not wise. And in consequence of this employment I have no leisure worth mentioning either for public or private transactions; but I am in great poverty through my religious cultivation of the God.

Besides, the youth that spontaneously follow me, who especially abound in leisure, as being the sons of the most wealthy, rejoice on hearing men confuted by me; and often imitating me, they afterwards endeavor to make trial of others. In which attempt I think they find a numerous multitude of men who fancy that they know something, but who know little or nothing. Hence, therefore, those who are tried by them are angry with me, and not with them, and say that there is one Socrates a most wicked person, and who corrupts the youth. And when some one asks them what he does, and what he teaches, they have nothing to say, but are ignorant. That they may not however appear to be dubious, they assert things which may be readily adduced against all that philosophize, as, that he explores things on high and under the earth, that he does not think there are Gods, and that he makes the worse to be the better reason. For I think they are not willing to speak the truth, that they clearly pretend to be knowing, but know nothing. Hence, as it appears to me, being ambitious and vehement and numerous, and speaking in an elegant and persuasive manner about me, they fill your ears, both before and now calumniating in the extreme. Among these, Melitus, Anytus, and Lycon, have attacked me; Melitus indeed being my enemy on account of the poets; but Anytus on account of the artificers and politicians; and Lycon on account of the orators. So that, as I said in the beginning, I should wonder if I could remove such an abundant calumny from your minds in so short a time. These things, O Athenians, are true; and I thus speak, neither concealing nor subtracting any thing from you, either great or small; though I nearly know that I shall make enemies by what I have said. This however is an argument that I speak the truth, that this is the calumny which is raised against me, and that the causes of it are these. And whether now or hereafter you investigate these things, you will find them to be as I have said. Concerning the particulars, therefore, which my first accusers urged against me, let this be a sufficient apology to you.

In the next place, I shall endeavor to reply to Melitus, that good man and lover of his country, as he says, and also to my latter accusers. For again, as being different from the former accusers, let us take the oath of these men for calumny. The accusation then is as follows: Socrates, it says, acts unjustly, corrupting the youth; and not believing in those Gods in which the city believes, he introduces other novel dæmoniacal natures. Such then is the accusation; of which let us examine every part. It says, therefore, that I act unjustly by corrupting the youth. But I, O Athenians, say that Melitus acts unjustly, because he intentionally trifles, rashly bringing men into danger, and pretending to be studious and solicitous about things which were never the objects of his care. But that this is the case I will endeavor to show you.

Tell me then, O Melitus, whether you consider it as a thing of the greatest consequence, for the youth to become the best of men?—

Meletus:: I do.—

Socrates:: Come, then, do you therefore tell them what will make them better? For it is evident that you know, since it is the object of your care. For, having found me to be a corrupter of youth, as you say, you have brought me hither, and are my accuser; but come, inform me who it is that makes them better, and signify it to this assembly do you see, O Melitus, that you are silent, and have not any thing to say? Though, does it not appear to you to be shameful, and a sufficient argument of what I say, that this is not the object of your attention? But tell me, O good man, who it is that makes them better.—

Meletus:: The laws.—

Socrates:: I do not, however, ask this, O best of men, but what man it is that first knows this very thing, the laws.—

Meletus:: These men, Socrates, are the judges.—

Socrates:: How do you say, Melitus? Do they know how to instruct the youth, and to make them better?—

Meletus:: Especially so.—

Socrates:: But whether do all of them know how? or do some of them know, and others not?—

Meletus:: All of them.—

Socrates:: You speak well, by Juno, and adduce a great abundance of those that benefit. But what? Can these auditors also make the youth better, or not?—

Meletus:: These also.—

Socrates:: And what of the senators?—

Meletus:: These senators also can effect this.—

Socrates:: But, O Melitus, do some of those that harangue the people in an assembly corrupt the more juvenile; or do all these make them better?—

Meletus:: All these.—

Socrates:: All the Athenians therefore, as it seems, make them to be worthy and good, except me, but I alone corrupt them. Do you say so?—

Meletus:: These very things I strenuously assert.—

Socrates:: You charge me with a very great infelicity. But answer me: Does this also appear to you to be the case respecting horses, *viz.* that all men can make them better, but that there is only one person that corrupts them? or does the perfect contrary of this take place, so that it is one person who can make them better, or, at least, that those possessed of equestrian skill are very few; but the multitude, if they meddle with and make use of horses, corrupt them? Is not this the case, O Melitus, both with respect to horses and all other animals? It certainly is so, whether you and Anytus say so, or not. For a great felicity would take place concerning youth if only one person corrupted, and the rest benefited them. However, you have sufficiently shown, O Melitus, that you never bestowed any care upon youth; and you clearly evince your negligence, and that you pay no attention to the particulars for which you accuse me.

Further still, tell me, by Jupiter, O Melitus, whether it is better to dwell in good or in bad polities? Answer, my friend: for I ask you nothing difficult. Do not the depraved always procure some evil to those that continually reside near them; and do not the good procure some good?—

Meletus:: Entirely so.—

Socrates:: Is there then any one who wishes to be injured by his associates, rather than to be benefited? Answer, O good man: for the law orders you to answer. Is there any one who wishes to be injured?—

Meletus:: There is not.—

Socrates:: Come then, whether do you bring me hither, as one that corrupts the youth, and makes them depraved willingly, or as one who does this unwillingly?—

Meletus:: I say that you do it willingly.—

Socrates:: But what, O Melitus, is it possible that you, who are so much younger than I am, should well know that the depraved always procure some evil to those that are most near to them, and the good some good; but that I should have arrived at such ignorance as not to know that, if I make any one of my associates depraved, I shall be in danger of receiving some evil from him; and that I, therefore, do this so great an evil willingly, as you say? I cannot be persuaded by you, O Melitus, as to these things, nor do I think that any other man would: but either I do not corrupt the youth, or I corrupt them unwillingly. So that you speak falsely in both assertions. But if I unwillingly corrupt them, the law does not order me to be brought hither for such-like involuntary offences, but that I should be taken and privately taught and admonished. For it is evident that, if I am taught better, I shall cease doing that which I unwillingly do. But you, indeed, have avoided me, and have not been willing to associate with and instruct me; but you have brought me hither, where the law orders those who require punishment, and not discipline, to be brought. Wherefore, O Athenians, this now is manifest which I have said, that Melitus never paid the smallest attention to this affair.

At the same time, however, tell us, O Melitus, how you say I corrupt the youth. Or is it not evident, from your written accusation, that I teach them not to believe in the Gods in which the city believes, but in other new divine powers? Do you not say that, teaching these things, I corrupt the youth?—

Meletus:: Perfectly so: I strenuously assert these things.—

Socrates:: By those very Gods, therefore, Melitus, of whom we are now speaking, speak in a still clearer manner both to me and to these men. For I cannot learn whether you say that I teach them to think that there are not certain Gods, (though I myself believe that there are Gods, for I am by no means an atheist, nor in this respect do I act unjustly,) not, indeed, such as the city believes in, but others, and that this it is for which you accuse me, that I introduce other Gods; or whether you altogether say that I do not believe there are Gods, and that I teach this doctrine also to others.—

Meletus:: I say this, that you do not believe that there are Gods.—

Socrates:: O wonderful Melitus, why do you thus speak? Do I then think, unlike the rest of mankind, that the sun and moon are not Gods?—

Meletus:: He does not, by Jupiter, O judges: for he says that the sun is a stone, and that the moon is earth.—

Socrates:: O friend Melitus, you think that you accuse Anaxagoras; and you so despise these judges, and think them to be so illiterate, as not to know that the books of Anaxagoras the Clazomenian are full of these assertions. Besides, would the youth learn those things from me, which they might buy for a drachma at most in the orchestra, and thus might deride Socrates if he pretended they were his own, ESPECIALLY SINCE THEY ARE LIKEWISE SO ABSURD? But, by Jupiter, do I then appear to you to think that there is no God?—

Meletus:: None whatever, by Jupiter.—

Socrates:: What you say, O Melitus, is incredible, and, as it appears to me, is so even to yourself. Indeed, O Athenians, this man appears to me to be perfectly insolent and intemperate in his speech, and to have in reality written this accusation, impelled by a certain insolence, wantonness, and youthfulness. For he seems, as it were, to have composed an ænigma in order to try me, and to have said to himself, Will the wise Socrates know that I am jesting, and speaking contrary to myself? Or shall I deceive him, together with the other hearers? For he appears to me to contradict himself in his accusation, as if he had said, Socrates is impious in not believing that there are Gods, but believing that there are Gods. And this, indeed, must be the assertion of one in jest.

But let us jointly consider, O Athenians, how he appears to me to have asserted these things. And do you, O Melitus, answer us, and, as I requested you at first, be mindful not to disturb me if I discourse after my usual manner. Is there then any man, O Melitus, who thinks that there are human affairs, but does not think that there are men? Pray answer me, and do not make so much noise. And is there any one who does not think that there are horses, but yet thinks that there are equestrian affairs? or who does not think that there are pipers, but yet that there are things pertaining to pipers? There is not, O best of men. For I will speak for you, since you are not willing to answer yourself. But answer also to this: Is there any one who thinks that there are dæmoniacal affairs, but yet does not think that there are dæmons?—

Meletus:: There is not.—

Socrates:: How averse you are to speak! so that you scarcely answer, compelled by these things. Do you not, therefore, say that I believe in and teach things dæmoniacal. whether they are new or old? But indeed you acknowledge that I believe in things dæmoniacal, and to this you have sworn in your accusation. If then I believe in dæmoniacal affairs, there is an abundant necessity that I should also believe in the existence of dæmons, Is it not so?—It is.—For I suppose you to assent, since you do not answer. But with respect to dæmons, do we not think either that they are Gods, or the sons of Gods? Will you acknowledge this or not?—

Meletus:: Entirely so.—

Socrates:: If, therefore, I believe that there are dæmons as you say, if dæmons are certain Gods, will it not be as I say, that you speak ænigmatically and in jest, since you assert that I do not think there are Gods, and yet again think that there are, since I believe in dæmons? But if dæmons are certain spurious sons of the Gods, either from Nymphs, or from certain others, of whom they are said to be the offspring, what man can believe that there are sons of the Gods, and yet that there are no Gods? For this would be just as absurd, as if some one should think that there are colts and mules, but should not think that there are horses and asses. However, O Melitus, it cannot be otherwise but that you have written this accusation, either to try me, or because there was not any crime of which you could truly accuse me. For it is impossible that you should persuade any man who has the smallest degree of intellect, that one and the same person can believe that there are dæmoniacal and divine affairs, and yet that there are neither dæmons, nor Gods, nor heroes. That I am not, therefore, impious, O Athenians, according to the accusation of Melitus, does not appear to me to require a long apology; but what I have said is sufficient.

As to what I before observed, that there is a great enmity towards me among the vulgar, you may be well assured that it is true. And this it is which will condemn me, if I should happen to be condemned, viz. the hatred and envy of the multitude, and not Melitus, nor Anytus; which indeed has also happened to many others, and those good men, and will I think again happen in futurity. For there is no reason to expect that it will terminate in me. Perhaps, however, some one will say, Are you not ashamed, Socrates, to have applied yourself to a study, through which you are now in danger of being put to death? To this person I shall justly reply, That you do not speak well, O man, if you think that life or death ought to be regarded by the man who is capable of being useful though but in a small degree; and that he ought not to consider this alone when he acts, whether he acts justly, or unjustly, and like a good or a bad man. For those demigods that died at Troy would, according to your reasoning, be vile characters, as well others as the son of Thetis, who so much despised the danger of death when compared with disgraceful conduct, that when his mother, who was a goddess, on his desiring to kill Hector, thus I think addressed him—My son, if you revenge the slaughter of your friend Patroclus, and kill Hector, you will yourself die, for said she, death awaits you as soon as Hector expires:—Notwithstanding this, he considered the danger of death as a trifle, and much more dreaded living basely, and not revenging his friends. For he says, May I immediately die, when I have inflicted just punishment on him who has acted unjustly, and not stay here an object of ridicule, by the crooked ships, and a burden to the ground? Do you think that he was solicitous about death and danger? For this, O Athenians, is in reality the case: wherever any one ranks himself, thinking it to be the best for him, or wherever he is ranked by the ruler, there as it appears to me he ought to abide, and encounter danger, neither paying attention to death nor to any thing else before that which is base.

I therefore, O Athenians, should have acted in a dire manner, if, when those rulers which you had placed over me had assigned me a rank at Potidea, at Amphipolis, and at Delium, I should then have remained where they stationed me, like any other person, and should have encountered the danger of death; but that, when Divinity has ordered, as I think and apprehend, that I ought to live philosophising, and exploring myself and others, I should here through fear of death or any other thing desert my rank. For this would be dire: and then in reality any one might justly bring me to a court of judicature, and accuse me of not believing in the Gods, in consequence of not obeying the oracle, fearing death, and thinking myself to be wise when I am not. For to dread death, O Athenians, is nothing else than to appear to be wise, without being so: since it is for a man to appear to know that which he does not know. For no one knows but that death may be to man the greatest of goods; but they dread it, as if they well knew that it is the greatest of evils. And how is it possible that this should not be a most disgraceful ignorance, I mean for a man to suspect that he has a knowledge of that of which he is ignorant? But I, O Athenians, differ perhaps in this from the multitude of men; and if I should say that I am wiser than some one in any thing, it would be in this, that not having a sufficient knowledge of the things in Hades, I also think that I have not this knowledge. But I know that to act unjustly, and to be disobedient to one more excellent, whether God or man, is evil and base. I shall never, therefore, fear and avoid things which for aught I know may be good, before those evils which I know to be evils. So that neither if you should now dismiss me, (being unpersuaded by Anytus, who said that either I ought not to have been brought hither at first, or that, when brought hither, it was impossible not to put me to death, telling you that if I escaped, all your sons studying what Socrates had taught them would be corrupted,) if besides these things you should say to me, O Socrates, we now indeed shall not be persuaded by Anytus, but we shall dismiss you, though on this condition, that afterwards you no longer busy yourself with this investigation, nor philosophise, and if hereafter you are detected in so doing, you shall die,—if, as I said, you should dismiss me on these terms, I should thus address you: O Athenians, I honour and love you: but I obey Divinity rather than you; and as long as I breathe and am able, I shall not cease to philosophise, and to exhort and indicate to any one of you I may happen to meet, such things as the following, after my usual manner. O best of men, since you are an Athenian, of a city the greatest. and the most celebrated for wisdom and strength, are you not ashamed of being attentive to the means of acquiring riches, glory and honour, in great abundance, but to bestow no care nor any consideration upon prudence and truth, nor how your soul may subsist in the most excellent condition? And if any one of you should contend with me, and say that these things are the objects of his care, I should not immediately dismiss him, nor depart, but I should interrogate, explore, and reason with him. And if he should not appear to me to possess virtue, and yet pretend to the possession of it, I should reprove him as one who but little esteems things of the greatest worth, but considers things of a vile and abject nature as of great importance. In this manner I should act by any one I might happen to meet, whether younger or older, a stranger or a citizen; but rather to citizens, because ye are more allied to me. For be well assured that Divinity commands me thus to act. And I think that a greater good never happened to you in the city, than this my obedience to the will of Divinity. For I go about doing nothing else than persuading both the younger and older among you, neither to pay attention to the body, nor to riches, nor any thing else prior to the soul; nor to be so much concerned for anything, as how the soul may subsist in the most excellent condition. I also say that virtue is not produced from riches, but riches from virtue, as likewise all other human goods, both privately and publicly. If, therefore, asserting these things, I corrupt the youth, these things will be noxious; but if any one says that I assert other things than these, he says nothing. In addition to this I shall say, O Athenians, that whether you are persuaded by Anytus or not, and whether you dismiss me or not, I shall not act otherwise, even though I should die often.

Be not disturbed, O Athenians, but patiently hear what I shall request of you; for I think it will be advantageous for you to hear. For I am about to mention certain other things to you, at which perhaps you will be clamorous; though let this on no account take place. Be well assured then, if you put me to death, being such a man as I say I am, you will not injure me more than yourselves. For neither Melitus nor Anytus injures me; for neither can they. Indeed, I think it is not lawful for a better to be injured by a worse man. He may indeed perhaps condemn me to death, or exile, or disgrace; and he or some other may consider these as mighty evils. I however do not think so; but, in my opinion, it is much more an evil to act as he now acts, who endeavors to put a man to death unjustly. Now, therefore, O Athenians, it is far from my intention to defend myself, (as some one may think,) but I thus speak for your sake, lest in condemning me you should sin against the gift of Divinity. For, if you should put me to death, you will not easily find such another (though the comparison is ridiculous) whom Divinity has united to this city as to a great and generous horse, but sluggish through his magnitude, and requiring to be excited by a certain fly. In like manner Divinity appears to have united such a one as I am to the city, that I might not cease exciting, persuading and reproving each of you, and every where sitting among you through the whole day. Such another man, therefore, will not easily arise among you. And if you will be persuaded by me, you will spare me. Perhaps, however, you, being indignant, like those who are awakened from sleep, will repulse me, and, being persuaded by Anytus, will inconsiderately put me to death. Should this be the case, you will pass the rest of your time in sleep, unless Divinity should send some other person to take care of you. But that I am such a one as I have said, one imparted to this city by Divinity, you may understand from hence. For my conduct does not appear to be human, in neglecting every thing pertaining to myself and my private affairs for so many years, and always attending to your concerns, addressing each of you separately, like a father, or an elder brother, and persuading you to the study of virtue. And if indeed I had obtained any emolument from this conduct, and receiving a recompense had exhorted you to these things, there might be some reason for asserting that I acted like other men; but now behold, even my accusers themselves, who have so shamelessly calumniated me in every thing else, have not been so impudent as to charge me with this, or to bring witnesses to prove that I ever either demanded or solicited a reward. And that I speak the truth, my poverty I think affords a sufficient testimony.

Perhaps, therefore, it may appear absurd, that, going about and involving myself in a multiplicity of affairs, I should privately advise these things, but that I should never dare to come to your convention and consult for the city. The cause of this is that which you have often heard me every where asserting, viz. because a certain divine and dæmoniacal voice is present with me, which also Melitus in his accusation derided. This voice attended me from a child; and, when it is present, always *dissuades* me from what I intended to do, but never *incites* me. This it is which opposed my engaging in political affairs; and to me its opposition appears to be all-beautiful. For be well assured, O Athenians, if I had formerly attempted to transact political affairs, I should have perished long before this, and should neither have benefited you in any respect, nor myself, And be not indignant with me for speaking the truth. For it is not possible that any man can be safe, who sincerely opposes either you, or any other multitude, and who prevents many unjust and illegal actions from taking place in the city; but it is necessary that he who in reality contends for the just, if he wishes even but for a little time to be safe, should live privately, and not engage in public affairs.

I will present you with mighty proofs of these things, not words, which you honour, but deeds. Hear then the circumstances which have happened to me, that you may know that I shall not yield to any one contrary to what is becoming, through dread of death; though at the same time by not yielding I shall perish. For I, O Athenians, never bore the office of magistrate in the city, but I have been a senator: and it happened that our Antiochean tribe governed, when you thought proper to condemn the ten generals collectively, for not taking up the bodies of those that perished in the naval battle; and in so doing acted illegally, as afterwards appeared to all of you. At that time I alone of the Prytaneans opposed you, that you might not act contrary to the laws, and my suffrage was contrary to yours. When the orators also were ready to point me out and condemn me, and you likewise were exhorting and vociferating to the same end, I thought that I ought rather to encounter danger with law and justice, than adhere to you, not establishing what is just, through fear of bonds or death. And these things indeed happened while the city was yet a democracy; but when it became an oligarchy, the Thirty sent for me and four others to the Tholus, and ordered us to bring Leon the Salaminian from Salamis, in order to be put to death; for by these orders they meant to involve many others in guilt. Then indeed I, not in words but in deeds, showed them, if the assertion is not too rustic, that I made no account of death; but that all my attention was directed to this, that I might do nothing unjust or unholy. For that dominion of the Thirty, though so strong, did not terrify me into the perpetration of any unjust action. But when we departed from the Tholus, the four indeed went to Salamis, and brought with them Leon; but I returned home. And perhaps for this I should have been put to death, if that government had not been rapidly dissolved. These things many of you can testify.

Do you think, therefore, that I could have lived for so many years, if I had engaged in public affairs, and had acted in a manner becoming a good man, giving assistance to justice, and doing this in the most eminent degree? Far otherwise, O Athenians: for neither could any other man. But I, through the whole of my life, if I do any thing publicly, shall appear to be such a man; and being the same privately, I shall never grant any thing to any one contrary to justice, neither to any other, nor to any one of these whom my calumniators say are my disciples. I however was never the preceptor of any one; but I never repulsed either the young or the old that were desirous of hearing me speak after my usual manner. Nor do I discourse when I receive money, but refrain from speaking when I do not receive any; but I similarly offer myself to be interrogated by the rich and the poor: and if any one is willing to answer, he hears what I have to say. Of these too, whether any one becomes good or not, I cannot justly be said to be the cause, because I never either promised or taught them any discipline. But if any one says that he has ever learnt or heard any thing from me privately which all others have not, be well assured that he does not speak the truth.

Why therefore some have delighted to associate with me for a long time ye have heard, O Athenians. I have told you all the truth, that men are delighted on hearing those interrogated who think themselves to be wise, but who are not: for this is not unpleasant. But, as I say, I am ordered to do this by Divinity, by oracles, by dreams, and by every mode by which any other divine destiny ever commanded any thing to be done by man. These things, O Athenians, are true, and might easily be confuted if they were not. For If, with respect to the youth, I corrupt some, and have corrupted others, it is fit, if any of them have become old, that, knowing I gave them bad advice when they were young, they should now rise up, accuse and take vengeance on me; but if they themselves are unwilling to do this, that their fathers, or brothers, or others of their kindred, should now call to mind and avenge the evil which their relatives suffered from me. But in short many of them are here present, whom I see:—In the first place, Crito, who is of the same age and city that I am, and who is the father of this Critobulus: in the next place, Lysanias the Sphecian, the father of this Æschines; and further still, Antipho the Cephisian, the father of Epigenes. There are also others whose brothers are in this assembly, viz. Nicostratus the son of Zotidas, and the brother of Theodotus. And Theodotus indeed is dead, and so has no occasion for his brother's assistance. Paralus also is here, the son of Demodochus, of whom Theages was the brother; likewise Adimantus the son of Aristo, the brother of whom is this Plato; and Æantidorus, of whom Apollodorus is the brother. I could also mention many others, some one of whom Melitus, especially in his oration, ought to have adduced as a witness. If however he then forgot to do so, let him now produce him, for he has my consent; and if he has any thing of this kind to disclose, let him declare it. However, you will find the very contrary of this to be the case, and that all these are ready to assist me who have corrupted and injured their kindred, as Melitus and Anytus say. It might indeed perhaps be reasonable to suppose that those whom I have corrupted would assist me; but what other reason can the relatives of these have, who are not corrupted, and who are now advanced in age, for giving me assistance, except that which is right and just? For they know that Melitus lies, and that I speak the truth. Be it so then, O Athenians: and these indeed, and perhaps other such-like particulars, are what I have to urge in my defence.

Perhaps, however, some one among you will be indignant on recollecting that he, when engaged in a much less contest than this, suppliantly implored the judges with many tears; that he also brought his children hither, that by these he might especially excite compassion, together with many others of his relatives and friends: but I do none of these things, though, as it may appear, I am brought to extreme danger. Perhaps, therefore, some one thus thinking may become more hostile towards me, and, being enraged with these very particulars, may give his vote with anger. If then any one of you is thus affected, I do not think it by any means right; but if he should be, I shall appear to myself to speak equitably to such a one by saying that I also, O best of men, have certain relatives. For, as Homer says, I am not sprung from an oak, nor from a rock, but from men. So that I also, O Athenians, have relations, and three sons; one now a lad; but the other two, boys: I have not however brought any one of them hither, that I might supplicate you on that account to acquit me. Why is it then that I do none of these things? It is not, O Athenians, because I am contumacious, nor is it in contempt of you. And as to my fearing or not fearing death, that is another question. But it does not appear to me to be consistent either with my own glory or yours, or that of the whole city, that I should do any thing of this kind at my age, and with the reputation I have acquired, whether true or false. For it is admitted that Socrates surpasses in something the multitude of mankind. If, therefore, those among you who appear to excell either in wisdom, in fortitude, or any other virtue, should act in such a manner as I have seen some when they have been judged, it would be shameful: for these, appearing indeed to be something, have conducted themselves in a wonderful manner, thinking they should suffer something dreadful by dying, as if they would be immortal if you did not put them to death. These men, as it appears to me, would so disgrace the city, that any stranger might apprehend that such of the Athenians as excell in virtue, and who are promoted to the magistracy and other honours in preference to the rest, do not in any respect surpass women. For these things, O Athenians, ought not to be done by us who have gained some degree of reputation, nor should you suffer us to do them, if we were willing; but you should show that you will much sooner condemn him who introduces these lamentable dramas, and who thus makes the city ridiculous, than him who quietly expects your decision.

But exclusive of glory, O Athenians, neither does it appear to me to be just for a judge to be entreated, or to acquit any one in consequence of being supplicated; but in my opinion he ought to teach and persuade. For a judge does not sit for the purpose of showing favour, but that he may judge what is just: and he takes an oath that he will not show favour to any, but that he will judge according to the laws. Hence it is neither fit that we should accustom you, nor that you should be accustomed to swear: for in so doing neither of us will act piously. Do not, therefore, think, O Athenians, that I ought to act in such a manner towards you as I should neither conceive to be beautiful, nor just, nor holy; and especially, by Jupiter, since I am accused of impiety by this Melitus. For it clearly follows, that if I should persuade you, and, though you have taken an oath, force you to be favourable, I might then indeed teach that you do not think there are Gods; and in reality, while making my defence, I should accuse myself as not believing in the Gods. This however is far from being the case: *for I believe that there are* GODS *more than any one of my accusers*; and I refer it to you and to Divinity to judge concerning me such things as will be best both for me and you.

That I should not, therefore, O Athenians, be indignant with you because you have condemned me, there are many reasons, and among others this, that it has not happened to me contrary to my expectation; but I much rather wonder that there should have been so great a number of votes on both sides. For I did not think that I should have wanted such a few additional votes for my acquittal. But now, as it seems, if there had been only three more votes, I should have escaped condemnation. Indeed, as it appears to me, I now have escaped Melitus; and I have not only escaped him, but it is perfectly evident that unless Anytus and Lyco had risen to accuse me, he had lost his thousand drachmas, since he had not the fifth part of the votes on his side.

Melitus then thinks that I deserve death. Be it so. But what punishment, O Athenians, shall I assign to myself? Is it not evident that it will be such a one as I deserve? What then do I deserve to suffer or to pay, for not having during my life concealed what I have learned, but neglected all that the multitude esteem, riches, domestic concerns, military command, authority in public assemblies, and other magistracies? for having avoided the conspiracies and seditions which have happened in the city, thinking that I was in reality a more worthy character than to depend on these things for my safety? I have not, therefore, applied myself to those pursuits, by which I could neither benefit you nor myself; but my whole endeavor has been to benefit every individual in the greatest degree; striving to persuade each of you, that he should pay no attention to any of his concerns, prior to that care of himself by which he may become a most worthy and wise man; that he should not attend to the affairs of the city prior to the city itself; and that attention should be paid to other things in a similar manner. What then, being such a man, do I deserve to suffer? A certain good, O Athenians, if in reality you honour me according to my desert; and this such a good as it is proper for me to receive. What then is the good which is adapted to a poor man who is a benefactor, and who requires leisure that he may exhort you to virtue? There is not any thing more adapted, O Athenians, than that such a man should be supported at the public expense in the Prytaneum; and this much more than if some one of you had been victorious in the Olympic games with horses, or in the two or four-yoked car. For such a one makes you appear to be happy, but I cause you to be so: and he is not in want of support, but I am. If, therefore, it is necessary that I should be honoured according to what is justly my desert, I should be honoured with this support in the Prytaneum.

Perhaps, therefore, in saying these things, I shall appear to you to speak in the same manner as when I reprobated lamentations and supplications. A thing of this kind, however, O Athenians, is not the case, but rather the following. I am determined not to injure any man willingly; though I shall not persuade you of this, because the time in which we can discourse with each other is but short. For if there was the same law with you as with others, that in cases of death the judicial process should not continue for one day only but for many, I think I should be able to persuade you. But now it is not easy in a short time to dissolve great calumnies. Being however determined to injure no one, I shall be very far from injuring myself, and of pronouncing against myself that I am worthy of evil and punishment. What then? Fearing lest I should suffer that which Melitus thinks I deserve, which I say I know not whether it is good or evil, that I may avoid this, shall I choose that which I well know to be evil, and think that I deserve this? Whether then shall I choose bonds? But why is it necessary that I should live in prison, in perpetual subjection to the eleven magistrates? Shall I pay a fine then, and remain in bonds till it is discharged? But this is what I just now said: for I have not money to pay it. Shall I then choose exile? For perhaps I shall be thought worthy of this. I should however, O Athenians, be a great lover of life, if I were so absurd as not to be able to infer that if you, being my fellow citizens, could not endure my habits and discourses, which have become to you so burthensome and odious, that you now seek to be liberated from them, it is not likely that others would easily bear them. It is far otherwise, O Athenians. My life would be beautiful indeed were I at this advanced age to live in exile, changing and being driven from one city to another. For I well know that, wherever I may go, the youth will hear me when I discourse, in the same manner as they do here. And if I should repell them, they also would expell me, persuading the more elderly to this effect. But if I should not repell them, the fathers and kindred of these would banish me on account of these very young men themselves.

Perhaps how ever some one will say, Can you not, Socrates, live in exile silently and quietly? But it is the most difficult of all things to persuade some among you, that this cannot take place. For if I say that in so doing I should disobey Divinity, and that on this account it is impossible for me to live a life of leisure and quiet, you would not believe me, in consequence of supposing that I spoke ironically. And if, again, I should say that this is the greatest good to man, to discourse every day concerning virtue, and other things which you have heard me discussing, exploring both myself and others; and if I should also assert that an uninvestigating life is to be rejected by man, much less, were I thus to speak, would you believe me. These things however, O Athenians, are as I say; but it is not easy to persuade you that they are so. And at the same time I am not accustomed to think myself deserving of any ill. Indeed, if I were rich, I would amerce myself in such a sum as I might be able to pay; but now I am not in a condition to do this, unless you would allow the fine to be proportioned to what I am able to pay. For thus perhaps I might be able to pay a mina of silver. But Plato here, O Athenians, Crito, Critobulus, and Apollodorus, exhort me to pay thirty minæ, for which they will be answerable. I amerce myself, therefore, in thirty minæ; and these will be my securities for the payment.

Now, O Athenians, your impatience and precipitancy will draw upon you a great reproach, and give occasion to those who are so disposed, to revile the city for having put that wise man Socrates to death. For those who are willing to reproach you will call me a wise man, though I am not. If, therefore, you had waited but for a short time, this very thing, my death, would have happened to you spontaneously. For behold my age, that it is far advanced in life, and is near to death. But I do not say this to all of you, but to those only who have condemned me to die. This also I say to them: Perhaps you think, O Athenians, that I was condemned through the want of such language, by which I might have persuaded you, if I had thought it requisite, to say and do any thing, so that I might escape punishment. Far otherwise: for I am condemned through want indeed, yet not of words, but of audacity and impudence, and because I was unwilling to say such things to you as you would have been much gratified in hearing, I at the same time weeping and lamenting, and doing and saying many other things unworthy of me, as I say, but such as you are accustomed to hear and see in others. But neither then did I think it was necessary, for the sake of avoiding danger, to do any thing illiberal, nor do I now repent that I have thus defended myself; but I should much rather choose to die, after having made this apology, than to live after that manner. For neither in a judicial process, nor in battle, is it proper that I or any other should devise how he may by any means avoid death; since in battle it is frequently evident that a man might easily avoid death by throwing away his arms, and suppliantly converting himself to his pursuers. There are also many other devices in other dangers, by which he who dares to do and say any thing may escape death. To fly from death however, O Athenians, is not difficult, but it is much more difficult to fly from depravity; for it runs swifter than death. And now I indeed, as being slow and old, am caught by the slower; but my accusers, as being skilful and swift, are caught by the swifter of these two, improbity. Now too, I indeed depart, condemned by you to death; but they being condemned by truth, depart to depravity and injustice. And I acquiesce in this decision, and they also. Perhaps, therefore, it is necessary that these things should subsist in this manner, and I think they subsist properly.

In the next place, I desire to predict to you who have condemned me, what will be your fate. For I am now in that situation in which men especially prophesy, viz. when they are about to die. For I say, that you, my murderers, will immediately after my death be punished, by dying in a manner, by Jupiter, much more severe than I shall. For now you have done this, thinking you should be liberated from the necessity of giving an account of your life. The very contrary however, as I say, will happen to you: for many will be your accusers, whom I have restrained, though you did not perceive it. These too will be more troublesome, because they are younger, and will be more indignant against you. For, if you think that by putting men to death you will restrain others from upbraiding you that you do not live well, you are much mistaken; since this mode of liberation is neither sufficiently efficacious nor becoming. But this is the most beautiful and the most easy mode, not to disturb others, but to act in such a manner that you may be most excellent characters. And thus much I prophesy to those of you who condemned me.

But to you who have acquitted me by you decision, I would willingly speak concerning this affair during the time that the magistrates are at leisure, and before I am brought to the place where it is necessary I should die. Attend to me, therefore, O Athenians, during that time. For nothing hinders our conversing with each other, as long as we are permitted so to do; since I wish to demonstrate to you, as friends, the meaning of that which has just now happened to me. To me then, O my judges, (and in calling you judges I rightly denominate you,) a certain wonderful circumstance has happened. For the prophetic voice of the dæmon, which opposed me in the most trifling affairs, if I was about to act in any thing improperly, prior to this, I was continually accustomed to hear; but now, though these things have happened to me which you see, and which some one would think to be the extremity of evils, yet neither when I departed from home in the morning was the signal of the God adverse to me, nor when I ascended hither to the place of judgment, nor when I was about to speak,—though at other times it frequently restrained me in the midst of speaking. But now, in this affair, it has never been adverse to me, either in word or deed. I will now, therefore, tell you what I apprehend to be the cause of this. For this thing which has happened appears to me to be good; nor do those of us apprehend rightly who think death to be an evil; of which this appears to me to be a great argument, that the accustomed signal would have opposed me, unless I had been about to do something good.

After this manner too we may conceive that there is abundant hope that death is good. For to die is one of two things. For it is either to be as it were nothing, and to be deprived of all sensation; or, as it is said, it is a certain mutation and migration of the soul from this to another place. And whether no sensation remains, but death is like sleep when unattended with any dreams, in this case death will be a gain. For, if any one compares such a night as this, in which he so profoundly sleeps as not even to see a dream, with the other nights and days of his life, and should declare how many he had passed better and more pleasantly than this night, I think that not only a private man, but even the great king himself, would find so small a number that they might be easily counted. If, therefore, death is a thing of this kind, I say it is a gain: for thus the whole of future time appears to be nothing more than one night. But if again death is a migration from hence to another place, and the assertion is true that all the dead are there, what greater good, O my judges, can there be than this? For if some one arriving at Hades, being liberated from these who pretend to be judges, should find those who are true judges, and who are said to judge there, viz. Minos and Rhadamanthus, Æacus and Triptolemus, and such others of the demigods as lived justly, would this be a vile journey? At what rate would you not purchase a conference with Orpheus and Musæus, with Hesiod and Homer? I indeed should be willing to die often, if these things are true. For to me the association will be admirable, when I shall meet with Palamedes, and Ajax the son of Telamon, and any other of the antients who died through an unjust decision. The comparing my case with theirs will, I think, be no unpleasing employment to me. But the greatest pleasure will consist in passing my time there, as I have done here, in interrogating and exploring who among them is wise, and who fancies himself to be but is not so. What, O my judges, would not any one give for a conference with him who led that mighty army against

Troy, or with Ulysses, or Sisyphus, or ten thousand others, both men and women, that might be mentioned? For to converse and associate with these would be an inestimable felicity. For I should not be capitally condemned on this account by those that dwell there; since they are in other respects more happy than those that live here, and are for the rest of time immortal, if the assertions respecting these things are true.

You, therefore, O my judges, ought to entertain good hopes with respect to death, and to be firmly persuaded of this one thing, that to a good man nothing is evil, neither while living nor when dead, and that his concerns are never neglected by the Gods. Nor is my present condition the effect of chance; but this is evident to me, that now to die, and be liberated from the affairs of life, is better for me. On this account the accustomed signal did not in this affair oppose me. Nor am I very indignant with those that accused and condemned me, though their intention in so doing was to injure me; and for this they deserve to be blamed. Thus much however I request of them: That you will punish my sons when they grow up, if they cause you the same molestation that I have; and if they shall appear to you to pay more attention to riches or any thing else than to virtue, and shall think themselves to be something when they are nothing, that you will reprobate them as I do you, as neglecting the care of things to which they ought to attend, and conceiving themselves to be of some consequence when they are of no worth. If ye do these things, your conduct both towards me and my sons will be just. But it is now time to depart hence,—for me indeed to die but for you to live. Which of us however will arrive at a better thing, is perfectly immanifest except to Divinity.

THE END OF THE APOLOGY OF SOCRATES.

# Socrates' Defense.

## (Apology)

Translated by Hugh Tredennich.

CHARACTERS.

Socrates; Meletus.

---

Socrates:: I do not know what effect my accusers have had upon you, gentlemen, but for my own part I was almost carried away by them—their arguments were so convincing. On the other hand, scarcely a word of what they said was true. I was especially astonished at one of their many misrepresentations; I mean when they told you that you must be careful not to let me deceive you—the implication being that I am a skillful speaker. I thought that it was peculiarly brazen of them to tell you this without a blush, since they must know that they will soon be effectively confuted, when it becomes obvious that I have not the slightest skill as a speaker—unless, of course, by a skillful speaker they mean one who speaks the truth. If that is what they mean, I would agree that I am an orator, though not after their pattern.

My accusers, then, as I maintain, have said little or nothing that is true, but from me you shall hear the whole truth—not, I can assure you, gentlemen, in flowery language like theirs, decked out with fine words and phrases. No, what you will hear will be a straightforward speech in the first words that occur to me, confident as I am in the justice of my cause, and I do not want any of you to expect anything different. It would hardly be suitable, gentlemen, for a man of my age to address you in the artificial language of a schoolboy orator. One thing, however, I do most earnestly beg and entreat of you. If you hear me defending myself in the same language which it has been my habit to use, both in the open spaces of this city—where many of you have heard me—and elsewhere, do not be surprised, and do not interrupt. Let me remind you of my position. This is my first appearance in a court of law, at the age of seventy, and so I am a complete stranger to the language of this place. Now if I were really from another country, you would naturally excuse me if I spoke in the manner and dialect in which I had been brought up, and so in the present case I make this request of you, which I think is only reasonable, to disregard the manner of my speech—it may be better or it may be worse—and to consider and concentrate your attention upon this one question, whether my claims are fair or not. That is the first duty of the juryman, just as it is the pleader's duty to speak the truth.

The proper course for me, gentlemen of the jury, is to deal first with the earliest charges that have been falsely brought against me, and with my earliest accusers, and then with the later ones. I make this distinction because I have already been accused in your hearing by a great many people for a great many years, though without a word of truth, and I am more afraid of those people than I am of Anytus and his colleagues, although they are formidable enough. But the others are still more formidable. I mean the people who took hold of so many of you when you were children and tried to fill your minds with untrue accusations against me, saying, There is a wise man called Socrates who has theories about the heavens and has investigated everything below the earth, and can make the weaker argument defeat the stronger.

It is these people, gentlemen, the disseminators of these rumors, who are my dangerous accusers, because those who hear them suppose that anyone who inquires into such matters must be an atheist. Besides, there are a great many of these accusers, and they have been accusing me now for a great many years. And what is more, they approached you at the most impressionable age, when some of you were children or adolescents, and they literally won their case by default, because there was no one to defend me. And the most fantastic thing of all is that it is impossible for me even to know and tell you their names, unless one of them happens to be a playwright. All these people, who have tried to set you against me out of envy and love of slander—and some too merely passing on what they have been told by others—all these are very difficult to deal with. It is impossible to bring them here for cross-examination; one simply has to conduct one's defense and argue one's case against an invisible opponent, because there is no one to answer. So I ask you to accept my statement that my critics fall into two classes, on the one hand my immediate accusers, and on the other those earlier ones whom I have mentioned, and you must suppose that I have first to defend myself against the latter. After all, you heard them abusing me longer ago and much more violently than these more recent accusers.

Very well, then, I must begin my defense, gentlemen, and I must try, in the short time that I have, to rid your minds of a false impression which is the work of many years. I should like this to be the result, gentlemen, assuming it to be for your advantage and my own; and I should like to be successful in my defense, but I think that it will be difficult, and I am quite aware of the nature of my task. However, let that turn out as God wills. I must obey the law and make my defense.

Let us go back to the beginning and consider what the charge is that has made me so unpopular, and has encouraged Meletus to draw up this indictment. Very well, what did my critics say in attacking my character? I must read out their affidavit, so to speak, as though they were my legal accusers : Socrates is guilty of criminal meddling, in that he inquires into things below the earth and in the sky, and makes the weaker argument defeat the stronger, and teaches others to follow his example. It runs something like that. You have seen it for yourselves in the play by Aristophanes, where Socrates goes whirling round, proclaiming that he is walking on air, and uttering a great deal of other nonsense about things of which I know nothing whatsoever. I mean no disrespect for such knowledge, if anyone really is versed in it—I do not want any more lawsuits brought against me by Meletus—but the fact is, gentlemen, that I take no interest in it. What is more, I call upon the greater part of you as witnesses to my statement, and I appeal to all of you who have ever listened to me talking—and there are a great many to whom this applies—to clear your neighbors' minds on this point. Tell one another whether any one of you has ever heard me discuss such questions briefly or at length, and then you will realize that the other popular reports about me are equally unreliable.

The fact is that there is nothing in any of these charges, and if you have heard anyone say that I try to educate people and charge a fee, there is no truth in that either. I wish that there were, because I think that it is a fine thing if a man is qualified to teach, as in the case of Gorgias of Leontini and Prodicus of Ceos and Hippias of Elis. Each one of these is perfectly capable of going into any city and actually persuading the young men to leave the company of their fellow citizens, with any of whom they can associate for nothing, and attach themselves to him, and pay money for the privilege, and be grateful into the bargain.

There is another expert too from Paros who I discovered was here on a visit; I happened to meet a man who has paid more in Sophists' fees than all the rest put together—I mean Callias, the son of Hipponicus. So I asked him—he has two sons, you see—Callias, I said, if your sons had been colts or calves, we should have had no difficulty in finding and engaging a trainer to perfect their natural qualities, and this trainer would have been some sort of horse dealer or agriculturalist. But seeing that they are human beings, whom do you intend to get as their instructor? Who is the expert in perfecting the human and social qualities? I assume from the fact of your having sons that you must have considered the question. Is there such a person or not?

Certainly, said he.

Who is he, and where does he come from? said I. And what does he charge?

Evenus of Paros, Socrates, said he, and his fee is five minas.

I felt that Evenus was to be congratulated if he really was a master of this art and taught it at such a moderate fee. I should certainly plume myself and give myself airs if I understood these things, but in fact, gentlemen, I do not.

Here perhaps one of you might interrupt me and say, But what is it that you do, Socrates? How is it that you have been misrepresented like this? Surely all this talk and gossip about you would never have arisen if you had confined yourself to ordinary activities, but only if your behavior was abnormal. Tell us the explanation, if you do not want us to invent it for ourselves.

This seems to me to be a reasonable request, and I will try to explain to you what it is that has given me this false notoriety. So please give me your attention. Perhaps some of you will think that I am not being serious, but I assure you that I am going to tell you the whole truth.

I have gained this reputation, gentlemen, from nothing more or less than a kind of wisdom. What kind of wisdom do I mean? Human wisdom, I suppose. It seems that I really am wise in this limited sense. Presumably the geniuses whom I mentioned just now are wise in a wisdom that is more than human. I do not know how else to account for it. I certainly have no knowledge of such wisdom, and anyone who says that I have is a liar and willful slanderer. Now, gentlemen, please do not interrupt me if I seem to make an extravagant claim, for what I am going to tell you is not my own opinion. I am going to refer you to an unimpeachable authority. I shall call as witness to my wisdom, such as it is, the god at Delphi.

You know Chaerephon, of course. He was a friend of mine from boyhood, and a good democrat who played his part with the rest of you in the recent expulsion and restoration. And you know what he was like, how enthusiastic he was over anything that he had once undertaken. Well, one day he actually went to Delphi and asked this question of the god—as I said before, gentlemen, please do not interrupt—he asked whether there was anyone wiser than myself. The priestess replied that there was no one. As Chaerephon is dead, the evidence for my statement will be supplied by his brother, who is here in court.

Please consider my object in telling you this. I want to explain to you how the attack upon my reputation first started. When I heard about the oracle's answer, I said to myself, What does the god mean? Why does he not use plain language? I am only too conscious that I have no claim to wisdom, great or small. So what can he mean by asserting that I am the wisest man in the world? He cannot be telling a lie; that would not be right for him.

After puzzling about it for some time, I set myself at last with considerable reluctance to check the truth of it in the following way. I went to interview a man with a high reputation for wisdom, because I felt that here if anywhere I should succeed in disproving the oracle and pointing out to my divine authority, You said that I was the wisest of men, but here is a man who is wiser than I am.

Well, I gave a thorough examination to this person—I need not mention his name, but it was one of our politicians that I was studying when I had this experience—and in conversation with him I formed the impression that although in many people's opinion, and especially in his own, he appeared to be wise, in fact he was not. Then when I began to try to show him that he only thought he was wise and was not really so, my efforts were resented both by him and by many of the other people present. However, I reflected as I walked away, Well, I am certainly wiser than this man. It is only too likely that neither of us has any knowledge to boast of, but he thinks that he knows something which he does not know, whereas I am quite conscious of my ignorance. At any rate it seems that I am wiser than he is to this small extent, that I do not think that I know what I do not know.

After this I went on to interview a man with an even greater reputation for wisdom, and I formed the same impression again, and here too I incurred the resentment of the man himself and a number of others.

From that time on I interviewed one person after another. I realized with distress and alarm that I was making myself unpopular, but I felt compelled to put my religious duty first. Since I was trying to find out the meaning of the oracle, I was bound to interview everyone who had a reputation for knowledge. And by dog, gentlemen, for I must be frank with you, my honest impression was this. It seemed to me, as I pursued my investigation at the god's command, that the people with the greatest reputations were almost entirely deficient, while others who were supposed to be their inferiors were much better qualified in practical intelligence.

I want you to think of my adventures as a sort of pilgrimage undertaken to establish the truth of the oracle once for all. After I had finished with the politicians I turned to the poets, dramatic, lyric, and all the rest, in the belief that here I should expose myself as a comparative ignoramus. I used to pick up what I thought were some of their most perfect works and question them closely about the meaning of what they had written, in the hope of incidentally enlarging my own knowledge. Well, gentlemen, I hesitate to tell you the truth, but it must be told. It is hardly an exaggeration to say that any of the bystanders could have explained those poems better than their actual authors. So I soon made up my mind about the poets too. I decided it was not wisdom that enabled them to write their poetry, but a kind of instinct or inspiration, such as you find in seers and prophets who deliver all their sublime messages without knowing in the least what they mean. It seemed clear to me that the poets were in much the same case, and I also observed that the very fact that they were poets made them think that they had a perfect understanding of all other subjects, of which they were totally ignorant. So I left that line of inquiry too with the same sense of advantage that I had felt in the case of the politicians.

Last of all I turned to the skilled craftsmen. I knew quite well that I had practically no technical qualifications myself, and I was sure that I should find them full of impressive knowledge. In this I was not disappointed. They understood things which I did not, and to that extent they were wiser than I was. But, gentlemen, these professional experts seemed to share the same failing which I had noticed in the poets. I mean that on the strength of their technical proficiency they claimed a perfect understanding of every other subject, however important, and I felt that this error more than outweighed their positive wisdom. So I made myself spokesman for the oracle, and asked myself whether I would rather be as I was—neither wise with their wisdom nor stupid with their stupidity—or possess both qualities as they did. I replied through myself to the oracle that it was best for me to be as I was.

The effect of these investigations of mine, gentlemen, has been to arouse against me a great deal of hostility, and hostility of a particularly bitter and persistent kind, which has resulted in various malicious suggestions, including the description of me as a professor of wisdom. This is due to the fact that whenever I succeed in disproving another person's claim to wisdom in a given subject, the bystanders assume that I know everything about that subject myself. But the truth of the matter, gentlemen, is pretty certainly this, that real wisdom is the property of God, and this oracle is his way of telling us that human wisdom has little or no value. It seems to me that he is not referring literally to Socrates, but has merely taken my name as an example, as if he would say to us, The wisest of you men is he who has realized, like Socrates, that in respect of wisdom he is really worthless.

That is why I still go about seeking and searching in obedience to the divine command, if I think that anyone is wise, whether citizen or stranger, and when I think that any person is not wise, I try to help the cause of God by proving that he is not. This occupation has kept me too busy to do much either in politics or in my own affairs. In fact, my service to God has reduced me to extreme poverty.

There is another reason for my being unpopular. A number of young men with wealthy fathers and plenty of leisure have deliberately attached themselves to me because they enjoy hearing other people cross-questioned. These often take me as their model, and go on to try to question other persons. Whereupon, I suppose, they find an unlimited number of people who think that they know something, but really know little or nothing. Consequently their victims become annoyed, not with themselves but with me, and they complain that there is a pestilential busybody called Socrates who fills young people's heads with wrong ideas. If you ask them what he does, and what he teaches that has this effect, they have no answer, not knowing what to say. But as they do not want to admit their confusion, they fall back on the stock charges against any philosopher, that he teaches his pupils about things in the heavens and below the earth, and to disbelieve in gods, and to make the weaker argument defeat the stronger. They would be very loath, I fancy, to admit the truth—which is that they are being convicted of pretending to knowledge when they are entirely ignorant. So, jealous, I suppose, for their own reputation, and also energetic and numerically strong, and provided with a plausible and carefully worked-out case against me, these people have been dinning into your ears for a long time past their violent denunciations of myself.

There you have the causes which led to the attack upon me by Meletus and Anytus and Lycon, Meletus being aggrieved on behalf of the poets, Anytus on behalf of the professional men and politicians, and Lycon on behalf of the orators. So, as I said at the beginning, I should be surprised if I were able, in the short time that I have, to rid your minds of a misconception so deeply implanted.

There, gentlemen, you have the true facts, which I present to you without any concealment or suppression, great or small. I am fairly certain that this plain speaking of mine is the cause of my unpopularity, and this really goes to prove that my statements are true, and that I have described correctly the nature and the grounds of the calumny which has been brought against me. Whether you inquire into them now or later, you will find the facts as I have just described them.

So much for my defense against the charges brought by the first group of my accusers. I shall now try to defend myself against Meletus—high-principled and patriotic as he claims to be—and after that against the rest.

Let us first consider their deposition again, as though it represented a fresh prosecution. It runs something like this : Socrates is guilty of corrupting the minds of the young, and of believing in deities of his own invention instead of the gods recognized by the state. Such is the charge. Let us examine its points one by one.

First it says that I am guilty of corrupting the young. But I say, gentlemen, that Meletus is guilty of treating a serious matter with levity, since he summons people to stand their trial on frivolous grounds, and professes concern and keen anxiety in matters about which he has never had the slightest interest. I will try to prove this to your satisfaction.

Come now, Meletus, tell me this. You regard it as supremely important, do you not, that our young people should be exposed to the best possible influence?

Meletus:: I do.

Socrates:: Very well, then, tell these gentlemen who it is that influences the young for the better. Obviously you must know, if you are so much interested. You have discovered the vicious influence, as you say, in myself, and you are now prosecuting me before these gentlemen. Speak up and inform them who it is that has a good influence upon the young—You see, Meletus, that you are tongue-tied and cannot answer. Do you not feel that this is discreditable, and a sufficient proof in itself of what I said, that you have no interest in the subject? Tell me, my friend, who is it that makes the young good?

Meletus:: The laws.

Socrates:: That is not what I mean, my dear sir. I am asking you to name the *person* whose first business it is to know the laws.

Meletus:: These gentlemen here, Socrates, the members of the jury.

Socrates:: Do you mean, Meletus, that they have the ability to educate the young, and to make them better?

Meletus:: Certainly.

Socrates:: Does this apply to all jurymen, or only to some?

Meletus:: To all of them.

Socrates:: Excellent! A generous supply of benefactors. Well, then, do these spectators who are present in court have an improving influence, or not?

Meletus:: Yes, they do.

Socrates:: And what about the members of the Council?

Meletus:: Yes, the councilors too.

Socrates:: But surely, Meletus, the members of the Assembly do not corrupt the young? Or do all of them too exert an improving influence?

Meletus:: Yes, they do.

Socrates:: Then it would seem that the whole population of Athens has a refining effect upon the young, except myself, and I alone demoralize them. Is that your meaning?

Meletus:: Most emphatically, yes.

Socrates:: This is certainly a most unfortunate quality that you have detected in me. Well, let me put another question to you. Take the case of horses. Do you believe that those who improve them make up the whole of mankind, and that there is only one person who has a bad effect on them? Or is the truth just the opposite, that the ability to improve them belongs to one person or to very few persons, who are horse trainers, whereas most people, if they have to do with horses and make use of them, do them harm? Is not this the case, Meletus, both with horses and with all other animals? Of course it is, whether you and Anytus deny it or not. It would be a singular dispensation of fortune for our young people if there is only one person who corrupts them, while all the rest have a beneficial effect. But I need say no more. There is ample proof, Meletus, that you have never bothered your head about the young, and you make it perfectly clear that you have never taken the slightest interest in the cause for the sake of which you are now indicting me.

Here is another point. Tell me seriously, Meletus, is it better to live in a good or in a bad community? Answer my question, like a good fellow; there is nothing difficult about it. Is it not true that wicked people have a bad effect upon those with whom they are in the closest contact, and that good people have a good effect?

Meletus:: Quite true.

Socrates:: Is there anyone who prefers to be harmed rather than benefited by his associates? Answer me, my good man; the law commands you to answer. Is there anyone who prefers to be harmed?

Meletus:: Of course not.

Socrates:: Well, then, when you summon me before this court for corrupting the young and making their characters worse, do you mean that I do so intentionally or unintentionally?

Meletus:: I mean intentionally.

Socrates:: Why, Meletus, are you at your age so much wiser than I at mine? You have discovered that bad people always have a bad effect, and good people a good effect, upon their nearest neighbors. Am I so hopelessly ignorant as not even to realize that by spoiling the character of one of my companions I shall run the risk of getting some harm from him? Because nothing else would make me commit this grave offense intentionally. No, I do not believe it, Meletus, and I do not suppose that anyone else does. Either I have not a bad influence, or it is unintentional, so that in either case your accusation is false. And if I unintentionally have a bad influence, the correct procedure in cases of such involuntary misdemeanors is not to summon the culprit before this court, but to take him aside privately for instruction and reproof, because obviously if my eyes are opened, I shall stop doing what I do not intend to do. But you deliberately avoided my company in the past and refused to enlighten me, and now you bring me before this court, which is the place appointed for those who need punishment, not for those who need enlightenment.

It is quite clear by now, gentlemen, that Meletus, as I said before, has never shown any degree of interest in this subject. However, I invite you to tell us, Meletus, in what sense you make out that I corrupt the minds of the young. Surely the terms of your indictment make it clear that you accuse me of teaching them to believe in new deities instead of the gods recognized by the state. Is not that the teaching of mine which you say has this demoralizing effect?

Meletus:: That is precisely what I maintain.

Socrates:: Then I appeal to you, Meletus, in the name of these same gods about whom we are speaking, to explain yourself a little more clearly to myself and to the jury, because I cannot make out what your point is. Is it that I teach people to believe in some gods—which implies that I myself believe in gods, and am not a complete atheist, so that I am not guilty on that score—but in different gods from those recognized by the state, so that your accusation rests upon the fact that they are different? Or do you assert that I believe in no gods at all, and teach others to do the same?

Meletus:: Yes, I say that you disbelieve in gods altogether.

Socrates:: You surprise me, Meletus. What is your object in saying that? Do you suggest that I do not believe that the sun and moon are gods, as is the general belief of all mankind?

Meletus:: He certainly does not, gentlemen of the jury, since he says that the sun is a stone and the moon a mass of earth.

Socrates:: Do you imagine that you are prosecuting Anaxagoras, my dear Meletus? Have you so poor an opinion of these gentlemen, and do you assume them to be so illiterate as not to know that the writings of Anaxagoras of Clazomenae are full of theories like these? And do you seriously suggest that it is from me that the young get these ideas, when they can buy them on occasion in the market place for a drachma at most, and so have the laugh on Socrates if he claims them for his own, to say nothing of their being so silly? Tell me honestly, Meletus, is that your opinion of me? Do I believe in no god?

Meletus:: No, none at all, not in the slightest degree.

Socrates:: You are not at all convincing, Meletus—not even to yourself, I suspect. In my opinion, gentlemen, this man is a thoroughly selfish bully, and has brought this action against me out of sheer wanton aggressiveness and self-assertion. He seems to be devising a sort of intelligence test for me, saying to himself, Will the infallible Socrates realize that I am contradicting myself for my own amusement, or shall I succeed in deceiving him and the rest of my audience?

It certainly seems to me that he is contradicting himself in this indictment, which might just as well run : Socrates is guilty of not believing in the gods, but believing in the gods. And this is pure flippancy.

I ask you to examine with me, gentlemen, the line of reasoning which leads me to this conclusion. You, Meletus, will oblige us by answering my questions. Will you all kindly remember, as I requested at the beginning, not to interrupt if I conduct the discussion in my customary way?

Is there anyone in the world, Meletus, who believes in human activities, and not in human beings? Make him answer, gentlemen, and don't let him keep on making these continual objections. Is there anyone who does not believe in horses, but believes in horses' activities? Or who does not believe in musicians, but believes in musical activities? No, there is not, my worthy friend. If you do not want to answer, I will supply it for you and for these gentlemen too. But the next question you must answer. Is there anyone who believes in supernatural activities and not in supernatural beings?

Meletus:: No.

Socrates:: How good of you to give a bare answer under compulsion by the court! Well, do you assert that I believe and teach others to believe in supernatural activities? It does not matter whether they are new or old. The fact remains that I believe in them according to your statement; indeed you solemnly swore as much in your affidavit. But if I believe in supernatural activities, it follows inevitably that I also believe in supernatural beings. Is not that so? It is. I assume your assent, since you do not answer. Do we not hold that supernatural beings are either gods or the children of gods? Do you agree or not?

Meletus:: Certainly.

Socrates:: Then if I believe in supernatural beings, as you assert, if these supernatural beings are gods in any sense, we shall reach the conclusion which I mentioned just now when I said that you were testing my intelligence for your own amusement, by stating first that I do not believe in gods, and then again that I do, since I believe in supernatural beings. If on the other hand these supernatural beings are bastard children of the gods by nymphs or other mothers, as they are reputed to be, who in the world would believe in the children of gods and not in the gods themselves? It would be as ridiculous as to believe in the young of horses or donkeys and not in horses and donkeys themselves. No, Meletus, there is no avoiding the conclusion that you brought this charge against me as a test of my wisdom, or else in despair of finding a genuine offense of which to accuse me. As for your prospect of convincing any living person with even a smattering of intelligence that belief in supernatural and divine activities does not imply belief in supernatural and divine beings, and vice versa, it is outside all the bounds of possibility.

As a matter of fact, gentlemen, I do not feel that it requires much defense to clear myself of Meletus' accusation. What I have said already is enough. But you know very well the truth of what I said in an earlier part of my speech, that I have incurred a great deal of bitter hostility, and this is what will bring about my destruction, if anything does—not Meletus nor Anytus, but the slander and jealousy of a very large section of the people. They have been fatal to a great many other innocent men, and I suppose will continue to be so; there is no likelihood that they will stop at me. But perhaps someone will say, Do you feel no compunction, Socrates, at having followed a line of action which puts you in danger of the death penalty?

I might fairly reply to him, You are mistaken, my friend, if you think that a man who is worth anything ought to spend his time weighing up the prospects of life and death. He has only one thing to consider in performing any action—that is, whether he is acting rightly or wrongly, like a good man or a bad one. On your view the heroes who died at Troy would be poor creatures, especially the son of Thetis. He, if you remember, made light of danger in comparison with incurring dishonor when his goddess mother warned him, eager as he was to kill Hector, in some such words as these, I fancy: My son, if you avenge your comrade Patroclus' death and kill Hector, you will die yourself—'Next after Hector is thy fate prepared.' When he heard this warning, he made light of his death and danger, being much more afraid of an ignoble life and of failing to avenge his friends. 'Let me die forthwith,' said he, 'when I have requited the villain, rather than remain here by the beaked ships to be mocked, a burden on the ground.' Do you suppose that he gave a thought to death and danger?

The truth of the matter is this, gentlemen. Where a man has once taken up his stand, either because it seems best to him or in obedience to his orders, there I believe he is bound to remain and face the danger, taking no account of death or anything else before dishonor.

This being so, it would be shocking inconsistency on my part, gentlemen, if, when the officers whom you chose to command me assigned me my position at Potidaea and Amphipolis and Delium, I remained at my post like anyone else and faced death, and yet afterward, when God appointed me, as I supposed and believed, to the duty of leading the philosophical life, examining myself and others, I were then through fear of death or of any other danger to desert my post. That would indeed be shocking, and then I might really with justice be summoned into court for not believing in the gods, and disobeying the oracle, and being afraid of death, and thinking that I am wise when I am not. For let me tell you, gentlemen, that to be afraid of death is only another form of thinking that one is wise when one is not; it is to think that one knows what one does not know. No one knows with regard to death whether it is not really the greatest blessing that can happen to a man, but people dread it as though they were certain that it is the greatest evil, and this ignorance, which thinks that it knows what it does not, must surely be ignorance most culpable. This, I take it, gentlemen, is the degree, and this the nature of my advantage over the rest of mankind, and if I were to claim to be wiser than my neighbor in any respect, it would be in this—that not possessing any real knowledge of what comes after death, I am also conscious that I do not possess it. But I do know that to do wrong and to disobey my superior, whether God or man, is wicked and dishonorable, and so I shall never feel more fear or aversion for something which, for all I know, may really be a blessing, than for those evils which I know to be evils.

Suppose, then, that you acquit me, and pay no attention to Anytus, who has said that either I should not have appeared before this court at all, or, since I have appeared here, I must be put to death, because if I once escaped your sons would all immediately become utterly demoralized by putting the teaching of Socrates into practice. Suppose that, in view of this, you said to me, Socrates, on this occasion we shall disregard Anytus and acquit you, but only on one condition, that you give up spending your time on this quest and stop philosophizing. If we catch you going on in the same way, you shall be put to death.

Well, supposing, as I said, that you should offer to acquit me on these terms, I should reply, Gentlemen, I am your very grateful and devoted servant, but I owe a greater obedience to God than to you, and so long as I draw breath and have my faculties, I shall never stop practicing philosophy and exhorting you and elucidating the truth for everyone that I meet. I shall go on saying, in my usual way, My very good friend, you are an Athenian and belong to a city which is the greatest and most famous in the world for its wisdom and strength. Are you not ashamed that you give your attention to acquiring as much money as possible, and similarly with reputation and honor, and give no attention or thought to truth and understanding and the perfection of your soul?

And if any of you disputes this and professes to care about these things, I shall not at once let him go or leave him. No, I shall question him and examine him and test him; and if it appears that in spite of his profession he has made no real progress toward goodness, I shall reprove him for neglecting what is of supreme importance, and giving his attention to trivialities. I shall do this to everyone that I meet, young or old, foreigner or fellow citizen, but especially to you, my fellow citizens, inasmuch as you are closer to me in kinship. This, I do assure you, is what my God commands, and it is my belief that no greater good has ever befallen you in this city than my service to my God. For I spend all my time going about trying to persuade you, young and old, to make your first and chief concern not for your bodies nor for your possessions, but for the highest welfare of your souls, proclaiming as I go, Wealth does not bring goodness, but goodness brings wealth and every other blessing, both to the individual and to the state.

Now if I corrupt the young by this message, the message would seem to be harmful, but if anyone says that my message is different from this, he is talking nonsense. And so, gentlemen, I would say, You can please yourselves whether you listen to Anytus or not, and whether you acquit me or not. You know that I am not going to alter my conduct, not even if I have to die a hundred deaths.

Order, please, gentlemen (Remember my request to give me a hearing without interruption. Besides, I believe that it will be to your advantage to listen. I am going to tell you something else, which may provoke a storm of protest, but please restrain yourselves. I assure you that if I am what I claim to be, and you put me to death, you will harm yourselves more than me. Neither Meletus nor Anytus can do me any harm at all; they would not have the power, because I do not believe that the law of God permits a better man to be harmed by a worse. No doubt my accuser might put me to death or have me banished or deprived of civic rights, but even if he thinks—as he probably does, and others too, I dare say—that these are great calamities, I do not think so. I believe that it is far worse to do what he is doing now, trying to put an innocent man to death. For this reason, gentlemen, so far from pleading on my own behalf, as might be supposed, I am really pleading on yours, to save you from misusing the gift of God by condemning me. If you put me to death, you will not easily find anyone to take my place. It is literally true, even if it sounds rather comical, that God has specially appointed me to this city, as though it were a large thoroughbred horse which because of its great size is inclined to be lazy and needs the stimulation of some stinging fly. It seems to me that God has attached me to this city to perform the office of such a fly, and all day long I never cease to settle here, there, and everywhere, rousing, persuading, reproving every one of you. You will not easily find another like me, gentlemen, and if you take my advice you will spare my life. I suspect, however, that before long you will awake from your drowsing, and in your annoyance you will take Anytus' advice and finish me off with a single slap, and then you will go on sleeping till the end of your days, unless God in his care for you sends someone to take my place.

If you doubt whether I am really the sort of person who would have been sent to this city as a gift from God, you can convince yourselves by looking at it in this way. Does it seem natural that I should have neglected my own affairs and endured the humiliation of allowing my family to be neglected for all these years, while I busied myself all the time on your behalf, going like a father or an elder brother to see each one of you privately, and urging you to set your thoughts on goodness? If I had got any enjoyment from it, or if I had been paid for my good advice, there would have been some explanation for my conduct, but as it is you can see for yourselves that although my accusers unblushingly charge me with all sorts of other crimes, there is one thing that they have not had the impudence to pretend on any testimony, and that is that I have ever exacted or asked a fee from anyone. The witness that I can offer to prove the truth of my statement is, I think, a convincing one—my poverty.

It may seem curious that I should go round giving advice like this and busying myself in people's private affairs, and yet never venture publicly to address you as a whole and advise on matters of state. The reason for this is what you have often heard me say before on many other occasions—that I am subject to a divine or supernatural experience, which Meletus saw fit to travesty in his indictment. It began in my early childhood—a sort of voice which comes to me, and when it comes it always dissuades me from what I am proposing to do, and never urges me on. It is this that debars me from entering public life, and a very good thing too, in my opinion, because you may be quite sure, gentlemen, that if I had tried long ago to engage in politics, I should long ago have lost my life, without doing any good either to you or to myself. Please do not be offended if I tell you the truth. No man on earth who conscientiously opposes either you or any other organized democracy, and flatly prevents a great many wrongs and illegalities from taking place in the state to which he belongs, can possibly escape with his life. The true champion of justice, if he intends to survive even for a short time, must necessarily confine himself to private life and leave politics alone.

I will offer you substantial proofs of what I have said—not theories, but what you can appreciate better, facts. Listen while I describe my actual experiences, so that you may know that I would never submit wrongly to any authority through fear of death, but would refuse even at the cost of my life. It will be a commonplace story, such as you often hear in the courts, but it is true.

The only office which I have ever held in our city, gentlemen, was when I was elected to the Council. It so happened that our group was acting as the executive when you decided that the ten commanders who had failed to rescue the men who were lost in the naval engagement should be tried en bloc, which was illegal, as you all recognized later. On this occasion I was the only member of the executive who insisted that you should not act unconstitutionally, and voted against the proposal; and although your leaders were all ready to denounce and arrest me, and you were all urging them on at the top of your voices, I thought that it was my duty to face it out on the side of law and justice rather than support you, through fear of prison or death, in your wrong decision.

This happened while we were still under a democracy. When the oligarchy came into power, the Thirty Commissioners in their turn summoned me and four others to the Round Chamber and instructed us to go and fetch Leon of Salamis from his home for execution. This was of course only one of many instances in which they issued such instructions, their object being to implicate as many people as possible in their wickedness. On this occasion, however, I again made it clear not by my words but by my actions that death did not matter to me at all—if that is not too strong an expression—but that it mattered all the world to me that I should do nothing wrong or wicked. Powerful as it was, that government did not terrify me into doing a wrong action. When we came out of the Round Chamber, the other four went off to Salamis and arrested Leon, and I went home. I should probably have been put to death for this, if the government had not fallen soon afterward. There are plenty of people who will testify to these statements.

Do you suppose that I should have lived as long as I have if I had moved in the sphere of public life, and conducting myself in that sphere like an honorable man, had always upheld the cause of right, and conscientiously set this end above all other things? Not by a very long way, gentlemen; neither would any other man. You will find that throughout my life I have been consistent in any public duties that I have performed, and the same also in my personal dealings. I have never countenanced any action that was incompatible with justice on the part of any person, including those whom some people maliciously call my pupils. I have never set up as any man's teacher, but if anyone, young or old, is eager to hear me conversing and carrying out my private mission, I never grudge him the opportunity; nor do I charge a fee for talking to him, and refuse to talk without one. I am ready to answer questions for rich and poor alike, and I am equally ready if anyone prefers to listen to me and answer my questions. If any given one of these people becomes a good citizen or a bad one, I cannot fairly be held responsible, since I have never promised or imparted any teaching to anybody, and if anyone asserts that he has ever learned or heard from me privately anything which was not open to everyone else, you may be quite sure that he is not telling the truth.

But how is it that some people enjoy spending a great deal of time in my company? You have heard the reason, gentlemen; I told you quite frankly. It is because they enjoy hearing me examine those who think that they are wise when they are not—an experience which has its amusing side. This duty I have accepted, as I said, in obedience to God's commands given in oracles and dreams and in every other way that any other divine dispensation has ever impressed a duty upon man. This is a true statement, gentlemen, and easy to verify. If it is a fact that I am in process of corrupting some of the young, and have succeeded already in corrupting others, and if it were a fact that some of the latter, being now grown up, had discovered that I had ever given them bad advice when they were young, surely they ought now to be coming forward to denounce and punish me. And if they did not like to do it themselves, you would expect some of their families—their fathers and brothers and other near relations—to remember it now, if their own flesh and blood had suffered any harm from me. Certainly a great many of them have found their way into this court, as I can see for myself—first Crito over there, my contemporary and near neighbor, the father of this young man Critobulus, and then Lysanias of Sphettus, the father of Aeschines here, and next Antiphon of Cephisus, over there, the father of Epigenes. Then besides there are all those whose brothers have been members of our circle—Nicostratus, the son of Theozotides, the brother of Theodotus, but Theodotus is dead, so he cannot appeal to his brother, and Paralus here, the son of Demodocus, whose brother was Theages. And here is Adimantus, the son of Ariston, whose brother Plato is over there, and Aeantodorus, whose brother Apollodorus is here on this side. I can name many more besides, some of whom Meletus most certainly ought to have produced as witnesses in the course of his speech. If he forgot to do so then, let him do it now—I am willing to make way for him. Let him state whether he has any such evidence to offer. On the contrary, gentlemen, you will find that they are all prepared to help me—the corrupter and evil genius of their nearest and dearest relatives, as Meletus and Anytus say. The actual victims of my corrupting influence might perhaps be excused for helping me; but as for the uncorrupted, their relations of mature age, what other reason can they have for helping me except the right and proper one, that they know Meletus is lying and I am telling the truth?

There, gentlemen, that, and perhaps a little more to the same effect, is the substance of what I can say in my defense. It may be that some one of you, remembering his own case, will be annoyed that whereas he, in standing his trial upon a less serious charge than this, made pitiful appeals to the jury with floods of tears, and had his infant children produced in court to excite the maximum of sympathy, and many of his relatives and friends as well, I on the contrary intend to do nothing of the sort, and that, although I am facing, as it might appear, the utmost danger. It may be that one of you, reflecting on these facts, will be prejudiced against me, and being irritated by his reflections, will give his vote in anger. If one of you is so disposed—I do not expect it, but there is the possibility—I think that I should be quite justified in saying to him, My dear sir, of course I have some relatives. To quote the very words of Homer, even I am not sprung 'from an oak or from a rock,' but from human parents, and consequently I have relatives—yes, and sons too, gentlemen, three of them, one almost grown up and the other two only children—but all the same I am not going to produce them here and beseech you to acquit me.

Why do I not intend to do anything of this kind? Not out of perversity, gentlemen, nor out of contempt for you; whether I am brave or not in the face of death has nothing to do with it. The point is that for my own credit and yours and for the credit of the state as a whole, I do not think that it is right for me to use any of these methods at my age and with my reputation—which may be true or it may be false, but at any rate the view is held that Socrates is different from the common run of mankind. Now if those of you who are supposed to be distinguished for wisdom or courage or any other virtue are to behave in this way, it would be a disgrace. I have often noticed that some people of this type, for all their high standing, go to extraordinary lengths when they come up for trial, which shows that they think it will be a dreadful thing to lose their lives—as though they would be immortal if you did not put them to death! In my opinion these people bring disgrace upon our city. Any of our visitors might be excused for thinking that the finest specimens of Athenian manhood, whom their fellow citizens select on their merits to rule over them and hold other high positions, are no better than women. If you have even the smallest reputation, gentlemen, you ought not to descend to these methods; and if we do so, you must not give us license. On the contrary, you must make it clear that anyone who stages these pathetic scenes and so brings ridicule upon our city is far more likely to be condemned than if he kept perfectly quiet.

But apart from all question of appearances, gentlemen, I do not think that it is right for a man to appeal to the jury or to get himself acquitted by doing so; he ought to inform them of the facts and convince them by argument. The jury does not sit to dispense justice as a favor, but to decide where justice lies, and the oath which they have sworn is not to show favor at their own discretion, but to return a just and lawful verdict. It follows that we must not develop in you, nor you allow to grow in yourselves, the habit of perjury; that would be sinful for us both. Therefore you must not expect me, gentlemen, to behave toward you in a way which I consider neither reputable nor moral nor consistent with my religious duty, and above all you must not expect it when I stand charged with impiety by Meletus here. Surely it is obvious that if I tried to persuade you and prevail upon you by my entreaties to go against your solemn oath, I should be teaching you contempt for religion, and by my very defense I should be accusing myself of having no religious belief. But that is very far from the truth. I have a more sincere belief, gentlemen, than any of my accusers, and I leave it to you and to God to judge me as it shall be best for me and for yourselves.

There are a great many reasons, gentlemen, why I am not distressed by this result—I mean your condemnation of me—but the chief reason is that the result was not unexpected. What does surprise me is the number of votes cast on the two sides. I should never have believed that it would be such a close thing, but now it seems that if a mere thirty votes had gone the other way, I should have been acquitted. Even as it is, I feel that so far as Meletus' part is concerned I have been acquitted, and not only that, but anyone can see that if Anytus and Lycon had not come forward to accuse me, Meletus would actually have forfeited his one thousand drachmas for not having obtained one fifth of the votes.

However, we must face the fact that he demands the death penalty. Very good. What alternative penalty shall I propose to you, gentlemen? Obviously it must be adequate. Well, what penalty do I deserve to pay or suffer, in view of what I have done?

I have never lived an ordinary quiet life. I did not care for the things that most people care about—making money, having a comfortable home, high military or civil rank, and all the other activities, political appointments, secret societies, party organizations, which go on in our city. I thought that I was really too strict in my principles to survive if I went in for this sort of thing. So instead of taking a course which would have done no good either to you or to me, I set myself to do you individually in private what I hold to be the greatest possible service. I tried to persuade each one of you not to think more of practical advantages than of his mental and moral well-being, or in general to think more of advantage than of well-being in the case of the state or of anything else. What do I deserve for behaving in this way? Some reward, gentlemen, if I am bound to suggest what I really deserve, and what is more, a reward which would be appropriate for myself. Well, what is appropriate for a poor man who is a public benefactor and who requires leisure for giving you moral encouragement? Nothing could be more appropriate for such a person than free maintenance at the state's expense. He deserves it much more than any victor in the races at Olympia, whether he wins with a single horse or a pair or a team of four. These people give you the semblance of success, but I give you the reality; they do not need maintenance, but I do. So if I am to suggest an appropriate penalty which is strictly in accordance with justice, I suggest free maintenance by the state.

Perhaps when I say this I may give you the impression, as I did in my remarks about exciting sympathy and making passionate appeals. that I am showing a deliberate perversity. That is not so, gentlemen. The real position is this. I am convinced that I never wrong anyone intentionally, but I cannot convince you of this, because we have had so little time for discussion. If it was your practice, as it is with other nations, to give not one day but several to the hearing of capital trials, I believe that you might have been convinced, but under present conditions it is not easy to dispose of grave allegations in a short space of time. So, being convinced that I do no wrong to anybody, I can hardly be expected to wrong myself by asserting that I deserve something bad, or by proposing a corresponding penalty. Why should I? For fear of suffering this penalty proposed by Meletus, when, as I said, I do not know whether it is a good thing or a bad? Do you expect me to choose something which I know very well is bad by making my counterproposal? Imprisonment? Why should I spend my days in prison, in subjection to the periodically appointed officers of the law? A fine, with imprisonment until it is paid? In my case the effect would be just the same, because I have no money to pay a fine. Or shall I suggest banishment? You would very likely accept the suggestion.

I should have to be desperately in love with life to do that, gentlemen. I am not so blind that I cannot see that you, my fellow citizens, have come to the end of your patience with my discussions and conversations. You have found them too irksome and irritating, and now you are trying to get rid of them. Will any other people find them easy to put up with? That is most unlikely, gentlemen. A fine life I should have if I left this country at my age and spent the rest of my days trying one city after another and being turned out every time! I know very well that wherever I go the young people will listen to my conversation just as they do here, and if I try to keep them off, they will make their elders drive me out, while if I do not, the fathers and other relatives will drive me out of their own accord for the sake of the young.

Perhaps someone may say, But surely, Socrates, after you have left us you can spend the rest of your life in quietly minding your own business.

This is the hardest thing of all to make some of you understand.

If I say that this would be disobedience to God, and that is why I cannot 'mind my own business,' you will not believe that I am serious. If on the other hand I tell you that to let no day pass without discussing goodness and all the other subjects about which you hear me talking and examining both myself and others is really the very best thing that a man can do, and that life without this sort of examination is not worth living, you will be even less inclined to believe me. Nevertheless that is how it is, gentlemen, as I maintain, though it is not easy to convince you of it. Besides, I am not accustomed to think of myself as deserving punishment. If I had money, I would have suggested a fine that I could afford, because that would not have done me any harm. As it is, I cannot, because I have none, unless of course you like to fix the penalty at what I could pay. I suppose I could probably afford a mina. I suggest a fine of that amount.

One moment, gentlemen. Plato here, and Crito and Critobulus and Apollodorus, want me to propose thirty minas, on their security. Very well, I agree to this sum, and you can rely upon these gentlemen for its payment.

Well, gentlemen, for the sake of a very small gain in time you are going to earn the reputation—and the blame from those who wish to disparage our city—of having put Socrates to death, 'that wise man' —because they will say I am wise even if I am not, these people who want to find fault with you. If you had waited just a little while, you would have had your way in the course of nature. You can see that I am well on in life and near to death. I am saying this not to all of you but to those who voted for my execution, and I have something else to say to them as well.

No doubt you think, gentlemen, that I have been condemned for lack of the arguments which I could have used if I had thought it right to leave nothing unsaid or undone to secure my acquittal. But that is very far from the truth. It is not a lack of arguments that has caused my condemnation, but a lack of effrontery and impudence, and the fact that I have refused to address you in the way which would give you most pleasure. You would have liked to hear me weep and wail, doing and saying all sorts of things which I regard as unworthy of myself, but which you are used to hearing from other people. But I did not think then that I ought to stoop to servility because I was in danger, and I do not regret now the way in which I pleaded my case. I would much rather die as the result of this defense than live as the result of the other sort. In a court of law; just as in warfare, neither I nor any other ought to use his wits to escape death by any means. In battle it is often obvious that you could escape being killed by giving up your arms and throwing yourself upon the mercy of your pursuers, and in every kind of danger there are plenty of devices for avoiding death if you are unscrupulous enough to stick at nothing. But I suggest, gentlemen, that the difficulty is not so much to escape death; the real difficulty is to escape from doing wrong, which is far more fleet of foot. In this present instance I, the slow old man, have been overtaken by the slower of the two, but my accusers, who are clever and quick, have been overtaken by the faster—by iniquity. When I leave this court I shall go away condemned by you to death, but they will go away convicted by truth herself of depravity and wickedness. And they accept their sentence even as I accept mine. No doubt it was bound to be so, and I think that the result is fair enough.

Having said so much, I feel moved to prophesy to you who have given your vote against me, for I am now at that point where the gift of prophecy comes most readily to men—at the point of death. I tell you, my executioners, that as soon as I am dead, vengeance shall fall upon you with a punishment far more painful than your killing of me. You have brought about my death in the belief that through it you will be delivered from submitting your conduct to criticism, but I say that the result will be just the opposite. You will have more critics, whom up till now I have restrained without your knowing it, and being younger they will be harsher to you and will cause you more annoyance. If you expect to stop denunciation of your wrong way of life by putting people to death, there is something amiss with your reasoning. This way of escape is neither possible nor creditable. The best and easiest way is not to stop the mouths of others, but to make yourselves as good men as you can. This is my last message to you who voted for my condemnation.

As for you who voted for my acquittal, I should very much like to say a few words to reconcile you to the result, while the officials are busy and I am not yet on my way to the place where I must die. I ask you, gentlemen, to spare me these few moments. There is no reason why we should not exchange fancies while the law permits. I look upon you as my friends, and I want you to understand the right way of regarding my present position.

Gentlemen of the jury—for you deserve to be so called—I have had a remarkable experience. In the past the prophetic voice to which I have become accustomed has always been my constant companion, opposing me even in quite trivial things if I was going to take the wrong course. Now something has happened to me, as you can see, which might be thought and is commonly considered to be a supreme calamity; yet neither when I left home this morning, nor when I was taking my place here in the court, nor at any point in any part of my speech did the divine sign oppose me. In other discussions it has often checked me in the middle of a sentence, but this time it has never opposed me in any part of this business in anything that I have said or done. What do I suppose to be the explanation? I will tell you. I suspect that this thing that has happened to me is a blessing, and we are quite mistaken in supposing death to be an evil. I have good grounds for thinking this, because my accustomed sign could not have failed to oppose me if what I was doing had not been sure to bring some good result.

We should reflect that there is much reason to hope for a good result on other grounds as well. Death is one of two things. Either it is annihilation, and the dead have no consciousness of anything, or, as we are told, it is really a change—a migration of the soul from this place to another. Now if there is no consciousness but only a dreamless sleep, death must be a marvelous gain. I suppose that if anyone were told to pick out the night on which he slept so soundly as not even to dream, and then to compare it with all the other nights and days of his life, and then were told to say, after due consideration, how many better and happier days and nights than this he had spent in the course of his life—well, I think that the Great King himself, to say nothing of any private person, would find these days and nights easy to count in comparison with the rest. If death is like this, then, I call it gain, because the whole of time, if you look at it in this way, can be regarded as no more than one single night. If on the other hand death is a removal from here to some other place, and if what we are told is true, that all the dead are there, what greater blessing could there be than this, gentlemen? If on arrival in the other world, beyond the reach of our so-called justice, one will find there the true judges who are said to preside in those courts, Minos and Rhadamanthus and Aeacus and Triptolemus and all those other half-divinities who were upright in their earthly life, would that be an unrewarding journey? Put it in this way. How much would one of you give to meet Orpheus and Musaeus, Hesiod and Homer? I am willing to die ten times over if this account is true. It would be a specially interesting experience for me to join them there, to meet Palamedes and Ajax, the son of Telamon, and any other heroes of the old days who met their death through an unfair trial, and to compare my fortunes with theirs—it would be rather amusing, I think. And above all I should like to spend my time there, as here, in examining and searching people's minds, to find out who is really wise among them, and who only thinks that he is. What would one not give, gentlemen, to be able to question the leader of that great host against Troy, or Odysseus, or Sisyphus, or the thousands of other men and women whom one could mention, to talk and mix and argue with whom would be unimaginable happiness? At any rate I presume that they do not put one to death there for such conduct, because apart from the other happiness in which their world surpasses ours, they are now immortal for the rest of time, if what we are told is true.
